Let us assume that an action was started against an American enterprise and the enterprise was found guilty of restrictive business practices by the director of the advisory staff. Let us for the purpose of argument also assume that the United States representative on the representative body did not believe the complaint justified. He would have 1 vote out of some 60 votes, and would be required to adopt the usual United Nations procedure of lobbying for votes among the other representatives in order to reverse the findings of this one man who heads the advisory staff. Such a procedure is not conducive to the success of the United Nations or to American prestige therein. Furthermore, if he is unable to reverse the staff which would probably be the case in view of the composition of the representative body, we would then be bound by treaty to implement the findings of the staff. I can think of no more impossible situation.

Let us examine the terms of references under which these judgments would be made. In his appearance before the subcommittee Mr. Timberg said, and I quote:

"Definition of restrictive business practices: The draft agreement prepared by the U. N. committee deals with restrictive business practices, which are defined as 'business practices affecting international trade which restrain competition, limit access to markets, or foster monopolistic controls' (art. 1, par. 1). Restrictive business practices are not only defined, but are specifically listed as embracing exclusion from markets or dividing markets, price fixing, price discrimination, limitations of production, and specific types of patent, trademark and copyright abuse (art. 1, par. 3). This enumeration seems to me to cover adequately the main areas to which this country's enforcement of the Sherman Act in international trade has in the past been directed."

Upon examination of the draft charter, I find the practices enumerated by Mr. Timberg are listed in article 1, paragraph 3. While Mr. Timberg refers to specific types of patent abuse in his testimony, I find upon reading article 1, paragraph 3 of the agreement, that the practices affecting patents and technology are far broader than Mr. Timberg stated. Article 1, paragraph 3, subparagraph (e) reads as follows:

"Preventing by agreement of coercion the development or application of technology or invention whether patented or unpatented, or withholding the application of such technology with the result of monopolizing an industrial or commercial field."

In other words, the withholding of technology by an American enterprise or perhaps even our own Government could be the basis of a complaint to the United Nations agency that a restrictive business practice was taking place. The entire patent system is placed in jeopardy by this proposal.

Mr. Timberg, however, neglected to mention all of paragraph 3. I am startled by subparagraph 3 (g) which reads as follows:

"(g) Any similar practices which the organization may declare, by a majority of two-thirds of the members present and voting, to be restrictive business practices."

In other words, this agreement proposes that we write the antitrust laws as we go along by a two-thirds vote of the members of the representative body who happen to be present. Mr. Timberg's friends will then determine what they mean. This is hardly in keeping with American concepts of jurisprudence. Mr. Murchison's testimony meets these issues squarely. He said:

"There are many other defects in the concept underlying the agreement. For instance, the draft agreement's lack of provision for the selection of independent, impartial judges to pass upon matters brought before the tribunal is glaringly apparent. Use of the term 'representative body' to describe the tribunal should not obscure the fact that it would perform functions basically judicial in nature, indeed, very similar to those performed by the Federal Trade Commission in this country. It would seem essential, especially in the field of business practices, for voting members of the tribunal to make their decisions impartially and on a record, rather than as representatives of a particular government or interest."

Again let us examine the agreement to see how a respondent in a complaint would be treated. Article 15, paragraph 3 provides:

"3. The director of the advisory staff shall arrange for opportunities to be given in accordance with paragraph 5 of article 3, for any member or any person, enterprise, or organization on whose behalf the complaint has been made, or any commercial enterprise alleged to have engaged in the practice complained of, to be heard by the advisory staff: *Provided, however,* That the representative body in its discretion may afford opportunities for such persons to be heard by it after it has received the report of the advisory staff."

Mr. Murchison in his testimony on this point said:

"There is a perceptible lack of basic procedural safeguards governing the operation of the tribunal. No provision is made concerning the rights of parties appearing before it. These rights, which are commonly accepted in the English-speaking countries, and considered essential in our own, should certainly include the opportunity to be represented by counsel, to examine, cross-examine, and reexamine witnesses, and the like."

I think I have pointed out enough of the contradictions in Mr. Timberg's tetimony and inconsistencies with American concepts of fair play and Anglo-Saxon jurisprudence to fully justify the position of our Government in rejecting the draft agreement. The amazing thing to me is that the ad hoc committee was established in the first place by a resolution introduced in the United Nations by this Government under the Truman administration to implement Mr. Timberg's pet ideas.

I am sure you cannot fully appreiate the difficulties you have been spared by our Government's rejection of this agreement. Mr. Timberg's statement exposed one of the implications of the draft agreement to the mining industry which is rather startling. After stating to the subcommittee that the proposed agreement on world antitrust laws did not give any judicial powers to the United Nations, Mr. Timberg endeavored to explain how the agreement would work with a hypothetical situation. His hypothetical case is one which directly involves everyone in this room and I want to read from his testimony. This is what he said:

"Let us assume that the General Services Administration was involved in an alleged restrictive practice in the importation of some critical material from a foreign country. First, a complaining government would have to bring its complaint in its own behalf, and not merely in behalf of its nationals. Second, the complaining government would have to take the matter up in the first instance on an informal basis with the United States Government, which controls the General Services Administration, so as to exhaust the possibilities of rectifying the situation expeditiously and without fanfare. In cases involving complaints against private enterprises, governments may (but are not required to) resort to such informal consultations. Once informal consultations fail, a complaint against a public enterprise is handled exactly as is one against a private enterprise."

The Cabinet Committee on Minerals Policy, whose program Secretary Wormser has outlined, recommended that all stockpile objectives be reviewed and new long-term objectives established to reduce and wherever possible eliminate foreseeable wartime shortages. The Cabinet Committee specifically stated with respect to the materials required to meet the new long-term objectives that "in making purchases preference should be given to newly mined metals and minerals of domestic origin." This is the kind of restrictive practice engaged in by the General Services Administration which Mr. Timberg would like to submit to the United Nations.

Mr. Murchison paid a tribute to the State Department under the Eisenhower administration in his appearance which I heartily endorse. He said:

"Fortunately, the United States delegation to the Economic and Social Council in 1955 was well aware of this background. Headed by Preston Hotchkis, and assisted by such able persons as Mr. Joseph C. Hickingbotham, Mr. Nat King, and others in the Department of State, the delegation reversed our Government's earlier stand and opposed the recommendations contained in the report. This turnabout was a difficult diplomatic operation, and Mr. Hotchkis and the entire Department of State should be commended for the admirable way the matter was handled. United States opposition to international machinery of the type recommended was firmly and clearly stated. As a result, the resolution adopted at the close of the May 1955 session of the Council did not approve the report."

Mr. Timberg's testimony clearly shows that he has no understanding of American constitutional government with its division of powers between the executive, judicial, and legislative branches. He suggested to the subcommittee an amendment to the antitrust laws, and again I shall read from his testimony:

"My third suggestion is that the Congress enact legislation whereby antitrust violators, whose practices have excluded competition or raised prices and whose product is protected by a tariff, may, in appropriate circumstances, lose the benefit, in whole or in part, of that tariff."

If we ever start writing our laws by permitting the judicial branch of the Government to invoke changes in the law as a penalty we are in for very serious trouble. The House Ways and Means Committee under our Constitution is responsible for initating all tariff legislation. As a former member, I am qualified to label this proposal as fantastic.

As you know, the development of a sound stockpile policy and tariff legislation have occupied my thoughts for many many years and you can understand why I take a very dim view of Mr. Timberg's proposals.

History reminds us of the famous quotation that "Eternal vigilance is the price of liberty." At present the fires are out on agreements dealing with restrictive business practices and commodity agreements under United Nations auspices. However, the appearance within the past month of Mr. Timberg before this subcommitte shows that the concepts are not dead.

This group representing the leadership of the entire mining industry must support your Government officials who have been carrying on this fight and you must make certain that this policy is never reversed by any future administration which may be less dedicated to free enterprise concepts than President Eisenhower.

More About Our Declining Strength

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1956

Mr. PRICE. Mr. Speaker, recently there appeared in the press of the Nation two articles by Mr. Joseph Alsop and Mr. Stewart Alsop, pointing out that the only reason we do not have military strength equal to that of the Communist countries is our unwillingness to spend the money to provide that strength—to spend money on research, first, and on the production of the new weapons research gives us. Meanwhile the Russians move rapidly ahead, building up a modern air force not merely equal to ours but in many ways better.

Today, I refer to another in the series of brilliant articles the Alsop brothers are publishing in an effort to awaken Americans to the danger which is being hidden from them with all the skill and the talents the Pentagon can command.

The rates of production of advanced aircraft types shows the Soviets well ahead of us in the buildup of their air force. The difference in the rates shows the Soviets steadily forging further ahead in numbers and in strength. About the time we expect to have our 137-wing Air Force fully equipped, in 1957, the Soviets' strategic air force will be able to deliver a punch of which our own Strategic Air Command will be incapable. Today we are fully capable of building long-range B–52's which do not require overseas bases for combat operations, but we are gambling on the future use of overseas bases by medium-range bombers. If Russia strikes us, it will be from her own bases, and with long-range aircraft excelling in number our own B–52's. General LeMay's request for an urgent program to provide 1,900 B–52's was rejected, for budgetary and therefore political reasons.

Mr. Speaker, our strength is being overtaken rapidly, and declining needlessly; and the danger is that in a campaign year, politics will be played even more furiously with the vital problem of national defense. The American people need as never before to be fully informed of what is happening. Their own survival is at stake. I would like to call my colleagues' attention to an insertion in the RECORD of January 9, page 197, by the Honorable STUART SYMINGTON, of Missouri, of the third article by the Alsops in this stimulating but disheartening report on our declining strength. Every Member of Congress should read these articles.

Communist Tactics in the Near East and Asia

EXTENSION OF REMARKS
OF
HON. RICHARD B. WIGGLESWORTH
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 17, 1956

Mr. WIGGLESWORTH. Mr. Speaker, in a recent powerful address President Meany of the newly merged A. F. of L. and CIO made the following statement:

This conflict between communism and freedom is the problem of our time. It overshadows all other problems. This conflict mirrors our age, its toils, its tensions, its troubles, and its tasks. On the outcome of this conflict depends the future of all mankind. I pray that, on the threshold of the atomic age, we—all of the free world—can muster the moral courage and total strength to preserve the peace and promote the freedom of the men and women of every continent, color, and creed.

We should all share these sentiments.

I returned just before Christmas from an official study mission with 6 other Members of the House which covered more than 30,000 miles by air in just under 10 weeks. The trip made it possible to exchange views with outstanding national figures as well as United States representatives in each of more than 24 countries visited in the Near East and Asia.

During the trip an attempt was constantly made to evaluate the extent of Communist influence, the amount of neutralism and the impact of the United States policy and programs in each of the countries visited.

Nowhere in the area visited was there any evidence whatsoever of any change in the fundamental objectives of strategy of the Communist world.

On the contrary, there was evidence all along the line of persistent Communist activities reflected in infiltration, promises, propaganda, and subversion.

Perhaps we should thank Mr. Bulganin and Mr. Khrushchev for making the facts crystal clear—for giving the world their real interpretation of the spirit of Geneva.

It is impossible to view the picture in Asia as a whole except against the background of the tragic policies of years gone by which made it possible—policies helping the Kremlin to establish its control directly or indirectly over 800 millions of people, one-third of the population of the world—policies making impossible a military victory in Korea when it lay within our grasp, with the resulting enormous loss of prestige.

Once again come to mind the famous words of General MacArthur, when he said:

Allowing the Communists to grow to power was the greatest political blunder in a hundred years, and one for which this Nation will pay for a century to come.

The free world has made great progress since that day.

We have seen, among other things, the organization of NATO with its 15 members; of the Baltic Pact with its 3 members; of the Bagdad Pact with its 5 members; of the SEATO Pact with its 8 members, and of pacts with our many friendly nations in the Western Hemisphere.

We have seen also the pact of Paris and the admission of Western Germany into NATO; the independence of Austria; the adjustment of important problems in Egypt, Iran, and Trieste.

We have seen the creation of enormous offensive and defensive military power at home.

Fully adequate—

According to Admiral Radford, Chairman of the Joint Chiefs of Staff—

to perform all essential tasks in the initial stages of a shooting war, global or otherwise, and to permit a rapid and orderly buildup when and if that should become necessary,

America and its allies have met with great success in terms of our military programs. By a policy of collective security based on military strength we have compelled the Communist world to abandon military aggression for the time being.

We are now confronted by a shift in tactics on the part of the Kremlin. The emphasis now is in the nonmilitary field and on tactics referred to by the President in his message on the state of the Union as the tactics of "division, enticement, and duplicity." These tactics were in evidence pretty generally throughout our trip, particularly in Asia.

Wherever there is friction or disagreement within a nation or between nations the Communist policy of division does everything possible to accentuate the trouble.

This policy was apparent, for example, in the differences between Greece and Turkey, arising out of the Cyprus problem; in the differences between the Arab States and Israel, and between the Arab States themselves; in the differences between Afghanistan and India on the one hand and Pakistan on the other; and in the differences in southeast Asia.

In country after country the Communists were making every effort to infiltrate, particularly into schools and labor organizations; to form cells; to promise anything and everything that might contribute to the desired end, and to weaken and subvert with a view to finally taking over and organizing.

It was heartening in the light of these activities in the nonmilitary field to talk with outstanding and courageous free-world leaders such as President Magsaysay, of the Philippine Islands; President Chiang Kai-shek, of Nationalist China; President Syngman Rhee, of South Korea, and others standing stalwartly against the pressures of the Communist world.

The tide of any struggle ebbs and flows. At the moment in this campaign for the minds and hearts of men in the part of the world which we visited, particularly in Asia, the tide is not running in favor of the free world. It is running against us.

The new Communist tactics, which can become as dangerous as those of military aggression, have been gaining ground, and the trend is important, because as in other campaigns there are those who want to ride on the winning bandwagon.

If the trend is to swing our way, if Communist infiltration and subversion are to be halted, the free world must develop as much power, firmness, and effectiveness in its nonmilitary programs as it has developed in its military programs.

A policy based on strength will build confidence among our friends. A policy based on strength will appeal to those nations who are today neutral. A policy based on strength is the only policy which the Communist world understands.

No campaign was ever won on the defensive. The free world must take the initiative. Its policy must be dynamic.

We must, of course, do our utmost to help settle outstanding problems such as those in the Near East, which, however important to those primarily concerned, from the overall point of view, play directly into the hands of the Kremlin.

We must do what we can to eliminate the threat posed by infiltration and subversion in its early stages.

We must work with and stand by our friends.

The Kremlin does not want war. It will respond in the future, as in the past, to a policy based on strength.

Under the outstanding leadership of President Eisenhower and other free world leaders I am confident that we shall meet the new tactics of the Communist world in the nonmilitary field just as we have met their previous tactics in the field of military aggression.

Address by Hon. William F. Knowland, California, Before the Economic Club of New York

---

EXTENSION OF REMARKS

OF

HON. WILLIAM F. KNOWLAND

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

Tuesday, January 17, 1956

Mr. KNOWLAND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address I made last evening at the Economic Club of New York.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, members, and guests of the Economic Club, Americans, regardless of their party affiliation, are pleased to have noted the excellent progress toward recovery that President Eisenhower has made and the fact that he is once again able to resume his duties in the Nation's Capital.

The President has already sent the state of the Union, the agriculture, education, and the budget messages to the Congress. All of these documents have recommendations of great importance to our national life.

Now the 84th Congress as the constitutional repository of the legislative power will determine how much of the recommended program will be adopted and in what final form.

Events may take place this year in Europe, Asia, Africa, in the Western Hemisphere, or in the Middle East that could set off a chain reaction of far-reaching significance.

It is important that in this year when political tensions may mount at home and international stresses may take place abroad, that all those in Government should speak with responsibility and with the knowledge that what is said may be distorted to serve the purposes of those who would destroy human freedom throughout the world.

Yet, in a free Republic it is equally important that those in Government speak with frankness. The American electoral result of 1956 may be one of the great decisive events of modern history.

Our international relations have a great impact on our domestic economy as well as upon other nations. Foreign policy is too important to be left to Government alone. It is of concern to 165 million Americans.

The age of colonialism is dead. Our own excellent record in the Philippines and elsewhere has been marred by impressions in Asia and the Middle East that we have allowed ourselves to be compromised by association with the colonial policies of Great Britain and France.

Countries could understand us better with our noncolonial record in the Philippines and Cuba and our own successful fight for independence if we would say frankly that our foreign policy is based on what is best for America.

They know we seek no territory and that we have an intuitive national conviction that our own survival as a free nation will be better served by assuring a free world of free men that by any system which at-

tempts to hold the loyalty of people by force of armed power and against their national will.

In 1858 a young and growing nation faced a great issue of principle over the expansion of slavery beyond its then limits. Abraham Lincoln, at that time a candidate for the United States Senate, said:

"If we could first know where we are, and whither we are tending, we could better judge what to do and how to do it."

Our aim should be to live in peace with all nations, but to pay tribute to none.

Our desire is for a system of international law and order based on peace with honor and justice.

A world in which small or large nations would have to live in fear of imminent violence or to buy a temporary respite by the payment of extortion is not the sort of existence that we or the other free peoples of the world are seeking.

A decade has passed since the conferences of Yalta and Potsdam, the end of World War II, and the founding of the United Nations in San Francisco.

Today as part of a series of discussions I intend to carry on in the Senate and throughout the country, I desire to review certain aspects of the problem that needs to be considered not only by the executive branch of the Government but by the Congress and the country as well.

In 1945 this Nation was the greatest military power in the world and was sole possessor, as the trustee of free men everywhere, of the atomic weapon. In order to help defeat the Axis Powers our resources had been placed at the disposal of our allies in Europe, Asia, and Africa in astronomical amounts which had no parallel in all recorded history.

From December 7, 1941, at Pearl Harbor until V-J Day in 1945 our Armed Forces had made a great contribution to the common effort and we suffered substantial casualties in helping to bring the war to a successful close.

In all of this mighty effort, costly in manpower and resources, we sought no territory and no reparations. The American people had reason to believe that the terms of the Atlantic Charter would be honored by us and we expected it to be respected by others.

America's prestige and power were high throughout the world. It was in that year, 1945, when we had the great opportunity to lay a firm foundation for human freedom and for a system of international law and order; for peace based on honor and justice.

When 1945 opened there were less than 200 million people behind the Communist Iron Curtain.

Now, just 10 years later, we are confronted with the following facts:

1. Over 900 million people are behind the Communist Iron Curtain and their totalitarian rulers are united in the common objective of making a Communist world.

2. Governments representing approximately 500 million people have determined to follow a neutralist course rather than to assume the responsibilities of an effective collective security system. They can afford this luxury because others have undertaken the necessary security burdens.

3. In the free world we have approximately 900 million people associated together in a series of interlocking mutual defense pacts. The United States of America appears to be the keystone to the arch, but the columns seem at times to be on shifting sands.

4. The United Nations on its major test as an effective collective security system during the Communist aggression in Korea (1950–53) had the following record:

A. Only 17 out of the then 60 members supplied any armed forces to resist the aggression.

B. The United States of America alone supplied 90 percent of the military forces furnished by the United Nations members and 95 percent of the resources to carry on the collective security action.

5. In the post-World War II period the United States has furnished over $52 billion in grants and loans to allies and former enemy nations.

6. We have a national debt of $280 billion and a budget of $65 billion. Our taxes, personal and corporate, are high and in some instances confiscatory in character. Many of our citizens have had to borrow funds to meet their income tax bills.

It is not my contention that all the virtues are in one political party or all the faults in the other. Members of both parties can fairly share part of the credit and assume part of the blame.

During the decade, 1945–55, the Democrats controlled the executive branch of the Government for 7 years while the Republicans have been in control for 3 years. The administration in power, of course, has the responsibility for the day-to-day formulation and direction of our foreign policy. In this same period the Democrats have had control of both the House and Senate for 6 years and the Republicans were in control for 4 years.

I refer to the past not for the purpose of opening old wounds or in any narrow partisan spirit, but with a deep conviction that in the 1955–65 decade the survival of our country may be at stake and with it the hope for a free world of free men.

As long as there is a strong America which stands for principles which free people and temporarily enslaved ones can understand and respect there is hope for mankind.

This strength is not primarily based on our material wealth though without it we could not support our own defense nor help others to help themselves.

Our real strength is the spirit and courage which under divine guidance, allowed a small colony of 3 million dedicated people to rise up and strike off the chains of colonialism despite the opposition of the mightiest empire of that day.

Our Revolutionary leaders represented the spirit of the song which states:

"Start me with 10 who are stout-hearted men and I will soon give you 10,000 more."

Whither are we tending? Will the next 10 years show the same progress of Marxian socialism? Is there any real indication that the Communist leopard has changed its spots? I believe not.

On July 28, 1955, in the Senate of the United States I said:

"Neither we nor the free world must lull ourselves into a 'Little Miss Red Riding Hood' belief that because the wolf has put on grandmother's cap and nightgown that his teeth are any less sharp or his intentions any less menacing."

President Eisenhower in a great desire to explore the possibility of a changed Soviet policy agreed to the meeting at the summit.

He also knew that a number of the allied governments as well as Members of Congress (including the distinguished Democratic Senator WALTER GEORGE, chairman of the Senate Foreign Relations Committee) had urged such a meeting.

The President made it clear that the acid test of Soviet intentions would come at the subsequent foreign ministers' meeting.

Results of that meeting clearly showed that the Soviet Union would not:

1. Agree to free elections throughout a free and sovereign Germany or permit a unification of Germany except on terms that would result in Communist domination of the whole country.

2. Support an adequate system of armament inspection of conventional weapons.

3. Consider the carrying out of their obligations under the Atlantic Charter to permit free elections in the captive nations of Poland, Czechoslovakia, Latvia, Hungry, Esthonia, Roumania, Lithuania, Bulgaria and Albania.

4. Agree to effective safeguards in the matter of the control of atomic weapons.

Stripped of Communist double-talk their position was and is that tensions can only be released through the Soviet brand of "peaceful coexistence" which would be based on a permanent enslavement of the satellite states of Eastern Europe, a united but Communist Germany, the breaking up of the North Atlantic Alliance and the system of western defenses.

If there were any so naive, in or out of government at home or abroad, as to have believed that the Communist leopard had changed its spots such thoughts should have been dispelled by the reported statements of Khrushchev made at the dinner given on September 17th to the East German Communist Premier Grotewohl. He said:

"Anybody who takes our smile for withdrawal from the teachings of Karl Marx or Lenin is making a mistake.

"Those who expect this will have to wait until Easter Monday falls on Tuesday."

At a Moscow gathering of the Kremlin heirarchy Soviet First Deputy Premier Kaganovich on November 6, 1955, said:

"If the 19th century was a century of capitalism, the 20th century is a century of the triumph of socialism and communism."

But perhaps the clearest expression of Soviet immorality in dealing with other nations was expressed by the late Joseph Stalin:

"A diplomat's words must have no relation to actions—otherwise what kind of diplomacy is it? Words are one thing, actions another. Good words are a mask for the concealment of bad deeds. Sincere diplomacy is no more possible than dry water or iron wood."

The test of the accuracy of the Stalin diplomatic doctrine is demonstrated by the broken treaties and subjugated nations along the periphery of the Soviet Union: Latvia, Lithuania, Estonia, Poland, Czechoslovakia, Hungary, Rumania, Bulgaria; all had to learn the hard way.

Do vodka toasts change these words and modify these facts? They do not.

When the free nations of the world retreat from principle and embrace a "package deal" on membership that a short time ago they designated as "unadulterated blackmail," is not our moral position greatly weakened?

When the Republic of China, now reduced to the island of Formosa, and the off-shore islands, is told that if they exercise their veto under the United Nations charter they will likely lose their own membership, is not the conscience of free men troubled?

When the international court has ruled that a "package deal" is a violation of the United Nations charter and the ruling is ignored, is this not nullification of judicial processes?

Is the United Nations now to be governed by expediency instead of principle? At San Francisco in 1945 it was agreed that only qualified nations which assumed the obligations under the charter were eligible to membership. At New York in 1955 governments frankly recognized to be without such qualifications were taken in at the adamant insistence of the Soviet Union.

The final test will come later this year, probably after our national elections, as various members connive to bring Communist China into that organization.

Munich should have taught the world that the road to appeasement is not the road to peace. It is only surrender on the installment plan.

Do not these events and contemplated actions bring to a focus the need for a reappraisal?

If it is not done by the executive department and the Congress it will be done on the Main Streets of America.

Can our economic system survive prolonged burdens of building a system of collective security and a system of neutralism at one and the same time?

If the neutralists are to receive the benefits and have none of the responsibilities of those in the collective defense system will not that act as an incentive plan to build up the fence sitters?

Certainly we should not endavor to remake the world in our political or economic image. We should recognize that neither personal nor international friendships can be purchased, they must be earned.

It is not and it should not be our policy to impinge upon the sovereignty of any nation. We do have a right and I believe a duty to point out as clearly as we can the dangers we believe are confronting free men everywhere.

We can and should point out that we and many of our associates have believed that our own survival and that of free men elsewhere depends upon an effective system of collective security. Whether or not any nation desires to join that system is for their government and their people to decide.

We could I believe properly point out that even the resources of this Nation are limited, that our people are bearing heavy burdens of debt and of taxes. We could point out that many worthwhile projects for the improvement of our own Nation have of necessity been held in abeyance because of the importance of helping rehabilitate the great damage and dislocation growing out of World War II.

We can and I believe should point out that in this country our growth and productivity has come because of the liberties guaranteed under our Constitution and our free economic system. American enterprise has supplied the taxes or the wages and dividends from which taxes are collected to carry in part the heavy burdens of the war and post-war period. The balance from deficit financing has added to the vast debt confronting ourselves and our children.

So that our own people and our friends abroad may understand the magnitude of this debt the following should be noted:

1. With principal payments of $1 billion a year (which was the total cost of all activities of the Federal Government in 1913) it would take 280 years to retire the national debt.

2. If we had started January 1, 1956, paying off on the debt at the rate of $1 million a day it would be the year 2725 before the last payment would be made. (A total of 769 years.)

We could and should point out I believe that in the event of disaster or famine our people, in the future as they have in the past, will generously respond to the relief of human distress and that in this aid there will be no political commitments expected or required of the nations and people we would be helping.

We can and we should point out I believe that we are prepared to help furnish, where requested, technical advice in the fields of public health, agriculture, education, or industry to help other free nations of the world in meeting their problems in these and similar fields.

We can also, I believe, point out that if the economic and political climate is made encouraging there is substantial private capital in this and other nations of the world that could help develop the natural resources, the transportation systems, and the industry of such countries as such investments helped to develop ours.

In this atomic and airplane age in which we now live this Nation can no more return to isolation than an adult can return to childhood.

An effective system of collective security will have to be created and maintained as long as the menace of aggressive communism continues.

In helping our associates who have demonstrated a willingness to do their utmost to help themselves, we will have substantial burdens. Within the policy of building an effective collective defense the President should have some flexibility in the allocation of funds appropriated by Congress.

But is it wise to continue to pour out billions of dollars of additional American aid over a prolonged period of time to nations:

1. That assume no collective security obligations for the preservation of human freedom, but desire to get all the advantages furnished by such a system on a free-ride basis?

2. That have made no reasonable effort to attract private capital to help develop their resources?

3. Whose leaders use their efforts to travel about the world attempting to seduce nations away from collective security into neutralism when such efforts coincide with present Soviet strategy?

As to the latter I recognize a sovereign right of any government or any people to choose the road of Fabian or Marxian socialism if that be their free choice. I question their right to expect or to get long-term government to government grants and loans which keep adding debt and tax burdens to the American free-enterprise camel to the point where its back is broken.

Every responsible man and woman at home and abroad must recognize that if the United States could be destroyed or impoverished by overt aggression from without, by political subversion from within, or by economic collapse, we would likely take the whole free world down with us.

There would then be no oasis of freedom to which those already enslaved might look for hope and there would be no international cornucopia upon which we might call for our own rehabilitation.

On these and other issues confronting us, men in and out of Government may honestly differ. In a free society there is room for such differences and there are certainly no pat solutions for the complex foreign and domestic problems that confront us.

But likewise in a free society it is important that these matters be brought into the open and that they be discussed.

It is my firm belief that if we win the cold war we can prevent a hot war from developing. I believe that this can best be done from a position of strength.

It is not now nor has it ever been my belief that we should have a "get tough policy."

On matters of principle I believe that we should be firm and should not yield principle for expediency. In the working out of the negotiable issues I think we should be reasonable in our attitudes and recognize that conditions change in the world and a policy which was wise 5 years ago or 1 year ago may need modification today.

But I do not believe that we should ever feel it necessary to apologize for either our political system or the economic system which has enabled this Nation to grow from a small colony of 3 million on the Atlantic seaboard to a great nation of 165 million, the most productive the world has ever known.

It is my personal belief that we would command more respect from our allies, from the neutrals, and from our potential enemies if we insisted on a fair quid pro quo for agreements entered into. We should stress the point that an alliance is of little value unless the other party has as much obligation to come to our defense in case of attack as we have to go to theirs.

As a Senator of the United States, as well as an American citizen, I have a deep conviction that if we of this generation will use the same courage and commonsense that motivated the men who sat at Philadelphia and under what I believe was divine inspiration, gave us first our Declaration of Independence and later our Constitution of the United States, there are none of our great domestic problems which we as a free society cannot solve and there is no foreign foe we need ever fear.

The Air Force and the Defense of the United States

EXTENSION OF REMARKS
OF
HON. ROBERT S. KERR
OF OKLAHOMA
IN THE SENATE OF THE UNITED STATES

Tuesday, January 17, 1956

Mr. KERR. Mr. President, on Friday, January 13, Gen. Nathan F. Twining, Chief of Staff of the United States Air Force, delivered an important and informative address in Oklahoma City to the Oklahoma City Chamber of Commerce. Because of its real value and interest, I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY GEN. NATHAN F. TWINING, CHIEF OF STAFF, UNITED STATES AIR FORCE, BEFORE THE OKLAHOMA CITY CHAMBER OF COMMERCE, OKLAHOMA CITY, OKLA., JANUARY 13, 1956

As I flew out here from Washington yesterday, I remembered what your beloved Will Rogers once said about Oklahoma. He said: "Oklahoma is so far away that a politician can't pay his way that far. Nobody can afford the trip but a statesman, and the road from town out is so bad that even he will get discouraged before he gets there, and turn around and go back."

He said that before the air age was well started, but by the time his career was ended he was an air enthusiast. As the airlines multipled, Will Rogers became their No. 1 passenger. However, farsighted as he was, he would be surprised at Oklahoma today.

Few places in the United States have developed so fast. Less than 70 years ago, this array of tall buildings, factories, and oil wells was only a level plain covered with wildflowers. It seems incredible that in one lifetime, a city like this could grow from the wilderness.

I guess the answer is that the men out here are powerful men and they are in a hurry.

I might add that when the powerful men of Oklahoma are after something, they let nothing distract or lull them, not even the strong scent of orange blossoms.

Watching that wonderful Orange Bowl game last week, I decided I had never seen a better exhibition of power and speed in any football stadium. I wish I had every one of those boys in the Air Force. I know you are proud of them.

You also have reason to be proud of the men who represent you in the United States Congress. These men have demonstrated clear thinking and farsightedness by their appreciation and understanding of aviation and our national air power.

Your senior Senator, ROBERT S. KERR, has long been an air power advocate. He was among the first to realize the potentialities of American air power for the defense of our Nation.

Senator MIKE MONRONEY has become exceptionally well-known for his interest in aviation, particularly civil aviation matters. He has repeatedly held up American aviation as a symbol of progress and has pleaded the case for better airports, for better weather reporting, and for increased prestige of civil aviation.

I am also happy to say that Representative JOHN JARMAN, from your district, is a spirited advocate of airpower.

It is natural that Oklahoma be identified with aviation. Distances out here are vast and the airplane offers the quickest way of

covering long distances. Then too, you have good flying weather—about 328 clear days a year. Both your geography and your climate favor aviation.

Fully as important as those advantages is Oklahoma oil. Oklahoma and the United States Air Force complement each other in the oil business. The Air Force is the greatest single consumer of gasoline in the Nation. We use about 110 million barrels of fuel annually. You can see that the Air Force and the Nation's defense would be in a bad way if we were suddenly denied Oklahoma's great wealth of oil.

Perhaps the greatest spur to the growth of and interest in aviation here is the people of Oklahoma. Recently I was impressed with Governor Gary's comment on Oklahoma's rapid expansion. He said:

"The attitude of the people in our communities is proving perhaps our greatest asset in dealing with industrialists. I always ask our new businessmen why they came to Oklahoma. Sometimes they point to the tax, climate, nearness of certain resources, or available power, but most of them say it's because of the people.

" 'The people of Oklahoma acted like they wanted us here,' one manufacturer told me. 'They invited us in and completely sold themselves.' "

That is one of the finest tributes that could be paid Oklahomans.

Believe me, this hospitality is not confined to incoming manufacturers. In no other place has the Air Force been made to feel more welcome. As a result we have four fine Air Force bases here: Altus Air Force Base where our medium bombers fly, at Ardmore there is a troop-carrier base, and at Vance Air Force Base our flying cadets are trained.

Of course you are most familiar with Tinker Air Force Base. It is the Air Materiel Command headquarters for 11 States, and it is the most modern and largest air depot in the world. That Tinker has grown to its present importance and size is directly due to your hospitality and generosity.

At the present time, of the 2,700 acres of Tinker Air Force Base, over one-half has been purchased by this fine Oklahoma City Chamber of Commerce. Even now Tinker is being enlarged by another 638 acres which, again, is being donated by you. This will provide a great degree of protection and flexibility that the air base needs for its ever-growing mission.

In addition to furnishing the supply and maintenance for an 11-State area, Tinker has recently assumed new importance. It is now the home of the 506th Strategic Fighter Wing. One of the 506th squadron commanders said that the community welcome had made all his men happy to be here. He described the housing that was offered at reasonable rents, and the help offered by the local merchants and banks. He told of the advantages of the recently completed, long runway in training new pilots and in reducing the chance of accidents.

You can be proud of this fighter wing. It is an important part of our Strategic Air Command and it also has the capability to bolster the air defense of this important industrial area and population center.

In this connection, your 185th Fighter Interceptor Squadron of the Air National Guard, based at Will Rogers Field, would also be an important part of your defense in case of attack.

Another key link in our defenses is the Oklahoma City Air Defense Filter Center. Your local volunteer ground observers keep this center posted on all aircraft in the area and are an important part of our warning net. They all are doing a wonderful job, but they are shorthanded. I am told that about 1,500 additional volunteers are needed for this part of our country's defense. I hope that the air minded and defense-minded men and women in this community will respond to this need.

Oklahoma's interest in the Nation's defense is not new. But the Nation's interest in the defense of Oklahoma is new. In many ways the position of Oklahoma in the United States is similar to the position of the United States in the world. In the United States, Oklahoma is known as the "last American frontier" and its resources and its people have made it one of our powerful States. The United States is the world's newest powerful Nation.

The United States has done much for the free world. It has supplied strong leaders and it has given the nations of the free world much of the military means they use to protect their freedom. Again Oklahoma is similar. It has provided outstanding men who have helped lead the Nation in times of crisis, and its oil fields and factories have contributed much to the defense of the Nation.

In a world endangered by aggression, the United States and Oklahoma share a third characteristic. For many years, in fact since the War of 1812, the United States has been secure from invasion. The vast waters of the Atlantic and Pacific have protected our shores against armed forces of our enemies. Our Army and our Navy, our Allies, and those seas formed a bulwark which no aggressor however desperate attempted to penetrate. But even if our coastal States could have been invaded, Oklahoma had nothing to worry about. For it was in the center of the United States, protected on all sides. Just as the United States was protected by its geographical location, so was Oklahoma protected.

Airpower changed all this. Airpower has erased the protection offered by the traditional barriers and traditional forces. The United States now lies exposed upon the surface of the earth, vulnerable to an attack which could come suddenly and with little warning. Oklahoma has lost the safety of its position and it is just as exposed to attack as any other part of the United States. Indeed, your industrial centers, airpower centers, and oil fields would be tempting targets. So, although Oklahoma was our last frontier, it is again a frontier, and so is every other State in the Union. And the frontier which we must defend today lies neither to the east nor west but directly above us.

The people of Oklahoma have an important advantage today in understanding the realities of modern defense. Oklahoma has never been the scene of a large scale land battle, and being far from the coast, Oklahoma has had little concern with naval matters. Therefore the people of Oklahoma have fewer built-in or traditional attachments for the historical forms of military defense.

Furthermore, men who are applying new and dynamic ideas to their daily living are likely to find it easier to accept new and dynamic ways of defending our Nation.

Thus I need not elaborate upon the one main reason why this Nation is not at war, or why our allies have not been attacked. It is not our traditional forms of military power that have held the Reds in check. The Soviets have overwhelming strength on the ground. In size the armies of the free world are mere outposts by comparison. The Soviets need not fear our strength at sea, for they are not dependent upon using the seas.

The Soviets fear our power in the air, and airpower has been the main reason for our peace and safety so far. It is airpower that gives us and our allies the best chance for staying safe in the future.

There are those who resist acceptance of the Air Force's leading role in the deterrence of war. They point to the fact that airpower did not stop the Communist invasion of North Korea nor the defeat of the French at Dien Bien Phu.

I cannot argue with those observations. In fact I can add more along the same line. Airpower did not stop the riots in Cyprus, the skirmishes between Israel and Egypt, the bloodshed in Morocco and Algeria and the sporadic artillery duels on Quemoy and Matsu.

I could list a hundred other undesirable events that airpower has not prevented, but all of this does not detract from the one all-important fact: Our American airpower has kept the one great potential enemy from attacking us. That has been and will be the real danger to us here at home.

I think a few phrases from President Eisenhower's state of the Union message delivered last week will point up the effect of airpower on the world situation. He said:

"Yet Communist tactics against the free nations have shifted in emphasis from reliance on violence and the threat of violence to reliance on division, enticement and duplicity."

It seems that the Communists may finally be realizing what the people of America have known all along, and which was said so well once by Will Roegrs:

"Wars strike me as being the only game in the world where there is absolutely no winner—everybody loses."

It is important for us to remember that the Communists will abide by this lesson only so long as we make it crystal clear to them that they would be the heavy losers in any war.

To do this we must keep our airpower so strong and ready that it can survive any desperate attack and hit back with devastating and crippling blows.

We now have this strength and capability, but to maintain it we cannot stand still. The Soviets are working hard on their Red air force and it is getting bigger and better all the time.

The growing numbers of modern airplanes in the already huge Red airforce gives us cause for concern, but numbers alone are not the prime worry. After all, the Soviet Air Force has had thousands more combat planes than we for many years.

Our main cause for concern is the rapidly improving quality of the Communist air force. It is in quality that we have maintained our lead in the air and our ability to deter war. Quality of airplanes and weapons, quality of bases and equipment, quality of men and training—these have been our margin of superiority.

We are not in an arms race in the traditional sense. It has become a race for quality—for better, more effective weapons. Today we are in a good position in this race. Our position tomorrow depends on what we are doing now.

In this race for technical superiority, there is a Soviet achievement that should concern us fully as much as their Bison and Badger jet bombers of 1956.

They are outstripping us in the education of scientists and engineers. It is no secret that during 1954, Russian schools graduated more than 50,000 engineers while the universities of America graduated only 20,000. This is fewer than half the number our Nation's industrial establishments and defense departments need.

This year Russia will graduate 120,000 new scientists and engineers of all types, which will compare to our total of 70,000. As we have slipped into low gear in turning out chemists and physicists, the Russian educational system has moved firmly into high gear.

Years ago it was said that the Battle of Waterloo was won on the playing fields of Eton. Let us hope it can never be said that the battle for the free world was lost in the classrooms of American high schools and colleges. We must hold our leadership in

research, engineering, and scientific discovery.

The young men and women in our high schools and colleges today are the ones we will have to depend on to keep the free world safe. It is they who must provide us with superior weapons of defense.

We must all make an effort to guide more of our young people into scientific and technical careers. In these fields they can find fruitful careers. They can contribute to our peacetime progress, but more important—they can insure our survival and our freedom. I know of no element of strength we need more.

For this reason, we are deeply interested in your latest, and perhaps, your greatest project here in Oklahoma. I refer, of course, to your frontiers of science program.

In a way, this program is as much of a pioneering effort as was the great land rush here, which led to the development of America's last great land frontier.

Your program of scientific information—scientific education, and scientific installations in Oklahoma is an inspiring example. It reflects great credit on your leaders in business and industry who are united behind this constructive project. I hope that other areas will follow Oklahoma leadership in this field.

Now before I sit down, I want to add one more thing. My job as a military officer is primarily concerned with the defense of the United States. This kind of a job has many frustrations, especially, it seems, in Washington.

But the job also has its rewards, and one of the finest rewards, I think, is the chance to leave Washington and visit places like Oklahoma City. The things I have seen here, at Tinker and in town, yesterday and today, are the products of dynamic, unbeatable people, and more significantly, of a free people. You are proud of your beautiful buildings, your factories, and your oil wells. But there is something else out here that should make us all even prouder. That is your spirit. This spirit is our biggest margin of superiority and it makes me certain that the captive people of Communist nations can never equal us, if we remain determined to stay ahead.

I have certainly enjoyed being here and I hope you will ask me back again.

The Administration's School Construction Bill

EXTENSION OF REMARKS
OF
HON. H. ALEXANDER SMITH
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Tuesday, January 17, 1956

Mr. SMITH of New Jersey. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD three editorials praising the President's education message, and praising in particular the administration's school construction bill, which I had the honor of introducing last Thursday.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Christian Science Monitor of January 13, 1956]

SCHOOL AID—A REALISTIC PROGRAM

In his message of a year ago, on Federal aid to public schools, the President put first emphasis on extending Federal credit to local school districts—to guarantee a cooperating Federal-State market for school construction bonds. For direct grants he asked of Congress less than one-third the amount he requested for the bond purchase authorization.

This emphasis had the great merit of demanding a maximum of local initiative and resources. But it met a storm of opposition, not all of it by any means from politicians merely interested in cutting a cash melon for their constituencies. Many, including school people, felt the need for facilities was so urgent and the legal and other obstacles to the bond idea so formidable that aid would come too late to forestall chaos. Others feared that Federal control might follow Federal holding of the credit strings.

The administration undoubtedly listened to these protests. And the President called the recent White House Conference on Education to advise him on this and other questions. When that group also stressed the urgency of direct aid, the President, as evidenced in the message just delivered, reversed his stand on financing although not his conviction that schools are primarily a local responsibility.

He asks for $1,250,000,000 to be spent on a State-matching basis over a 5-year program as direct grants for construction. He requests $750,000,000 (the same as last year) to establish a guaranteed market for local school building bonds and to set up reserves for State financing agencies. And he asks $20 million to help States overcome legal and other obstacles to local programs.

Perhaps the greatest danger confronting any such program of Federal aid is political pressure for a share for everyone. A flat grant all around, it was pointed out on this page recently, would mean raising four times the money for needs of the poorer States because three-fourths of it would have to be distributed among States with ample income.

Mr. Eisenhower has outlined a formula which would take account of each State's (and school district's) need, its resources, and its efforts. He has countered the fear of Federal control by limiting his program to construction only and to a 5-year period. He has contrived to insure the most in local endeavor by requiring States to match Federal graints and by proposing to penalize States whose efforts lag behind their abilities.

The message also expressed the administration's interest in research, in adequate rewards for teachers, and in higher education. The President hinted at no action in these fields other than a promise to appoint a prestige commission to study the particular problems of the colleges. The contribution the White House thus can make by way of public opinion toward desirable solutions should not be discounted.

Taken altogether and in parts, the President has charted a realistic and a sound program. It is up to Congress now—and to the people who put Congressmen where they are—to handle as nonpolitically as possible a nonpolitical program.

[From the New York Herald Tribune of January 13, 1956]

THE PRESIDENT'S LIBERAL SCHOOL PROGRAM

An expanded and improved program for Federal help in eliminating the dire shortage of school classrooms was sent to Congress by President Eisenhower yesterday. Congress will be inexcusably remiss if it lets this program get bogged down, with no affirmative action taken, as it did the President's program of last February.

The program of a year ago was avowedly an emergency one. It was subject to revision in the light of the nationwide educational conferences which had been authorized in the previous year on President Eisenhower's recommendation. Four thousand such conferences, local and State, were held in 1955, culminating last November in the White House Conference on Education. Many persons had the opportunity to air their ideas. Equally important, in the words of the President: "The work of the conferences has aroused the Nation. * * * The status of American education—where it is, the future of American education, where it should and can go—have been illuminated as never before."

The aroused public interest in the schools already has had beneficial effect. Construction of schoolrooms rose from an average of 60,000 to 66,000 rooms a year. This is good, but far from enough. Fifty thousand new classrooms a year are needed just to keep up with the new faces that appear at the doors. And we still have a deficit of some 300,000 classrooms, mainly inherited from the war years in which schools were not built. Nearly a million American children are being deprived of full educational opportunities, most of them attending school in shifts.

Two main revisions mark the new liberal administration program for Federal aid in the construction of schools. One is the amount of money involved. The proposal last year was for grants, on a matching basis, of $66.6 million a year over 3 years. Now the proposal contemplates $250 million annually for 5 years. The yearly sum would be increased almost 4 times, and the total sum 6 times.

The second revision makes more flexible the system of allocating the grants. Last year's program was criticized as requiring a community to prove itself on the verge of bankruptcy to obtain Federal school-construction help. This year the administration has laid down principles which are progressive and in keeping with the times. Larger amounts a school-age child would be allotted to States with lower income a child. As the States distribute the Federal funds, the highest priority would be given to school districts with the least economic ability to meet their needs. States which are prosperous enough to do better by their schools than they do would be spurred by finding their Federal grants reduced.

This year's administration program retains basic features of last year's. The Federal Government would buy up $750 million worth of local school construction bonds when school districts cannot sell them at reasonable interest rates in private markets. The Federal Government also would help underwrite bonds issued by State school agencies financing local construction. These are loan provisions as contrasted with grants.

The President did not confine himself to primary and secondary education. "The tide of increasing school enrollment will soon reach higher educational institutions," he said. "Within 10 years we may expect three students in our colleges and universities for every two who are there now." Therefore, he promised to appoint a distinguished group of educators and citizens to encourage active and systematic attack on all the problems of education beyond high school.

True responsibility for construction of, aid control of our schools still rests with the States and communities, in the President's view. He believes that his program of Federal aid should overcome the Nation's critical classroom shortage within 5 years. Once this shortage is overcome, the Federal grant program can and must terminate.

The President has shown the way, and it is now up to Republicans and Democrats alike to follow his lead. It is particularly important for the Republicans to establish a constructive voting record on this forward-looking measure. The need is great; it is national, and for the sake of America's children it demands a national solution.

[From the New York Times of January 13, 1956]

AID TO EDUCATION

President Eisenhower's revised proposal for Federal aid to school construction is in our opinion more realistic than the one he put forward 11 months ago, while still retaining much of the basic philosophy.

The President reiterates his belief, which we share, that fundamental "responsibility for public education rests with the States and the local communities." But he agrees that the Federal Government "can and should help with certain problems of nationwide scope and concern when States and communities—acting independently—cannot solve the full problem or solve it rapidly enough."

The crisis of the public schools presents just such a problem, created partially by curtailment of school construction during the war and partly by the sudden and enormous growth of the school-age population since then. Education in this country is literally in a state of emergency, and to the degree that the States and localities cannot meet that emergency the Federal Government must step in, if only on a temporary basis. Federal aid to the schools is not a gift to anybody. It simply represents a redistribution of tax burdens and receipts, but a redistribution necessitated by the national obligation to see that every child, no matter where he lives, has adequate school facilities.

We doubt very much that the President's plan, improvement though it is over the one of a year ago, can fully accomplish that end despite his expressed optimism that it will enable States and communities "to meet their current and future needs" for classroom construction. The needs are so great that even the increase of more than a billion dollars in grants over last year's administration proposal cannot provide all of the solution; but, limited though it is to construction costs, it should certainly provide a stimulus to further State and local activity. The grants would be made on a matching basis, which we think is essential in order to assure a maximum of local participation, and on a formula that would give to the poorer States relatively larger amounts than the wealthier States.

We think that this affords a more equable method of distribution than the principle—embodied in the House Labor Committee's bill granting $1.6 billions to the States over a 4-year period—under which school-aid funds would be apportioned simply according to the number of school-age children, irrespective of the States' financial condition. The President further proposes to penalize "those few States which are noticeably lagging, behind their ability, to support their public schools." We are all for this idea, too, but just how it can be worked out presents quite a problem.

In addition to his proposals for greatly increased grants-in-aid, the President renews his suggestions of last year for bolstering the credit of school districts by the purchase of $750 millions in local school bonds if they cannot be disposed of "at reasonable interest rates" and promoting a lease-purchase plan of school construction by State agencies. The President stresses his belief that once the classroom shortage is overcome "the Federal grant program can and must terminate." While we doubt that the termination will come as quickly as the President seems to hope, the mere existence of such a program as he puts forward should give great impetus to States and communities that may have been dragging their feet while waiting to see what the Federal Government will do to help them. But to acomplish this end Congress must take up the President's proposals with reasonable speed, improve them if it can, and act on them.

What everyone interested in the welfare of the Nation's schools and school children must fervently hope is that Congress will not become bogged down in fruitless arguments over irrelevant issues that can only block progress on a school-aid bill, as progress has been repeatedly blocked in the past.

Appoint a Special Counsel To Expose the Dixon-Yates Scandal

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1956

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I enclose herewith an editorial from the St. Louis Post-Dispatch, St. Louis, Mo., of January 11, 1956, entitled "Coolidge Did It."

In substance the editorial deals with the proposed appointment of a special counsel to help defend the Government's interest in the $3,500,000 Dixon-Yates damage suit. The editorial points out that a special counsel is crucial to making the Government's case a real defense and an exposure of the complete history of Dixon-Yates.

The editorial follows:

COOLIDGE DID IT

Appointment of special counsel to help defend the Government in the $3,500,000 Dixon-Yates damage suit is clearly desirable. It is needed to make sure the defense is a strong one. It is needed to bring out the facts that are still hidden. The designation of a special counsel is therefore being urged very sensibly by Senators KEFAUVER, of Tennesee, O'MAHONEY, of Wyoming, and ANDERSON, of New Mexico.

Both Attorney General Brownell and General Counsel William Mitchell of the Atomic Energy Commission have to a considerable extent compromised themselves as counsel for the defense, yet they head that counsel. Both were "interested parties" in negotiation of the now-repudiated contract, as Senator KEFAUVER notes.

Both have given legal opinions defending the validity of the contract—in other words, taking the side of the plaintiffs from whom they now propose to defend the Government. Mr. Mitchell's testimony in this regard was so spineless that Senator ANDERSON, chairman of the Senate-House Committee on Atomic Energy, told him he had "given up before the other side presented its case—lain down, rolled over, and was playing dead."

Many of the salient facts about Dixon-Yates may never be known if they are not brought out at the trial of the damage suit. A leading commentator as friendly to the Eisenhower administration as Arthur Krock of the New York Times has welcomed the suit for that very reason. Mr. Krock hopes, as we do, that the trial will bring out the answers to these and other still-unanswered questions:

Who ordered the name of Adolphe H. Wenzell, the New York investment banker, removed from the Bureau of the Budget's complete history of Dixon-Yates? Who advised the President that the AEC in particular, among all the agencies of Government, should make the contract? Who advised the President to "instruct" an agency which Congress had created independent?

How did the Budget Bureau ever explain to the President AEC Chairman Strauss's statement that he did not know of Wenzell's connection with the New York investment house until it was disclosed in the Senate? Did the President reprimand any members of his administration for the many blunders committed in the Dixon-Yates case, and, if so, whom?

These answers have not been forthcoming in congressional investigations because Admiral Strauss and Budget Director Hughes have declined to tell what went on in the executive branch and Presidential Assistant Sherman Adams has refused to testify at all.

The answers will not come out at the trial in response to powder-puff examination of witnesses, the sort of examination which lawyers reluctant to act, partisan to the administration, and themselves involved in Dixon-Yates debacle, could only be expected to make. What is called for is hard-hitting, searching, relentless examination, the kind that may be expected of an able special counsel with no purpose in mind except to put up the strongest possible defense.

The special counsel the three Senators propose is therefore crucial to making the Government's case, not a shadow-boxing and white-washing, but a real defense and an exposure, at interminably long last, of the complete history of Dixon-Yates.

President Eisenhower will find a constructive precedent for this in the administration of one of his recent Republican predecessors. That was when President Coolidge appointed two outstanding lawyers, Republican Owen J. Roberts and Democrat Atlee Pomerene, to investigate and prosecute the Teapot Dome oil scandals.

Address of Col. John J. Griffin, Vice President, First National Bank in St. Louis, to Christopher Council of Knights of Columbus, Christopher, Ill.

EXTENSION OF REMARKS
OF
HON. KENNETH J. GRAY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 9, 1956

Mr. GRAY. Mr. Speaker, the Christopher, Ill., Knights of Columbus held their annual banquet on December 11, 1955, and was fortunate in having Col. John J. Griffin, vice president of the First National Bank of St. Louis, Mo., as their principal speaker. He delivered such an inspiring and challenging message that I include the remarks in the RECORD.

I am very happy at the opportunity of again visiting Christopher in an official capacity, although I have been here many times unofficially. So when Mike Gaertner called and invited me to be the speaker at this, your anniversary banquet, I was very happy and pleased to accept.

Mike told me I was to choose my own subject, but there are so many things I could talk to you about in these days and times that I would have been much pleased to have been assigned a subject.

There is no use in making a speech today to draw a word picture or assemble an oration of euphonious sounds, all of which mean nothing. Although one is attempted at times to do it, nevertheless, it accomplishes very little.

I could make a wonderful flowery speech on the history, activities and the works of the Knights of Columbus, their glorious war history, the advantages of their insurance program, the job they have done in Rome, the photographing of the papal documents,

but these are all matters that you know about and are acquainted with, or if you are not acquainted with them, you should be. Therefore, it would be useless for me to discuss the Order with you.

It is my belief that in these days of unrest, this era of insecurity, this day of the cold war, that any time a group of Americans gather in a meeting, we should discuss seriously the duties and obligations we owe our Government in the preservation of the principles and ideals that we seem to enjoy so fully and value so lightly.

I can remember when I traveled this whole territory, discussing the Ku Klux Klan, urging every right-minded citizen down here, the need and necessity of driving that type and kind of thinking out of the minds and hearts of our people, that it was un-American and had no place in our American way of life, and that those who were promoting it were doing it for selfish, greedy purposes. In my opinion, it was the forerunner of the Hitler Black Shirts and our now present Communist threat.

In those days, when I was coming through your territory, discussing the Klan, it was not a very healthy thing to do at that time because so many of our citizens, our good men, were misled, listening and following the advice of false leaders. They believed at least, that they were performing a patriotic duty. We can be charitable enough to say they believed that. But like bad dreams, the era of the Ku Klux Klan has passed into an unsavory and unpleasant part of our history. Again, as soon as the real American people became acquainted with the truth and the facts, their good commonsense took care of the situation.

I could discuss with you tonight how I came through your territory discussing nazism, Hitler, and these un-American activities. That again, fooled the American people, lulled them into a sleep of security with a false belief that in promoting the welfare of this godless demagog they were promoting the welfare of America, deluded with the idea they were performing a patriotic service. I could go back into my files and pick out many of the speeches I made at that time and by changing a few words and phrases here and there, these speeches would be applicable today. But again nazism, Hitler's lieutenants and the Black Shirts have been erased from the American front and are now added to that unpleasant deplorable history that has and does on occasion arise to create a little flurry in America and darken the brightness of the resplendent pages of its history. This movement was taken care of by the good commonsense of the American people just as soon as they become acquainted with and knew the truth and the facts, they immediately struck it into oblivion.

The leaders of the Ku Klux Klan and the leaders of the Nazi movement were infants in comparison with the intelligent program of divide and conquer so as to destroy that is being carried on in America today by the Communist Party, directed and controlled direct from Moscow through its subversive agents planted in America. These men who have no allegiance to or love for anything that America stands for, they are devoted to, associated with, pledged to and are disciples of the Kremlin. They are educated by the Lenin Institution at Moscow and are carrying on a very intelligent, insidious program. It almost seems as though it is a satanic campaign from the depths of hell to bring about the destruction of America. The unfortunate thing about the situation is that again our American people in too many numbers to be comfortable have joined the ranks of and are following false leaders—men who have no love for America and have no respect for anything it stands for; men who are here to create dissension among our people to divide and conquer them; men who are here to fulfill the gospel of the Kremlin, which is to create a Soviet Union of the world with Moscow as its capital.

I know now many of our citizens are going to just shrug this off; they will say the same thing that many said when I was attacking the Klan, that I didn't know what I was talking about; that I was trying to inject Catholic principles into public life. I know, many will shrug it off and are going to say just exactly what was said when I was discussing the dangers of the nazism and Hitler elements, that I was opposed to the German people and I was promoting the welfare of the Catholic Church. But, of course, in both the above instances, time and history proved that everything I said and predicted was correct. The only people in those days who were concerned about what I was saying were the Ku Klux Klan and the Nazis, who attempted on several occasions to run me out of the country.

Today, the situation is about the same. During World War II when I was discussing and fighting communism and everything it stands for, they appointed a committee in 1946 to kill me because I was interfering with their program. In other words, I was telling people the truth, although the people would not believe it. Back in those days, I was a very unpopular individual with many patriotic citizens, because they believed I should not be discussing communism and what it stands for when Russia was our Ally in the war. The Communists knew the damage I was doing, apparently, to the extent of the usual Communist method of eliminating those who get in their way, but our smug American complacency couldn't see it.

I could go back into some of my old files and dig out speeches I made before VE-day and before V–J Day, days in which I warned the American people of the dangers that were ours, calling their attention to the fact we were nursing a viper to our breast, when we opened our arms and took the Communist government into them and welcomed them as brothers. I can recall talking to the American public wherever I could get them to listen, advising them if I were an official in this Government, I would call Russia in and flatly and pointedly lay down the rules that we were operating under; I would advise them we were going through with this program and if they were not pleased or happy about it, to retire back behind their borders as we did not need them. Let us not forget that our Russian friends (as they were called in those days) did not enter into or come over on our side until they were positive and sure they were on the losing side. They then abandoned Hitler and came over with us. Let us not forget they did not enter into the Japanese war until it was ended. We certainly didn't need them. Their entry into both wars was for the preservation of their own hides. They came in and walked off with the loot, stripped the country of anything that was of any value, took it back home.

Now today, again, we are entering into another phase and a different phase of communism. Sometimes as you look and see what is going on, it almost reminds you of Chamberlain fluttering back and forth to Hitler—Chamberlain and his umbrella—his program of appeasement, a program of brotherly love, a program of give them everything they ask for, a program of signing away the liberty, hearts and souls of free independent people, a program of materialistic age; furnish them with all the sinews of war that possibly could be furnished for the money they had to pay. Then, when the day of awakening came and what a rude awakening it was, as they showered down upon England death and destruction. Everything that fell thereon—bore an English trademark. Are we doing that today?

The new Russian cold war program today is taking on a pleasant atmosphere and we are becoming so indifferent and careless as to the security of this Nation that we are gladly accepting this new program; we are proclaiming to the world how happy we are that the Kremlin are now our brothers; they are friendly to us; they smile when they meet us; they stick out their hands and shake hands with us when they greet us; they give dinners and banquets for us; they send their representatives to America in order that they might see how their great American brothers conduct their domestic affairs. How stupid can we get? If we do not know from our own intelligence and training, then we should look into the past and become aware of the fact that you cannot buy loyalty; you cannot purchase security; you cannot hire or employ the support of other people because we are looking at things and dealing with things, judging results from their materialistic point of view. When the Russian delegates and the Russian representatives meet us with a smile, let us not forget what is concealed behind that hypocritical smiling mask; let us not forget that it is the program of destroy the free world; let us not forget that behind it lies a complete plan and program to take over America without firing a shot, without disturbing a pot on a stove or a car in a garage.

When they wine and dine us, let us not forget that behind that wining and dining is the thought and the program that we are a decadant Nation and the wining and dining they are going on with is a part of their program to divide and conquer, and as they slowly await, like a vulture, for us to become weak enough so they can take over under the schedule they have outlined, the program their agents are so intelligently carrying on in America.

When they reach out their hands in friendship—what hypocrisy there is behind that movement. How can we reach for and shake the hand that not only has in the past but is every day being dyed crimson anew with the blood of free people? Let us not forget that; let us not forget the only reason our blood hasn't dyed those hands crimson is they have other plans for us at this time or they consider the time is not ripe.

We find many, far too many in America, promoting the idea that Communism is a type and kind of government we should have. When we find our misguided citizens following again in the footsteps of false leaders, let us ask them if they are willing to go to Russia to live; let us ask them if they are willing to forget the millions of people who are behind the Iron Curtain with the leg irons of slavery fastened to their ankles. Let us ask them if they are willing to forget the thousands upon thousands of people who are still in slave labor or in concentration camps, many of them our own citizens, many of them our own servicemen. Let us ask them if they are willing to forget the trenches and the ditches behind the Iron Curtain filled with the last mortal remains of men and women, who would rather die free than live in slavery. Let us ask them if they are willing to forget the thousands upon thousands of children whose innocent blood was spilled as the Russian hordes turned loose their savage, relentless, ruthless power of government on an innocent people. Let us ask them if they ever stop to realize it can happen here, and unless our American people awake to the responsibilities that are theirs, meet these responsibilities and perform the duties necessary and essential in keeping with these responsibilities, it will happen here.

Let us, (I mean you, I, and everyone worthy of the proud title "American") accept our place on the firing line of civic responsibility, take our place in the trenches of

security with the fixed and firm determination to preserve this Nation in its entirety.

Let us beware of false leaders, keep before us the constant vision of what happened to others who have let down these safeguards. Let us talk to the Kremlin in the only kind of language the Kremlin understands, a language that has behind it the force and power of a free nation, plus the faith of a free people, a people determined that no power upon the face of the globe shall ever deprive us of that freedom. Let them know that we are talking softly or walking softly, but to not be misled because we can tread heavy and use a big stick if necessary and we will do so.

Let us return the minds and the hearts of the American people to God and the things that are God's. Let us not only be preachers of the gospel to render unto God the things that are God's and to Caesar, the things that are Caesar's, but let us live that gospel. Make a promise to yourself on this, the first anniversary of the founding of your council, that you are hereby renewing your determination to carry on for God and country. If we do that, I am sure we will set the example for the world as they come to a realization that it is not the steel and concrete in the buildings, the bathtubs, telephones, televisions, radios, automobiles, that have made America great or that will keep it great, but the thing that has made America great, and will keep America great is the faith of its people.

Let us stop quarreling among ourselves and unite at a time this Nation sorely needs it, as we have never been united before with a full determination and a positive faith that as soldiers in the army of the Heavenly Father and with He as our leader, our Commander in Chief, His commands shall be obeyed. If we do that, we shall live to see the day when communism after it has done its damage, after it has spread its poisonous virus in the bloodstreams of our people, will become like the Ku Klux Klan and nazism—just another dark page in our glorious history. It will pass out of existence if and only if, the American people renew within their hearts their allegiance to God and country, if they get down upon their knees and acknowledge their dependency upon God and the things God stands for. Then and only then, will we have peace in the world.

If we want to keep that peace in the world, the duties and responsibilities rest fairly and squarely upon you. By you—I mean each one of you individually.

Have you ever thought of the responsibility the future imposes upon you? Let us just take it for the next 10 years. Shall 1965 be a year in which the people are living under God, law, and order, or shall it be one in which confusion, distrust, hatreds, cold wars shall continue. It has been estimated that by 1965 there will be a population in excess of 200 million in America; there will be an excess of 60 million pupils of school age; more than 80 million people employed; for your benefit or destruction, depending upon how you conduct yourself, there will be in the United States 50 million or more television sets. Just look at these 10 years. Will you have done your part in that time to build them solidly, soundly, and morally in their program toward God, or will you by indifference and neglect allow them, as they are today, to drift further and further away from God and the moral laws of His teaching?

If freedom is to endure, what type and kind of government will these 200 million people have? You must answer it. It will be the type and kind that you, through your own individual personal effort, train the one that has been selected, trained because he not only believes, but he lives the gospel of Caesar.

The only country upon the face of the globe with a larger number of divorces than America is Russia. Will your effort, your moral leadership champion the sanctity of marriage and the home?

There will be 60 million children in school in 1965. What type and kind of teachers will they have? Will they be teachers who realize and understand their responsibilities in training this youth, not only to prepare them for the material things of life, but teachers who know and understand and realize they have a young soul in their hands, to mold, to culture in order that its growth might be strengthened to enable it to meet Almight God when He calls it home. Will they be teachers who will not be afraid to teach the spiritual truth upon which this Nation is founded?

What kind of leaders will the 80 million workers in 1965 have in the field of labor and management? Shall the leaders of both sides be trained—not only trained but place in actual operating condition, moral values: Shall they be the type and kind who know and realize the tremendous responsibility that is theirs as they exercise the leadership as representatives of Almighty God from whom all authority comes.

What kind of entertainment will be piped into the home living quarters, parlors, recreation rooms of 53 million households? What type and kind of people will be performing? Will it be a continuation of the filth, mire, immodesty, immorality, portrayed promiscuity, glorifying the criminal and all the things that are going on today? Or will it be a type and kind of entertainment based upon the moral standards that were basically, fundamentally right 2000 years ago and has never changed in that entire period?

In a few days you will be celebrating Christmas, the birthday of Christ who came upon earth and gave to us the moral law. That is the only law that will keep America safe.

Printing "In God we trust" on our coins, publicly reciting high sounding platitudes that are meaningless, publicly where it is to our benefit politically or otherwise to boast that we love God and our fellow man when privately in our actions—we defile and debase man rather than help him.

In 1965 shall we continue what seems to be a popularity contest in government circles today in which God is leading? We are now going to put "In God we trust" on our paper money. They changed our pledge of allegiance to the flag; we mention God in the new pledge; we mention him in the prisoner of war code of conduct, and He even gets a Prayer Room in the Capitol. Of course, these are all fine things; I am for them. I want you to know that what I am concerned about is the sincerity that is behind it. Are we back in the early ages where we believe by shouting "Lord, Lord" often and loud enough, we will have fulfilled our obligations? Or, are we living in an age where we believe, not only believe but put into practice that belief of living in strict accordance with the moral law as laid down by God through His Divine Son?

I hope our men in high places in Government, including our Senators and Congressmen and others, many in higher positions; are not doing this because they think it is good public relations, that religion in general is just one of those perfectly harmless things; makes a lot of people feel good. We refer to just good old religion and just like good old flea-bitten Spot—we give it a pat on the head and go on our wild, unrestricted way of living the opposite to our public statements because talking of God was good public relations. If that is not true, then let us see more evidence that our public leaders are reflecting the general conscience and they really do trust in God, love Him, follow Him, accept Him as their leader and as their leader, obey His commands.

One of the best ways to do this is to tighten the divorce laws; outlaw the sale of contraceptives; encourage the teaching of basic religious truths in public schools. Would it be any harm if we taught the children in all schools, both public and private the following:

1. God exists.
2. Man was created by God.
3. All men are created equal.
4. Every individual is of infinite value.
5. All of our rights come from God.
6. All men must obey the natural moral law implanted in them by God.
7. The Ten Commandments are binding upon all men.
8. The Government derives its authority from God.
9. The purpose of government is the protection of the rights of individuals.

Mr. Public Official, if you are sincere in all this public expression of trust in God and it's not merely like patting Spot on the head, then let us see some effort to get rid of the indecent type and kind of entertainment, the sex songs, the pornographic paper back books and crime-crammed comics.

Let us not bar God from the schools; let us not build a wall of separation; let us not look for far fetched legal opinions; but let us bring into the minds and the hearts of our youth a belief in God. If we do this, we know that 1956 will be morally able to meet its obligations. Let us show the way now, onward to victory—our battle cry for God and country. It is your America, its future will be what you make it.

St. Louis University Founders' Day Sermon by Most Rev. John J. Wright

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES

Tuesday, January 17, 1956

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the RECORD the founders' day sermon delivered at St. Louis University on November 16, 1955, by Most Rev. John J. Wright, bishop of Worcester diocese.

There being no objection, the sermon was ordered to be printed in the RECORD, as follows:

FOUNDER'S DAY SERMON DELIVERED BY MOST REV. JOHN J. WRIGHT AT ST. LOUIS UNIVERSITY, NOVEMBER 16, 1955

"Christ Jesus, in whom are hid all the treasures of wisdom and knowledge." St. Paul to the Colossians, chapter 2, verse 3.

The founding of educational institutions was from the beginning a primary preoccupation of the church in America. In Baltimore, Emmitsburg and Washington our first seminary, college and university had their respective beginnings under the first bishop of the first diocese to be established in the United States. The first priest to be ordained in the United States, Father Stephen Badin, ordained in 1793, donated to the Bishop of Vincennes what is now the campus of Notre Dame University. One of the first dioceses to be cut off from the parent-diocese of the church in the United States was Bardstown, and almost immediately there were established under its auspices a seminary of its own and then, in 1814, an institution for the education of young ladies, which became Nazareth College for Women.

It was appropriate, therefore, that in Missouri, the first of the Western States organized west of the Mississippi, there should have been founded the first university of the West, and that this university, growing out of a Jesuit school, as did Georgetown in the East, should have been under Catholic auspices.

Part of the motivation which prompted this early and so ambitious educational effort of the Catholic Church in America was, of course, protective. It sought to preserve the faith of young people who would otherwise have been obliged to seek their higher education in the aggressively Protestant seminaries of the East which were the colleges and budding universities of the day.

But a greater dynamic behind this heroic pioneer educational program was something more positive and permanent, something that is revealed in the quality of our early Catholic schools and colleges. It was an understanding of the kindred roles of the priest and the professor, of the mutual relationship among all the agencies which elevate the mind and perfect personality. This positive motivation behind the effort to build colleges and universities as soon as we had built our homes and our altars demonstrates the authentic Catholic attitude toward the things of the intellect and gives the lie to any idea that the church herself—our Holy Mother the Church, as distinct from any or even most of her children at some given moment—is suspicious of the intellect, indifferent to learning or unsympathetic with scholarship.

That this same positive dynamic behind the educational efforts of the American Church continued throughout the 19th century is reflected in the public pronouncements as well as personal labors of two typical prelates of the last century.

Father John Tracy Ellis recently took occasion in this very city to recall the convictions so admirably expressed by Bishop John Lancaster Spalding in the sermon he preached at the Third Plenary Council of Baltimore. Spalding argued that all but the most unreasonable of our neighbors were even by his time persuaded of the depth and sincerity of Catholic loyalty, but on the intellectual level he found a less impressive situation and a much more urgent need. In 1884 John Spalding said: "When our zeal for intellectual excellence shall have raised up men who will take place among the first writers and thinkers of their day, their very presence will become the most persuasive of arguments to teach the world that no best gift is at war with the spirit of Catholic faith."

So far John Spalding. It should be immediately evident that the converse proposition implied in his words is not less true, and that therefore the very absence of a generation of authentic intellectuals among us would constitute a serious embarrassment to arguments for the faith which are in themselves unanswerable but which, in the unfortunate circumstances of the absence of impressive intellectual vitality among those who advance them, might have little cogency to a generation rightly or wrongly enamoured of the intellect.

Archbishop John Ireland understood this clearly. Speaking at the centennial of the American hierarchy, John Ireland linked his plea for the development of a vigorous intellectual life among our people to considerations of a pertinent and practical argument for the faith. Archbishop Ireland said: "This is an intellectual age. It worships intellect. It tries all things by the touchstone of intellect. * * * The church herself will be judged by the standard of intellect. Catholics must excel in religious knowledge. * * * They must be in the foreground of intellectual movements of all kinds. The age will not take kindly to religious knowledge separated from secular knowledge."

So far John Ireland. Lest anyone be tempted to minimize his contentions as perhaps reflecting the special American circumstances of time and place in which Archbishop Ireland spoke, let us note the example given us in our own day by the Holy See and notably by the reigning chief shepherd who so luminously blends the intellectual with the pastoral apostolate in the incomparable conferences which he gives the world week in week out on philosophy, on the physical sciences, on literature, law, and the widest range of secular subjects, all to the end that he may demonstrate how congenial are sound religious and secular sciences, how interrelated are the truths of both, and how he who holds the place of primacy among those who pray, or rule, or sanctify, holds also the place of primacy among those who teach and, therefore, is at home with the intellectuals—the poets and prophets—as well as with the priests and princes.

And yet there have been grave reasons in recent years to fear that in our newspapers and our forums, not to say even on our campuses, we have frequently revealed a nervous spirit of impatient and sullen anti-intellectualism. Such a spirit is surely inconsistent with the enlightened understanding and eloquent insistence of our forefathers concerning what must be the attitudes and accomplishments of Catholics in the realm of intellectual life if our holy mother, the church, is to achieve her divinely intended growth in this land of privileged opportunity for her influence and action.

It makes little difference and there is room for much debate as to why so many Catholics have conformed to the prevailing mood of anti-intellectualism in our land. Perhaps Father John Tracy Ellis is accurate in his suggestion that such conformity may be part of the pattern by which our people have in all things sought to demonstrate how thoroughly American they are. In any case, it is unfortunate both for us and for America that we Catholics should so often qualify under the "witty extravagance," quoted by Father Ellis, by which a certain dean differentiated the attitudes of Europeans and Americans toward intellectuals. The dean remarked that "in the Old World an ordinary mortal, on seeing a professor, tipped his hat, while in America he tapped his head."

Such a suspicious contempt for the intellectual life is far from being an exclusively Catholic phenomenon in the United States. It is, as Father Ellis notes, a kink in the American character fairly generally. It is the more unbecoming in Catholics, however, because it is so utterly out of harmony with any authentic Catholic tradition, and it is therefore the more painful that it should so often reveal itself on public questions and in community life as so entrenched among us.

There are, of course, refreshing signs of a requickened appreciation of the intellectual apostolate and of a reevaluation of intellectual interests among Catholics. In recent months one may observe several indications that the question of the role and the responsibilities of the intellectual, both in the apostolic life of the church and in the affairs of the general community, is, to risk a pathetic pun, at last coming to a head. One notes with joy a fresh solicitude among Catholics for a proper evaluation of the intellectual and his potential contribution to both the kingdom of God and the city of man. I have already mentioned the valiant conference on Catholic intellectualism in America by which Father Ellis braved the wrath of the unthinking. A young lay columnist, writing in the (Davenport, Iowa) Messenger, has been groping with admirable earnestness, if sometimes uneven results, to find a few definitions in this problem of the apostolic responsibilities of the Catholic intellectual. A monthly magazine, published by priests for priests, editorialized in a recent issue of "the intellectual." It remarked that the word "intellectual" has become almost an expletive among us. It is so synonymous with "egghead" and "bubble-head" that many of us would rather have reflections cast on the honesty of our ancestry than be designated intellectuals at the moment.

This magazine, the Priest, finds the current distrust of the intellect largely justified in terms of short-range reaction of the follies of loosely defined intellectuals, but it also declares the reaction itself to be dangerous, indeed disastrous in terms of any long-range and authentically Catholic outlook. It writes: "To let just indignation over the intellectuals' betrayal and crass stupidity ever lead us to a repudiation of the intellect itself would mean absolute disaster * * *."

It is healthy that Catholics are saying such things with increasing urgency and apostolic emphasis. It would be not only disastrous but also a bitter irony if any school of voluntarists, preoccupied exclusively with the virtues of the will, even sublime virtues so saving as obedience and so noble as loyalty, were to gain such ascendancy among the sons and daughters of the church as to set at naught or almost annihilate the intellectual tradition in the household of the faith.

So many of the heresies which have wounded our holy mother, the church, and robbed her of so many of her children have been voluntarist heresies, anti-intellectual in their roots and pretensions, that it would be pathetic indeed if anti-intellectualism now became a characteristic of those who have remained faithful to her obedience.

From the "stat pro ratione voluntas" of Luther and the fides fiducialis of Lutheranism, through the blind fatalism of Calvin and the perverse austerities of Jansenism, to the sentimentality and exaltation of instinct or feeling which, for all its superficial show of scholarship, characterized religious modernism, the heresies which have divided the Christian flock in these last four centuries have been chiefly voluntarist and anti-intellectual. By the same token the inspired witness of our holy mother, the church, from the counterreformation, the Council of Trent and the ratio studiorum, to the Council of the Vatican and the syllabus against modernism, has been a witness at once to the reality of revelation and to the validity of reason, to the essential part of rational elements even in the supernatural act of faith and to the divine origin of the primacy and rights of the intellect in the natural order.

What a doubly tragic irony it would be, then, if, after centuries of battling for the natural law and the rights and function of reason, as well as for the primacy of the intellect over passion, emotion, instinct, or even will, the church should find herself represented in the world of the college, the press, or the forum by sons and daughters contemptuous of that wild, living intellect of man of which Newman spoke and cynical about the slow, sometimes faltering, but patient, persevering processes by which intellectuals seek to wrest some measure of order from the chaos about us.

How to prevent the spread of such a spirit of anti-intellectualism? How to uproot and annul it where it may have gained ground? How to foster anew a truly Catholic reverence for the gifts of the intellect and a wholesome vigilance for their proper use and growth? These are timely questions for our universities to face.

Our text this morning suggests the spiritual and theological context within which the question of the dignity and the vocation of the intellectual should be evaluated by persons of truly Catholic mentality. "Christ

Jesus, in whom are hid all the treasures of wisdom and knowledge. * * *" Does not this description of the eternal Son of God incarnate among us impel mediation on Christ as the inspiration and the exemplar of all intellectuals worthy of the name? Because He was reared in the home of Joseph and Mary subjecting Himself to them in all things, we have proposed Him in our schools as the model of obedient adolescence. Because He was reputed to be the carpenter's son and plied the trade of His foster father, we have asked ourselves what He would do as a worker and we have hallowed the cause of labor by the memory of His human toil. Because He shed tears of predilection over the capital city of His nation and paid the coin of tribute to Caesar, we have seen in Him the example of the good citizen. Because He preached a gospel destined to reach and unite all men, because He placed at the equal disposition of mankind without exception the treasures He came to share, we have sought in Him the qualities of the Christian internationalist. Christ the king, Christ the priest, Christ the judge, Christ the friend—all these we have studied in our classes and meditated in our chapels. As a result, these human offices and callings have been cleansed of their dross in our eyes and placed in their proper supernatural and eternal perspectives.

At a moment when the word "intellectual" has become a reproach and when the vocation of the intellectual has become obscured or even discredited, is it not time to reflect prayerfully on Christ the divine intellectual, the eternal logos of the Father, all divinity summed up in one divine idea and then made man, that person of the adorable trinity who is best described in terms of the thought of the divine intellect as the third person is best described in terms of the love of the divine will, the word of God, "Christ Jesus, in whom are hid all the treasures of wisdom and knowledge"?

Meditation on Christ so understood may help sanctify and inspire the work of intellectuals even as our preaching on Christ the Worker or Christ the Loyal Son of His nation has done so much to elevate and hallow Christian labor or patriotism. It will throw new light on the Christ-like function of the genuine intellectual, called to imitate Christ by making incarnate in each generation and each culture something at least of the treasures of eternal wisdom and knowledge, the divine ideas summed up totally and perfectly in the Person of the Son, the Logos, the Verbum (quod) caro factum est et habitavit in nobis, that we might see His glory and be guided by it.

Obviously, such an understanding of the sublime vocation and preeminent dignity of the intellectual involves no plea for intellectual license or academic irresponsibility. But it does imply that the living intellect has a certain divinely appointed autonomy and that every valid word of truth has rights analogous to that freedom which St. Paul proclaimed for the word of God: verbum Dei non est alligatum. We make no plea for disloyalty and we hold the will in no contempt when we warn against the voluntarism which is at the core of all fascism, red or black, and when we lament an anti-intellectualism which mocks that spiritual faculty by which the sons of men most nearly reflect the image of the Eternal Son of God.

To this needed spiritual and theological emphasis our schools and colleges can add other means of rehabilitating the name and nature of the intellectual vocation. Perhaps it is necessary at the moment for us teachers and priests to develop a special patience with the bright and the sometimes irritatingly brilliant, a patience comparable to that which we have always virtuously tried to have toward the dull. Perhaps it is needed that we be slow to label revolutionaries or liberals in any unfavorable sense those who have many ideas, including occasional disturbing ideas, instead of a mere comfortable few—or none. Perhaps it were well if for a season or two we preached as often on intellectual sloth as we tend to preach on intellectual pride.

The dangers of intellectual pride are many and grave, and we do well to discipline ourselves and our students in the moral and ascetical controls of this as of all other vices. But the dangers of intellectual stagnation are not less grievous both for individual personality, for the common good, and for the church. The wrath of the stupid has laid waste the world quite as often as has any craft of the bright.

Pride is no more the necessary concomitant of intellect than humility is necessarily the adornment of those lacking in intellectual gifts. Teachers and spiritual directors among us may be well advised to remember that while it is doubtless better to feel compunction than to know its definition, still the grace to repent and to repent humbly is not necessarily impeded by an informed understanding of what compunction is, or even by a knowledge of the bibliography on the subject, or of the history of those who have felt compunction to their own profit and ours—or of those who have failed to do so, with resultant grave loss to themselves and injury to mankind.

A typical Catholic university can do a great service toward correcting the prevailing prejudice against intellectualism by demonstrating that there is no intellectual class in the divisive and exclusive senses in which we speak of a proletarian or peasant or so-called noble class. Our students tend to come from many classes and especially from working and middle class families. When our universities develop the intellectuality which is latent in the common sense, good taste and alert minds found more or less equally among all classes, they produce authentic intellectuals in the fullest and fairest sense of the term, whatever the subsequent special vocations or interests of the genuine intellectual.

Possibly it would break the spell and ease the tension which surround the word intellectuals if we stopped using the word for a while, and used instead the more rugged word scholars, a more solid word, perhaps, and so easily associated with the word saints. In the days when this university was founded men aspired to be known as good scholars, and perhaps we would have more sturdy and more respected intellectuals if we intensified our efforts to make our students good scholars again. If the word intellectual has a recent history of effeteness and ineptness, the word scholar still keeps its ancient and honorable repute.

In any case, we cannot work too urgently for the highest effectiveness of our universities in graduating lovers of ideas, intellectual scholars or scholarly intellectuals as you choose. Pope Pius XI is quoted as calling the loss of the European worker "the great tragedy of the nineteenth century," and the recent history of the part of the workers in the great struggles of the twentieth century confirms his melancholy judgment. The loss of any class or any notable part of any class is a source of embarrassment and grief to our Holy Mother, the church.

But given the nature of the new struggles which lie ahead, the struggles we describe by the awkward but significant word "ideological," no tragedy of the 20 century could be greater than the loss to the church of intellectuals, those who deal in ideologies and who love ideas.

Speaking at the midcentury convocation at Massachusetts Tech 5 years ago, Winston Churchill spoke of the great battles of the future. He said they would no longer be fought on the level of colonial empires, or political empires, or for the dominance of empires of oil, precious metal, or vast populations. The struggles of the future, he said, will be on the level of the empires of the mind.

The phrase is striking and it has the ring of prophecy. The battle for the minds of men, for the furtherance of ideas rather than political boundaries or military spheres of influence, is a battle in which the Holy Catholic Church not only belongs but must be victorious if God's will is to prevail. In such a battle our schools, colleges, and universities are the indispensable arsenals and training grounds, our intellectuals are the soldiers and lieutenants. Of these may Christ be the commander, Christ Jesus the divine intellectual, "In whom are hid all the treasures of wisdom and knowledge."

Panama Railroad Abandonment: Panamanian Viewpoint

EXTENSION OF REMARKS
OF
HON. CLARENCE CANNON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 17, 1956

Mr. CANNON. Mr. Speaker, one of the proposals made last session by the Governor of the Canal Zone before the Committee on Appropriations was abandonment of the Panama Railroad and its replacement by a second transisthmian highway located on the roadbed of the railway.

This recommendation generated such strong opposition from so many responsible sources that the Committee on Appropriations in House Report No. 603, 84th Congress, of May 15, 1955, recommended an investigation of that proposal by the Committee on Merchant Marine and Fisheries before taking further action. This inquiry is in progress.

Since the indicated abandonment would affect not only the United States in its operation of the canal enterprise but also the Republic of Panama, it is helpful to know public opinion in that country. One of the best reflectors of isthmian views is the well-known Latin-American newspaper, the Star and Herald, of Panama City, R. P., of which Mr. T. Gabriel Duque is president and Mr. Luis Bunting is editor. The leading editorial in its December 9, 1955, issue, immediately following hearings by the special subcommittee in the Canal Zone, dealt with the Panama Railroad crisis and urged retention of that interoceanic link.

To the end that the views of the people of Panama, as developed in the indicated editorial of the Star and Herald, may be available to the Congress, under leave accorded, I include its text:

LET'S KEEP THE RAILROAD

Congressional probes notwithstanding, we still stand right where we stood before. We still say "Don't scrap the Panama Railroad." Whoever does so will be sorry. It continues to be a must, strategically, geographically, historically, sentimentally and as a symbol

of good will among the nations of these still free Americas.

If this sounds confused, dear reader, just read your morning newspaper, your weekly news reviews. Coordinate the facts as your mind encompasses the growing trouble spots around the world and ask yourself: Is this the time for penny-pinching, for making books balance just any-old-how, just to make a hit with the GAO?

The Panama Railroad was the forerunner of the Panama Canal. It reopened the route made famous by the Conquistadores in their quest for conquest—incidentally Panamanian and Peruvian gold. It was the first transcontinental railroad in the New World. It made millions during the California gold rush. It cost millions to build and many, many lives. And it is still running, though they say in the red. Without it the Panama Canal could never have been built. Yet the people of today, shortsighted, penny-pinching people who should know better, are all for scrapping those rails, locomotives, boxcars and passenger coaches, probably at minimum prices, and turning over the transisthmian hauling to one or more fleets of Panama-owned trucks.

In other words the Panama Canal Zone, which has no highway links between its Atlantic and Pacific terminals, would scrap its only land connection with those terminals. For what? For a saving of a few thousands annually and pending construction of a highly costly all-Canal Zone transisthmian road which might take years to build after appropriations were voted for the job.

Perhaps Panama's press sticks its neck out in merely commenting on this anomaly. Panamanians—the Nation's thousands of unemployed—will gain no advantage in the acquisition of trucking trade by a few of its already affluent truck-owners. What Panama needs most, in addition to wide employment openings, is security, defense. It has no army or fleet or air force. Its freedom is guaranteed by the United States. Thanks to F. D. R. it has a highway from ocean to ocean, a road which can easily be blocked by natural slides, could be thoroughly damaged by a few well placed bombs. Would the United States people (voters) be satisfied to know that would be the only land route across the Isthmus were the PRR scrapped?

Life has never been so insecure as it is today in the East-West armament race, including atomic and hydrogen bombs. With all accords failing we can expect a Russian onslaught any day. It is said they will come over the Bering Strait route or across the top of the world via Greenland. They may hit strategic United States targets with a bomb or two. Their best bet will be this Isthmus, completely closing the Panama Canal. There's always a suicide pilot who can manage to get through.

The United States stands pledged to defend Panama. She needs her railroad here just about as much as she needs to keep the canal open. She could do with another transisthmian highway, an all-Canal Zone road. The more such roads the better. They provide employment and increase defense, Panama Canal defense.

Count the millions the United States has shelled out to India (where the Red leaders got such a noisy welcome last week), to other neutral or friendly nations, simply to feed their people and keep them from joining the Reds. What would a few more millions mean spent here in the Canal Zone adjoining a land Uncle Sam is pledged to defend, 1 of 20 other American Republics with which the United States is bound by treaty after treaty?

And still, at this highly critical stage, the United States would pinch pennies in the Canal Zone. Truly, it doesn't make sense.

Preserving Freedom of Independent Colleges

EXTENSION OF REMARKS
OF
HON. THOMAS E. MARTIN
OF IOWA
IN THE SENATE OF THE UNITED STATES

Tuesday, January 17, 1956

Mr. MARTIN of Iowa. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Mr. Earl Bunting at a dinner meeting of trustees of Cornell College at Cedar Rapids, Iowa, on November 14, 1955.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

PRESERVING FREEDOM OF INDEPENDENT COLLEGES

(By Earl Bunting, honorary vice president, National Association of Manufacturers, at dinner meeting of trustees of Cornell College, Mount Vernon, Iowa, held at Roosevelt Hotel, Cedar Rapids, Iowa, Monday evening, November 14, 1955)

I am glad to have this opportunity to discuss the mutual interests of industry and education—not only from the standpoint of the great contributions made to business by the academic world—but to consider, with you, how that invaluable assistance may be enhanced, in order that we may be better prepared to meet present and future problems of our country.

And the solution of those problems will not be easy. Whatever other magical feats may be attributed to automation, we see no possibility of a pushbutton process substituting for the painstaking work of investigation, analysis, and evaluation by minds which will have received the type of training best exemplified by those who have unlocked secrets of the ages—and by others who have given them meaning and practical use.

The future will demand much more in its business leaders than the go-getter or hardheaded businessman, in spite of the desirability of the proper proportions of these qualities. The future scientist or engineer in industry will be fully qualified in his specialized field, but, in addition, will possess a knowledge of human beings, politics, and economics.

The responsibility of education to the Nation has been well summarized by the Very Reverend Paul C. Reinert, president of St. Louis University, who has said:

"Without institutions of higher learning to train men in the specific arts and sciences, business and industry as well as society as a whole would be dealt a paralyzing blow. Men of science to harness and turn to human use the forces of nature, to discover new ways to bring happiness to countless millions of people—men of medicine to minister to the the health of our people, men of the arts and literature to satisfy the human thirst for culture, men of religion to care for men's souls, men learned in sound business principles, and above all, men of sound moral training in whatever field they choose—to supply these needs is the obligation of education to society."

I repeat: "Men of sound moral training in whatever field they choose."

Can you imagine the Russian student, cramming in his present scientific courses—about which the Communists are so boastful right now—obtaining the "sound moral training" which is the obligation of education to our society?

Can you imagine the amount of training the Russian student is receiving in "new ways to bring happiness to countless millions of people?"

Would you trade "the sound moral training" of our physicists, chemists, and engineers for the ungodly robots of the Communist state?

Freemen have the right to live by the truth. This is a sacred privilege, the right to know, to question, to evaluate, to improve. The primary purpose of education is to impart those truths men live by. Truth can live only in an atmosphere of freedom.

If a society is to remain free those institutions which comprise that society must complement each other. There must be a constant meshing of the driving gears of mutual reliance and assistance.

American educators are agreed that it is their job to train what they term "the whole man." Science, history, economics, religion, politics—all enter into the "whole man." In spite of specialization, preachers, teachers, professors, doctors, scientists, engineers, and businessmen must be "whole men" in the best meaning of the term.

That's the function of our educational system. Look around you and see how their products measure up.

One of the great factors of strength in free America has been its system of independent, privately endowed, non-tax-supported colleges and universities. They were among our earliest institutions—antedating our form of government by more than a hundred years. They have been truly a key part of our system of free enterprise. They are free enterprise. As such they have been a bulwark against political or bureaucratic control of education, educational content, and educational processes.

Because the political decisions made by Americans are so inextricably tied up with economic problems, it is of utmost importance that all citizens be taught at least basic economic truths.

We can well heed Thomas Jefferson's statement that "I know of no safe repository for the ultimate powers of society but the people themselves; and if we think them not enlightened enough to exercise their control with a wholesome discretion, the remedy is not to take it from them, but to increase their discretion by education."

Economics must be so taught that it comes to grips with the problems of everyday living. This means that educators must have a deep appreciation of the exact nature of our modern industrial society—a growth and development which has come from individual freedom, individual courage, and self-reliance. Most of the books on socialism and communism have been based upon European capitalism, which bears little resemblance to the American opportunity system.

Great increases and rapid shifts in population, geographical decentralization of industry, greater productivity, constantly increasing standards of living, and vast changes in living habits have created many social problems. Housing, schools, welfare, employment and employee relations are among the urgent issues of the day. Solutions of many of these problems have been attempted upon a basis of emotional reaction—or political expediency. Yet, political mistakes, arising from economic ignorance, could wreck our country, turning it over to our enemies for liquidation of everything we hold dear.

Decisions made by truly competent people, intelligently arrived at by free access to the world's knowledge, have carried us to dizzy heights among the nations of the world. And today's problems, at home and abroad, place greater and greater emphasis upon the freedom to know.

No past period in the world's history or that of our own country has ever placed

so much reliance upon the benefits anticipated from higher educational institutions. Failure to extend and improve the facilities for training our young people in the arts and sciences, in business and industry, and throughout society as a whole, would deal our great country an uterly paralyzing blow.

All people in industry—in management, in production, in sales, in the various scientific and engineering positions—must possess much more than a superficial knowledge of political and economic institutions and processes. They must possess abilities to discriminate between the truth and the false in arriving at an understanding of the vital relationships between spiritual, academic, political, and economic freedoms.

The American economy is based upon the creation of human wants rather than merely satisfying a minimum of human needs. Our dynamic competition is at the heart of our free-enterprise system. Dynamic competition serves to prevent exploitation, channels economic efforts into producing goods people really want, and spurs producers to ever-increasing efficiency in serving the public. Preservation of a climate in which freedom of competition can thrive is the fundamental purpose of our Federal antitrust laws.

Out of this dynamic competition have come improvements in productivity and the development of new products upon which our general economic growth depends. This process of growth and development is constantly creating new ideas, new patterns, and new problems. Just as the automobile took the customers from every crossroads general store to urban centers whose merchants had much more extensive varieties of goods to choose from, so the automobile is now taking shoppers from their homes to suburban shopping centers. What the helicopter may do in the future is your guess.

Coal producers who formerly faced their main competition from each other now face the competition from oil, water power, natural gas—and solar heat and nuclear fission are on the horizon. Changes in the nature of competition go on steadily in most other lines of activity and are inevitable in a growing economy.

In this process of national economic growth it is the customer who has the final say. He determines just what share of the market each producer will get. Any attempt to substitute the judgment of some official—whether of a Government bureau, or a private cartel—for the free choice of the customer would be to deny him the freedom which is the essence of competition.

Our big job is to do those things which will add to the joys and satisfactions of life for all Americans. From the drawing boards, the laboratories, the test tubes and man's imagination will come the new products, the new processes, the new ways of life. If we follow through the wide-open doorways to the frontiers of science we will do those things which will preserve our country, our institutions and our opportunities.

Our best assurance of keeping the doorways to science open for all who would enter is to maintain our independent educational institutions. They haven't yet begun to serve as they must. In spite of our somewhat astounding progress in applied research, at leást partially accelerated by the pressures of national defense, we have been neglecting our basic studies from which must come most new scientific developments.

Basic studies in the fields of the physical as well as the social sciences canont be subject to political, geographical or industrial pressures. The necessity for showing a profit or of adhering to a politically determined "appropriation" certainly wouldn't be conducive to the atmosphere in which the best work in the fields of "pure" research can be done. And, the best work cannot be done by researchers in this field who have been the victims of political and economic distortions and misrepresentations. They are in special need of understanding which can come best from genuinely free educational institutions.

Can anyone imagine that industry as we know it can continue to be administered and improved if the industrial leaders and their collaborators in scientific fields do not possess the breadth of knowledge we have described?

The importance of protecting, preserving and extending our system of independent colleges and universities, keeping them free from political pressures and subversive influences, is a task for all Americans.

Businessmen must recognize that they have not paid for the tremendous contributions to business by the independent colleges and universities of our country. A very few people in each past generation who made the grants were the ones who made their independence possible.

Now, our independent, nontax-supported educational institutions need money.

They need it for all kinds of things—more and better facilities to meet the needs of a rapidly expanding population; the new things necessary to care for the vastly widened scope of scientific studies, in both the fields of the social as well as the physical sciences. They need to get realistic in the matter of salaries—professors being entitled to more pay than janitors. They need enough for future growth and expansion to make most economical approaches to the needs of the future.

And, why haven't they got this money?

Well, principally because of ideological confusion having given the politicians an opportunity to change the rules! When the income tax was adopted, with its subsequent so-called "progressive" rate provisions, our country embarked upon a new set of ideological concepts.

It was politically easy—and popular—to soak the rich. (From each according to his ability, to each according to his need.) Remember?

The income-tax source of money made it ridiculously easy to provide Federal funds for the wildest expansion of government spending ever known to man. When they could charm voters, nothing was too absurd for the big spenders. (Remember "spend and spend, tax and tax, elect and elect?")

What else happened to us during this period?

Well, we had wars to pay for—which we didn't do. We refused to pay for them as we went along. We coined new money, passed out more Federal Government securities, and by this process so greatly increased the amount of money in circulation that its increase would have bought twice the goods available, thereby cutting the value of the dollar in half!

You will ask, what all this has to do with the present plight of the colleges?

First, let me point out that in spite of our independent colleges not paying income taxes, they are victims of the income-tax laws. Every tax dollar that goes to pay for anything except the proper functions of government is a dollar which will never reach the colleges—unless (and God forbid) it comes through the government and carries with it the Federal control which would be inevitable.

Inflation has hit the colleges, just as it has the rest of us, halving the value of their money. Tuition rates have been raised as much as they dare without creating an economic intelligentsia, which I, for one, certainly won't go for.

Because of our income-tax laws, no new philanthropic pots are being created from which can come the juicy endowments which bought the ground, built the buildings, paid the professors and bills of the past. The colleges can either move into the ranks of the Government spenders and live by Federal handouts, or they can find some new source of income.

Recognizing the problems of those colleges which would stay free, what courses are open to those who would aid in solving this problem?

Businessmen have been asking themselves and each other whether the making of corporate contributions to higher education is a sound business policy. While business has already accepted a commitment to help meet the needs of the colleges and universities, it was felt by a group of business leaders who met some months ago that a clarifying statement was needed, which I quote, as follows:

"We believe corporate financial support of higher education is a sound business policy. This is a matter of enlightened self-interest and a sound investment in order to help maintain the American way of life, the independence of the colleges and universities, and to insure for corporate enterprise a supply of personnel properly educated from which to select management of a breadth of view and understanding necessary for operating business on the high level of wisdom and skill the coming years will demand."

The only way that the independent colleges and universities of our country will be able to meet urgent present needs will be from some form of current support program of contributions from corporations and individuals. Corporations, under present laws, can make contributions for such purposes up to 5 percent of their current taxable profits, while individuals may contribute up to 20 percent of their personal tax liabilities.

For the longer term, the soak-the-rich policy of the advocates of bid Federal spending in our country must be completely eliminated from the governmental picture. If we spent money for only those things which are a proper function of government our citizens would again be able to spend, save, invest or contribute their money in ways which have been traditional in our country until very recent years.

When we can reestablish an atmosphere of fiscal sanity and simple justice in our Government spending and taxation policies, we will again make it possible to accumulate the type of personal fortunes which have been drawn upon so heavily in the past for the large sums going to independent education in America. Many tax-free colleges and universities would never have come into existence without the substantial sums from such sources.

Many of us were alarmed some years back when our youngsters came home from schools and colleges and repeated some of the preposterous charges made by some teacher or professor about the imperfections and inequities of the American capitalistic system. These were cases of either the "egg-head" or the use of the classroom platform for purposes of propaganda instead of freedom of inquiry. Indoctrination instead of education.

Why am I saying these things?

To recognize that our educational system has had problems of its own, not all of which have been financial—and at the same time to pay my wholehearted respect to those great leaders in the field of higher education who have gone calmly and confidently on their way toward equipping young Americans to meet the challenges of the future with courage, with intelligence and with integrity.

No thinking American wants to see such a vital element in our Republic as our independent educational system jeopardized or circumscribed by a failure to remain free. Yet, that is precisely what will happen if private support upon a current income basis is not made available to the private colleges and universities of our country.

And, for the longer term, and to meet the capital as well as operating needs of our independent educational system, we need to

remove the hampering, uneconomic and unfair system of rate-progression in our Federal income tax system.

A trade of academic freedom and responsibility for Federal financing and control is unthinkable. Let's make certain it can never happen.

Indians and Industry

EXTENSION OF REMARKS
OF

HON. LEE METCALF

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 16, 1956

Mr. METCALF. Mr. Speaker, a steadily growing population on an already overcrowded land area is resulting in increasing poverty for Indians of our reservations.

Present population of our Indian reservations is placed at 400,000 persons, a 60 percent increase since the turn of the century. Economic resources of most of the reservations—excepting those few with valuable oil or timber resources—have long been strained to the limit. As a result, Indian welfare costs have been rising and now the Federal Government is spending $96 million on Indians in 1 year—a 50 percent increase in 5 years.

Relocation assistance for those Indians who want to leave the reservations would help the limited reservation resources to more nearly meet the needs. At the same time, it would give the Indian the opportunity to become independent.

Those Indians who desire to leave the reservations should be aided in such adjustment. The assistance they are receiving now is not sufficient. I stress that such assistance should be provided only to those who desire to leave the reservations. Those who feel unprepared to relocate off the reservations must not be forcibly moved; they have a right to remain where they are.

Relocation officers are being provided to aid our Indians in the transition from reservation to independence. But there are far too few relocation officers.

In Montana, 1 relocation officer, greviously overworked, serves 7 reservations.

Despite the handicap of insufficient time to keep up with relocation applications he reported about 94 percent success last year with those who were relocated. Only about 25 percent of the persons he places are individuals; the remainder are family units. Most are unskilled workers and go into apprenticeship in factory work.

The Government pays transportation costs to the relocation center and provides household and living expenses until the Indians receive their first checks.

Despite the costs of transportation, initial housing and paying initial living expenses, the relocation program saves money for the Government. Without relocation, many of the families would become welfare recipients.

But a single relocation officer for 7 scattered reservations simply cannot keep up with the demand of those Indians who want to strike out on their own. He reports there is always a backlog of relocation applications all the time.

In concert with Senators MURRAY and MANSFIELD, I recently addressed the following letter to the Bureau of Indian Affairs advocating the placement of one trained relocation officer on each Indian reservation in the United States:

Mr. GLENN L. EMMONS,
Commissioner, Bureau of Indian Affairs, Department of the Interior, Washington, D. C.

DEAR COMMISSIONER EMMONS: During hearings and meetings with Indian leaders this summer we became aware of the need for the assistance and guidance which only relocation officers can give Indians desirous of leaving their reservations.

We heard of many Indians who left their reservation only to return in a short time because they had had no or inadequate briefing on what to expect outside.

Such incidents are unfortunate, because they discourage other Indians from leaving the reservation to take their rightful place in our society. As you know, the Indian land base is so small that it complicates the general problem of continuing to care for our Indians on reservations.

At the other end of the line is the community in which the Indian locates. There, too, a lack of knowledge of our ways on the part of the Indian, an inability to support himself in many cases because he had no vocational guidance, creates a welfare burden.

A relocation program would help both the Indian and the community in which he locates.

The one trained relocation officer in Montana is grievously overworked. There should be one on each reservation in the United States.

Very truly yours,

JAMES E. MURRAY,
United States Senate.
MIKE MANSFIELD,
United States Senate.
LEE METCALF,
Member of Congress.

I believe such a policy would pay great dividends to the Indians, both those who are relocated and those who remain on the reservations; to the communities in which the relocated Indians settle and to the Federal Government and Nation as a whole.

In that connection I believe my colleagues also will be interested in reading the following article which appeared in the Wall Street Journal of December 28, 1955:

INDIANS AND INDUSTRY—FACTORIES REACH FOR RESERVATION RED MEN TO EASE LABOR PINCH—TREK TO CITIES RISES 200 PERCENT SINCE 1952—GARRETT CORP., SEARS, AND HOLLYWOOD—SIOUX, FLATHEADS, APACHES

(By Thomas Bush and Ed Cony)

LOS ANGELES.—Casper Thunder Hawk effortlessly swings 20 feet of green lumber onto a truck at a Food Machinery Corp. plant here, where he came to work just this month as a helper.

The 237-pound Mr. Thunder Hawk, a full-blooded Sioux, is right off the Standing Rock Reservation in North Dakota where he eked out an existence as a part-time farm hand and construction worker. His new job pays him more than twice as much as he's ever made before.

A few miles away, at a Chrysler Corp. plant, Asa Chalepah, a full-blooded Apache, gives a mighty shove with his 249 pounds and pushes the body of a new Dodge onto a final assembly line. He too is taking home twice as much pay as he ever did as a farmhand on the Oklahoma reservation he called home until a year ago.

LABOR SHORTAGE HELP

Except for their size, Mr. Thunder Hawk and Mr. Chalepah are not exceptional cases. Altogether more than 500 companies in the Los Angeles area are putting to good industrial use the skills of 6,500 Indians, many of whom were living on primitive reservations as Government welfare cases just a few months ago. Companies in other cities in the Far West, Midwest, and Southwest are reaching out for the Red Man to help solve labor shortage problems.

Of course, there have long been large numbers of citizens in business and industry who have some Indian blood. But relatively few of their Indian ancestors ever saw a reservation; the reservation system wasn't set up until after the Indian wars of the mid-1800's when the Federal Government put the remnants of the vanquished tribes, mostly full-blooded Indians, on these defined preserves. Since 1924, the reservation Indians have had full citizenship rights, including voting privileges. Although they've been free to leave their reservations, a notable exodus occurred only with World War II. The migration has grown sharply in the past few years.

About 10,000 will make the switch this year, according to the Interior Department's Bureau of Indian Affairs. That's a hefty 40 percent jump over last year's migration and a 200 percent increase over that of 1952 when some 3,000 Indians left reservations to cope with city traffic hazards, assembly-line jobs, and monthly payments on TV sets.

Los Angeles is the No. 1 attraction for city-bound Indians. Over 50 percent of this year's migrating tribesmen were drawn to the southern California metropolis, the Indian Bureau estimates. Geographical proximity is a likely explanation for Los Angeles' popularity; a fourth of the country's 400,000 Indians live in the barren wastes of Arizona and New Mexico, to the east of Los Angeles.

TREK IN MIDWEST

Chicago, Denver, and Minneapolis are also attracting Indians in some numbers. Over 5,000—mostly Chippewas and Sioux—reside in Chicago, for instance, and almost half of them are recent migrants from reservations.

This "new invasion" is of interest to taxpayers, as well as to employers and sociologists. The United States Government is spending $96 million on Indians this year, a 50 percent increase over 1950. Most of it goes for services on reservations, where 3 of every 4 Indians still live.

Why is Uncle Sam's Indian bill mounting? For one thing, instead of vanishing, the red man is multiplying in numbers. The 400,000 population is a 60 percent increase over the turn of the century.

This steady growth has strained the limited economic resources of most reservations, increased the poverty of Indians living on them and made them more dependent than ever on Government help.

An Indian Bureau official says: "Most of the land on reservations is of poor quality. It is estimated conservatively that less than three-fifths of the Indians now living on reservations could be supported on a decent standard of living from resources available on the reservations."

NAVAHOS AND CHIPPEWAS

Some 70,000 Navahos, for instance, are trying to exist on 25,000 square miles of barren, arid reservation tucked away in the remote wildness where New Mexico, Arizona, and Utah meet. The Indian Bureau says the land is capable of providing a decent living for only about 40 percent of the tribe.

Over a thousand miles to the north, close to the Canadian border in North Dakota, some 9,000 Chippewas huddle together on

the tiny, 2-square-mile Turtle Mountain Reservation, "which provides the tribe a little firewood and a squatting place—and that's about all," a Bureau official says.

But this year enough Indians are migrating to town to cancel out any gain in reservation population, and 1955 may mark the turning point in the long, steady rise in reservation population.

What happens to the Indian when he leaves familiar surroundings to strike out on his own?

A young Navaho couple recently arrived in Los Angeles, straight from the reservation. Mrs. Begay—that's not her real name, but among Navahos it's the equivalent of Jones or Smith—carried her baby strapped to her back on a cradleboard. She wore long, heavy braids, a blue velvet jacket and a long, rose satin skirt—a Navaho costume unchanged since the 1840's.

Two weeks later, she'd cut her hair short, was pushing the baby around in a stroller and was dressed like any teen-ager—including bobby sox and saddle shoes.

And her husband was getting interested in buying a television set. "We used to count the number of TV sets bought each month by new arrivals," says an Indian Bureau official in Los Angeles. "But they became so common we gave up counting them. I'd say 50 percent of the Indian families buy a set soon after they arrive; and after 6 months to a year, practically all have them."

Abrupt transitions like the Begay's aren't always successful. One Indian of every eight who tries city life finally returns to the reservation, the Indian Bureau estimates.

Among pale face customs which sometimes confuse newly arrived Indians are those surrounding labor-management relations. For example, one brave thought he was acting correctly during an aircraft strike in Los Angeles. But he soon learned differently. He had been walking the picket line during the day, then after a quick dinner at home, was reporting for his swing-shift job, unconcernedly crossing the picket line.

During the same strike, another Indian came to work but soon ran out of material to fabricate because workers on either side of him weren't at their machines. The Indian quietly went over to the idle machines, began to operate them and soon had his own one-man assembly line operating. "He'd never said 'boo' to anyone, and it's the first time we had any idea he could run any machine but his own," recalls his supervisor.

THE RELOCATION SERVICE

Indians arriving in Los Angeles frequently get help from Mrs. Mary Gamble who heads the local office of the Indian Bureau's Relocation Service which tries to find jobs for Indians in Los Angeles and help them adjust to city ways.

The Relocation Service attempts to help the Indian in the first, difficult days of adjustment in the city. And back on the reservation, the Relocation Service is also ready to help Indians who express a desire to move into town. On 14 reservations, Relocation representatives will give the Indian advice on what he needs to bring to the city, and what to do when he arrives. The Service will also give him a physical exam and in some cases help out financially with moving expenses.

Mrs. Gamble explains that many "blanket Indians" have never before been off their reservations. Riding on streetcars, shopping at supermarkets and using dial telephones are entirely new adventures for them.

"We have a saying around here," says the motherly Mrs. Gamble: "If the phone rings and you hear heavy breathing, you know it's an Indian right off the reservation—and he's in trouble. Otherwise he wouldn't have dared to pick up the phone."

SOME HIGH HURDLES

Many Indians, once they leave the reservation, have to go to schools operated by the Indian Bureau to learn the three R's—and to learn to speak English. On the Navaho Reservation in Arizona, about 45,000 of the 70,000 tribal members couldn't read or write, as recently as 1947. And almost as many couldn't speak English. While schooling on the reservation has improved in the last 8 years, literacy is still far short of 100 percent.

Some also arrive in Los Angeles suffering from malnutrition. A North American Aviation spokesman says: "More than once, we've placed Indians under a doctor's care to build them up so they can pass our stiff medical requirements and come to work for us."

Few Indians are skilled workers when they leave the reservation. But despite these handicaps, Indians have found and kept jobs in Los Angeles where they've had help from cooperative employers and the Indian Bureau.

North American Aviation, for instance, has between 450 and 500 Indians working in its Los Angeles plants.

"I was awful scared the first month on the job, but I'm getting along fine now," says stocky 21-year-old Stan Begay as he stops work for a minute on a hydraulic line he's putting into one of North American's F–100 super-Sabres.

His supervisor agrees: "Stan's an awful good worker. When he's out of something to do, he comes around for more."

After work, Stan heads for night school where he's taking blueprint reading; he soon hopes to go on to mechanical engineering courses.

MR. ZOOK'S VIEW

Indians at North American start out at relatively unskilled jobs, but "because of their handicraft skill and manual dexterity" most of them work into better jobs paying between $300 and $400 a month, an official says.

North American's attitude toward hiring Indians is summed up by Dwight Zook, head of employment: "We look on Indians as a great untapped source of workers in a tight labor market."

Listen to Mrs. Peggy Koester who has a dozen Indians among the workers she supervises at Cole of California's swimsuit plant in Hollywood: "Indians have terrific finger dexterity and they're proud of their work."

At Bethlehem Pacific Steel Corp.'s Los Angeles plant, Peter Pflough, of the Flathead Tribe in Montana, works for $1.84½ an hour as an electric furnace tender. His foreman sums up his performance in three words: "He's the shovelingest."

And at Garrett Corp., where a Sioux named Ben Gullikson works as an electrical assembler, comes this praise from a company official: "If you have more like Gullikson, send 'em out."

BANKS, RETAIL STORES

Los Angeles industrial plants aren't the only ones to employ Indians. Walk into the Security-First National Bank, Sears, Roebuck stores, Los Angeles public schools, and city and county offices, and you'll find copper-hued employees working alongside lighter-skinned workers. And at least one Indian has found his way to Hollywood.

Felix Noriego left the Papago reservation in Arizona a couple of years ago to work in a Los Angeles aircraft plant. But shortly after he arrived here, Hollywood put out a call for "an Indian 6 feet tall, 21 years old, with a face like that on the buffalo nickel."

Mr. Noriego got the job and ever since has been busy appearing in "To Hell and Back," "Drum Beat" and "Battle Cry." The job is fairly easy, he says: "They just want me to act like an Indian."

Among the Indians who didn't take to metropolitan life was Ben Gullikson's brother. He tried living in Los Angeles, got fed up with the noise and the traffic "and has gone back to the Rosebud reservation in North Dakota for good."

But the Indians who stay on in the cities are quick to use their increased purchasing power to grab the same variety of consumer goods as any American—autos, furniture, appliances, to name some.

Take Adolph "Bronc" Nagurski, a 31-year-old Navajo, who is a sheet metal worker at Douglas Aircraft Co. Mr. Nagurski—named after the famous Chicago Bears fullback by a teacher who had trouble spelling and pronouncing his Indian name (Chechinezhesue, or "grandson of a tall brave")—has recently bought an $11,000 house.

In addition to his swing shift job at Douglas, Mr. Nagurski works days as an airplane mechanic at Long Beach airport. He's using some of this extra money to finance flying lessons. "I don't have my pilot's license yet, but I expect to get it this summer," he says.

"I hope to buy a home here soon, like my older brother did," says Bill Thorpe, son of the great Indian athlete, Jim Thorpe. Bill works at North American where his sure hands guide a machine which cuts into aluminum, stainless steel and titanium to form airplane parts.

The Government, of course, benefits too from the Indians' increased purchasing power. A survey last year in one Los Angeles industrial plant showed the average Indian worker was paying $210 a year in withholding taxes. Instead of being a recipient of Government help as a "ward of the Government," the Indian working in industry pays his share of the tax burden.

Of course, on a few rich reservations—where oil has been discovered or where valuable timber resources are owned by the tribe—the brave forks out a substantial tax payment. But consider some of the poorer reservations.

Take the 7,400 Papagoes, who live on a reservation at Sells Agency, Ariz. A report to a congressional committee at the end of 1952 showed the average family income to be $1,500 with a fourth of the families earning less than $100 a year per capita.

Obviously there was little income-tax revenue from the Papagoes.

Or take another Arizona reservation, the San Carlos Apache Reservation, where some 4,000 Apaches are trying to exist on 1.6 million acres.

Tribal leaders, anxious to develop "our own resources" and "to train our people to help themselves," asked Stanford Research Institute to look into the reservation's economic resources.

Here are some of the findings submitted to the tribal council last year:

About 20 percent of the tribe's labor force was unemployed. One reason for the unemployment—the Apaches' reliance on livestock raising as a chief occupation.

"Except during the semiannual roundup and auction periods, relatively few persons are required for livestock operations," the report notes. War and postwar prosperity enabled the Indians to make a living without working consistently. "The consequent idleness and lack of opportunity to find constructive outlets for their energies led to such serious social problems as excessive drinking, breakdown of family relationships, and a relatively high suicide rate."

The institute came up with some suggestions as to how the Apaches might better utilize their resources—range improvement, expanded lumber operations, and additional irrigation. But the researchers also agreed: "There are no easy economic solutions to the problems with which the San Carlos people are faced."

Federal Aid for Surplus Labor Areas

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 17, 1956

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following article on the subject of Federal aid to surplus labor areas and I was pleased to note that the President's recommendations to alleviate conditions in such areas in his state of the Union message were views incorporated in H. R. 9137, which I introduced in the House of Representatives on May 13, 1954, and which I reintroduced on January 5, 1955.

The article appeared in the Boston Globe, January 9, 1956:

IKE EXPECTED TO URGE "LUBRICATING" LOANS—DEMOCRATS SUPPORTING BROADER PROGRAM—FEDERAL AID PLANNED FOR JOBLESS AREAS

(By John Harriman)

Both the administration and Congress are apparently determined to do something about what are usually called surplus labor areas; this is, communities where 6 percent of the labor force is unemployed and likely to remain so for some time.

Lawrence and Lowell are among such areas in this State. Others throughout the country include Duluth-Superior, out in Minnesota; Tacoma, Wash.; the anthracite coal region in eastern Pennsylvania; parts of North Carolina; Charleston, W. Va.; and Atlantic City, N. J.

President Eisenhower promised recommendations to alleviate conditions in such areas in his congressional message last week, and on Friday hearings were started on the same matter by a subcommittee of the Senate.

FEDERAL LOANS TO HELP FINANCE NEW PLANTS

The plan to be offered by the President is said to contemplate Congress appropriating $35 million to the Department of Commerce. This money would be loaned to the 80-odd communities still suffering unemployment.

The loans, as planned, are described as "lubricating"; that is, they would be granted with the idea of bringing in local, State and private funds to finance new industry in these areas.

Federal money would only be a part. The figure 25 percent is mentioned of the cost, for instance, of a new plant for an industry which might locate in the community, with maybe another 20 percent put up by the State or city, and the balance from private sources.

There would also be grants, maybe up to $1 million to universities to train specialists and develop facilities to aid these distressed areas.

Furthermore, the program is said to call for a determined effort by the Government through advice and technical assistance to discover and root out the basic causes of unemployment wherever they exist.

The Democrats, controlling Congress, have a much more ambitious program, however. This is a bill sponsored by seven Senators, including DOUGLAS, of Illinois, LEHMAN, of New York, and KENNEDY, of this State.

FAST TAX WRITE-OFF BENEFITS PROPOSED

This bill would create a depressed areas administration, under an administrator.

This new agency of Government would be authorized to make up to $100 million in loans for new plants and other industrial development * * * plus another $100 million to "initiate programs of public facilities * * *."

Funds for such a program would be raised by the issuanec by the agency of $200 million in notes and obligations, which could be purchased by the Treasury. And it is contemplated that such loans as are made will be self-liquidating, as was the case with the old RFC.

Other provisions in the Senate bill are fast tax write-off benefits for new plants, a program under which the government would supplement State unemployment insurance benefits in some cases, and the distribution of surplus farm commodities to homes and institutions.

Vocational training for new employment, and the siphoning of Governemnt contracts to depressed areas are another part of the plan.

Obviously the Democrats' program goes much further than that to be offered by the administration, and the two will meet head-on in Congress.

What we shall probably see enacted is some compromise between the two plans.

Budget Bureau's Proposal for a TVA Self-financing Plan Is Another in a Long Series of Efforts to Destroy TVA, Says Gordon Clapp, Former TVA Board Chairman—Supports TVA Board Plan for Financing—Part I

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 17, 1956

Mr. EVINS. Mr. Speaker, recently, two of Tennessee's most distinguished journalists, Mr. Coleman A. Harwell, editor of the Nashville Tennessean, and Mr. Nat Caldwell, a distinguished member of the staff of the Tennessean, conducted a transcribed interview in New York City with Mr. Gordon Clapp, former Chairman of the Board of the Tennessee Valley.

This interview is virtually a historical document—it is one of the most lucid statements of the purposes and activities of the great TVA that I have ever read and I strongly believe that it should be further considered and this document preserved.

Therefore, under unanimous consent, I ask that this interview be included in the Appendix of the RECORD. I have devided the reported interview into five parts—with the first part consisting for the most part of the high esteem in which the TVA is held by other nations of the world as an example of how best to promote rehabilitation and development for themselves.

Part I of the Clapp interview follows:

Mr. HARWELL. We have come here today to interview you, and we appreciate the opportunity to do it. We, along with all the people of the Tennessee Valley, recognize that you are the outstanding advocate of the things that have made the TVA one of the most remarkable experiments in our day, and you, as much as anyone, have been responsible for its great success and its service to the people of the valley, and we believe, to the people of the country.

Today it sems clear that the TVA has reached another of its crises, and, facing that, we have come to you for your opinions and suggestions, and to ask you to share with the people of the Tennessee Valley and, also, with the people of the country the benefit of your knowledge and experience.

First, before talk of other things, we'd be interested to know, having some general idea about it, a little more about what you are doing now and what your plans are in this interesting new work you are undertaking.

Mr. CLAPP. I am glad to have a chance to talk about the TVA and the future of the TVA. Certainly, the past history of the TVA has a great deal to do with what I am doing now.

Dave Lilienthal (Clapp's predecessor as TVA Chairman) and I are back together again under the auspices of a private company to make our services available for counsel and advice to governments of other countries, or to their public agencies, in the plans and programs they have for development of their natural resources, their rivers, their agricultural lands, their forests, their mineral deposits, and the like.

Mr. HARWELL. How long were you and Lilienthal associated previously?

Mr. CLAPP. You remember that Dave was a member of the original Board in 1933, and later was Chairman until 1946. About 1 month after the Board was established I came into the TVA in a very minor capacity in the Personnel Division. I succeeded him as Chairman of the Board and Director in 1946, when he was made Chairman of the Atomic Energy Commission.

Mr. HARWELL. When did you become a member of the Board?

Mr. CLAPP. In 1946. That is 13 years after I went to TVA. During that time I became Director of Personnel, and later General Manager of the TVA. This new work we are in——

CAME FROM RANKS

Mr. HARWELL. So you came from the ranks of the staff of the TVA onto the Board. Isn't it true that you are the only member of the Board who did have that experience? You had the benefit of the experiences as a member of the staff as well as of the Board and then Chairman?

Mr. CLAPP. That is right. Of course, you will remember that Harry Curtis, a present and distinguished member of the TVA Board of Directors was TVA's first chief chemical engineer back in 1933 and 1934, and was with the TVA for a number of years with some interruption before he came back to the TVA as a member of the Board.

Mr. HARWELL. Well, is your present enterprice directed at any one part of the world?

Mr. CLAPP. No. I would say in any part of the free world, although we will, of course, have to limit the number of assignments we take on.

Mr. HARWELL. Is there any news in your plans at present?

Mr. CLAPP. At present we are actively engaged in advisory capacity with the Cauca Valley Corp., which is a public agency of the Colombian Government, in South America. It is setting out to do for the Cauca River Valley very much what the Tennessee Valley program contemplated 20 years ago—flood control, irrigation, power, agricultural improvement.

Mr. HARWELL. How is that to be financed?

Mr. CLAPP. The corporation is working on that now. Most of the financing will, of course, have to come from Colombia, but it will seek other sources, too.

Mr. CALDWELL. That is the National Government of Colombia?

Mr. CLAPP. The National Government of Colombia as well as the departmentos or states directly concerned with the regional development along the Cauca River.

Mr. HARWELL. Has anything recently occurred in connection with your survey and recommendation in Jordan?

Mr. CLAPP. As you know, Eric Johnston has been negotiating in the Middle East among the Arab States and with Israel attempting to get an agreement on a Jordan Valley development plan which the TVA developed at the request of the United Nations a couple of years ago. It is a most difficult and complex assignment. I don't know anything more about the progress on that than what I read in the papers.

WORLD INSPIRATION

Mr. HARWELL. Well, you have said, I believe, that sometimes we are more enthusiastic about sharing the good things in life with other countries than here at home and that the TVA has served as an inspiration to people in many parts of the world, which is an indication of its value to us.

Mr. CLAPP. I don't think there is any question about the tremendous value of the practical experience shown in the Tennessee Valley development in its effect upon the thinking of people all over the world. If you examine the list of the visitors from other countries who have come to the Tennessee Valley on official missions as interested engineers and technicians, as heads of state, and if you were to count up the time that people from other countries have spent in the Tennessee Valley studying the TVA, you would begin to realize that it is really one of the outstanding showcases for United States foreign policy.

It is ironical, however, that some of the very people in high places who are selling it most eagerly abroad are most apologetic about it at home. That fact was borne out to me in a very sharp way when the Jordan River plan that the TVA developed at the request of the U. N. was blessed by the President and put into the hands of United States emissaries for negotiation between Israel and the Arab countries. The plan for doing something constructive about a river was advanced as offering high hopes for relieving international tensions in that part of the world. This came shortly on the heels of the condemnation of the TVA by the President when he labeled it as creeping socialism on the very day that the House of Representatives was debating appropriations for a TVA steam plant.

This type of doubletalk about TVA's value abroad and at home is a serious reflection upon our estimate of the intelligence of people in other countries.

HISTORIC IRONY

Mr. CALDWELL. Hasn't some of the opposition to TVA in the valley been on the claim it could not succeed?

Mr. CLAPP. That is right. History has made that rather ironical. At first the private utilities, and some of those who opposed TVA in the valley and elsewhere, said they were against it because they didn't think it would work and it would be a waste of effort. Then as TVA proved successful the private utilities have continued to oppose it because it has worked so well.

Mr. HARWELL. Aren't those who are saying in other parts of the country today, that we must not repeat the TVA pattern because we must have a great degree of participation of local governmental and civic and individual groups; aren't they actually using that in some measure to advance the purposes of private power and defeat the aim of public power?

Mr. CLAPP. Of course, and it seems to me, they are working that idea to death. The fact is that the Army engineers who conducted the engineering surveys of the Tennessee River years ago, not wanting to get into the controversial subject of public power development on the river, invited the private utility companies in the valley to build dams which the Army engineers considered necessary to control floods and to make the rivers navigable. The private utilities turned down the invitation and, moreover, said that any power development on the Tennessee River would be surplus, unneeded, and that the area was getting all the power it could possibly use.

I think that history in the Tennessee Valley plus the current lipservice that is pushing for local initiative in power development is designed deliberately to confuse the public about the nature of these problems, and the remedy which must be sought to solve them. No agency outside of the Federal Government could do on the Tennessee River what the TVA was set up to do and has done.

Mr. HARWELL. Is there any reason, in your view, that any of the basic original purposes of the TVA as set out in the original act should be modified today?

Original Purposes of TVA Remain Sound Today—Part II

EXTENSION OF REMARKS

OF

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 17, 1956

Mr. EVINS. Mr. Speaker, I include in the Appendix of the RECORD part II of a significant interview with Mr. Gordon Clapp, former TVA Chairman, conducted recently by Mr. Harwell and Mr. Caldwell, of the Nashville Tennessean.

Part II follows:

REMAIN SOUND

Mr. CLAPP. The original purposes of the TVA Act are just as sound today as they were when they were written into the law. Let me cite them briefly.

It was assigned the task of controlling floods with which the Tennessee Valley was plagued year after year, to make the river navigable from its mouth at Paducah to Knoxville, the head of navigation, and, thereby, make it an important part of the growing inland waterway system of the country. TVA was created to provide for the national defense—certainly, the TVA's record is an illustrious confirmation of the congressional and Presidential wisdom on that point.

Witness the atomic energy development at Paducah and Oak Ridge, the Tullahoma engineering wind tunnel development, the rapid increase in chemical and light-metal industries which the TVA development accelerated, if not made possible.

It also had the objective of bringing about an orderly development of the natural resources of the whole region, including its minerals, its forests, its agricultural lands, and to improve "the general welfare of the people of said region"—as the TVA Act puts it in so many words.

Some of these objectives have been attained in large part, though a process of development of this kind is never ending. Then there is power supply, more efficient conservation and use of forests and agricultural lands, and a greater development of the industrial processing of the raw materials with which that region is blessed.

The main purpose of the TVA in all of area as set forth in the act of 1933 was to lend general oversight to these problems, work with the States, the counties, the cities, and the citizens of the valley to keep moving in the direction of greater and greater development of the resources of the region.

I think the record of the TVA and the Tennessee Valley confirms the wisdom of those objectives. It would be a denial of experience to remove from the scene of the Tennessee Valley that agency which has stimulated, guided, accelerated these developments, and has helped as a partner the thousands of businessmen, citizens, public officials, farmers, and workers in putting these resources to work in raising the standards of living.

ENEMY WISECRACK

Mr. HARWELL. You know, there are people who believe, and there are others who propagandize, whether they believe it or not, against the TVA on the basis that it serves just one area. A favorite wisecrack is to the effect that TVA drains 47 States for the benefit of 1. Is the value of TVA to the country as a whole demonstrable?

Mr. CLAPP. I think the case on that is unanswerable in favor of TVA as a national benefit if people will just review the record with an open mind. Before there was a TVA, and before there was a Federal investment in the dams of the Tennessee River and its tributaries, flood relief had to be poured into the Tennessee Valley when there were floods though not on as large a scale as is true today when regions like New England suffer floods.

When there are floods on the Missouri, the whole country comes to the rescue and pours money for relief into the area.

In one flood alone in 1951 on the Missouri River, the Federal agencies concerned estimated the flood damage and the relief cost at somewhere around a half-billion dollars, which at that time was more money than had been put into the development of the Tennessee Valley by the Federal Government to prevent there the very thing that was happening on the Missouri. On the ground of arithmetic alone related to dollars and cents, the Tennessee Valley experience is clearly a benefit to all of the taxpayers of the United States.

However, one can attribute benefits beyond the obvious arithmetic. There are those who say that the flood-control, navigation and power-development plans that have been devised in recent years for the Missouri River system are good plans, and I am prepared to accept their judgment.

But the record of the development of those plans at the time shows one Government agency was planning the upper end of the river while another Government agency was planning the lower end of the Missouri, and they were both claiming that the other's plans were not good. The existence of the TVA and its record of success in developing a single plan for a single river, can be credited with bringing those two agencies together. They resolved their differences, revised their engineering, and I think TVA should be given a large credit for the improvement and asserted economy that now shows up in the plans for the Missouri.

DOLLARS AND CENTS

Mr. CALDWELL. Has it been of any practical dollars-and-cents benefit in the present atomic program. We are conscious of the Federal budget and the need to save money.

Mr. CLAPP. Well, let's take a look at one case, power for the atomic-energy program. The quantity of power that is required by Oak Ridge and Paducah atomic-energy installations is so great that the difference in their power costs of as slight as one-half of a mill per kilowatt-hour—a difference of one-half of one-tenth of a penny—would account for an annual difference in the United States Government's power bill of at least $50 million.

The existence of the TVA before the construction of the atomic energy projects, the ability of the TVA to build steam plants efficiently and economically, to supply their power needs, established a base line for costs against which the quotations of the private utility companies could be compared. Those private utility companies which now supply part of the power to the Paducah installation and to the new atomic energy installation

going up at Portsmouth, Ohio—those quotations compare rather favorably with what the TVA charges the Atomic Energy Commission, but the power rates paid by the Atomic Energy Commission to those private companies is considerably lower than those private companies ordinarily quote to other industrial users.

It is perfectly clear that if there had been no TVA, the Atomic Energy Commission in those two installations alone would be paying a power cost running into many, many millions of dollars a year more than it is costing now.

You can add up many cases like that in connection with the power cost at the Air Force wind tunnel at Tullahoma, the cost of power for aluminum that went into our bomber program during the war and into the chemical operations that centered in the Tennessee Valley. On the basis of dollars and cents I don't think it would take much figuring to equate savings to the Federal Government for the military and national-defense programs attributable to the existence and efficiency of the TVA, which savings would very quickly equal the investment that has gone through the TVA.

Mr. CALDWELL. Wouldn't it almost save each year from now on the equivalent of the $150 million a year that we have got to spend for new steam plants?

Mr. CLAPP. It would add up to more than that very quickly, and these savings that I refer to go on year after year. Those savings represent a lesser bill that the taxpayer in the States of Ohio, Michigan, Illinois, and New York pay into the Federal Government for the national-defense bill, and it is no small item. That saving in a sense, therefore, is a dividend which the TVA declares by its very existence. It benefits citizens everywhere.

Now, one can go on and spell out many other ways in which the TVA has created national benefits. At least half of all the money that has been invested in the TVA power system, including the steam plants, and in flood control and navigation systems, was spent outside the Tennessee Valley to the great benefit of working forces and manufacturing corporations in Illinois, New York, Massachusetts, Pennsylvania, to name but a few.

ANSWER TO SOVIETS

Mr. CALDWELL. In that connection, and in the light of your present business experiences, what has TVA meant in the world picture?

Mr. CLAPP. The ability of the United States to make a fresh approach to the development and control of a river and the development of the natural resources of the region in cooperation with State and local governments and private citizens, has shown people in other parts of the world that Americans are still inventive not only in the field of mechanical gadgets but also in the more difficult field of methods of administration.

Foreign countries are especially eager to learn how TVA handles the extremely delicate problem of the relationship between a strong central Government and the State and local governments from which so much initiative must come in any democratic society.

TVA's outstanding success in this respect alone has been of the strongest appeal to those underdeveloped countries where heavy reliance must perforce be put upon central government and where leadership in the provinces and outlying areas has a difficult time making itself known and felt.

The Soviets who approach the underdeveloped countries extol the virtues of the highly centralized practice of the Soviet system where plans and the execution of plans are done by the few in the national capital in order to get quick results by dictatorial methods. They offer a very appealing theory to countries where people are hungry and idle and want modern benefits in a hurry.

The success of the TVA within the Federal system of the United States, the success of the TVA in finding a highly effective means of working hand in hand with States and local government without depriving citizens of their individual or economic freedom, but, in addition, helping to create new economic opportunities for them is a dramatic answer to the Soviet line of approach to economic development. The existence of the TVA is a practical, observable answer to what otherwise might be an empty argument about abstract theory.

I believe that if properly understood and interpreted by our leaders in foreign policy, the TVA method of governmental cooperation could be one of the most effective and understandable instruments with which to combat in a constructive way the drive the Soviets are now making in the Middle East and in the Far East to freeze out the technical assistance and ideas of the western world.

Mr. HARWELL. On the yardstick matter, what about the individual benefit to the citizens of other parts of the country?

Mr. CLAPP. Well, that is, really, a dramatic story all by itself. The very fact that the Tennessee Valley has shown that electricity from hydro and steam plants can be brought to the consumer at a rate appreciably lower than the rates charged by the private companies and still produce a good return for the Federal Government and a very good return to the municipal and rural electric cooperatives on their investment has alerted people all over the country about the high charges they are paying for their electric service.

Many cooperatives in other parts of the country have sent their people to the Tennessee Valley to study this system of low rates designed to achieve high consumption. By becoming informed about TVA's experience they have strengthened their hand in bargaining with the private utilities from which they get power, and have been successful in many instances in bringing their own rates down.

Moreover, the rural electric cooperative, which is now commonplace in most parts of the country, originated in the Tennessee Valley, in the State of Mississippi, with the advent of the TVA. One could estimate the effect that TVA rates have had upon rates in other parts of the country, but let me just point out this, that if you chart the rates charged by private utility companies to rural electric cooperatives over the country, you will find that as you move away from the Tennessee Valley and from the Pacific Northwest, where there has been another large public power center, the private utility rates go up in direct proportion as you move away from those centers.

That demonstrates the competitive influence of a TVA demonstration. The ascending rates as you move away from the Tennessee Valley cannot be attributed to increased costs of producing electricity, because even if you equalize fuel costs, for example, you find the ascending rate phenomenon showing up as you chart rate zones outside the Tennessee Valley and the Pacific Northwest.

Tennessee Valley Power Consumption Has Been Boon to Appliance and Other Manufacturing Industries of the Nation—Part III

EXTENSION OF REMARKS

OF

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 17, 1956

Mr. EVINS. Mr. Speaker, under unanimous consent, I ask that part III of the interview between Mr. Gordon Clapp, former TVA Chairman, and Messrs. Harwell and Caldwell, of the Nashville Tennessean, be included in the Appendix of the RECORD.

Part III of the interview follows:

TWICE NATION'S AVERAGE

Mr. HARWELL. Has development of REA's in the Tennessee Valley been greater than in other parts of the country?

Mr. CLAPP. The contrast between the Tennessee Valley and other parts of the country is not so marked in that respect as it is in the increased use by the individual consumer.

The average residential consumption in the Tennessee Valley, which would include rural users, is about twice that of the national average. That is one of the functions of the low rate. As the rate is reduced, consumers use more and the heavy investment in generating plants is more efficiently used.

Mr. HARWELL. And doesn't that in turn result in the type of thing you cited earlier that the purchase of more appliances——

Mr. CLAPP. Exactly. The appliance manufacturers for years since the advent of the TVA program have marked the Tennessee Valley as the boom market for electrical appliances.

If you added up the amount of money that electric consumers in the Tennessee Valley have spent in purchasing appliances since the war when they became readily available again, it exceeds $1 billion.

There is the increase in house heating, in air conditioning, in water pumps on the farms, to say nothing of cooking ranges, hot water heaters. That increase has been phenomenal in the Tennessee Valley as compared with other parts of the country, with the possible exception of the Northwest.

Mr. HARWELL. Do you feel that the TVA has given the valley an unfair advantage over other parts of the country in its industrial development?

Mr. CLAPP. No, I don't believe that is a valid point. The power rates in the Tennessee Valley are based upon the cost of producing power there. The coal was there before TVA appeared on the scene. The potential hydro was in the river. The raw materials upon which industry must rely were there. TVA simply was a means of mobilizing and utilizing those basic power resources.

As long as the TVA rates cover all costs and provide a sufficient rate of return for private or for the Federal investment, no valid objection can be made as to whatever attraction that rate level may offer for industry.

One must remember that so far as power rates are concerned, the Columbia River Valley in the Northwest offers much greater

advantages than the Tennessee Valley can offer. They have a bigger and better river for power. Yet, the Tennessee Valley has never suggested, to my knowledge, that the advantages of the Columbia River should be neutralized by forcing the private and public power utilities in that area to raise their rates so that they won't compete with the Tennessee Valley.

AIDS OTHER AREAS

Mr. HARWELL. Would you say that the industrial development of other parts of the country in itself is an answer to this question?

Mr. CLAPP. It is a sweeping answer to it. I think it is clear that we gain greater and greater national strength by encouraging within each region that kind of development which its natural resources of transportation, terrain, minerals, ray materials, growing season, fuel and power capacities will best support.

The development in the Tennessee Valley has not been the expense of industrial development elsewhere. It has, instead, supplemented, complemented, added to the national productive capacity, and has in turn encouraged and helped to support industrial development elsewhere.

Mr. CALDWELL. Mr. Clapp, let's consider these conflicts that have been—I think you have said or implied—the good fortune of TVA and the people in the Tennessee Valley. That is because they had to fight back?

Mr. CLAPP. I think they were good things, yes. The major issues that arose in the course of TVA's success made it necessary from time to time for the people of the Tennessee Valley to think very deeply and soberly about the value of this development that was going on and of which they were a very important part. It made them realize anew each time these basic issues came up—such as the issue about keeping TVA free from political patronage—it made them realize that they couldn't safely take the continued successful existence of the TVA or their whole valley development program for granted; that its future depended upon their understanding and upon their activity and aggressive support of the valley's program.

The issue now confronting the Tennessee Valley about future power supply and how it shall be financed is another one of these basic questions, basic issues, which will call as never before for full and devoted understanding of the people so that they can relate the outcome of that question to the future of the valley and their own continued development.

The proposal that the TVA board has made to get an amendment to the TVA act authorizing revenue bond financing as another and additional means of financing future power supply, additional steam plants, is a sound and wise proposal. It will not be easy to obtain the necessary legislation, because the opponents of the TVA in and out of Government will try to use this occasion to destroy the TVA, or to render it wholly ineffective and make it fail.

Mr. CALDWELL. Why?

Mr. CLAPP. Because the diehard opposition to the TVA has only one purpose in mind, and that is to dismantle, disband, and get rid of the TVA, and they don't care by what means they accomplish that purpose.

Witness the ill-fated Dixon-Yates scheme which was the vehicle for a kind of slipperiness in high Government circles that reckoned without the alert attention of the public in these matters.

Mr. CALDWELL. Why do they feel they have to destroy? Does it have any relation to this map of spreading ripples of lower rates that surround the Tennessee Valley? Does that have anything to do with it?

Mr. CLAPP. I am sure that has a lot to do with it. The successful existence of the TVA as an efficient, low-cost supplier of power makes the neighboring utilities or private utilities anywhere in the country very uncomfortable. Being monopolies in the areas they serve, they would much prefer not to be bothered by any demonstrations of how their type of business can be conducted more efficiently or more economically to the benefit of consumers.

FEAR COMPARISON

Mr. CALDWELL. The thing they fear most is the regulation by comparison.

Mr. CLAPP. I think that is right. They would much prefer to be not regulated at all, or, in lieu of that, be regulated by agencies which they can overpower by statistics, litigation, and time-consuming hearings on highly complicated rate studies.

Mr. HARWELL. You made the statement concerning the efficient operation of TVA. President Eisenhower gave assurance that his administration would maintain the TVA at maximum efficiency. Apparently there is a considerable misunderstanding as to what maximum efficiency means.

Would you say that for the TVA to be maintained at maximum efficiency, it must meet the needs of the Valley as to power?

Mr. CLAPP. Certainly. It must continue to meet the needs of the valley as to power in the most economical and in the most competent engineering way available. The TVA can meet that responsibility financially under the present circumstances only through two routes; one is through the use of its earnings which it can do under the law, and has done in the past, but which is never sufficient in any private or public utility to meet the capital requirements for power supply expansion.

The other route is through appropriations by which the Federal Government in effect loans money for investment in TVA power facilities, the TVA being required by law to pay back to the Federal Government over a period of not to exceed 40 years every dime that is thus invested. The TVA is proposing to add an additional means of financing, not a substitute means but an additional means, whereby it could go at its discretion under congressional authorization into the private bond market and sell bonds against which the revenues from the sale of TVA power would be pledged for interest and redemption.

That would give the TVA three means of access to capital for expansion of its power system by adding steam plants—new steam plants, or units to existing steam plants.

Now, if the administration really meant what it said when it promised to maintain TVA at maximum efficiency, it will guard very zealously the managerial flexibility which TVA has previously possessed, namely, access to apropriations and use of its revenues, and if it wants to relieve the Federal budget of some of that capital requirement, it will gladly and without tricky restrictions upon the management and board of the TVA authorize access to the private money market.

HIDDEN DANGERS

Mr. HARWELL. Doesn't one of the alternative methods now proposed contain such hidden means of crippling the efficient operation of TVA?

Mr. CLAPP. The proposal which the Bureau of the Budget has advanced as its own self-financing plan for the TVA is full of jokers. If the Budget Director's proposal is adopted, it would take away from the TVA Board and management that degree of discretion which any managerial group must have in timing its financing program and in choosing from among its various means of financing, and draw that discretion into the hands of the Bureau of the Budget which is not set up to run a power system and has no experience in that connection.

The effect of the Budget Bureau's proposal is to—I think the intent behind the Budget Bureau's proposal—and intent may be more important than the language of their proposed bill—is to force the TVA Board to rely upon an exclusive means of financing, frequently ill-timed related to the cost of money, and thereby increase TVA's costs. It will force TVA power costs up and up in the hope that those higher costs would have to be recognized in higher rates to the ultimate consumers—the farmers, the factories, the places on Main Street, and in the thousands of homes throughout the valley.

If they can perpetrate this intent upon the Tennessee Valley, they will have succeeded in doing what they had hoped to do by means of the Dixon-Yates proposal.

Mr. CALDWELL. In other words they may not have had experience in managing a power system, but have had experience in trying to destroy one.

Mr. CLAPP. If the maneuvering that produced the Dixon-Yates scheme is an example of the Budget Director's facility in destructive purposes, I would say he is highly skilled in that art.

Mr. HARWELL. There are those who contend that the Dixon-Yates plan itself was a good one aside from any duplicity in trying to get it across. Can you subscribe to that?

Mr. CLAPP. No, I cannot. I think there are several facts that make that conclusion unsupportable.

In the first place, the Dixon-Yates plant was to be located in the wrong place. The TVA had gone over that problem of plant location from the standpoint of the best interest of the Tennessee Valley and its consumers and the best interest of the taxpayers of the country, and had settled upon the Fulton plant site on the side of the Mississippi River where there was some solid rock upon which it could be built. The Dixon-Yates team picked a dubious physical site from the standpoint of foundation and susceptibility to floods from the Mississippi. The Dixon-Yates plant would have added transportation costs to the cost of coal, as compared with the Fulton site.

In addition to locating it in the wrong place, it was going to produce costs that were substantially higher to the Government than would have been the case had the TVA been able to build the Fulton plant.

On top of that, the Atomic Energy Commission and the Bureau of the Budget were gambling desperately with the record of performance of the Dixon-Yates combination whose first reliance was upon Ebasco, when the TVA had already demonstrated in the Shawnee-Joppa contest that it could build faster and more economically no matter where the plant was going to be built.

Does Budget Bureau's TVA Self-Financing Plan Have Same Ancestry as Abandoned Dixon-Yates Deal?—Part IV

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 17, 1956

Mr. EVINS. Mr. Speaker, continuing the significant interview which Mr. Coleman Harwell and Mr. Nat Caldwell, of the Nashville Tennessean, held with Mr. Gordon Clapp, former TVA Board Chairman, I include part IV in the Appendix of the RECORD:

NOT BY ACCIDENT

Mr. CALDWELL. That wasn't by accident, was it?

Mr. CLAPP. No. That goes back to intent again. The only conclusion I can reach with respect to the whole Dixon-Yates affair is that those who maneuvered to develop and negotiate it were more intent upon doing harm to the TVA than they were upon serving the public interest. Naturally, that intent led them into a whole series of mistakes which they are now trying to atone for by making Messrs. Dixon and Yates the financial goats.

Mr. CALDWELL. The purpose of Dixon-Yates was to deny us an economic power supply, and the purpose of the Bureau of the Budget's self-financing plan is to deny us an economic capital supply; is that right?

Mr. CLAPP. I think that is right. I am confident that the people of the country and their Representatives in the Congress, when they examine the TVA's financing proposal and compare it with the Budget Bureau's financing proposal for the TVA, will side with the TVA's proposal.

Mr. CALDWELL. Would you be surprised if the Budget Bureau's self-financing plan had the same ancestry as the Dixon-Yates plan had?

Mr. CLAPP. I not only wouldn't be surprised, I would be prepared to assume it. Let me add one more thing to that last one. I still retain the hope that the President and his Director of the Budget, who is now so anxious to close the Dixon-Yates episode and have people forget about it, will regard the coming crisis of the TVA as a God-sent opportunity to demonstrate that the President really meant what he said when he promised to maintain TVA at maximum efficiency.

If the President and his subordinates really intend to live up to that promise, they will support TVA's financing proposal and try to obtain its enactment in the next Congress.

Mr. HARWELL. But isn't that a fond hope? Isn't it rather clear that both Mr. Hughes and his predecessor, Mr. Dodge, heard President Eisenhower when he referred to TVA as "creeping socialism" rather than when he promised to maintain it with maximum efficiency?

Mr. CLAPP. They could now make themselves right with their consciences by keeping a solemn promise.

Mr. CALDWELL. Is there any reason why TVA should continue to have appropriations from Congress in addition to the right to issue bonds?

Mr. CLAPP. I think there is a special reason why the TVA must continue to have access to appropriations as a means of obtaining capital for new power plants, and the reason is a very simple one. More than half of the capacity of the TVA system, and well over half of its energy output is committed to Federal national defense establishments, particularly the atomic energy program.

There is no reason that I can understand why the Federal Government should not finance at least that part of the additional power supply for service to itself through the cheapest means available, which is the Federal Government's ability to borrow money, which is represented in part by appropriations to the TVA.

CONGRESS HAS CHOICE

Mr. CALDWELL. There have been suggestions of amendment to the self-financing plan from Members of Congress who say that it is a bad thing for TVA, or any other Federal agency, to be permitted to operate outside of the Federal budget and outside of Federal debt control. What is your opinion on that?

Mr. CLAPP. Well, I think there is good theoretical support for that view, but I don't see that the TVA's financing proposal raises that question to any substantial degree.

There is more to the TVA than power. As long as the TVA is permitted to pursue the objectives assigned to it by law, it will have to go to the Congress each year for appropriations for its non-power activities. In the course of those hearings and examinations, TVA's plans for future power supply will of course, be discussed and reviewed.

If the TVA at any time, under the flexibility that would be granted by the TVA's financing plan, were to abuse its discretion under a wise financing authorization, the Congress could amend the discretion it had granted to TVA.

The Congress will have ample opportunity to control the TVA. One of the main questions involved in the TVA's financing proposal is whether the Congress will authorize the TVA to pick its own time to go into the money market, to set its own schedule for financing—or be subject to specific congressional approval for each loan.

When to buy money in my judgment, is a managerial question, not a question of political policy. If each bond sale has to be approved specifically in advance by the Congress, I see no justification for seeking revenue bond financing authorization at all. If TVA is not authorized to exercise discretion it might better continue to rely upon appropriations as it has in the past, and if Congress and the President failed to obtain them for the TVA, the President and the Congress will have to take the responsibility before the public for the gradual disruption of the TVA by repeated power shortages.

Mr. CADWELL. Some members of the valley's delegation in Congress feel that to win approval of any self-financing plan it will be necessary to provide for Congress to exercise some direct control over TVA's bond issues. They propose as a compromise a plan under which bond issues announced by the TVA would become effective if not specifically disapproved by Congress within a specific period. Do you think this plan would protect the interests of the TVA and permit its continued growth to serve the needs of the valley?

Mr. CLAPP. That idea has some appeal but for my own view I would want to see a thorough analysis of this specific proposal. I can see how in some circumstances it might create difficulties that might be costly. It must be remembered that the ability of the TVA to proceed economically and wisely under revenue bond financing must leave to the TVA sufficient discretion to pick the time at which they go into the market.

Mr. HARWELL. Should we in the valley stress the local aspects of the present crisis?

Mr. CLAPP. It would be most unfortunate and entirely beside the point for this issue to be debated on the basis of the Tennessee Valley versus the rest of the country. In this instance, as in the other big debates over the TVA, the people of the Tennessee Valley in fighting for the principles embodied in the TVA's financing proposal will be performing a national service in winning that fight.

That is particularly true in this case because they will simply be asking that the TVA power system, of which they are a part, be permitted to enter the market for private money with which to expand and enhance a national asset.

The earnings record of the TVA power system will make TVA revenue bonds a very good investment. In fighting for this in urging that this method be made available to the TVA, the valley is simply asking that the TVA have a chance to sell a part of its future to private citizens anywhere who want voluntarily to invest in the TVA power system.

INVESTIGATORS ACTIVE

Mr. CALDWELL. Actually, isn't it true that investment concerns here are prepared to, and are planning to compete for the opportunity of financing the TVA, if the plan is approved?

Mr. CLAPP. As I read the statement of the TVA, of the majority of the TVA Board, it so stated.

Mr. HARWELL. We have understood that some of the investment concerns in Nashville have already been making plans toward that end.

Mr. CLAPP. I would be very much surprised if there were not great competition among underwriting groups to have a chance to handle TVA revenue bond financing issues.

Mr. HARWELL. That would be another instance then, wouldn't it, of TVA's functioning to the benefit of private enterprise.

Mr. CLAPP. Of course.

Mr. CALDWELL. They wouldn't be in for it if they were not going to make a profit.

Mr. HARWELL. That goes without saying, doesn't it?

Mr. CLAPP. It goes without saying that any private financing group representing potential investors would examine the earnings record of the TVA, would examine the future prospects of the Tennessee Valley power requirements, would be impressed by the record of success in increased power demands, in TVA's ability to satisfy it, and would regard those bonds as a mighty good investment.

Mr. CALDWELL. But how do the private utilities feel about the financing plan?

Mr. CLAPP. I am sure the people of the Tennessee Valley as well as a lot of people in other parts of the country are watching the way the opponents of TVA change their tune every time TVA makes a suggestion about a change in the legislation.

It wasn't long ago when the utilities, along with other opponents of the TVA were saying that the TVA should not receive any more appropriations but should be required to finance its project by the issuance of bonds. But now that the TVA has proposed to do just that the private-utility spokesmen argue against it. The United States Chamber of Commerce has done the same kind of a flip-flop.

There is only one safe inference that can be drawn from this kind of double-talk—the opponents of TVA are not interested in the merits of the various methods by which the TVA seeks to remain effective and efficient; they are interested only in making arguments that will lead to a lack of public confidence in the TVA and in its ultimate dismemberment or destruction.

WORDS OF WARNING

Mr. CALDWELL. Do you have any words of warning as to what we might look forward to as fresh obstacles or new points of attack during this fight for the self-financing plan?

Mr. CLAPP. If past experiences on these basic issues affecting the future of the TVA are considered for guidance, I would say that no one should be surprised that the efforts to get the TVA financing plan adopted will take time.

Victory may be slow in coming. It may take quite a while. It may take more than the next session of the Congress. It may take another national election to get people to understand the merits of this idea—as did the Johnsonville issue.

I certainly hope that the people of the Tennessee Valley on this occasion, as in the past, gird themselves for a long engagement. If it comes quickly, so much the better, but we should all be prepared for a long argument. We should keep going back all the time to the basic reasons why the TVA was started in the first place, the successful record of achievement which the TVA, in cooperation with the people of the valley, has achieved, not just for the valley but for the whole country, and beyond the confines of these United States.

We should not be mislead by the attempts of the opponents to make some of the arguments about this TVA financing plan seem like quibbles over language or arguments over theory and thereby be entrapped in bad legislative results.

There will be occasions during this fight when the opponents of the TVA will appear to be willing to compromise and make concessions to the TVA—not as far as they ought to go, but farther than some might expect them to go.

And that is when we must be most careful and make sure that we are not going to yield to seemingly attractive bargains that will bring a quick end to the argument. If we do that, we may bring a quick end to the TVA.

Mr. CALDWELL. I gather that you don't share the apprehensions of your successor, the TVA Board Chairman, of great new danger to TVA if TVA becomes a national political issue.

Mr. CLAPP. I'm afraid I'm not very well informed about the new director's views and apprehensions. I can only say that the TVA has been a national issue since long before it was created. We can be thankful that it has been and hope that it will continue to be. I mean that very seriously for these reasons:

If the ideas and the principles represented in the TVA and the Tennessee Valley development are of consequence only for the Tennessee Valley, then I would begin to question whether there need be a TVA. On the other hand, as long as TVA and the Tennessee Valley and the people in the Tennessee Valley remain true to the joint commitment they have made for a development in the national interest, of course, the TVA will remain a national issue. And that, I think, is in part the answer to those who are fearful that this self-financing scheme may somehow remove TVA from congressional supervision.

I would say that as long as TVA continues to do the kind of job that it is set up by law to do, it will, of course, be a national institution set into a regional program where the Congress will not be permitted to forget it.

Recent Disastrous Floods in New England and California Should Awaken Public to the Tremendous Benefits of Flood Control as Has Been Made Possible by TVA—Part V

EXTENSION OF REMARKS

OF

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 17, 1956

Mr. EVINS. Mr. Speaker, part V of the interview recently given by Mr. Gordon Clapp, former TVA Board Chairman, to Messrs. Harwell and Caldwell, of the Nashville Tennessean, makes some interesting and significant conclusions with regard to flood control and multipurpose programs of the Tennessee Valley Authority. Under unanimous consent, the concluding portion of this interview, part V, is included in the Appendix of the RECORD:

NO EASY WAY

Mr. CALDWELL. And is there no way for the Valley's people to ride easy or tread softly or avoid controversy?

Mr. CLAPP. Certainly not. The Tennessee Valley program, of which the TVA is an important part, represents a practical application of a new idea that has a world spotlight upon it. An idea of that importance, of that consequence cannot be carried on without a terrific amount of hard work, persistence, viligance, great abilities, complete dedication, and devotion to the task, and the thoughtful cooperation of many thousands of private citizens who are making business decisions, public decisions in their own local and State fiovernments, and as voters in the national scene.

The very content of the idea and the manner by which this idea is applied and has been applied requires work. Argument and discussion are important parts of the process, and that I might add is one of TVA's most important contributions to our national life affecting the development of our natural resources.

It has provoked discussion about these questions that would not have been provoked or carried on had there been no TVA.

We used to have a man in the TVA who would occasionally say, "Do we have to argue this issue all over again? I thought we settled that 5 years ago." And some of us would have to remind him, "Look, you never settle these questions permanently. The very fact that they keep coming up means that we continue to discuss, to argue, and to be a part of a process whereby the public reaches conclusions."

And that is one of the functions of the TVA. Once it is all neatly arranged, tucked away on the shelf so that people forget about it, why, it better be ended.

Mr. CALDWELL. There has recently occurred in the section of the country where you live now a pair of disastrous floods, and that seems to raise for the Northeast some of the same questions that we faced before TVA.

Mr. CLAPP. The floods that struck New England and New York, New Jersey, Pennsylvania were terrible in their devastation. I am inclined to think that they had a more terrible impact upon the people of these regions than they might have because they have been encouraged too long to consider larger and more devastating floods as something that would not happen.

One of the things that struck me as a longtime resident of the Tennessee Valley transplanted to Manhattan was that all of this is so unnecessary. The costs are tremendous. The individual losses are tragic.

Whether the people of this region adopt or adapt the TVA approach to their own flood control problem and their own water supply problem, I think there are more people in this region now than there were before these recent floods who can understand very well why the people of the Tennessee Valley are so quick to rise to the support of TVA whenever opponents threaten the TVA's existence.

Mr. CALDWELL. Well, moving back from New England down to the Valley again and treating Memphis as a special case, can you see any reason for other big city power boards talking in terms of their own municipal generation?

SQUEEZE ON MEMPHIS

Mr. CLAPP. Well, I regard Memphis as a special case, and I don't see how the other cities of the Valley should or could with wisdom follow the lead of Memphis. I do not mean to be critical of Memphis in going ahead with the decision to build its own plant. There is much to be said in favor of the alternative they elected. The administration was squeezing TVA by the throat through the Dixon-Yates deal and threatening thereby the TVA's ability to continue to supply Memphis' needs without holding them up on the price of power which the Dixon-Yates deal would have required.

The advantages which Knoxville, Nashville, Chattanooga, and a score of other cities and many more communities in the Tennessee Valley enjoy come from the fact that TVA system sells the power to those cities and rural cooperatives on a regionwide cost-plus basis—averaging all costs over the entire system and giving all of them the advantages of the larger scale operations and higher efficiencies which the TVA system as a whole involves or creates.

Now, to think of the Tennessee Valley becoming once again a conglomeration of separate power systems with steam plants of smaller size units, less efficient units, uncoordinated fuel purchases, with an ultimate wide variety among communities on resale rates, that is like looking back to the days when the private companies were claiming to serve the people of the Tennessee Valley.

It would put the valley back even beyond that, because the private utilities at the time the TVA came in were moving in their slow way toward larger and better integrated generating, transmission and distribution systems.

You would have the problem of trying to integrate individual small plants by interchange ararngements. Before long, we would have a system in the Tennessee Valley that is like the antiquated systems of New England where one-third of the power is not a transaction between the supplier and the consumer, but a transaction between one utility company and another. And every kilowatt hour carries a portion of the overhead of various companies who buy and sell it among themselves, which pyramid cost and add superfluous management expenses and high salaried positions to every kilowatt hour of energy.

I cannot believe that the people of the Tennessee Valley having experienced and been a partner in the most modern power system in the world would want to start the road back to the time before the TVA began the process of building an integrated low cost power system.

BENEFITS FOR ALL

Mr. CALDWELL. Is the bargaining issue between TVA and its big municipal distributors over who shall get the profit, a sufficient reason for the big city power boards to consider municipal generations?

Mr. CLAPP. One of the greatest strengths of the Tennessee Valley which none of us should forget is that the power system of the TVA in partnership with the distributors, the municipalities and the cooperatives of all sizes and shapes, by their adherence to a uniform rate policy have achieved a spread of development in evening up of the advantages and disadvantages as between urban and rural living which has meant a great deal to the drive and perseverance and ingenuity of the whole population of the region.

If the larger cities were to cut themselves loose from the power system which serves small and big communities alike and thereby begin to take away from the rural areas and the small towns some of the advantages of low cost electricity and center the industrial development and job opportunities more and more exclusively in the large cities, then the people of the rural areas will move much more rapidly than they do now away from their present communities into the larger cities.

And the larger cities that may think they have gained some benefits by this undue concentration of development within their own city limits by virtue of rate concessions to industrial developments will be faced with a much higher magnitude of new housing, new streets, new sewers, new schools, and all of those things which will then have to rely upon the taxing power to support.

Mr. HARWELL. And wouldn't rural property be reduced in taxable value, putting a further burden upon the city to carry the State load?

Mr. CLAPP. Exactly. And the whole State, in any case, will suffer because the trend

toward a spread of diversification of development industrially and agriculturally which has been helped by this uniform rate policy will begin to stop, and eventually be reversed. Some of the conditions of 1932 and 1933 that showed such sharp contrast between urban and rural living in the Tennessee Valley would return and be sharper than ever.

HISTORY OF STRUGGLE

Mr. HARWELL. We are grateful for the opportunity of this extensive interview and conversation on behalf not only of ourselves but for all the people of the valley. In concluding, would you say something of the past struggles which TVA has come through successfully, as perhaps an encouragement to us in the upcoming fight that we face?

Mr. CLAPP. We should never forget that the TVA was nurtured in long public debate. When the Government, under President Wilson, started to build the Wilson Dam at Muscle Shoals and the chemical plant for the First World War, it really set the stage for what later became the TVA. The argument about what to do with those properties went on all during the twenties, and it took many years of public debate to bring about the creation of the TVA.

There were two acts creating the TVA passed by the Congress before 1933. One of them was vetoed by President Coolidge and another was vetoed by President Hoover.

The friends of the idea didn't give up. They kept on fighting for it, and were successful in 1933.

I doubt if there would be a TVA today if it hadn't been for the stubborn persistence and vision of George Norris, of Nebraska, who in the Senate led the fight to keep the Muscle Shoals properties, chemical plants, and Wilson Dam from being sold to private interests. He had to continue to fight even after TVA was established in 1933.

Then the utilities, among others, who opposed the creation of TVA, having failed in their opposition, tried to take it over. They came forward with an inviting inducement for peace by offering to buy all of the power TVA would produce at the bus bar, they to sell it to the consumers through their own systems. The TVA had made it clear that municipalities, cities, and towns and farmers organized for electric service and not for profit should have a chance to buy this power themselves. The TVA made clear that it was going to carry out the provisions of the act.

There followed a period of several years of bitter and deep controversy all through the valley between those who favored retention of the private utility system and those who favored municipal ownership of their own distribution systems and the development of rural-electric coopcratives as a means of distributing TVA power.

In very few instances in the history of this country has any subject of local interest been so thoroughly debated and argued out in local communities through the normal elective and democratic voting processes.

In city after city and town after town the people, despite the blandishments and threats of private utility advocates and officials, voted the private utilities out of business and voted their cities into it. This laid a firm voluntary basis for the partnership between TVA and local governments which is without parallel in American democratic procedures.

The Supreme Court litigation which followed the long, complicated, and difficult negotiations for the acquisition of the private utility systems by the TVA and the cities and cooperatives seem many times a hopeless thing and sure to fail, but the people ultimately triumphed and justice was done.

The recollection of that record of deep purpose and vision on the part of the leaders in the Tennessee Valley and thousands upon thousands of citizens should be encouraging now in the fight that TVA faces, even after 20 years of successful experience.

The new Johnsonville plant, which seemed hopeles at one time, was won. There was the Douglas Dam issue which for a period of several years threatened to break up the TVA through threats of legislative reprisals.

The mere mention of this long record of vigorous controversy and debate, and the many times during each one of them at which defeat seemed imminent should encourage TVA and its friends to redouble their efforts to give us a real basis for knowing that the Tennessee Valley will come through again, and that the TVA will, contrary to the hopes of its enemies, not be destroyed or crippled.

However, it will take no less effort and persistence in this case than it took in the other instances. It will not be an easy victory to achieve, but I deeply believe it can be achieved.

Labor's Political Rights

EXTENSION OF REMARKS

OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Tuesday, January 17, 1956

Mr. BRIDGES. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD an editorial entitled "Labor's Political Rights" which appeared in the Wall Street Journal on December 8, 1955. It comments on remarks made by the distinguished Senator from Arizona [Mr. GOLDWATER]. I believe this matter is worthy of the attention of the Senate and the country.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LABOR'S POLITICAL RIGHTS

Senator GOLDWATER said the other day that the newly wedded AFL–CIO has no right to endorse a presidential candidate. Former CIO President Reuther promptly accused the Senator of proposing the political disfranchisement of labor movement.

In this little contretemps there is perhaps more confusion than basic controversy. The confusion centers on the word "right." Of course a union, like any other group in this country, has a right to take a political stand. It has the right to form a political party if it wants.

But buried in the semantics there is also an important question—not least for the union leaders themselves.

What Mr. GOLDWATER meant was that many union members do not share the political views of their union leaders. Therefore, he argued, these members' rights are infringed when the union adopts a political position in which they do not concur.

One answer to this, which Mr. Reuther did not bother to give, is that these members' rights cannot be said to be seriously infringed so long as they retain the right to register their disagreement with their leaders when they vote on political candidates or local or national policies. And this right does still exist. Despite the vast amounts of time, money, and effort the unions expend on political education among the members, considerable numbers of the rank and file frequently rebuke the leaders at the polls.

Yet this answer is not the end of the matter. The fact still remains that many union members, in some cases perhaps majorities, disagree with the political stand of the leadership while the leadership nonetheless professes to speak in their political name.

In other types of organizations the members have avenues of protest besides the polling booth. A member of the American Legion, for example, who takes serious exception to the Legion leadership's attitude toward UNESCO or anything else is free to withdraw from the Legion. A member of the Republican Party who objects to party personalities or policies is free to change parties or dissociate himself from any.

As a practical matter, the member of a union is not free in this sense. In many cases withdrawal from the union would mean withdrawal from his livelihood. So here he is, not only a captive audience for the union leaders' political propaganda but also—if he happens to disagree with the official union line—an unwilling accomplice in the promotion of that line.

And there is no conceivable political ideology which the leaders could embrace that would accommodate the political views of all the members. To this extent the rights of the politically dissident are infringed the moment the leaders presume to speak for them on political matters.

But the rights are not thereby obliterated. The leaders know, and the public doubtless realizes, that when they endorse a politician or a policy they are not expressing the unanimous view of their whole huge amorphous membership. Certainly the answer is not to obliterate the leaders' right to make political pronouncements for themselves.

Indeed, there would be little concern over a collision between members' and leaders' rights were it not for the peculiar condition of economic sevitude which such arrangements as the union shop have imposed on the membership. This is what truly infringes the members' rights.

And this fact that unions have become fundamentally different from other kinds of organizations should give the leaders some political pause. The question is not whether they have the right to take political positions and try to influence their members accordingly. It is whether they are wise to exercise that right, and if so how and to what extent.

There are some very practical pitfalls. Over the years the leaders have increasingly identified their unions with the policies, purposes, and candidates of one political party. This means they have increasingly less freedom of choice. They could get themselves in the position of endorsing that party even when it is not in the best interests of their members to do so. Some would say this is in fact happening.

Even if they avoid this danger and practice the political eclecticism they preach—supporting candidates and policies regardless of party—they still have created a trap for themselves. They cannot get unanimity of support. Because they have made the members their economic prisoners, they will make some their enemies whenever they take a political stand.

The members did not join to find a political voice. They already had that. They joined to advance their economic interests and specifically to improve their position at the bargaining table. That provides a broad base for very general agreement among the members. Politics cannot.

The leaders need not worry about losing their political rights. But, as they try to make unions into something unions inherently are not, the leaders might well weigh the risks of seeking to lead where they cannot be followed.

Foreign Aid

EXTENSION OF REMARKS
OF
HON. BARRY M. GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Tuesday, January 17, 1956

Mr. GOLDWATER. Mr. President, for the past several years the people of my State, along with the people of all the other States, have expressed some doubt as to the wisdom of the foreign aid program of our country. They have rightfully asked, "What good has it done?"

Mr. President, because the subject will be debated this year in a rather thorough manner, I believe it is incumbent upon Senators, whose constituents have raised some questions about the foreign aid program, to make available, as much as they can, to the entire Congress the thinking of those people.

I have had the pleasure before of introducing editorials from the rather peculiarily named newspaper, published in Arizona, from which I now have before me another editorial. I ask unanimous consent that the editorial on the subject of foreign aid, published in the Brewery Gulch Gazette, of Bisbee, Ariz., be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

In a democracy, which this Nation is not (we have a republican form of government, which is something else), the people vote on important questions which concern them. In our Republic the people elect Representatives to Congress who decide these issues. We have before us a proposal by the President that our Government should give some $5 billion in the next year to various countries and nations all over the world, large and small, more than they have been getting lately, supposedly to make their people happier and friendlier toward us and less friendly toward our enemies. In addition to that, there is also a program giving them, or some of them, more billions annually during the next 10 years. There is no doubt that it will make them happy, but how pleased will they be when the payments stop, if they ever do? Many of us are somewhat unhappy about those forty-odd billions that have been dished out since the end of World War II, more than 10 years ago, money that came directly out of our pockets. We cannot believe that we got our money's worth; what good did it do? We invited a lot of our knife-and-fork brothers all over the world to sit down at our table, to eat and talk over a deal to become our friends and allies, but what did they do outside of eating? If we break their plates and they have to rustle their own grub, perhaps they will realize that we invited them only for a few free meals, and they won't like that. But what I am wondering is, if this were a democracy and 60 million voters were given an opportunity to vote on this question of dishing out billions of dollars, pouring them down rat-holes some of us believe, would they O. K. the deal or would they turn it down? I think a majority of them would say, "No soap. Too much is more than enough." This is not a democracy, and therefore we, who have to furnish these billions, have no opportunity of voting on such a proposal. We haven't been too concerned the past few years because we were told that this giveaway program was nearing an end, that it would be stopped, probably this year, but now Washington comes up with its 10-year plan. It's bad enough to lend; if the borrower is a bum, he becomes an enemy when its time for repayment, but start giving away dough by the month or year and it becomes a never-ending program. If you didn't know it before, you know it now.

"Pop, What Is the Gold Standard?"

EXTENSION OF REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 17, 1956

Mr. JENSEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article on the gold standard which was submitted to me by Mr. H. J. Stuhlmiller, of Fontenelle, Iowa, a banker who has taken an active interest in returning to the gold standard. The article is as follows:

"POP, WHAT IS THE GOLD STANDARD?"

(By Fred G. Clark and Richard Stanton Rimanoczy)

I

Some 40 million American have been born since 1933, the year when the United States abandoned the gold standard.

The newspapers seldom mention the subject.

Even in political campaigns the issue of gold (which used to be a lively one) is seldom raised even by conservative candidates.

The schoolchild like the little boy on the cover would be completely mystified by running across the words "gold standard" in a textbook.

A college professor we know, when temporarily taking over a junior group of economic students from another professor, was amazed to discover that in their 2-year study of the subject the gold standard had never been mentioned to them.

All this leads us to believe that a few comments on this ancient and honorable institution might interest a lot of our readers.

II

Gold when used as money is a unique force in economic and political life.

Gold money is more than money: it is an instrument of economic and political freedom—a curb bit in the mouth of governmental power.

The reason for this is that when gold is used as money, the supply of gold controls the amount of paper money and bank credit money that the Government can issue.

Under the gold standard the gold does not actually circulate among the people to any great extent because the paper money and bank credit money is redeemable in gold, making it as good as gold.

III

There has always been a sharp division of opinion as to whether the gold standard is the most desirable money system.

A good way to understand the reasons for these different opinions is to see what the gold standard means to different groups of people, that is, who benefits from it and who is penalized by it.

For example, to the elected and appointed officials running the Federal Government the gold standard means that when they want to spend money they must get it from the people in taxes—a painful and sometimes impossible proposition.

The gold standard shuts off the government's charge account, reduces its spending power, and makes the people much more critical of Federal expenditures.

To people who own bonds, insurance policies, and savings accounts, the gold standard means that the dollars they receive from their investment or savings will be worth as much, or more, as the dollars they originally saved.

(As matters now stand, in the absence of the gold standard since 1933, the dollar has lost more than 50 percent of its value.)

To people who owe long-time debts, particularly mortgages, the gold standard means that they will have to pay off their debt in dollars of approximately the same value as the ones they borrowed.

IV

Here then is the situation.

1. To people in government, the absence of the gold standard permits the creation (without the people's consent) of inexhaustible supplies of new inflationary money which is worthless except for the value it sucks from the already existing money.

2. To people who have saved money, the absence of the gold standard makes it impossible for them to predict the value of their savings at any future time.

3. To people who owe money, the absence of the gold standard opens the door to the possibility of being able to pay off their debts with cheap dollars.

It is easy to see, therefore, why people take sides so vigorously on the gold standard issue.

V

Among economists concerned with government policy there are two schools of thought.

One group looks upon the gold standard with disfavor because they believe that the manipulation of money and bank credit has been developed into such a "safe" science that the money supply should be under the control of the experts who will use it to regulate the value of the dollar in the "best interests of the Nation."

One belief within this group is that there should be as much inflation each year as there is increase in the production of goods and services, thus (theoretically, at least) insuring that prices will neither rise nor fall.

The gold-standard economists are guided by the historical experience of many manipulated currency systems without gold backing and maintain that the failure and eventual blowup of all of these in the past is an accurate prediction of what will happen to the United States if we continue an inflationary cheap money policy.

VI

Not long ago we set out to discover (through Opinion Research Corp.) how the American people felt about the various principles involved in the gold standard and discovered that from the standpoint of conservatism the people seemed to be way ahead of the Federal Government.

Two of the questions are of particular interest.

One of these dealt with the desirability of cheap money: "If you had the chance, would you rather get ahead by receiving more money or by being able to buy more with the money you are now receiving?"

Sixty-eight percent said they would rather be able to buy more with the money they are now receiving.

The other dealt with the gold standard from the standpoint of controlling inflation and the rising cost of living.

After being told how the gold standard limits the issuance of new money, they were asked: "Does going on the gold standard sound to you like a good way of controlling high prices and inflation or not?"

Sixty-one percent said it sounded good to them.

VII

From these answers it would appear that even though the gold standard as an institution has become dormant in the minds of most Americans, the principles underlying the gold standard are very much alive.

No economist that we know of believes that the redeemability of paper money in gold coin is a perfect institution.

Like monogamy and Christianity, they admit it to be subject to human error but maintain that, like monogamy and Christianity, it sets up a moral framework within which human error is far less hazardous to the security of our civilization.

It is true that since World War II, America has made spectacular economic progress under manipulated currency.

But it is also true that the economy has been walking the high wire with no landing net underneath.

That is why we believe it might be a good time to do some hard thinking about the gold standard.

The UMW Cares for Its Own

EXTENSION OF REMARKS
OF
HON. CARL D. PERKINS
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 17, 1956

Mr. PERKINS. Mr. Speaker, I ask unanimous consent that I be permitted to extend my remarks in the Appendix of the RECORD to include a story by Gerald Griffin, Courier-Journal staff writer, entitled "The UMW Cares for Its Own."

The article is as follows:

THE UMW CARES FOR ITS OWN

(By Gerald Griffin)

Colorful modernistic hospitals glistening in glass and steel have sprung up in the most unexpected places in Eastern Kentucky.

There's even one of them in the valley of Left Beaver Creek in Floyd County at a village called McDowell.

Any of these buildings, similar in design, would grace a large city. They are miners' memorial hospitals, and seven of them have been erected on eastern Kentucky soil. Two others are in West Virginia. Still another is in Virginia.

Besides the one at McDowell, those in Kentucky are at Harlan, Hazard, Whitesburg, Pikeville, Middlesboro and South Williamson, in Pike County on the Tug Fork of the Big Sandy River.

Others have been erected at Wise, Va., and in West Virginia at Beckley and Man.

All 10 form a chain of hospitals located along an irregular line extending from Beckley, W. Va., to Middlesboro, Ky., piercing the heart of the bituminous coal fields of the Appalachian Plateau.

The 10 hospitals, erected by the welfare and retirement fund of the United Mine Workers of America, have cost approximately, so far, $27,500,000. The miners themselves didn't put up that money. Their monthly union dues wouldn't go very far in such an ambitious undertaking. The coal operators financed those hospitals through the 40-cent-a-ton royalty they pay to the union in the organized areas.

Since 1946 the operators have paid $882,423,780 into the union's welfare and retirement fund. They know that part of the royalty money at least is being poured back into the regions from which it came.

There has been some opposition to the establishment of the miners' hospitals, but not outspoken except in isolated instances. Representatives of privately owned hospitals in the area haven't been too happy about the union's program. Some doctors in communities where the new hospitals have been built probably saw keener competition from the physicians and surgeons brought in to staff the new institutions.

But, as a whole, the new hospitals and their staffs are being accepted.

From the standpoint of the union, these new hospitals were essential to the welfare of the miners and their dependents. And an economic factor was involved. It was cheaper for the union to operate its own hospitals than to pay other hospitals for the treatment and care of its members.

All of these miners' hospitals, while primarily for the care of UMW people, plan to operate as community institutions.

In this chain of hospitals, welfare and retirement fund officials see an enormous saving in their operation as a group through efficient supply systems and centralized services. Eventual plans even call for a central laundry and the manufacture of certain pharmaceutical supplies.

Outside of the Armed Forces and the Veterans Administration, nothing like this hospital network has been attempted in this country, perhaps anywhere on earth, according to fund officials. And its chain-store method of management is unique for hospitals. Supplies will be purchased centrally for the entire chain, unloaded at a railhead at Williamson, W. Va., and shipped by truck to the hospitals.

Three of the larger hospitals have been designated as base units. These are at Beckley, South Williamson, and Harlan. Satellite hospitals of the Harlan unit will be those at Middlesboro, Whitesburg, Hazard, and Wise. The South Williamson satellites will be the hospitals at Pikeville, McDowell, and Man. The Beckley hospital has no satellites.

The base units will provide specialized services not available in the smaller hospitals. But, as all have been linked with a teletype service, it won't take long to get a specialist to any of the satellites from its base. Patients requiring the attention of specialists may be sent to the base hospitals, or the specialists may ride the circuit to visit patients in the satellites.

Free hospital care will be available in these hospitals for miners employed under UMW contracts. Others eligible for free hospitalization are retired union miners and the dependents of eligible miners, including their wives, children, and parents. Widows and other survivors of miners for whom cash benefits have been authorized also are eligible for free care as long as they are receiving payments from the widows and survivors benefits.

Other patients, however, may be admitted to the hospitals if all the beds are not needed for the miners and their families. They will be required to pay regular hospital fees. Community doctors have been invited to bring in their own patients although each hospital will have its own staff doctors on salary.

Hospitalization for nonunion patients will not be cheap, according to Harold Ward, a representative of the fund, who made a tour of the chain recently.

"We plan efficient service, prompt diagnosis, quick attention and cure to reduce the number of days spent in the hospital," he said. "No patient will be admitted unless he needs hospitalization, and then he will get the best attention possible. These hospitals are trying to provide the best of service for reasonable cost."

Although all these hospitals are amazingly well equipped, even to built-in oxygen tents, Ward said, "we had to pull back our horns in order to meet the budget." The cost of just about everything went up after the first ground breaking.

Ward said that the union expects to have its problems in operating the hospitals. Some businessmen are unhappy at the hospital wage scale, which starts at $1.25 an hour. And some community doctors are waiting to see if the union tries to take over the medical practice for the entire region. Ward said that nothing like that would happen, and fund officials are cooperating fully with the American Medical Association.

In their report for the fiscal year ended June 30, 1955, the welfare and retirement fund officials said:

"Existing hospitals have been used and will continue to be used to the fullest advantage of the fund and its beneficiaries. Some have provided a satisfactory quality of service at or near cost; others have supplied an inferior quality of care often at exorbitant rates. Many are privately owned and operated for profit with their income derived largely from beneficiaries of the fund. Their facilities are usually denied to physicians other than those employed on their staffs.

"The requisite number of competent physicians is thereby discouraged from locating in the areas and a monopoly tends to be created. The profit hospital is subject to the temptation of providing a minimum of service at maximum cost. The poorer the care the patient receives the larger the profit may be.

"To restrict admissions to the memorial hospitals exclusively to beneficiaries of the fund would mean that beds temporarily not occupied by miners could not be used by other members of the community regardless of how urgent their needs might be.

"Not only would other persons be deprived of humanitarian service that might spell the difference between life and death, but the hospital rates would be increased by receiving no income from vacant beds that could be filled by patients who needed them and would pay the cost."

Although the hospitals have been built by money paid by coal operators, the UMW and the fund have little connection other than that John L. Lewis heads both of them. The administration of the fund, which also pays out pensions and other benefits, is otherwise separate from that of the union.

The huge welfare and retirement fund actually was started in 1947 when the mines had been taken over by the Government as a result of a general strike in the industry. At that time the operators began paying the union a royalty of 5 cents a ton. Since then, almost every renewal of the contract has seen the royalty rate increase to its present 40 cents.

Naturally, the operators don't like the idea, but at least these hospitals show that fund officials are trying to do something for the communities in the coal fields.

The fund's hospital program is headed by Dr. Warren F. Draper, retired Deputy United States Surgeon General. Under him are 10 area medical officers. Medical administrator of the Memorial Hospital Association, responsible for the 10 new hospitals, is Dr. Frederick D. Mott, Washington, D. C.

New England Has Something To Sell

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 17, 1956

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following interesting article from

the Washington Daily News of recent date by Mr. Charles Lucey, Scripps-Howard staff writer:

U. S. A., THE BIG STORY: NEW ENGLAND PUTS ITS HOPE IN BRAINS AND SKILL

BOSTON, November 3.—A quiet revolution is taking place in this tight and tidy little kingdom of New England.

It is a revolution that faces the cold reality that the society New England built on textiles and old water-power mills is almost gone today.

Factories which rose with the first industrial revolution and poured their goods all over the world in Clipper ships stand gaunt and dreary now. There has been hardship and suffering. New England is coming through an agonizing economic readjustment.

New England is seeking new industry of the bright-and-shiny, day-after-tomorrow type on the basis of the greatest resource it has to offer:

Brains!

Brains in the great research laboratories of Yale and Harvard and Massachusetts Institute of Technology, Boston College, Holy Cross, Boston University, and a score of others—a reservoir of knowledge on which challenging new industries can find ways to make new products for a new day. Get research in here, they say, and new production will follow.

For three centuries now, Yankees have earned their living in a hundred ways. They've cut marble and granite from the quarries of Vermont, fished the Atlantic out of Gloucester, built the great brass industries of the Connecticut valleys, and sold insurance around the world. You couldn't count the millions of miles of textiles or pairs of shoes that have come from New England's mills.

NEW ENGLAND SEEKS TO HARNESS ATOM

But today New England is building a sturdy future on electronics and plastics and electrical goods and metalworking and aircraft and is moving to be among the first in turning atomic power to peacetime use.

Head out of downtown Boston on almost any main road and you are likely to see hundreds of acres of new plant facilities, all new red brick and glass and landscaped lawns, in startling contrast to the ancient New England mills. They're called industrial parks, and they may house a score of small- or medium-sized industries. The same idea is being followed in Connecticut and the New Haven Railroad has another planned for Rhode Island.

New England still has no real answer to keeping textile mills from moving South, though most men say the worst is past and that the ones remaining are the best managed and most competitive and best able to stay in business. And also, they say, making the highest-styled textiles.

But where 275,000 textile jobs have been lost in the years since 1920 there are bound to be problems.

It was inevitable, of course, that as population and consumer markets shifted westward in the United States, New England could not retain industrial dominance. When fuel-based energy took over from waterpower the factories began moving nearer sources of raw materials and markets.

A STEADY STREAM SOUTH AND WEST

Cotton textiles went first, then the woolens. The shoe and leather industries began dispersing southward and westward.

The South beckoned with sunshine, cheap labor, and Tennessee Valley power, offers of free plant sites and factories, and low taxes. The bleak milltowns waved doleful farewell to outfits which had been their mainstay of life for a century. Thousands of men hit the streets in search of jobs that weren't there. And there is still some unemployment.

But today, in town after town, local money has been subscribed to take over many of those old plants, or has been combined with funds provided by privately financed development corporations which saw the need of trying to hold old industry and bring in new.

At Lawrence a group of citizens raised $125,000, borrowed $300,000 from the Massachusetts Business Development Corp. A closed mill was bought and small business outfits were brought into Lawrence to fill it. They had a mortgage burning a short time ago; the $300,000 was paid back. That's not unusual. Manchester, N. H., did it years ago when the big Amoskeag Mills closed; so did Nashua, N. H., and others.

But New England's greater hope is in selling United States industry, increasingly devoting more billions to research on new materials, methods, and products, on the proposition that nowhere in America can it find the young brains to build on that can be found here in New England.

THERE ARE LOTS OF SKILLED HANDS

New England has something else to sell—skilled hands with generations of factory work behind them. The displaced textile worker has proved he's the good worker in electronics and other industries demanding sharp minds and deft fingers.

There are 10 million persons in New England, 2 million more than in 1920. Some 4 million work outside their homes. It is estimated now that new industries are employing perhaps 100,000 more persons than have been lost in the exodus since World War II. Jobs in the manufacturing and service industries in August were 32,500 over July and 65,000 over August of 1954. The shoe industry actually has been staging something of a comeback.

New England's growth will not be as spectacular as that of newer United States areas. But that there will be growth New Englanders are certain.

Efforts To Obtain Arbitration in Strike of Electrical Workers Against Westinghouse Electric Corp.

EXTENSION OF REMARKS
OF
HON. PAT McNAMARA
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES
Tuesday, January 17, 1956

Mr. McNAMARA. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a number of documents which detail efforts to secure arbitration in the strike by the International Union of Electrical Workers against the Westinghouse Electric Corp.

I believe Senators will be interested in these documents, which reveal that outside parties, including governors, mayors, Congressmen, and the director of the Federal Mediation and Conciliation Service, have urged arbitration or a fact-finding board as a means of aiding settlement of this dispute which has been underway since October 17, 1955. In each of these instances, the union agreed to the proposal, while the company refused.

The documents, I believe, speak for themselves.

There being no objection, the documents were ordered to be printed in the RECORD, as follows:

TEXT OF TELEGRAMS FROM GOV. GEORGE LEADER, OF PENNSYLVANIA, AND GOV. AVERELL HARRIMAN, OF NEW YORK, TO PRESIDENT JAMES B. CAREY, OF IUE-AFL-CIO, AND CAREY REPLIES

DECEMBER 19, 1955.

A nationwide strike of over 50,000 Westinghouse Electric Corporation employees is now going into its 10th week. As Governor of a State in which these strikers live and in which Westinghouse has its plants, we have been watching this situation with growing concern.

We have been advised that despite many weeks of discussions, representatives of the International Union of Electrical, Radio and Machine Workers, AFL-CIO, and the company have been unable to find a basis for settlement of the dispute.

Furthermore, evidence is accumulating that the strike is getting to the stage of bitterness where serious violence may result.

Under these circumstances, and because of our earnest desire to see industrial peace restored in Pennsylvania, particularly in this season of the year, we urge the union and the company to submit their dispute to final and binding arbitration. While this arbitration is proceeding the employees would be back at work.

We appeal to the leaders on both sides as men of good will to accept our proposal.

GEORGE LEADER,
Governor of Pennsylvania.

DECEMBER 19, 1955.

I am distressed that after all these weeks there has been no settlement in the Westinghouse strike which affects some 4,000 workers in Buffalo. I urge both the company and the union to submit their differences to arbitration and if this is agreed upon that the employees go back to work pending the decision of the arbitrator.

The State government stands ready to aid in bringing about a settlement of this dispute if its services can be helpful.

AVERELL HARRIMAN,
Governor of New York.

PRESDIENT CAREY'S REPLY TO BOTH GOVERNORS

DECEMBER 19, 1955.

We have received your telegram urging Westinghouse Electric Corporation and International Union of Electrical, Radio and Machine Workers, AFL-CIO to arbitrate the issues in the dispute that has kept 55,000 Westinghouse workers on a strike now in its 10th week.

This is to advise you that the union accepts your recommendation without reservation. If the corporation does the same, we are prepared to work out details immediately.

The International Union of Electrical, Radio and Machine Workers, AFL-CIO deeply appreciates the interest you have shown in an effective settlement of this nationwide strike.

JAMES B. CAREY,
President IUE-AFL-CIO.

REJECTION BY WESTINGHOUSE

We fully understand the desire to turn this dispute over to arbitration. It is true that many types of labor disputes can be properly submitted to arbitration. However, in this matter, because of our obligations to stockholders, we cannot delegate to a third party a decision which would affect the competitive standing of our company for at least the next 5 years.

JOINT STATEMENT OF REPRESENTATIVE AUGUSTINE B. KELLEY AND REPRESENTATIVE HERMAN P. EBERHARTER

A strike in 38 plants across the country of more than 50,000 employees of the Westinghouse Corp.—the 12th largest corporation in the Nation—is nearing the end of its

10th week. There are no signs a settlement of the dispute is being reached. A skillful and conscientious veteran official of the Federal Conciliation and Mediation Service, John Murray, has kept the parties to the dispute in discussion over many weeks to no avail.

A few days ago, the Governors of three States in which Westinghouse plants are located—George Leader, of Pennsylvania, Theodore McKeldin, of Maryland, and Averell Harriman, of New York—appealed to President Gwilym Price and his co-officers of Westinghouse and to President James B. Carey and his associate leaders of the International Union of Electrical, Radio, and Machine Workers, AFL-CIO, principal union involved, to submit all issues in dispute to final and binding arbitration.

Mr. Carey and his associates immediately accepted the proposal. Mr. Price and his rejected it. We note that Governor Leader said in his appeal the strike has reached a stage of bitterness threatening to result in violence.

We urge the Westinghouse Corp to reconsider its rejection of the Governors' appeal. We place our faith in collective bargaining, but when that breaks down, as in this case, we turn to arbitration. We are strong believers in voluntary arbitration. We believe it is an important instrument of true democratic principles. We believe its application during the great industrial development of our country has done much to strengthen the democracy of our society. Its methods are the antithesis of those relied on by autocracy. It is based on the rule of reason.

In their rejection of the Governors' appeal, we note that Mr. Price and his Westinghouse fellow officers state that "because of our obligations to stockholders, we cannot delegate to a third party a decision which would affect the competitive standing of our company for at least 5 years." We earnestly suggest to them that, if they still decline to reconsider the Governors' proposal, they submit the simple question of arbitration to their stockholders. We learn from Government records there are approximately 16½ million shares of Westinghouse stock outstanding, widely distributed. We further learn that Mr. Price and the Westinghouse board of directors hold slightly less than two-tenths of 1 percent of the outstanding shares.

It is hard for us to believe the stockholders would feel arbitration would endanger their company as much as a continuation of the deadlock and the already-long-drawn-out strike with its mounting animosities. The employees would go back to the plants while the processes of arbitration are functioning.

JERSEY CITY, *December 22, 1955.*

JAMES B. CAREY,

President IUE, Washington, D. C.:

As mayor of Jersey City where Westinghouse Electric Corp. elevator division has enjoyed a productive 20 years from both company and municipal viewpoints I send you this Yule message. In the interest of continued productivity for your great company and its many thousands of stockholders and in the interest and welfare of 5,500 employees on strike 1,200 of them from Jersey City I respectfully even prayerfully urge that the spirit of the Prince of Peace be permitted to enter the field of differences which has brought about this 10 weeks of strike so costly to both management and union. I urge that this spirit bring about agreement for arbitration of the grievances as soon as possible so that the somberness attendant with halted production lines be lifted and a happier holiday be celebrated by all concerned.

Mayor BERNARD J. BERRY,
City Hall, Jersey City.

BUFFALO, N. Y., *December 23, 1955.*

JAMES B. CAREY,

IUE, AFL, CIO, Washington, D. C.:

Approximately 20,000 workers and members and their families in the greater Buffalo community are directly affected by the Westinghouse strike. In the public interest we urge that both labor and management agree immediately to submit this dispute to arbitration before an impartial board of arbitrators, the decision of the arbitrators to be final and binding upon both parties. Continuance of this dispute over 10 weeks has brought great suffering to the workers in this area and the members of their families. Their personal hardship is even more difficult at this holiday season. To date the parties to this dispute have themselves been unable to reach settlement. Time has come to invite impartial arbitration, otherwise human suffering will continue in our community. We feel confident that in fairness to the stockholders at Westinghouse, the workers, their families and most important, the public interest, that immediate acceptance of arbitration by both parties is imperative.

We the undersigned, are willing to arrange a special meeting in Buffalo designed to settle this strike through arbitration in cooperation with Mayor Sensenbrenner's Committee of Mayors, if you feel such a meeting will bring immediate arbitration and settlement.

May we have the courtesy of an immediate reply? For your information a second wire of this exact text is being sent to Gwilym Price, president, Westinghouse Electric Corp.

STEVEN PANKOW,
Mayor of the City of Buffalo.
BENEDICT T. HOLTZ,
Supervisor, Town of Cheektowaga.

JANUARY 4, 1956.

A labor management dispute between the Westinghouse Electric Corp. and International Union of Electrical Workers, AFL–CIO resulting in a work stoppage involving approximately 45,000 employees has been in progress since October 17, 1955. It is my conclusion based upon conferences with representatives of the parties and representatives of this Service, that no substantial progress has been made toward a settlement of this dispute during the intervening period of upward of 80 days. The economic effects of this work stoppage have had a serious adverse effect on many thousands of other workers and upon other related industries. Representatives of the Federal Mediation and Conciliation Service have exerted every effort in an attempt to assist the parties voluntarily to work out for themselves a satisfactory settlement, but these efforts have not proven successful.

The public interest demands, in view of this impasse, that every method be resorted to by the parties in an attempt to resolve this collective bargaining stalemate.

In view of these factors, I therefore, recommend to the company and the union, that they agree to submit all of the disputed issues which gave rise to this stoppage to a fact-finding board. This board shall report its findings of facts and recommendations to the parties and to the Federal Mediation and Conciliation Service as the basis it considers affords opportunity for negotiation by the parties to an honorable settlement to this dispute which will be fair and equitable to both parties. The findings of fact and recommendations made by this board shall not be final nor binding upon either party. Such findings of fact and recommendations shall be made in writing and returned to the parties as expeditiously as possible for purposes of further collective bargaining. The board shall be empowered to inquire into and ascertain all of the facts surrounding the dispute through direct contacts, hearings, or any such other manner as a majority of the board may believe necessary or advisable to enable the board to accomplish its purpose.

The board may be dissolved by mutual consent of the parties at any time they feel they can effect a solution of this dispute without the aid of the board.

I further recommend that each party designate a board representative and notify us in writing within 24 hours of such designation; upon receipt of both designations I shall immediately proceed to appoint an impartial public member of the board who will act as its chairman.

I will appreciate being advised by letter or telegram as to whether this suggested procedure for settlement of this long and costly strike is acceptable.

JOSEPH FINNEGAN.

UNION'S REPLY TO DIRECTOR FINNEGAN'S STATEMENT AND RECOMMENDATION

The procedure set forth in your communication of January 4, 1956, is accepted; and if Westinghouse will agree with the IUE to be bound by the findings and not discriminate against any striker then work could be resumed immediately under our present agreements as modified by the findings.

JAMES B. CAREY,
President.
AL HARTNETT,
Secretary-Treasurer, International Union of Electrical, Radio and Machine Workers, AFL-CIO.

TELEGRAM SENT TO GWILYM PRICE BY GOVERNOR FRANK J. LAUSCHE, JANUARY 5, 1956

MR. GWILYM A. PRICE,
President, Westinghouse Electric Corporation Pittsburgh, Pa.:

Inasmuch as Mr. Joseph F. Finnegan, Director of Federal Mediation and Conciliation has recommended a voluntary fact-finding board be set up to attempt to settle the current dispute in which your company and its workers are involved and inasmuch as it is my belief that the interests of the company, the employees and the general public will best be served through compliance with Mr. Finnegan's recommendation I urge that Westinghouse Electric Corp. grant its consent to comply with the proposal.

FRANK J. LAUSCHE,
Governor of Ohio.

PITTSBURGH, PA.,

JOSEPH F. FINNEGAN,
Director, Federal Mediation and Conciliation Service
United States Department of Labor
Washington, D. C.:

There are circumstances in which a fact-finding board, as suggested by the Federal Mediation and Conciliation Service, can serve a useful purpose in settling management-labor disputes. The issues in the present controversy between Westinghouse and the IUE (AFL-CIO) are not proper subjects for this type of procedure.

The question in point is simple but fundamental: Can the management of a company refer to any agency, not responsible for the job security of the company's employees nor for the interests of its stockholders, the authority to make recommendations which may well have the practical effect of determining whether that company will be at a disadvantage for 5 years with its major competitor. As you know, the IUE has already made a 5-year settlement with our

major competitor, similar to the Westinghouse offer which IUE has rejected.

Another very important consideration is the fact that 26 unions, including several also affiliated with the AFL-CIO, representing over 25 percent of all union-represented people in Westinghouse, have without striking already signed 5-year agreements embracing principles and benefits that the IUE refuses to accept, and which would be issues subject to fact-finding and recommendations under your proposal. The contemplated procedure would place both the company and these other unions in an unfavorable position because they engaged in genuine collective bargaining and arrived at agreements without any stoppages of work.

For the foregoing reasons we cannot accept your proposal of January 4.

We believe our employees, whose job security is at stake, understand the issues better than any fact-finder who has no personal stake whatsoever in the resolution of these issues. Therefore, we respectfully request that the Federal mediation and conciliation service consider recommending to the parties that, as an alternate to your proposal, a secret ballot be conducted under your service's auspices on whether the IUE-represented employees wish to accept the company's offer and return to work or continue the strike. We will cooperate in every way to assist you in expediting the holding of such an election.

One of the reasons prompting this alternate proposal is the fact that title II of the Labor Management Relations Act of 1947, section 203, dealing with the functions of the Federal Mediation and Conciliation Service, specifies in paragraph (C): "If the director is not able to bring the parties to agreement by conciliation within a reasonable time, he shall seek to induce the parties voluntarily to seek other means of settling the dispute without resort to strike, lockout, or other coercion, including submission to the employees in the bargaining unit of the employer's last offer of settlement for approval or rejection in a secret ballot. The failure or refusal of either party to agree to any procedure suggested by the director shall not be deemed a violation of any duty or obligation imposed by this act."

We firmly believe that our proposal for a secret ballot is truly a traditional American procedure, as Congress clearly indicated by mentioning it specifically in defining the functions of your service

ROBERT D. BLASIER,
Vice President, Westinghouse Electric Corp.

REPLY OF UNION TO PROPOSALS MADE TO THE UNION AND COMPANY JANUARY 11 BY A MEETINGS OF MAYORS OF WESTINGHOUSE PLANT CITIES

We are grateful for the participation and interest of the mayors, and the country owes them a debt. We are gratified by their statement today in that it endorses two basic positions already taken by our union. We proposed and proposed again round-the-clock, 7-day-a-week collective bargaining to start immediately and until the strike is settled.

We long ago proposed and riterate a proposal for an interim agreement which we presented today to the mayors. This includes the following points:

1. That we get now assurances in writing that there were not be wage cuts as a result of the company's new time study program and disputed issues will be arbitrated.

2. Negotiations on wages under our current contract will continue for 30 days after the return to work. If no agreement is reached at that time the amount of the wage increase will be submitted to arbitration.

3. Negotiations to start as soon as the wage issue is settled on the question of a longer term agreement.

On the basis of such an interim agreement the strike could be settled immediately.

REJECTED BY PRESIDENT PRICE OF WESTINGHOUSE

It is very evident that the mayors tackled this difficult problem with great earnestness and objectivity. Also the company believes that the mayors' proposal has considerable merit. The problem is that the negotiation of an interim arrangement under which the IUE would agree to its members coming back to work would probably be difficult and time-consuming in view of the qualifications placed by the union. Furthermore the official negotiations under sponsorship of the United States Mediation and Conciliation Service are expected to continue and it might well be that these negotiations would produce a permanent settlement more quickly than the temporary one suggested by the mayors. Furthermore, Mr. Joseph F. Finnegan, Director of the Federal Mediation and Conciliation Service, has requested both the company and the union to desist from public proposals and counterproposals and to rely on the normal processes of closed negotiating sessions. Accordingly, while we do not reject the majors proposal, be welieve it is a wiser course of action for the time being to pursue the prospects of a settlement in the regular negotiating sessions. The management of Westinghouse is very appreciative of the time and effort devoted to the problem by the mayors and of their willingness to be of service on behalf of the communities they happen to represent.

GWILYM PRICE,
Chairman and President.

When Memory Ceases to Matter

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 17, 1956

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following beautiful editorial from the Gazette, Montreal, Canada, Friday November 11, 1955:

NOT LOST UNLESS FORGOTTEN

"Our dead are never lost to us until we have forgotten them."

These words are carved on a stone in an old Highland burying-ground. They are words that speak of the sacrament of remembrance. On this grey November day the dead are remembered, that they may not be lost. For all that holds them to the present hour, and to this place, is the memory of the living. Once that bond is broken, the dead are lost to the living, the living to the dead.

The desire to be remembered after death, with some warmth of affection, is one of the deepest of human emotions. It may be less an emotion than an instinct, something that goes deeper than a conscience desire. It is close-allied to life itself, as though the chill of being forgotten puts ashes upon the grave, and no greenness.

Only those who have come to hate the world and life would wish to have the earth swallow them up and be utterly forgotten. For all others there is in life, and perhaps most near its end, the hope that those from whom they part company will yet hold them in a firmness of memory, like a hand held out, true in its grip, and not weak with indifference.

Death is never death in this world so long as memory holds the dead close to life. More than a long century ago Thomas Hood was writing these words:

"It is not death * * *
That this warm conscious flesh shall perish quite,
And all life's ruddy streams forget to flow * * *
It is not death to know this—but to know
That pious thoughts, which visit at new graves
In tender pilgrimage, will cease to go
So duly and so oft,—and when the grass waves
Over the past away, there may be then
No resurrection in the minds of men."

On such a day as this it is only fitting that there should be the public ceremonial of remembrance. For 2 minutes the work of the world will cease that the dead may have their resurrection in the minds of men.

But this gray and solemn ritual should be only the outward symbol of the inner ritual of remembrance, the quiet and natural remembrance, at the going down of the sun and in the morning, when the dead are made alive.

Memory might seem a slight bond to keep the dead from being lost to the living. For memory is crowded in the passing scene of the present. And memory fades. Does this mean, then, that these dead of the wars, honored today so impressively, will yet be lost to the living?

It will not be so. For memory is not merely a shadow in life, an intangible and fragile thing. As life goes on, memory comes to have the quality of life itself, and life the quality of memory.

For life itself becomes more and more a mystery, a dream almost, something intangible, vulnerable to change. It is a feeling that comes to all. It may come soon, it may come late, but come it will. It is the feeling in the words of the old hymn:

"Days and moments quickly flying
Blend the living with the dead."

Nor do old memories fade as the years pass, as weather may wear out an inscription carved in stone. As the years pass, it is the distant things that become the clearest, those known long ago who come back, the old companions, long dead, who are most real. The dead, so far from being lost by the memory that fades, are cherished most by the memory that calls them home.

The dead of the wars, on such a day as this, are not hailed as those who have their backs turned upon us as they recede into the gray mist. They are hailed, rather, as those whom we approach, and who approach us.

"The dead are never lost to us until we have forgotten them." So runs the old Highland inscription.

And the returning dead cannot be forgotten by the living until that time when memory ceases to matter, when the mystery is ended, when life and death are joined, and when there will be no more gray silence of November.

Dr. Ernest F. Swift of the National Wildlife Federation Issues a Warning

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 9, 1956

Mr. REUSS. Mr. Speaker, under permission to extend my remarks, I include the text of an address made by Dr. Ernest F. Swift, executive director, National Wildlife Federation, Washington, D. C., at the annual meeting of the Mil-

waukee County Alliance at the Hotel Schroeder in Milwaukee, December 2, 1955. When Dr. Swift left his position as Deputy Director of the Fish and Wildlife Service last summer, we all lost one of our ablest and most dedicated career public servants. Dr. Swift's message is one that may well scare those who cherish what is left of our natural resources. Dr. Swift's address follows:

Conservationists have a terrific power to influence public opinion so long as they can stay organized to accomplish their objective. By and large, it is not a sustained power. It is a mystic and elusive one, more like quicksilver, one might say.

When the call to arms is of sufficient significance to capture the collective imagination of the conservationists, like quicksilver, they gravitate to a common purpose; and when the battle is seemingly won and the hazard over, they disperse to their daily tasks and so become a mystic and indefinable force. They mystify and frustrate the politicians because they cannot be identified by party, color, or creed. Their conservation ideals are something apart from all other loyalties, alliances, and fealties. One day they are embroiled and bickering among themselves, the next they stand before a legislative committee with united front; branded by some members of the business and scientific world as a group of disorganized half-baked fanatics.

* * * * *

Conservationists are not universally blessed with the virtue of eternal vigilance and this is why they gain two feet and lose one and a half; for unless the issues appear large and appealing, unless they have some emotional punch, unless a big smoke signal is sent up, the conservationists will not coordinate their mighty force to defeat the myriad of small, isolated but continuing efforts, of constant destruction which collectively represent mass destruction. Wildlife conservationists win some battles but are losing the war.

* * * * *

I certainly pose as no expert but I do think that I can point your attention to some facts of considerable importance regarding waterfowl from beyond the boundaries of the State and the Mississippi Valley.

To begin with, we start with a basic difference as related to the common concept of local or native game species; waterfowl problems are international in scope. This fact was early recognized and resulted in a treaty with Great Britain in 1916. To give effect to the treaty, Congress passed the Migratory Bird Treaty Act in 1918. Over the years Congress has repeatedly taken cognizance of this great resource and acted to protect it. The Migratory Bird Conservation Act of 1929 was implementing legislation for the establishment of migratory bird refuges and created the Migratory Bird Conservation Commission to promulgate land acquisition for refuges. This Commission is composed of Secretaries of Agriculture, Interior, and Commerce, plus 2 Senators and 2 Members of the House. Again in 1934 the Migratory Bird Hunting Stamp Act and the Coordination Act were made law to help finance and protect transitory wildlife.

A treaty for the protection of migratory waterfowl was ratified between Mexico and the United States in 1936.

I have heard it stated that the Department of Agriculture had a mandate to subsidize drainage; that is not quite correct, but if the Migratory Bird Treaty is not a mandate to protect birdlife then it takes on some such status as our Indian treaties. A mere scrap of paper.

By the very nature of this far-flung problem, when hunters attempt to view its continental complexities from behind one duck blind, it is too much to expect that he will comprehend all its intricate ramifications. Until recently few, if any, State administrators had any factual knowledge to guide them because it was so far away as compared with local troubles, they paid little attention to it except to berate the Fish and Wildlife Service and accede to local pressures so they would be taken off the hook temporarily on some other problem.

One fact stands out above all others. If waterfowl are to be perpetuated as a game bird and not classified with song birds, it is high time that the rank and file of the conservationists have some fundamental understanding of the multitude and variety of issues, crosscurrent, and roadblocks involved, and beyond that they should begin to appreciate the limitations of their own knowledge and begin to rely on career men for their advice.

As a resource to be preserved and perpetuated, migratory waterfowl is one of the most valuable on the continent. The situation is not all bad but it is a long way from being entirely satisfactory for those conservationists who attempt to peer into the future 50 years ahead and compare them with the past 50 years.

I can remember back that far along with some of you present. My experience was in western Minnesota and the Dakotas. Long files of ducks and geese from horizon to horizon quacking and honking their way north while the spring winds warmed the earth and smiled on the pasqueflower. South in the fall, day after day, with the Arctic chill in their tail feathers.

They were uncounted and without number; laws were something to joke about. Spring shooting was nearly as common as fall hunting. Market hunting was a recognized occupation. Subsidized drainage, which has destroyed a greater part of the finest waterfowl habitat in the United States, had not been included into the official conservation concept of the Department of Agriculture. The pothole country of the Dakotas and Minnesota was still one of the best duck producing factories in the North American Continent.

This has all happened in my lifetime, ladies and gentlemen, something that I can remember; and so I wish to remind you as forcefully as I can that too many adverse factors cannot come along to rock the boat or migratory waterfowl will be classified as a songbird at some future time.

It is wishful thinking to hope for original population, to keep them at the present level is going to be a sizable job.

Today more than 80 percent of all waterfowl nests in Canada and Alaska. From the Bering Sea to Ungava, from Baffin Bay Island and the Mackenzie River south to the border. The highest potential is in the Saskatchewan prairies with Alberta and Manitoba running second. The future trend of economic development in the prairie provinces will, in a great measure, determine the destiny of waterfowl of the North American Continent.

South of the border about 80 percent of the nesting grounds of the Dakotas and Minnesota, the best in the United States, has already been destroyed, mostly by subsidized drainage.

At the time of settlement of the Midwest, there were 115,000 square miles of pothole country in Iowa, Minnesota, North Dakota, and South Dakota. Today, the pothole country has been eliminated in Iowa and reduced in Minnesota, North Dakota, and South Dakota to 56,000 square miles. Iowa originally 3 to 4 million ducks in production.

DRAINAGE IN THE POTHOLE COUNTRY

On a 10-township sample in Minnesota, 16 percent of the potholes were drained between 1945 and 1950.

On the basis of published PMA records for the period 1944–54, there were expended $1,800,000 in subsidy for drainage of 800,000 acres, of which it is estimated 25 percent were actual acres drained, or 200,000 acres in South Dakota.

On the same basis, the drainage subsidy in North Dakota, of over $1,800,000 has resulted in drainage of 335,000 acres.

On the basis of PMA records for 1949 and 1950 for all three States, there were 32,000 potholes per year drained with a subsidy payment.

More than 2 percent of the remaining potholes have been drained each year in the pothole country.

In recent years, although no more than 3 percent of the land in eastern South Dakota is wetland acreage, yet over 40 percent of the ACP payments have gone for drainage in certain counties in certain years.

Between 1946 and 1950, 10,700 potholes were drained in eastern South Dakota and, between 1950 and 1954, 130,300 acres of wetlands were drained.

But in looking to Canada as the last source of waterfowl for the American hunter, agriculture and oil interests up there are already competing with the ducks. The prairie province farmer will flatly state he does not want unlimited duck populations. Spring planting sometimes comes when the ducks are nesting, with the result that a high percentage of nests are destroyed. There are instances of deliberate nest destruction. When there is delay in fall harvesting, depredations occur at which time permits to kill are issued.

Drought and floods have a marked influence on nesting in addition to the human influences. This year conditions are good so there was a marked increase. Some seasons end up in a decrease. Winston Mair, Chief of the Wildlife Service of Canada, recently told me that the depredation by waterfowl this past summer and fall was very slight in spite of the increase of birds due to a favorable hatching season. There is no question, however, but what the depredation threat is used as a bugaboo for liberalization of seasons and kill permits.

The question is frequently asked, "Why does the Pacific flyway have a larger daily bag limit and a longer season on waterfowl than the rest of the Nation?" Primarily because a large proportion of the ducks of that flyway winter in California and nearly 90 percent of the waterfowl habitat in that State have been destroyed. Irrigation farming has taken over the once vast tule marshes of the Sacramento and San Joaquin Valleys, the former wintering area of untold millions of birds. Irrigation has moved out into the desert and is still on the march in the Imperial Valley. Crops are rotated the year round and are subject to depredation during the winter months by birds who now have little or no place to rest and feed. Like the Canadian, the California farmer does not want too many ducks; not when agricultural expansion is paid for by the taxpayer. The claim of an overpopulation of ducks in California or Canada is true or false depending on whose ox is being gored.

One key to the Pacific flyway situation are three refuges: Upper Klamath in southern Oregon and Lower Klamath and Tule Lake Refuges at the border in northern California. These two California refuges comprise an area of about 60,000 acres and upon which nearly 80 percent of the flyway population is dependent for food and protection. It is their ancestral home pinched down to a mere fraction of its former dimensions.

Apparently about 10 to 12 percent of the annual waterfowl production can be credited to the remnant of breeding ground habitat in the United States. What may remain if we continually reshape the face of the continent with drainage, flood control, and irrigation is a matter of speculation. In the Klamath Basin of Oregon, reclamation development has, since the turn of the century, converted nearly 200,000 acres of waterfowl habitat to cropland. The fate of the Tule Lake National Wildlife Refuge, when the reclamation district in which it is located is taken over by the water users, remains to be determined. Here, public lands have been drained with public funds and the crop production has contributed to local economy, yet at the same time, added to a national problem of what to do with the overflow from bulging granaries. In the growing scarcity of natural feeding grounds, the ducks and geese have been pitted against the farmer, and are in competition with the Commodity Credit Corporation for grain which might otherwise be added to surpluses stored in the holds of idle cargo ships.

These refuges were not all purchased by duck-stamp money but a goodly part were overlays of land under the jurisdiction of the Bureau of Reclamation and used as refuge by permit and agreement. The operations are all financed by duck-stamp money.

Agricultural interests continue to hammer away at each succeeding Secretary of Interior to relinquish more Klamath and Tule Lake refuge land. Some is submarginal and subject to frost. Recently it was pinched down still more for farming purposes and partly lost to waterfowl. If conservationists allow this acreage to be diverted to agriculture, they will have to stand trial along with the perpetrators for one of the most damaging and wasteful anticonservation acts in history.

The greater part of the waterfowl of the Pacific Flyway depend on this 60,000 acres for a period of time in their flight south; their fate hangs on a thin thread. It is true there are refuges to the south welded into a vast pattern of irrigation where the birds continue a precarious existence. Finally, the birds reach Imperial Valley just above the Mexican border. This is where much of the depredation takes place. As a result, kill permits are issued to the landowners to kill and harass the birds until they start north on spring migration.

The California Fish and Game Department has spent from eight to nine million dollars in recent years on waterfowl refuges, management, feeding, and so forth. The State laws and the landowner attitude has been such that it is nearly impossible for either the Federal Government or the State conservation department to make purchases for refuges. If I recall, the State was recently negotiating for some 8,000 acres at about a half-million dollars for the bare land. This does not make Horicon look like it had too much money invested in it. In addition, the problem is very complex and fraught with much bitterness by the various interests that are competing for land use in California today. Both Federal and State agencies have made a valiant effort to ease the problem but always are faced with insurmountable odds.

The attempted feeding program has divided the California Conservation Commission. Some are dissatisfied. The unattached hunter feels it favors the duck clubs, of which there are many, powerful and wealthy. In the past 2 years, only about 10 percent of these duck clubs have taken advantage of the so-called feeding program and many of them admit they use it not for the purpose of feeding the birds but for the purpose of enticing them to their duck club. I am told there will be a concerted effort to have this feeding law abolished by the next California Legislature. The Lostetter report was a report by a man highly qualified and with many years of experience in handling waterfowl depredations. The facts of his report were not repudiated by the career biologists of the Fish and Wildlife Service. They all agreed with him but these career people should be allowed to publicly speak for themselves and not be quoted by inference through the press agents of the Secretary of the Interior.

Along the coastal areas of the Gulf of Mexico, an inland waterway plus drainage, has destroyed tremendous areas of inland marsh where waterfowl wintered. Salt water came in some places and destroyed the vegetation. Other fresh water drained out. The lower Mississippi is being throttled by the Army engineers with the result that much former bird area is being drained for various reasons. Waterfowl are being forced to winter further north and the lower country is losing out on a great deal of its former hunting.

In the Lacassine Refuge, Louisiana, where there has been a costly development with duck-stamp money, the oil interests are pressing for drilling privileges; on the Sabine, the shell interests propose to remove shells which would destroy the duck-feeding grounds; the lumbering interests are exerting pressure to get the last virgin cypress of the Okefenokee Swamp; on the Chincoteague Refuge in Virginia, efforts have been made to allow dredging for zircon and titanium, and it is now threatened with a toll road to be built by private industry to service a real estate development. Real estate may win too.

In Massachusetts the State has petitioned to take over the Parker River Waterfowl Refuge for a honky-tonk recreational area.

In Oregon there is a move to set aside a substantial portion of the Malheur Refuge of 165,000 acres, and vital to the Pacific flyway, for homesteading and irrigation projects.

One of the most important refuges of the central flyways, and in that critical area of wetland drainage, the Lower Souris Refuge of North Dakota, farmers are demanding parts of it for pasture and the elimination of the refuge. Gas and oil companies are already exploring it for future drilling.

Strawberry Valley Refuge, Utah. Established 1908, 14,000 acres. Now abolished, 1955. Control of all hunting and fishing resources pass to water users. Public must pay—former public property.

The Air Force is now using a part of the Cabeza Prieta Arizona bighorn sheep game refuge for gunnery practice and wants more; the Army has requested more of the Kofa game refuge, Arizona, much of which they wish to use for the testing of poison gas; on the Desert Game Range, Nevada, the Air Force is taking steps to get primary jurisdiction over some 600,000 acres. It is a bighorn refuge. I spent some time inspecting this.

According to reports the Air Force has decided not to make any further attempts to obtain the Aransas Refuge as a flash-bombing area. This is the refuge where the last whooping cranes make their home and again, incidentally, it was the intervention of the Canadian Government that was one of the deciding factors. Canada, through their Ambassador, very emphatically protested the use of this refuge area along the Gulf of Mexico as a flash-bombing range.

A brutal contempt for wildlife values and an even greater and more alarming contempt for the democratic processes can be reviewed in the CONGRESSIONAL RECORD on the attempted rape of the Wichita Mountains Wildlife Refuge, abutting Fort Sill.

Wilderness and wildlife advocates are constantly being confronted with questions and statements by some of the Nation's leading scientists, by economists, by big business, the military, by proponents of grandiose reclamation schemes which purportedly seem unanswerable. These pronouncements are made with such a weight of authority as to brook no contradiction or debate and it must be admitted that wildlife interests sometimes find them extremely difficult to rationalize.

And so the pintail flies down the Klamath Basin, the Sacramento, San Joaquin, the San Bernardino and the Imperial Valleys to be harassed all winter as a trespasser and a thief. The old green head of the Mississippi finds his coastal marshes devoid of food and full of salt water, or dry, and when he flies north in the spring, circles his favorite pothole only to find a cloud of dust rising from the cutting blades of a disk harrow. In fact, during late summer, fall and early winter, from the Arctic Circle to the Gulf of Mexico, he is subjected to open hunting seasons for 6½ months.

In closing, I wish to leave a few thoughts for your reflection: In the light of history, is it improper for us to examine the ideologies of our prophets, past and present?

In the days of my youth, while the big, bad lumber barons stood trial for the destruction of our forests, and the Lord knows they were far from lily white, the free-running fires from the smoke-filled clearings of thousands of settlers were the glorious signal of manifest destiny for the cut-over country. Fire was progress. The more fire, the more progress. For 30 years you have been taxed to heal the scars of a succession of gigantic abuses to the land, both State and national. At the time it was called progress, resulting from a high quotient of misguided evangelism; managing marginal land with marginal knowledge. Fifty years ago, the draining of Horicon Marsh was an outstanding victory for progress. Today you are taxed to reflood it.

Fifty years ago the miles of drainage ditches in the ancient peat bogs of central Wisconsin was another milestone of progress. Today those ditches have been plugged and the land is growing timber and producing wildlife. However, talk of more progress is in the air now that the water table has been brought back. There is interest to place one of Wisconsin's greater recreational areas into irrigation.

Two decades ago, agricultural leadership advocated clean farming and row crop tillage on as much as 30 percent slope regardless of the effects of erosion. It took big Hugh Bennett and millions in subsidies to start a change in that pattern.

Think long and hard before you accept the new connotation of the word "conservation." Scientific exploitation, just a thin line from plundering. * * *

Those who devise means have been fantastically successful but we are no longer so sure as we once were that the ends being reached are desirable or even tolerable. Many suspect that the world is not becoming in every way a better place for human beings to live in. Some suspect, even, that it threatens to become a place where they cannot live at all. And that is the penalty we are paying for being so pleased with the fact that we are going somewhere rapidly, that we are not at all concerned over the question where we're going.

Conservationists, like many other scientists, are beginning to realize that the question of values has caught up with them. But there is no general agreement among them as to what they want to conserve or why it is worth conserving.

And so, ladies and gentlemen, you will continue to band together sporadically in an attempt to save resources which to you are near and dear, and at the same time, you will continue to tax yourself and have your Congress issue mandates that the tax money shall be used to destroy those very resources that are near and dear.

You think you want these values saved but you will deny yourselves nothing in a

material way to guarantee that preservation. And in the end, some individuals wishing to be counted among those who are serving in the ranks of conservation, if and when these decisions regarding creature comforts and effects on the pocketbooks have to be made, will take the 30 pieces of silver and give their conservation principles the Judas kiss. Leopold said: "There are some who can live without wildlife, and some who cannot." To me, the issue is as simple as that.

Address by Governor Harriman at the Constitution Day Celebration of the New York Committee, Benjamin Franklin 250th Anniversary Celebration, New York City, September 17, 1955

EXTENSION OF REMARKS
OF
HON. LEO W. O'BRIEN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 17, 1956

Mr. O'BRIEN of New York. Mr. Speaker, today is the 250th anniversary of the birth of Benjamin Franklin. Throughout the civilized world, voices are raised in his honor, commemorating his great contributions to government, to science, to literature, and to all the arts which advance the progress of mankind.

The people of my city, Albany, N. Y., wish to join in this accolade, because in our community Franklin presented, more than 200 years ago, the Albany plan of the Union.

The distinguished Governor of our State, in a talk last September, said better than I possibly could what the Nation and the world owes to Franklin. I should like to incorporate his remarks in the RECORD:

I welcome the unusual occasion which gives me the opportunity of being with you tonight. It serves not only to remind us of the greatness of the Constitution under which we live, but of the man who did so much to light America on its way toward human freedom. It serves, moreover, to point up the essential differences in the titanic contest that is going on today between freedom and tyranny for the possession of men's minds and bodies—a contest so vital to the peace of the world.

Tonight we are on the threshold of a national and international celebration to honor Benjamin Franklin on the 250th anniversary of his birth, which took place in Boston, January 17, 1706. I note that this anniversary will be celebrated for a full year. With a man as productive and versatile as Franklin, it would take a year just to list his varied achievements.

This celebration could not be less than international in its scope. Franklin was the first and foremost exponent of American democratic ideals. He was one of the most advanced thinkers of his age, the first interpreter of America to other lands, possessed of an amazing vision for his country, and one of its master-founders.

We in New York State have the good fortune to be selected, for special reasons connected with Franklin's career, to provide an advance observance of this great anniversary celebration. In the year to come it will draw the attention of civilized people throughout the globe to Franklin's honest and solid idealism—an idealism which is as real and vaild today as when he helped to write it into the American Constitution.

We have need of this occasion. Today the world is faced with the greatest assault on the principles of freedom and democracy that mankind has ever seen. For 200 years the ideal and the result of American Revolution have inspired the oppressed people of the world. Communism now claims to be the real doctorine of progress, while in fact it seeks by subversive means to impose a new slavery upon those who are seeking freedom.

More than ever we have need to rededicate ourselves to the ideals of democracy which are the constant foe of oppression. We must become more articulate so that we may help more effectively those who are still struggling toward freedom; or, having won it, do not want to sink back into the despair of slavery and dictatorship.

This is a time when we all have need to revitalize our concepts and strengthen our armor for the defense of human rights and freedom. I know of no better way of doing this than by gaining a more lucid understanding of the concepts of that remarkable group of men who gave this Nation its peerless foundation in the American Constitution—a document which today still stands as the most powerful guarantor of human freedom the world has known.

Franklin, as we all know, was one of that group of Constitution makers. He was known in his day as the first great American. He was so widely recognized as a defender of the rights of man and as an interpreter of America to the world that many in Europe considered him to be the principal advocate of human liberty. Carlyle called him "the father of all the Yankees." Balzac said he was "the inventor of the American Republic."

All of these things grew out of a career so all encompassing that we ourselves are only beginning to appreciate its full sweep and power. We are only beginning to understand him, and to realize the steady and forceful opposition to oppression of any kind that drove him on throughout his life. It has been well said of him that he hated anything that tended to debase mankind.

With many of Franklin's achievements we are all familiar. We know him as a printer, publisher, author, humorist, philosopher, scientist, skilled negotiator, organizer with a rare gift of leadership, diplomat, and statesman. We identify him as the inventor of a stove, the man who drew the lightning from the skies, the founder of the American postal system, of the first circulating library system on this continent, and of the first American scientific society. He was a thinker whose basic creed was to discover the needs of mankind and endeavor to meet them. He was a profound philosopher without being an ascetic. Intensely practical, he always endeavored to translate his concepts into action. He represented, in short, an almost incredible array of talents, and it is no wonder that he atained a worldwide fame.

We know Franklin also for his achievements in public life—as a colonial agent in London, fighting the American cause; as our representative in Paris, where he brought the aid of France to the new Nation in the critical days of the Revolution; as one of the framers of the Declaration of Independence, and as an associate of Washington, Adams, Jefferson, Madison, and others in shaping the Constitution itself.

But we are not as familiar with another and, some believe, the most significant of all his achievements in behalf of the country he loved so well. This was the plan he drew for the first union of colonies on this continent—a plan which was the beginning of the effort to frame a Federal Constitution for Americans.

That plan is known historically as the Albany Plan of Union. I take pride in saying that it was drawn on New York State soil, in the city of Albany, in the year 1754, by Benjamin Franklin, as a delegate to the first great Congress called in America. It was a plan developed while the colonies were not yet free—while they were torn by strife, disputings, jealousies, and selfishness—totally unable to reach an agreement on any subject, even when faced with perils of invasion and savage warfare.

The basic idea it embodied—the idea that made it great—was Franklin's realization that in order to progress out of the wilderness of provincialism and attain their proper status, the colonies must unite, sinking their individual differences for the good of all.

At that time, union of the colonies seemed a remote, impossible thing. Yet Franklin persevered in his idea, envisioning a nation on this side of the Atlantic which, though still legally tied to Great Britain, would work out its own destiny by vote of its own representative national legislature, financed by its own national treasury and dedicated to the promotion of the common welfare.

And this was 22 years before the Declaration of Independence.

The plan did not succeed at the time, and this is undoubtedly the reason it has suffered from much neglect in telling the story of America. The Revolution, as we know, had its origin long before the Battle of Lexington in a deep sense of resentment against invasion of human rights. As thoroughgoing historians long have recognized that the Declaration of Independence and the Constitution had their authentic forerunner in the Albany Plan of Union—the first formal step taken by a representative body to establish a general government for the British colonies.

Nevertheless, it was not until last year, on the 200th anniversary of the plan of union, that the United States Congress gave it official recognition, honoring Franklin as the author of the plan and Albany as the place where, as the congressional resolution put it, the Federal Government had its stirring beginning. To convey the tribute of the Nation a congressional delegation was sent to join in the Albany celebration, and governors of several of the States represented at the original Congress as Colonies sent their personal emissaries.

This pioneer Constitution for the Colonies was written under dramatic circumstances. In 1754, the last of the French-Indian wars was getting underway. The French, driving down the Ohio from Canada, were hoping to push the British from control of the continent. The Colonies, as ever disunited, unwilling to defend each other, were woefully weak and unprotected.

In the emergency, the British Lords of Trade directed the calling for the first time of a general congress of all the Colonies in America to meet in Albany. They were to make a new and lasting treaty with the Six Nations of Iroquois. Under the urging of Franklin and Thomas Hutchinson, of Massachusetts, sentiment for a union had arisen in several Colonies in advance of the Albany meeting. The British ministry was informed of this and initially favored the idea. Lord Halifax instructed the colonial assemblies to send to the Congress their men of highest standing and integrity. Bancroft has said it was the most notable assemblage America had seen up to that time. Albany was chosen for the sessions because, for over a century, it had been the chief treaty center in dealings with the Iroquois Confederacy.

Twenty-four delegates from seven Colonies—New York, Massachusetts, New Hampshire, Rhode Island, Connecticut, Pennsylvania, and Maryland—met in Albany's original city hall on June 19, 1754, remaining in session until July 11. Virginia and the Carolinas, although sending no delegates, desired

to be considered present for the treatymaking. Two hundred Indians took part in the negotiations which resulted in renewal of their agreement to support the British cause. The agreement was reinforced by 30 wagonloads of gifts, contributed by the Crown and the Colonies, the most lavish outpouring of generosity the savages had ever received.

The delegates, however, were even more interested in the idea of a Colonial Union. On June 24, 1754, they adopted unanimously a history-making motion which has echoed through our annals ever since:

"*Resolved*, That a union of all the Colonies has become absolutely necessary for their security and defense."

A committee was named to receive and consider plans of union. Some of the delegates favored a union in three parts—north, south, and middle. Others wanted a two-part union—north and south. But Franklin prevailed with his proposal for a single government, the capital to be at Philadelphia. The legislative power would be vested in a representative assembly, or Grand Council, of 48 members, chosen from the 11 then existing colonies. The assembly would enact laws, make treaties, and appoint civil officers with the approval of the President-General, who would be appointed by the Crown and would have veto power. On the side of representative government, an astonishing number of similarities are to be found between the original plan and the Constitution that finally evolved.

Franklin himself disliked the notion of a royally-appointed president, but since the plan's approval necessarily was dependent on the king as well as the colonies, it was the only practical solution. And Franklin, with all his idealism, was a practical man.

The plan was debated for 12 days and was adopted on July 10, 1754. Franklin was ordered to put it in final shape, for referral to the king and colonies. Had the approvals been given, it would have been binding upon all the colonies, then with a population of a million and a half.

Franklin had prepared well for the Albany Congress. In May 1754, before leaving for Albany, he had published in his Pennsylvania Gazette a cartoon showing a snake cut in several pieces, the segments labeled for the various colonies. Underneath it was the slogan, "Join, or Die." The cartoon was often reprinted up and down the colonies. It is familiar to us from our school days, but I wonder how many of us know it dates from 1754 instead of 1776.

As Franklin himself said later, the plan of union was rejected for directly opposing reasons. The colonies felt it contained too much royal prerogatives. The crown was horrified by the notion of so much representative government. The plan was not at all the sort of thing that had been envisioned when the British ministry called the Congress—a much more authoritarian setup was their aim.

As events proved, the colonies were not then ready to unite. It required a more direct coercion on the part of Britain to bring the crisis of independence. Yet, it was only 11 years from the Albany Congress until the Stamp Act Congress met here in New York City to protest again taxation without representation; and it was only 22 years from the Albany Congress until Franklin joined in signing the Declaration of Independence at Philadelphia.

In that brief period the course of world history changed. An impetus was set up which created the world's greatest democracy—then and still the largest free nation on earth. Franklin is credited with the authorship of the national idea which is the keystone of the arch. Actually, as we see it in perspective, 22 years was not a long period for a new Nation resting on a base of freedom and common cooperation to emerge from a group of disunited, bickering, self-interested colonies.

President Garfield once said that the "first germ of the American union was planted by Franklin, while to Philadelphia remains the honor of the seat of the First Continental Congress." It is not to quarrel with Philadelphia that I speak tonight. Rather it is to enhance the eminence of the great Philadelphia apostle of human liberty. In a very real sense Franklin not only blazed the trail for a united America, but from start to completion played a master part in forming "the more perfect union" which gave the world a new idea of the dignity of man.

Perhaps nothing reveals Franklin's extraordinary vision so much as a letter he wrote to Lord Halifax in 1756, in which he said he had long been of the opinion that "the future grandeur and stability of the British Empire lie in America." Franklin's Albany plan, had it been accepted by the British Crown at that time, would have laid the foundation for the British Commonwealth. Britain had to lose the American colonies before it learned to embrace Franklin's concept of commonwealth relationships.

After our Constitution had been adopted, it was his great hope that European countries, too, would be able to reconcile their differences and form one grand democracy.

From that day to this, the American example of union has kept alive that hope, and today there have flowered several new institutions beginning to unite the nations of Europe. These institutions we in America can say proudly we helped to bring about through our leadership in the Marshall plan and in the North Atlantic Treaty Organization.

When I was in Paris as European administrator of the Marshall plan, it was most fitting that in my office stood a bust of Franklin presented me by the French Government—a copy of the famous bust by Houdon in the Louvre. That the French Government should have chosen to present this bust reflects the honor they still pay to Franklin and their recognition that our work then carried forward the things he stood for.

Along the difficult, tortuous path toward unity among nations, the ideas and the voice of Franklin are a living guide. What he has helped to teach the world is that men can unite. Then can submerge their differences in the interest of the common good. They can create sound and lasting institutions of democratic self-government embracing broader areas.

And the urgency of his famous warning to the colonies, "We must all hang together or most assuredly we shall all hang separately" has its meaning, too, for the free peoples of the world today.

"God grant," he said, "that not only the love of liberty but a thorough knowledge of the rights of man may pervade all the nations of the earth." This idea rang again in Roosevelt's call for the four freedoms—everywhere in the world.

God grant the time of fulfillment may come. That it may come, it is our mission today, as it was then, to bring the American revolution to the rest of the world.

Many of the people of the world are now in the process of choosing, as the American people chose 200 years ago.

Many are clinging to freedom as to a lifeline. But others are being misled by villainous propaganda to believe human liberties can survive in a dictator-ruled state that parades under the name of a union of republics.

We must not—we cannot—be complacent when we view their plight. We must see that our own house is put in order; that we are renewed in the strength of our own idealism. And we must use our energies to spread this understanding to those who are looking to us for guidance. Let us keep our eyes forever open and our defenses forever firm. Let us not be deceived by sweet words or alluring promises, or fall into a trap laid by this 20th century tyranny. Let us resist at every point the insidious effort to spread the enslavement of humankind. Let us spread the knowledge that human liberty is evidenced in freedom of religion, of speech, of action, and of opportunity.

The question our generation will determine is whether this century will be the century of the Communist Manifesto or the century of the Declaration of Independence; whether man will live by the inspiration of Benjamin Franklin or of Karl Marx.

It is in our hands to decide that issue.

It is in our power to see that the flame of American revolution burns brightly to light the progress of mankind to freedom under God.

The World Must Choose Between Religion and Ruin

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, January 16, 1956

Mr. LANE. Mr. Speaker, under unanimous consent, for publication in the RECORD, I wish to include the following complete text of Archbishop Cushing's address to the Holy Name Society officers' 11th annual convention, given in St. James Church on Sunday, December 4, 1955, which appeared in the Pilot, Saturday, December 10, 1955.

The spiritual leader of the Archdiocese of Boston has won the affection of all his fellow citizens by his good works and his devotion to God and country.

In these and other thoughtful observations concerning the contradictions in the lives of individuals, of nations, and the world at large, the archbishop gives us cause to stop and ponder.

Somewhere many have lost the way.

In his kindly wisdom, Archbishop Cushing reminds us that only as we live so as to be worthy of God shall we ever hope to overcome the trials and anxieties of our times.

THE WORLD MUST CHOOSE BETWEEN RELIGION AND RUIN

In undertaking this engagement to address the officers of the Holy Name Society of the Archdiocese of Boston I have been conscious of the heavy responsibility which developed upon me as the spiritual leader of a devoted people to raise up loyal and cooperative helpers among the laity. It is your purpose to fit yourselves for this important function; it is for this reason that I am so eager to assure you of my interest in you and in the program which you are to carry on under the direction of your zealous diocesan moderator.

It would be a great mistake to think of the Holy Name Society as occupying a place of inferior importance in the campaign of Catholic Action which the archdiocese is pledged to maintain. It would be a still greater mistake to assign arbitrarily to the Holy Name Society certain purely devotional functions and to restrict its influence to what is sometimes termed the purely spiritual life of its members.

In point of fact, there is no such thing as a purely spiritual life for any of us. The life we live is bound up inseparably with the

world in which we struggle for material existence, with our fellow men with whom we share the benefits of our individual efforts and with the God who has made us like to Himself, and who has destined us for an eternity of happiness in His heavenly kingdom. The Holy Name Society, if it is to serve the purpose indicated by its dedication to the cause of Christ our Lord, must do something more than provide the incentive for fulfillment of the ordinary obligations of decent Christian living.

It is with this thought in mind that I propose to consider with you today some of the problems which I consider as pertaining in a particular way to those who have been invited, as you have been, to share in the important work of saving the world for Christ in this eventful age in which we live.

WE MUST CHOOSE

It is not an exaggeration to say that we are confronted squarely today with the need of choosing between religion and ruin. Nor is it an exaggeration to say that if we choose to be religious we must make the further choice between the world's interpretation of religion and that which is presented to us by the divinely instituted church which claims our allegiance. It is foolish to think that religion, which implies essentially the dependence of man on God and the satisfaction of man's deepest yearnings in the infinite truth and goodness of God, can be organized according to the proud and self-regarding principles of an atheistic philosophy of life.

To be religious means to look to God as the supreme arbiter of human conduct. To be religious means to be willing to live by principles of morality which are imposed by God and which do not depend on the changing points of view of those who occupy positions of authority in human society. To be religious means to look to God's plan in the organization of every phase of human activity and to be willing to adjust in accordance with God's law even those convictions and policies which may have received approbation and blessing on the highest levels of human jurisprudence.

In a word, we can find the paths of religious life, which are pointed out today as our defense against disaster, only by surrendering ourselves to God and living in humble submission to His will. We cannot be religious by rendering to God only lip service and sentimental protestations of affection while we continue to pursue in effect a way of life which bespeaks defiance of the most fundamental principles of natural law and divine revelation.

LEADERSHIP NEEDED

The world needs the leadership which you, as followers of Christ and pillars of the church, are in a position to afford. Let me point out to you some of the more important ways in which your influence, as leaders in the Holy Name Society, should be exerted.

You must be leaders, first of all, by exemplifying in your relations with others the highest standards of honesty and truth. It is easy to gain a point by deceit and fraud; it requires great sacrifice to be faithful to the truth when the truth demands that we forego some coveted advantage or some considerable degree of material profit.

It sometimes seems that the business world of today has organized its activities on the hypothesis that everyone is dishonest and that successful completion of any business transaction demands unscrupulous readiness to match lie with lie and to anticipate by fraudulent machination any possibility that the other fellow may resort to dishonest methods. So true is this that even theological treatises on the morality of business operations must indicate with considerable precision the extent to which dishonest competition may be met and circumvented without violation of the moral law.

Calculation of the just price of merchandise which is offered for sale must necessarily take into account the fact that people often purchase for credit things that they will not be able to pay for in full, and the more distressing fact that many people deliberately refuse to pay their bills and thus make necessary expensive efforts to force them into payment.

High-pressure salesmanship is not always limited to morally acceptable means of making merchandise attractive and stimulating consumer demands. Too often it happens that the low prices at which merchandise is offered are made possible by fraudulent substitution and deceitful misrepresentation. The prevalence of cut-throat competition makes necessary the development of devious methods of merchandising and equivocal methods of advertising and display. All this would be unnecessary if every buyer and seller could be assured in advance of not encountering dishonesty.

Here then is one important field in which you can exercise leadership. Do all that you can to bring honesty into the business relations in which you may have a part. If you are in business for yourself, never stoop to shady means of increasing your profit. If you work for someone else, do an honest day's work for an honest day's pay. If you sell to others, give them what they have the right to expect for the price which has been agreed upon. If you buy from others, do so within the limits of your means and pay your bills when they become due.

A person who is known in the community in which he lives as honest and reliable, upright, and beyond reproach, is a source of strength and inspiration for all who know him. A self-respecting and self-sustaining community is made up of such people. We admire them and respect them; but we must make it possible for them to be successful as well as honest. This we can do by the contribution of our own efforts to be honest.

The more influential a man is, the greater is his responsibility to avoid any form of unjust enrichment of himself at the expense of others. A man who cheats his neighbor has not only lost the respect of all who learn of his dishonesty; he has failed, in an important field of human activity, to show his fellow men the way of God.

LEGITIMATE AUTHORITY

Christian leadership requires also that those who exercise it be subject to legitimately constituted authority, whether in the church or in the state. It is well known that Catholic theology has always insisted upon respect for authority on all levels of civil government. This means that the laws of the state, when they are properly enacted and reasonably applied, are the laws of God as well.

There must be no opposition on the part of Catholics to the legitimate functioning of the state. However much we deplore the secularistic point of view of so many modern statesmen and however strongly we oppose the extension of state power into forbidden areas, we must never forget that an efficient civil government is essential for the welfare of the church.

Let it be said to the credit of our American form of government, that it has provided an environment of peace and good will in which the church has prospered. However great our debt of gratitude to the zealous bishops and priests who have planted the seeds of the faith in every corner of our land, and to the self-sacrificing, laity of generations past who have bequeathed to us the heritage of their dauntless loyalty, it remains true that had our Government as such taken a hostile attitude toward the church, we could never have attained our present position of influence among our fellow Americans.

As we reflect upon the responsibilities of leadership which we are now able to fulfill, we must be determined to face them not only as Catholics but as loyal citizens of the great Nation which has reared us in a spirit of respect for human dignity. We have never suffered from the efforts of our Government to interfere with the internal administration of the church. We have never been denied the right to communicate with the Holy Father, and with our fellow Catholics in other parts of the world. We have never been forced out of the market place and the halls of justice into the narrow boundaries of our churches and forced to confine our educational program and our proclaiming of the word of God within the limits of state-imposed censorship.

Today, as it becomes increasingly difficult to maintain and develop our schools, let us never make the mistake of assuming an attitude of hostility toward our American system of government as such merely because certain of its policies may effect us adversely or because we may suffer injustice in the distribution of governmental funds and subsidies. We have nothing to gain and everything to lose if we encourage in our Catholic people an attitude of disrespect toward our Government because of regrettable departure from Christian principles on the part of some of our elected representatives. We must fight secularism, but we must never attack the structure itself of the legal institutions through which the authority of God imposes itself upon our temporal life. We must insist upon our rights as members of the church to worship God in accordance with the teachings of our faith, but we must never repudiate in principle our obligations as citizens of the United States of America.

Let us, as intelligent and zealous Catholic laymen, support every reasonable and well planned effort against placing Catholic school chidren in an inferior category because they chose to attend a religious school. Let us oppose with all our energy the attempts of educators trained in a godless tradition to maneuver our schools and colleges into a position of helpless subserviency to iniquitous State control.

Let us do our utmost to place and keep in posts of public responsibility those who can be counted upon to be fair and square to God and country in accordance with the highest ideals of American democracy. And let us at the same time strive to build up in our people an attitude of deepest respect for the authority of every legitimately appointed public official.

Let us never advocate reform by rebellious overturning of the system of Government which has served us so generously in the past and which needs but to be purified of its human defects to provide in the future the helpful cooperation which religion in America will need for its future growth and development.

LOYALTY TO CHURCH

Finally, as Catholic leaders in a community, let us strive to keep alive within the church that spirit of loyalty to ecclesiastical authority which is so necessary for the church's growth from within. It is disturbing to hear from time to time complaints by Catholics that the church's teaching, particulary on moral matters, is unreasonable and out of date. It is still more disturbing to find Catholics adopting a questioning attitude in relation to the very foundations of revealed truth.

HUMBLE MIND

How contemptible it is for one who calls himself a Catholic to put the church on the defensive and to demand as the condition of his assent to the dogmas of faith that his own objections to those dogmas be answered! How can a Catholic honestly assume the role of an adversary toward the church which Christ founded in the flowing of His precious Blood?

The church has never demanded blind assent to its teachings from any one; but certainly the attitude of the faithful Catholic should be that of faith seeking knowledge, not that of knowledge seeking to vilify faith. We can best penetrate the truth of the church's teaching by accepting it first in humble submission to the church's authority. Your most important duty as Catholic lay leaders is to promote this attitude of respect and reverence for every command, every directive, every intimation of the truth which passes through the channels of the church's ministry. Thus, we shall keep intact the deposit of truth upon which the mission of the church is based. Thus we shall safeguard the church from the regrettable dissensions which rend the seamless garment of Christ and expose the faith to the taunts of an unbelieving world.

My dear men of the Holy Name Society, thank God for your affiliation with this organization which has contributed so enormously to the spiritual growth of our archdiocese. I pray that God may bless the work which you have undertaken so willingly and which promises to bear such abundant fruit in the months which lie ahead. Be courageous, be loyal, be true to the ideals of Catholic life which emerge from your faith. Thus you will afford to all who look to you for inspiration the leadership which will save them from the corruption of the world and save the world from the crisis which threatens it as godless statesmen and educators strive to drive God from men's souls.

The Timing of the Collection of the Tax in the Case of Tires

EXTENSION OF REMARKS
OF

HON. LEE METCALF

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 16, 1956

Mr. METCALF. Mr. Speaker, independent tire dealers everywhere will be interested in the following remarks made by George J. Burger, vice president of the National Federation of Independent Business, in his appearance before the Subcommittee on Excise Tax Technical and Administrative Problems, House Committee on Ways and Means, October 11, 1955:

Mr. Chairman, I am George J. Burger, vice president in charge of legislative activities, National Federation of Independent Business, 740 Washington Building, Washington, D. C. Our national headquarters are located in Burlingame, Calif. We also maintain division offices at New York, Cincinnati, and Chicago.

It must be understood by members of the committee that no officer or group of officers is permitted to speak for the federation as to its position on any legislative or economic problems unless so directed by a nationwide poll of our members. The entire membership is polled and the results of these polls give the executive officers the authority to act in behalf of the members.

For the information of the committee, we have in the field approximately 200 or more sales representatives who are in personal daily contact with small business nationwide. Through this we are able to get the factual information from the grassroots.

Mr. Chairman, your announcement of your committee's planning, as released under date of August 16, stated on page 2, paragraph 3 of the release:

"3. Technical problems relating to individual excises, such as, but not limited to, the timing of the collection of the tax in the case of tires, the treatment of reclaimed oil in the case of the tax on lubricating oil, and the treatment of charitable and similar organizations in the case of the tax on admissions. A witness may testify on more than one of these groupings, but it is requested that each grouping be clearly separated and captioned in the copies of the prepared testimony."

My comments will be devoted exclusively to the timing of collection of tax in the case of tires.

Mr. Chairman, the Committee of Ways and Means is to be complimented in having taken interest in this subject matter which has been a thorn in the side of the independent tire sales and servicing stations nationwide since the wartime excise taxes were first inaugurated.

Bear in mind that independent tire dealers are not alone the victims of this discrimination in the tax levy, but all sellers of tires are also victims—be they filling station operators, garages, automobile dealers, or wholesalers, where, on the other hand, a special few, numbering approximately 1,500 to 2,000, in daily competition with all other retailers, are exempt from the tax levy on their stocks of tires and tubes until the merchandise is ultimately sold to the consumer. I am referring to the factory-owned retail stores—owned and operated by Goodyear, Goodrich, Firestone, and others. The three mentioned own and operate, collectively, approximately 1,500 stores.

In a recent prospectus of a well-known banking house in their report as it related to the Goodyear Tire and Rubber Co. they said in substance that Goodyear claimed 40,000 independent retailers, and the report further stated that the Goodyear Co. operated nearly 500 retail stores.

In my private capacity, prior to my official connection with the National Federation of Independent Business, I first became interested in this injustice in or around 1940, and from that moment up to the present time, in my dual capacity, I have urged correction of this discrimination.

The National Federation's position in the matter was openly declared through a nationwide poll of its membership when the question was put to the membership, and the result of this poll made to all types of independent businesses disclosed 95 percent for the correction, 3 percent against, 2 percent not voting. Such vote was reported in mandate No. 135, official publication of the federation.

I think it is necessary, Mr. Chairman, to give you the log of our activities in this respect for the information of your committee:

1. In public hearings before the House Small Business Committee January 13, 14, 15, 19, 22, 23, 26, 27; February 6, 9, 10, 16, 19; March 4, 9, 10, 16, 17, 18, 19, 20, 23; May 5; July 9, 10, 15; September 24, 1942; after presentation of the discriminatory excise tax situation the committee was unanimous in recommending immediate correction.

2. The situation was again explored before the Senate Banking and Currency Committee on June 10, 1952.

3. Hearings were held before the Senate Small Business Committee on May 6, 1943, on the same subject matter, Problems of American Small Business, referring to pages 2646–2648.

4. Hearings before the House Ways and Means Committee June 13, 1947. Refer to pages 547 to 562. Refer to the letter from the then chairman of the House Small Business Committee, the Honorable Walter Ploeser, who stated that the House Small business Committee feels the discrimination must be corrected, that the committee recommends the dealers be permitted to pay the tax after the sale to the ultimate consumer.

The hearings will disclose in my testimony the correspondence between myself and the United States Treasury officials in which the Department stated it was considering recommendations for correction by the House Ways and Means Committee.

5. Hearings before the House Small Business Committee November 17, 1948, Monopolistic and Unfair Trade Practices, page 567, at which time I urged the committee to recommend that the House Ways and Means Committee adopt H. R. 4407, which was introduced by the Honorable Walter Ploeser, a bill to correct the excise tax discrimination.

6. Hearings before the Senate Finance Committee July 5–13, 1950, Revenue Revisions of 1950. Refer to page 218.

7. Hearings before the House Small Business Committee May 20, 1953.

The above action in behalf of this necessary relief does not tell the full story, and it does not cover the many contacts on the subject matter because numerous personal contacts were made with members of the staff of the Joint Committee of Taxation and constant correspondence with Members of Congress and with members of the Committee on Ways and Means.

It will be noted in the recent annual reports of both the Senate and House Small Business Committees that they recognize this deplorable situation and have urged appropriate correction of the discrimination.

We are not asking, in behalf of small business which includes independent tire sales and servicing agents, any special tax consideration for them, which may be denied to others, but we are asking for a fair break.

The Treasury Department may contend that collecting the tax at the source from the manufacturer is a much simpler and easier procedure for the Treasury Department. We would go along with that if the regulation applied to all other industry products where the tax would be collected from the manufacturer, but such is not the case.

Also, we are not asking for the elimination of the excise tax on tires and tubes.

It is to be noted in the hearings before the House Public Works Committee with reference to the recent highway legislation, this excise tax discrimination subject matter was taken under consideration by many members of that committee, and they were sympathetic to the proposition to have correction made, but held to the premise such relief should be forthcoming through the action of the Committee on Ways and Means. With reference to action taken on the highway bill in the recent session of the 84th Congress it is to be noted that under date of July 27, 1955, on the floor of the House the Honorable WRIGHT PATMAN, present chairman of the House Small Business Committee, and the first chairman of that committee, being fully cognizant of the injustice to independents in the tire sales and servicing field through the existing method of tax imposition, was prepared to offer an amendment to the highway bill, which would have corrected the inequity in the excise-tax levy. However, as the bill was not open to amendment on the floor, Mr. PATMAN'S proposed amendment could not become a part of that major legislation.

Finally, Mr. Chairman, I know many members of the Ways and Means Committee have individually expressed to me that something should be done to correct this long-overdue injustice.

These major rubber companies owning and operating retail stores are certainly in a much stronger position to be able to make what might be termed advance payments than the people are now being required to make such advances, namely, small business.

We ask:

1. That the stocks of tire and tubes in the hands of tire manufacturers' retail stores be subject to the excise-tax levy at the time of delivery of the merchandise, the same as is now imposed on independents.

2. That the independents be given the same concession of making payment when their merchandise is ultimately sold, as is now given to the company-owned stores.

Small-business institutions today, of any and all descriptions, have all they can do to keep their businesses properly financed, and there is no reason why the Federal Government should add an increased financial burden through practices such as outlined above.

I ask in behalf of small business that this correction be made, and that it carry the recommendation of your committee, Mr. Chairman.

Increased Federal Aid for School Construction

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 17, 1956

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following article from the Boston Post, Boston, Mass., on the subject of Federal aid to schools:

PAYING FOR SOUTHERN SCHOOLS

The recent White House Conference on Education found agreement in one area of a vast problem—that of increased Federal aid for school construction distributed in accordance to need.

This recommendation will be handed along to Congress. In considering this recommendation to Congress, New Englanders must face the fact that southern Congressmen are better organized as a bloc than New England Congressmen.

One can expect, therefore, that the Southern bloc will offer proof that in school shortages they are the neediest of all. That raises two more questions: Will regions like New England be expected to help build schools in the Southern States which are fighting desegregation? And will New England be expected to help provide schools for those Southern communities which have lured Northern industries away by tax amortization plans?

In 36 years New England has lost 270,000 jobs in the textile industry alone. Most of these jobs are now in the South in communities which attracted the industries by cheap labor, tax amortization and other schemes. These Southern towns now need schools for workers' children and can't afford them. Desegregation has aggravated the Southern school situation.

Recent studies of major Federal programs during the past 20 years have shown that the poorer Southern States gather in more than five times the amount of Federal cash per $1,000 of Federal taxes paid than New England States collect per $1,000 of Federal taxes paid.

The Federal aid to schools proposed is another program in which the New England States will certainly get the worst of it. New England already pays more for food and raw materials than the rest of the country, according to expert economists.

The well-organized Southern Congressmen, always on the qui vive for a fight or a frolic where Federal funds are concerned, have all the more reason to go after Federal school-aid funds with high hopes of success. School desegregation has already arounsed the Southerners and increased the estimated costs of Southern schools by 100 percent. To placate the Southerners it is certain that the leadership of both parties will hand out Federal funds to hush up the Southern bloc.

New England has taken an awful beating from Federal programs. In only a single Federal category—the insurance programs—has New England taken out more than it put in. But, as the school construction aid shapes up at the moment, New England is going to take another beating unless the New England delegation insists upon a bill written with full cognizance of the needs of New England's educational systems and institutions, which serve the whole Nation. But, more than anything else, there must be a requirement that communities with industry tax inducement plans undertake school construction with smaller Federal contributions than those which now support school systems out of local revenue with no tax lures.

Agreement on the Urgency of Federal Aid for Schools

EXTENSION OF REMARKS
OF
HON. STEWART L. UDALL
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1956

Mr. UDALL. Mr. Speaker, there are few men in Washington who have a better grasp of the many issues involved in formulating a Federal program for aid to the schools of the Nation than Dr. Edgar Fuller, executive officer for the chief school officers of the 48 States. In the January 16 issue of the New Republic, Dr. Fuller has concisely presented the current status of school-aid legislation. I am confident his analysis will attract the attention of our colleagues who favor prompt action on this important subject.

Dr. Fuller's article follows:

AGREEMENT ON THE URGENCY OF FEDERAL AID

In the section of his state of the Union message that deals with human concerns President Eisenhower once again argues that good education is fundamental to our democracy. This year he grants in addition that it requires prompt and substantial action by the Federal Government:

"So far as the Federal share of responsibility is concerned I urge that the Congress move promptly to enact an effective program of Federal assistance to help erase the existing deficit of school classrooms. Such a program which should be limited to a 5-year period, must operate to increase rather than decrease local and State support of schools and to give the greatest help to the States and localities with the least financial resources. Federal aid should in no way jeopardize the freedom of local school systems. There will be presented to the Congress a recommended program of Federal assistance for school construction."

Similar statements in recent years—for President Truman was ardent in his advocacy of Federal aid—have led to no helpful action. But there is reason to believe that in this fourth year of the Eisenhower administration action will be taken at last. For one thing the need has become appalling in its urgency; for another, as President Eisenhower notes, public opinion has been mobilized through the mechanism of the White House conference and its preliminary meetings, in which a half-million Americans took part.

In pressing for action the Eisenhower administration should welcome its present opportunity to share political credit with the Democratic Congress. For on the school-construction issue the administration's political stock has nowhere to go but up, especially in the thinking of large numbers of independent voters among professional school people and other citizens greatly concerned about the schools. Far more important than political advantage, a substantially bipartisan law is possible this year. For if the bill offered once again in the House by Representative AUGUSTINE B. KELLY, Democrat, of Pennsylvania, passes the House and something based on the administration's bill passes the Senate, the two can be merged in a joint conference committee to produce acceptable legislation. This seems the obvious course for Congress to take. The Kelley bill, after all, is the result of years of congressional study and struggle in Congress. It is bound to be a prime factor in responsible congressional action and thus deserves the administration's full respect. But if the Eisenhower administration puts politics first and works to defeat the Kelley bill in the House in order to gain priority for its new bill in the Senate, our schools may be the losers.

And this would be unnecessary as well as tragic. The origins of the Kelley bill itself are bipartisan. Its grant-in-aid section is similar to that of the identical bills introduced with perfect bipartisan harmony a year ago.

In spite of its origins, however, the Kelley bill is widely regarded as the Democratic bill. Speaker RAYBURN has given it priority on the agenda. It was voted out of the House Education and Labor Committee last July by 15 Democrats and 6 Republicans, with 2 Democrats and 7 Republicans in opposition. Its grant-in-aid authorization of $400 million annually for 4 years is too high to be acceptable to the administration. In recent weeks, too, some of the special provisions considered for many years in connection with the old general Federal-aid bills that failed have been dusted off in the HEW Department and found to be good. So the administration has a new bill of its own.

Upon most issues there are no serious disagreements in principle. To illustrate, both parties want Federal funds distributed according to need. Everyone desires that Federal funds shall not displace State or local funds that would otherwise be expended for school facilities. All bills being considered safeguard State and local autonomy completely through State administration of the construction program. They make absurd any charge that there could be Federal interference with programs of education in local schools after the facilities have been constructed by the school districts under State standards with combined local, State and Federal funds.

The question of distribution according to need raises the question about what is fairly defined as such. Both administration and Democratic bills authorize full equalization among local districts within each State under the priorities of State plans. This is the major factor in determining need for school facilities, because variations in fiscal capacity among local districts within States are commonly 100 to 1 and are greater in every State than the less than 3 to 1 variation between the richest State and the poorest State.

The administration's bill goes beyond equalization in allocations within States and authorizes equalization in allocations among States. The Kelley bill takes more into account where the Federal funds come from and authorizes allocations to State on the basis of school-age population alone. Kelley bill supporters point out that after Federal taxes have been credited to the States where the tax burden actually falls, (rather than where Federal taxes are collected), the advantage per school child that the poorest

State would have over the richest State would be about 8 to 1. Since the difference in fiscal capacity between these 2 States is less than 3 to 1, Kelley bill supporters believe the 8 to 1 inherent leveling effect of the Federal tax system is enough equalization. The administration's formula would increase the advantage of the poorest over the richest State to about 16 to 1 per schoolchild. This range is only 2 to 1 if no account is taken of the sources of Federal tax funds.

A majority of the supporters of both bills agree with President Eisenhower that "anti-segregation" amendments are "extraneous" to this legislation. No bill could pass in the 84th Congress with this handicap. Children without schools cannot wait for the reform of a social system and the amendment can only deny them schools.

The complexity of the legislation cannot be denied, but there is rapid progress toward a concensus on school construction aid. The way things look now, the 84th Congress seems likely to rise to is opportunity.

The League of Women Voters and Its Program

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 5, 1956

Mr. MULTER. Mr. Speaker, in the CONGRESSIONAL RECORD for January 16, 1956, at page A340, I called the attention of our colleagues to the December 1955 issue of the National Voter, monthly publication of the League of Women Voters of the United States, which contained an explanatory article on league procedure. Through inadvertence that article was not printed.

The article on league procedure is as follows:

THE LEAGUE AND ITS PROGRAM

How is the league program made?

How does the league reach consensus?

These are the two questions most frequently asked by outsiders. They know the league's reputation as a grassroots organization with a thoroughly democratic process, and they ask: "How do you do it?"

New members in the league ask the same questions. And there are hundreds of new members to ask these days, for the league has grown rapidly in the past 10 years. In 1945 there were 523 local leagues and 52,099 members; in 1950, 740 and 93,090; in 1955 there are 985 and 126,747. A survey of the first 500 delegates to register for the 1954 convention showed that more than half had joined since 1948.

The formal answers can be found in the local league handbook and the national bylaws. And the program record, recently published, tells what the league has accomplished in its 35 years. But the answers are living realities to those long in the league, who have actively participated in program-making in their local leagues and at national conventions, who have painstakingly studied issues and patiently arrived at consensus.

Because it is important that all members understand league procedure now, while they are in the national program-making period, and because there are so many new members not all yet seasoned in the league, the National Voter attempts in this article to answer some of the obvious questions.

HOW IS THE PROGRAM MADE?

The 1956–58 national program will be selected by local and State league delegates at the convention to be held April 30 to May 4 of next year. That vote will be the final step of a process which began in the fall of this year. Most local leagues discussed national program as early as October. Their recommendations had to be sent to the national board by November 30.

Whatever emerges on the national program at the coming convention will be based on the recommendations now in the hands of the national board. About 3,000 have been received, representing over 700 leagues.

Members of the national board are now engaged in studying and analyzing these program recommendations. At their week's meeting in mid-January they will work out a proposed program.

FACTORS TO BE CONSIDERED

Usually the recommendation made by the most leagues goes at the top of the list, but this is not mandatory and it is not invariably so. The recommendation must be measured against league principles and purpose, possibilities of political effectiveness, and womanpower and time available. Also to be considered is whether it represents a cross section of thinking, that is, did the recommendation come from various sections of the country, from large and small leagues, from city and rural leagues?

The result of this process—1 item or 2, usually—will be the part of the proposed program that is called the current agenda (current governmental issues for concerted action). The current agenda plus continuing responsibilities (positions on national issues to which the league has given sustained attention and on which it may continue to take action) plus the principles (governmental principles supported by the league as a whole) comprise the program.

LOCAL LEAGUES DISCUSS AGAIN

The proposed program will be sent to the local leagues by February 15. The local leagues will go through another round of discussion and by the deadline of April 9 must send to the national board their recommendations, if any, for changes in the proposed program. The national board evaluates these comments and suggestions and may revise the proposed program.

Sometimes leagues protest at the workload, what with local, State, and National programs. In making up the 1952–54 proposed program, the national board sought to respond to this feeling. The proposed program contained only one item; it was an international one. But the local leagues, who had sighed at the workload, then protested because there was no domestic item. So the national board went back to the recommendations received from local leagues in the first round, which had indicated economy and efficiency in government as the field of second greatest interest, and worked out the wording of an item II for the current agenda. That is how the item on congressional procedures of the Federal budget became a part of the national program.

Next comes convention. Now the proposals art threshed out among the delegates. Because the delegate body has grown so large, section meetings, diversified as to region, size and type of league, etc., are set up for the purposes of preliminary debate. Then comes floor debate. Work proceeds in this manner—section meetings, floor debate, section meetings, floor debate—until all viewpoints have been aired and the program is finally adopted by vote of the delegates.

THE VALUE OF DEBATE

It is convention debate which gives the national board direction as to how to carry out the program.

More than one hotel convention manager has had to adjust his usual routine in order to accommodate the league. For the league he must provide a number of aisles, with microphones at intervals in each one. The league is determined to provide an easy way for every delegate to express her opinion to the convention, and no one who has ever attended a league convention can forget the picture of democracy at its best in the queues of delegates awaiting their turn at the microphones.

Suppose your league suggested a current agenda item which does not appear on the proposed program. You are sure that what your league recommended would be adopted if only it could be submitted to the delegates.

Or suppose world events have shifted to such an extent that now you have a brand-new idea to submit to the delegates.

There are ways to achieve the first.

The latter is impossible, and this is why. The league, being thoroughly democratic in its processes, believes that all members, not just delegates, should have an opportunity for consideration of proposals to be voted on at convention. Therefore, the bylaws provide that there shall not be presented at convention a new item.

THE PROGRAM CAN BE CHANGED

However, if your league has submitted a recommendation prior to convention, within the stipulated deadlines, you have a chance. In the first place, you will find it in the list of "not-recommended items" in the convention briefing. This is a bit of league lingo which confuses the press and the public no end. It does not mean that the national board, in making up the proposed program, is against the substance of the item; the board recommends a program, and because the league selects only a very few areas in which to work at one time, the national current agenda is likely to be composed of 1 or 2 items at the most. All other recommendations from local leagues are called "not-recommended items."

So, you try to marshal opinion among other delegates for the program recommendation your league made in the first round. You will find that it takes a two-thirds vote to substitute it for one of the recommended items. And you will think back and remember who put the two-thirds vote there, and why: Convention delegates, as a safeguard against spur-of-the-moment changes. If your motion to consider does receive a two-thirds vote, your "not-recommended item" will be considered by the convention. Again a two-thirds vote is necessary to get it on the final program. And now you will recall even more—that it has twice been proposed to convention that delegates might want to liberalize the two-thirds stipulation, and twice the convention has turned down the idea. The two-thirds vote was put there by delegates from local leagues; it is still there because local leagues voted to keep it there.

However, a simple majority may adopt the proposed program or amend it. Usually it is a big majority.

HOW DOES THE LEAGUE REACH CONSENSUS?

The process involved in reaching consensus is as thoroughly democratic, as thoroughly grassroots, as the program-making process.

First of all, the league takes on national legislative position only on program-related issues which local leagues have had a long time to study.

Secondly, no position is taken without a clear-cut mandate from the membership. If there is not a wide area of agreement, that is, unless it is possible to be sure that a position reflects general membership opinion, no position is taken.

Sometimes the league is challenged because it does not poll its members and does not give out figures when it announces consensus. To understand the league's policy one need only consider the representative system of our Government. Does a Representative or Senator poll everyone in his

constituency when he is preparing to vote on an issue? Of course not; yet he usually has his finger on the pulse of his constituents as a whole. And does everyone vote in an election? Of course not; yet everyone has the chance, and usually those who feel strongly either way on an issue register their opinions.

The national board does keep track of the number of local leagues which send in reports of their consensus or lack of same. But it believes figures are not the only factors to be considered. If numbers of leagues alone were counted, one section of the country could outweigh all the other sections. If numbers of members within leagues were the basis of a count, a few big leagues could outweigh the total of many small leagues. If the issue were one in which, for example, city and rural leagues might be assumed to have opposing opinions, and more city leagues than rural registered opinions, they could outweigh the rural; and vice versa.

Therefore, as in program-making, there must be a wide area of agreement based on substantial numbers, cross section as to States, and cross section as to size and type of leagues, before the national board can determine that consensus has been reached. The board also considers attitudes revealed in local league bulletins, correspondence, field visits, much as a member of Congress keeps up with opinions of his constituents.

THE LEAGUE TAKES A POSITION

To trace a league position from the beginning, consider the Bricker amendment. The league was one of the last of the large national organizations to take a stand on this issue, because it had to await crystallization of opinion among the local leagues.

The Bricker amendment was introduced in the United States Senate in September 1951 and again in January 1952. In March 1952 the National Voter carried an article on it, and in April 1952 the national convention discussed the problem. The 1953 national Council also discussed the proposed amendment. Altogether, pro and con information was made available to members in at least 14 separate instances—in the National Voter, Report From the Hill, communications to local league presidents, etc. Three times—May, October, and November, 1953—the national board asked local leagues to report as to their preparation and views, the final one a reminder that local league opinion would be considered at the coming board meeting "to determine whether a league position is warranted."

Responses were more numerous and opinion was stronger than in the case of any issue on which consensus had been reached in at least 15 years. And, in January 1954, the national board announced that the League of Women Voters was opposed to the Bricker amendment.

The league constantly strives to improve its methods of ascertaining membership opinion. Responsibility rests with the local leagues to express their views; responsibility rests with the national board to determine the point at which opinion is strong enough to represent the membership as a whole. The amount of participation from the grassroots is extremely high in the league, and the league is willing to stack its system up against the method of any other voluntary organization for interpretation of membership opinion.

IS LEAGUE POSITION IRREVOCABLE?

The league has never reversed a position, but it has withdrawn positions.

For example, the equal rights amendment. From 1923 to 1954 the league opposed such an amendment. Then, because of the time that had elapsed since the position had been taken, and because many of the new members who had joined in the meantime had little background or little interest in the subject, the 1954 convention voted that the league had no position on the equal rights amendment. No voice had been raised in convention against the traditional stand, but delegates chose to have the league stand uncommitted on this issue.

As another example, from 1944 to 1949 the league held a position in support of Federal aid to education. But in the course of continued study enough leagues raised questions so basic to the concept that doubt arose as to whether there was the wide area of agreement so essential to consensus. As important as the league felt the issue of Federal aid to education to be, there were other issues to which members preferred to turn their attention. Therefore, in lack of a paramount interest in the subject and in lack of a clear mandate from the membership, convention delegates voted to have the league stand uncommitted on this issue.

DOES THE LEAGUE STAND FOR "MORE AND MORE GOVERNMENT"?

Of course not. The league does not believe that all problems must necessarily be handled by government. The league, however, works only in the field of government, therefore it is obvious that everything on its program is directly related to government. The league might be for "less" government, that is, for defeat or repeal of a measure, in one case, and "more" government, that is, for passage of a measure, in another.

Not more and more government, but more and more citizen concern for good government, is the league's purpose. This is true not only at the national level, but also, in fact particularly so, at the State and local levels. No organization has done more to enlist citizen participation than has the League of Women Voters through its local leagues.

IS THE LEAGUE INTERNATIONALIST?

Yes, and proud of it, if internationalism means cooperation for better understanding among nations. The league has never advocated world government. The United Nations, as the only existing agency that affords a meeting place where nations can come together to discuss common problems, has the support of the league.

In this the league stands shoulder to shoulder with President Eisenhower and former President Truman.

WHAT IS THE LEAGUE PROGRAM ON INDIVIDUAL LIBERTIES?

Because of its dedication to democratic principles, the league long has recognized communism as a deadly threat to the national security. From its beginning the league has been involved in the free examination and exchange of ideas, recognizing that communism or any other form of totalitarianism destroys this freedom first of all.

At the 1954 convention the league decided that the best way it could help strengthen national security was to develop widespread awareness of our American heritage of individual liberties and their relationship to the public interest.

A program to stimulate thoughtful discussion of these subjects is now under way throughout the country. Discussion groups have been held in over 500 communities.

The league, in line with its policy of encouraging free expression of opinion, has served as a catalytic agent in initiating some of these groups. It has helped draw together a cross section of the community, has sparked interest and organized discussion groups, leaving them free to examine a subject as they choose.

In connection with these discussions the league has recommended, as helpful resource material for study, the Freedom Agenda pamphlets published by the Carrie Chapman Catt Memorial Fund, Inc., a research organization founded by the league. These pamphlets, prepared by outstanding authorities in the legal and political science fields, are matched with discussion guides designed to stimulate maximum exchange of ideas and pro-and-con considerations. The community discussion groups are free to examine any material they choose and no controls over community organization have been imposed. In supporting freedom, the league advocates freedom.

Some factions which are not in favor of free debate on public issues have suggested that these discussions be discontinued. To members familiar with the league's long-standing policy of encouraging thoughtful discussion of public issues, such reactions only serve to point up more clearly the need for continuing these citizen forums.

The Stars and Stripes

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 17, 1956

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following articles from Facts Forum News, September 1955, on the subject of Our Flag:

OUR FLAG

(By Brig. Gen. Bonner Fellers, U. S. Army retired)

Our flag, like our religious faith, is something to which we all turn in time of trouble. Let me give an illustration of what the flag means to soldiers.

During the dark days of Bataan, when the surrender of MacArthur's forces was imminent, a handful of spirited United States cavalrymen decided that they would not surrender. It would mean certain death if they were caught, but somehow they managed to escape into the great Zambales Mountain Range of Luzon, which parallels the China Sea. There they hid out for 3 long years. Loyal Filipinos, at the risk of torture and death, gave warning when Japs came near. And what did these cavalrymen take with them into the Zambales Mountain fastness? It was the American flag—the colors of the 26th Cavalry.

On sunshiny days when the mountain passes were clear of the enemy, these American patriots unfurled their emblem of freedom into the breeze, and they lay there by the hour feasting on its glory.

While Manila was being liberated, these lads made their way through the battlelines and proudly presented their honored flag to General MacArthur. Throughout the Japanese occupation, the colors of the 26th Cavalry had never been hauled down.

I should like to hear some of our promiscuous internationalists tell these hard-bitten cavalrymen not to wave the Stars and Stripes.

Shortly after Japan's surrender, the writer, together with less than a dozen officers and a small color guard, stood at the American Embassy in Tokyo and General MacArthur, visibly moved, ordered the Stars and Stripes raised over the Embassy. It was the end of a long and frustrating and heartbreaking and bloody trail. And as our beautiful flag unfurled in the blue over Tokyo, emotion shook every one of us to the marrow of his bones.

I tell you our flag does have a meaning. And if it ever loses its meaning, it will not only be the end of freedom in America, it will be the end of freedom everywhere.

A Joint Committee on United States International Exchange of Persons Programs Needed

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 5, 1956

Mr. THOMPSON of New Jersey. Mr. Speaker, on Monday, January 16, 1956, I introduced a bill, H. R. 8497, to make the President's fund for participation in international affairs a permanent program. This step was in line with the recommendation of the Senate Appropriations Committee which last year said, in its report on the supplemental appropriations bill for 1956, H. R. 7278, that this fund should be made a part of the regular budget. I am very pleased to see that the President said in his budget message that—

> In view of the effectiveness of these activities (carried on by the President's emergency fund) legislation will be recommended to authorize them on a continuing basis.

For the past 2 years the Congress has appropriated an annual sum of $5 million to the fund, the broad purposes of which are first, the presentation abroad of American cultural and athletic attractions by the Department of State; and second, United States participation in international trade fairs. The Department of Commerce has charge of the trade fair program. To date, the $5 million has been divided equally between these two programs. The USIA has done a first-rate job of publicizing these programs abroad.

In the 5 years prior to 1955 the Soviet bloc exhibited at 122 trade fairs at which the United States was not represented. With the help of this fund the Department of Commerce has been able to take positive steps to overcome this long head start by the Communists. On the strictly cultural side our leading artists have performed in some 220 major cities of the world and given the lie to the Communist line that we are barbarians. At least 12 athletic teams have been sent abroad and have been widely hailed.

The administration refused to finance the Russian trip of Porgy and Bess, our most successful cultural export to date. The U. S. S. R. tour of the company is being paid for by the Russian Government. The State Department, which approved the trip, said it could not afford any financial support. That the Russians, instead of our own Government, should be the sole sponsor of this trip is an outstanding example of penny-wise and pound-foolish diplomacy.

The President recommended only a modest increase in appropriations for the educational exchange programs of the Department of State which constitute a basic element of our long-term effort to attain a better mutual understanding with other peoples of the world. Certainly a much larger sum should have been recommended for these important activities.

In the President's own words he is "recommending a modest increase in appropriations for the educational exchange programs of the Department of State." Contrast this with the treatment accorded the information program. In the case of the latter the President recommended that appropriations be increased by $48 million from the level in the current fiscal year.

The vast difference between these two recommendations typifies the Madison Avenue approach to the problems of the world, which is the hallmark and the most distinguishing characteristic of the present administration.

I have introduced a joint resolution, House Joint Resolution 474, to establish a joint congressional committee to be known as the Joint Committee on United States International Exchange of Persons Programs. Such a joint committee will be able to make an important contribution to the advancement of these international exchange programs.

It gives me great pleasure to be able to say that Senator J. W. FULBRIGHT will sponsor this joint resolution in the Senate.

I am sure that other Members of the House will want to join me in sponsoring this legislation. I therefore invite and welcome their cooperation, and I would be happy to have similar measures introduced in the House by any of my colleagues.

International exchange of persons has proved a valuable means of developing closer cooperation among the nations of the free world. The need for such cooperation is everyday more apparent. The United States Government is using this technique both for building better understanding of our country abroad and for technical cooperation and economic development. Large exchange programs in both fields are now operated by the Department of State. Students, teachers, prominent specialists and leaders in many fields are exchanged and outstanding cultural performers are sent abroad under the International Educational Exchange Program. The Congress authorized this program through the Smith-Mundt Act—Public Law 402, 80th Congress; the Fulbright Act—Public Law 584, 79th Congress; and several other acts. American technical experts are sent abroad and foreign nationals are brought to the United States for training under the International Cooperation Administration—formerly FOA and point 4.

The Congress receives reports from the Secretary of State on these programs and reviews their operation annually in connection with appropriations. The Smith-Mundt Act also provides for a United States Advisory Commission on Educational Exchange which reports directly to the Congress on a semiannual basis.

Each of these programs is reviewed separately, and by different committees of the Congress. Each of these programs is extremely complex both from the point of view of administration and source of funds. Each use dollars and foreign currencies and rely to a large extent on the efficient use of similar private resources in the United States.

It is, therefore, not surprising that some confusion has persisted in the Congress as to the relationships between these programs. It is imperative that this confusion be eliminated so that both of these efforts can achieve the most useful results.

No concerted or continuing review of these programs and their relationships to each other has ever been undertaken by the Congress. Such a review is of the utmost importance and would be of inestimable benefit to the Congress. It would help all of us to make a more realistic appraisal of these programs.

The Joint Committee on United States International Exchange of Persons Programs which my joint resolution would establish will provide the necessary review to insure the most effective planning, operation, and administration of these two important facets of our international relations.

I am confident that the Congress under Democratic control will take the leadership in these important matters.

Regarding my bill to make the President's emergency fund for participation in international affairs permanent it may be useful to recall that a subcommittee of the House Education and Labor Committee under Republican leadership in 1954 rejected 14 bills calling for a similar program saying: "We cannot endorse any of them. We do not believe this is a proper area for the expenditure of Federal funds." This position was taken in a report published almost 2 months after the Congress had appropriated $5 million for the activities proposed in the President's emergency fund.

The bills in the House were sponsored by Democratic Members of the Congress, which apparently made them unacceptable to the Republicans there. However, these bills were a serious attempt to develop the program which had been recommended by the United States Advisory Commission on Educational Exchange beginning in 1951 and semiannually since in its 7th, 8th, and 9th reports to the Congress. The thoughtful recommendations of this commission have been ignored by the present administration which should have taken positive action regarding them several years ago. With the introduction of my bill, H. R. 6874, and the hearings held on it by the Subcommittee on Distinguished Civilian Awards and Cultural Interchange and Development under the chairmanship of my distinguished colleague, Representative LEE METCALF, Democrat, of Montana, in the House Committee on Education and Labor, the administration finally has bestirred itself.

The legislation introduced in the 83d Congress by its democratic Members for the purpose of establishing a cultural-exchange program was strongly supported by one former Republican Member of the Congress who testified in favor of it saying:

> There is an enormous propaganda weapon which the Russians are using against us, with the most telling effect, all over the world. They are posing, and getting away with it, as the people of culture, as juxtaposed to us who are painted to the world

as the people who don't care for culture. The Russians are doing an enormous job in that. They have sent traveling artists, violinists, pianists, whole ballet companies, theater companies, into the big world centers, and they have made a very distinct impression. Let us not kid ourselves on that. They have made a very distinct impression.

Despite this impressive warning the Republican members of the subcommittee last year recommended that none of the bills referred to in this report be passed.

The text of my joint resolution to establish a joint congressional committee to be known as the Joint Committee on United States International Exchange of Persons programs follows:

Joint resolution to establish a joint congressional committee to be known as the Joint Committee on United States International Exchange of Persons Programs

Resolved, etc., That (a) there shall be a joint congressional committee known as the Joint Committee on United States International Exchange of Persons Programs (hereinafter in this joint resolution referred to as the "joint committee").

(b) The joint committee shall be composed of 22 members as follows:

(1) Eleven Members of the Senate, appointed by the President of the Senate, as follows:

(A) Two from each of the following committees, one from the majority and one from the minority party: The Committee on Foreign Relations, the Committee on Appropriations, the Committee on Labor and Public Welfare, and the Committee on Government Operations; and

(B) Three at large from the Senate, two from the majority and one from the minority party.

(2) Eleven Members of the House of Representatives, appointed by the Speaker of the House, as follows:

(A) Two from each of the following committees, one from the majority and one from the minority party: The Committee on Foreign Affairs, the Committee on Appropriations, the Committee on Education and Labor, and the Committee on Government Operations; and

(B) Three at large from the House of Representatives, two from the majority party and one from the minority party.

(c) No person appointed by the Speaker of the House under subsection (b) (2) (A) shall continue to serve as a member of the joint committee after he has ceased to be a member of the committee of the House of Representatives of which he was a member when appointed to the joint committee, except that a member who has been reelected to the House of Representatives may continue to serve as a member of the joint committee notwithstanding the expiration of the Congress.

(d) A vacancy in the joint committee shall not affect the power of the remaining members to execute the functions of the joint committee, and shall be filled in the same manner as in the case of the original selection.

(e) The joint committee shall elect a chairman and vice chairman from among its members, and the chairmanship and vice chairmanship shall rotate between the two Houses with each session of Congress.

(f) Subject to applicable provisions of law, the joint committee may appoint and fix the compensation of such personnel as it shall determine to be necessary to carry out the purposes of this joint resolution.

(g) The expenses of the joint committee shall be paid one-half from the contingent fund of the Senate and one-half from the contingent fund of the House of Representatives, upon vouchers signed by the chairman or vice chairman.

SEC. 2. (a) The joint committee shall—

(1) conduct public hearings on, and cause studies to be made concerning, the extent and effectiveness of all United States international exchange of persons programs, including the international educational exchange programs authorized by section 32 (b) of the Surplus Property Act of 1944 and by the United States Information and Educational Exchange Act of 1948, the interchange of persons under the technical assistance programs carried on by the International Cooperation Administration, and the cultural presentations programs of the President's Emergency Fund for Participation in International Affairs;

(2) cause studies to be made of the relationships among the various United States international exchange of persons programs, exclusive of those relating to military activities, to insure their most effective planning, operation, administration, scope, and effectiveness and to determine their relationship in these respects to private programs in the same fields; and

(3) provide a continuous, cooperative relationship between the Congress and the various United States international exchange of persons programs and similar or related programs both public and private in order to foster, encourage, promote, and otherwise assist their further growth and development.

(b) As used in this joint resolution the term "United States international exchange of persons program" means any program, operated by or financed in whole or in part by any department or agency of the Government, involving the exchange of persons between the United States and other countries for any purposes whatsoever, exclusive of military purposes.

SEC. 3. The joint committee shall report to the Congress twice annually (beginning on July 1 or January 1 next occurring after the date of the enactment of this joint resolution), and at such other times as it deems necessary, on the extent and effectiveness of the United States international exchange of persons programs; and shall recommend to the President and the Congress steps considered necessary to improve the quality of all such programs.

SEC. 4. For the purposes of this joint resolution the joint committee, or any duly authorized subcommittee thereof, is authorized to hold such hearings, to sit and act at such times and places, to require, by subpena or otherwise, the attendance of such witnesses and the production of such books, papers, and documents, to administer such oaths, to take such testimony, to procure such printing and binding, and to make such expenditures, as it deems advisable. The provisions of sections 102 to 104, inclusive, of the Revised Statutes shall apply in case of any failure of any witness to comply with a subpena or to testify when summoned under authority of this section.

The World Bank

EXTENSION OF REMARKS

OF

HON. PRESCOTT BUSH

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Tuesday, January 17, 1956

Mr. BUSH. Mr. President, I ask unanimous consent to have printed in the RECORD an article published in a recent issue of the New York Times. It discusses the 1955 operations of the International Bank for reconstruction and development. I consider the article a very good analysis of the operations of the bank. It shows that the bank is making great headway and doing much good work all over the world, and is fulfilling its mission under the leadership of which the United States can be very proud, in the person of Eugene Black, the chief executive officer of the bank.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WORLD BANK SETS 3 NEW HIGHS—$460,500,000 LOANS, INCOME OF $26 MILLION, INVESTORS TOPPED PREVIOUS LEVELS

(By Paul Heffernan)

The year 1955 was a record one for the International Bank for Reconstruction and Development.

The bank made 27 loans aggregating $406,500,000 in 20 counties. This compares with a record of 16 loans totaling $282,700,000 in 15 countries during 1954, and 22 loans totaling $257 million in 1953.

On the income side the bank's 1955 earnings are estimated at $26 million, a new high. This compares with $22,500,000 for 1954. Additions to a special reserve derived from the 1-percent statutory commission charged on all disbursed and outstanding loans also reached a new high and are estimated at about $14 million, against $12 million in 1954.

Direct participations by privately owned institutional investors in the World Bank's loans also reached a new high both as to number and amount in 1955. The year's participation aggregated $30,200,000, and represented a part of 19 of the 26 loans made by the bank in the period. In the previous year private financial organizations participated to the extent of about $12 million in 9 of the 16 loans made in that year.

EUROPEAN BANKS PARTICIPATE

The participants in the 1955 financing included 22 private banks, of which 13 were in the United States, 6 of the Eastern Exchange Banks, and, for the first time, 3 private banks in Europe. All took down participations without the guaranty of the World Bank.

Similarly, the international lending institution continued to sell from its investment portfolio certain obligations of borrowers. These sales totaled $51,200,000 for the 11 months ended November 30, of which $50,700,000 was disposed of without the bank's guaranty and only $500,000 with the bank guaranty. In the year before portfolio sales amounted to $43 million, of which $39 million was sold without the bank guaranty and $3,500,000 with it.

Aggregate participations and portfolio sales on November 30 were $222 million, of which $163 million were without recourse to the bank and $69 million bore the bank's guarantee.

The bank sold three bond issues in 1955, all outside of the United States and for currencies other than United States dollars.

In Canada, $15 million was borrowed on 3¼ percent bonds due in 1965. There was also raised about $10,500,000 on 3½ percent Netherlands guilder bonds due in 1975. In Switzerland, the equivalent of about $11,600,000 was borrowed on 3½ percent bonds due in 1976.

NEED OF DOLLARS DECREASES

The World Bank has not publicly offered bonds in the United States market in almost 2 years because its need of United States dollars has not been urgent. An increasing amount of loans is being made in non-dollar currencies.

Repayments of loans made years ago in United States dollars are beginning to be

made in volume. Lastly, a growing number of private financial institutions is sharing in the bank's grants or credit, both by participating in loans and by purchasing parts of the bank's portfolio investments.

The outstanding debt of the World Bank is $860,806,060, of which $705 million is denominated in the 9 issues of United States dollar bonds. Also outstanding are $73,389,000 of Swiss franc bonds in 7 issues; $36,364,000 of Canadian dollar bonds in 2 issues; $28 million of British sterling bonds in 2 issues; and $21,053,000 of Netherlands guilder bonds in 2 issues.

The European area received more of the bank's loan money last year than any other region. This was largely due to a credit of $70 million made for the improvement of agriculture, industry, and power in southern Italy.

Loans to Europe were disbursed in 4 countries—Finland, Norway, Austria, and Italy—for a total of $117 million.

PAKISTAN A BIG BORROWER

Asia and the Middle East ranked next in obtaining credits. Eight loans totaling $87,100,000 were made in this area, the major share—$32,800,000—going to Pakistan for port, power, and pulp and paper manufacturing projects. The rest of the Middle East and Asian loans were made in India, Lebanon, Thailand, and Japan.

Latin American areas received 11 loans totaling $84,500,000, with $23 million of the total going to cement manufacturing and highway projects in Peru and Honduras. The other loans were allotted for projects in Colombia, Nicaragua, Panama, Guatemala, and Uruguay.

Credits totaling $59,200,000 were granted in Africa. The Union of South Africa got $25,200,000 for transportation; Algeria got $10 million for electric power; and $24 million was advanced to the East Africa High Commission for transportation.

A loan of $54,500,000 was granted to Australia for development in equipment.

The investment in Lebanon totaled $27 million and marked the bank's first outlay for river valley development in the Middle East. The advance of $10 million in Algeria was the bank's first loan in the north African region.

In Latin America, the bank's advance of $15,900,000 to the Colombian National Railroad was the second financing in this field. A first loan in 1952 financed the start of the construction of the Magdelena Valley Railroad and the integration of various railroad systems in the South American republic.

In Cleveland, Savings and Loan Cooperative Financing Put This Urban Renewal Project on the Map

EXTENSION OF REMARKS

OF

HON. CHARLES A. VANIK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 17, 1956

Mr. VANIK. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to insert the following article in the January 1956 issue of the Savings and Loan News entitled "In Cleveland, Savings and Loan Cooperative Financing Put This Urban Renewal Project on the Map." This article points up a splendid formula that can be used as a pattern for developing low-cost sale and rental housing with a minimum of redtape and no Government subsidy:

This could be called the story of the Big C. Cleveland is the setting.

Cuyahoga County Savings and Loan League, Cleveland Plan Commission, Cleveland Development Foundation, Community Development, Inc., and a soft-spoken but tenacious man named Clarence P. Bryan play the leading roles.

Courage and cooperation are the principal elements of the plot, for it took courage to tackle an urban renewal project without the usual subsidy props and plenty of cooperation to see that it got beyond the talking stage.

Today, there must be a real sense of accomplishment for all who have a part in this worthwhile and precedent-setting project.

A year ago, Community Apartments was only a remote possibility. By March, a plan began to jell, and on August 20 the first shovel bit into the soil of 6.1 acres at 79th and Woodland in the heart of Cleveland's slum and blight area. First occupants are expected to move into the 148-unit housing development next March with completion scheduled for next summer.

But how did the Cuyahoga County Savings and Loan League become a part of the script to the tune of underwriting a $1,075,600 mortgage?

Says Clarence P. Bryan, "The real motivating force was H. H. Hampton, one of our directors (Cuyahoga Savings Association, of which Bryan is managing officer). He sparked the idea and found the builder."

Hampton is vice president of industrial development for the Nickel Plate Railroad and a member of the Cleveland Plan Commission and the board of trustees of Cleveland Development Foundation.

Because of his close contact and understanding of the savings and loan business and his keen interest in revitalizing the rotting core of Cleveland, Hampton felt that savings associations could and should lend their financial weight to urban renewal.

"The economic health of Cleveland and other cities only can be assured by improving the tax base through revitalization of slum and blight sections," insists Hampton. "This is a vital concern of savings associations because of their inherent community responsibilities."

Last February, Hampton's persistence had won support of not only the directorate of Cuyahoga Savings but the Cuyahoga County Savings and Loan League as well. Bryan became the liaison, and it was decided that the league's membership resources were such that, through cooperative effort, it could participate in urban renewal financing.

With this decision made, the next step was to find a builder, and Hampton again came up with the answer. The Nickel Plate Railroad's industrial development program had put Hampton in touch with a building organization that in recent years had gained considerable experience in low-cost housing development and construction.

The principals of this organization were operating their residential activity under the name of Community Development, Inc.

In March, the Cuyahoga League, headed by president Joseph E. Sotak, Jr., and Bryan as chairman of the league's special committee for urban renewal financing, buckled down to earnest negotiations with the building firm.

At the very start of negotiations the builders took the emphatic position that the project should be privately financed; that they wanted no part of FHA. Community Development President Oscar H. Steiner and Vice President Chat Paterson said:

"We cannot afford the luxury of doing business with FHA. We will have to add 10 to 15 percent to our costs just for doing business with the agency, and our objective is to set rents and monthly mortgage payments at a level commensurate with the average wage earner to be served. This would be impossible under any FHA provision.

"As far as we can see, all the talk about FHA supporting slum clearance and urban redevelopment has been just that, since our files do not reveal a single unit built anywhere in the country under slum clearance and urban redevelopment sections.

"But the major reasons we cannot afford to do business with FHA would be the delays and redtape. Nor would we have the flexibility so essential in putting over a cooperative rental and sale project of this kind."

VALUE SET AT $1,350,000

The builders found the Cuyahoga League more than willing to proceed on the basis of providing financing without insurance or subsidy of any kind. The league commissioned R. L. Free, of the Cleveland appraisal firm of Cragin, Lang, Free & Co., to establish a value for land and proposed improvements. His appraisal was $1,350,000. Since the builders were putting up approximately $300,000, a mortgage of $1,075,600 was required.

With this as the target, Bryan began the task of rounding up league membership support so that a commitment could be issued to the builders. His first step was to obtain oral commitments from more than 20 associations. And so that the builder and architect could complete plans and specifications, a commitment was given to the builders in the name of Bryan's institution, Cuyahoga Savings.

Issuance of this interim commitment touched off weeks and months of working out all the difficult detail and legal procedure that a cooperative effort of this kind requires. Various other roadblocks were encountered along the way too, but the perseverance of Bryan and others put these aside one by one.

First, there was the site. It had to be one that would tie in with the city's overall urban renewal program. The city-owned 6.1 acre tract at 79th and Woodland was selected; it had to be rezoned from industrial to multiunit residential use. A special emergency ordinance accomplished this. Then followed the city's appraisal for sale and determination of conditions to be imposed upon the sale of the property.

Next, under State law, the site had to be sold by public bid, and the bidders were required to submit a financing commitment with their bids. Actually, this simplified matters for Community Development, Inc., because it was the only firm prepared to submit a bid on that basis. Understandably, it was the only bidder and acquired the property.

At this point it should be emphasized that the city of Cleveland cooperated to the fullest extent possible throughout the negotiations.

Meanwhile, Architect Max Ratner put the finishing touches to plans and specifications, and his interesting solution for the site, as illustrated on these pages, is a story in itself.

Meanwhile too, Cuyahoga Savings' attorney, Thomas A. Quintrell, acting in behalf of the participating associations, was busy unraveling legal and procedural details for the mortgage.

Space does not permit a description and explanation of the numerous special documents and agreements developed by Attorney Quintrell. These include commitment agreements, a pledge agreement and agent agreement (more about these later), and construction loan agreement.

Because the Cleveland cooperative financing plan is not only a "first" but one that could be adopted elsewhere, it is the intention of the United States League to incorporate the step-by-step procedure and most of the legal documents in a manual on savings and loan participation in urban renewal pro-

grams. This manual will be distributed by early spring.

By midsummer Bryan completed negotiations with 19 associations—13 State chartered and 6 Federals. A permanent loan from inception, the mortgage was set up in the amount of $1,075,600 for 25 years at 4½ percent interest. No service charges were involved.

The list below shows a breakdown of each association's participation:

Savings association participation in financing of Community Apartments, Inc.

[Mortgage loan—$1,075,600]

Participants	Participation		Pledge
	Amount	Percentage	
Broadview Savings	$193,132.87	0.17955	$33,074.64
Citizens Federal Savings	57,939.85	.05387	9,922.40
Cuyahoga Savings	54,077.20	.05028	9,260.90
East Cleveland Savings	23,175.95	.02155	3,968.95
Ohio Savings	64,892.65	.06033	11,113.08
Park View Federal Savings	38,626.58	.03592	6,614.93
Provident Savings	23,175.95	.02155	3,968.95
Quincy Savings	3,476.39	.00323	595.34
Ridgewood Savings	11,587.97	.01078	1,984.47
Second Federal Savings	115,879.72	.10773	19,844.78
Security Federal Savings	55,622.26	.05171	9,525.50
Shaker Savings	77,253.15	.07182	13,229.85
South Side Federal Savings	50,000.00	.04649	8,562.66
Southwestern Savings	23,175.95	.02155	3,968.95
State Savings	38,626.58	.03591	6,614.92
Superior Savings	15,450.63	.01437	2,645.97
Union Savings	75,000.00	.06972	12,844.00
United Savings	38,626.58	.03591	6,614.93
Women's Federal Savings	115,879.72	.10773	19,844.78
Total	1,075,600.00	100	184,200.00

The pledge column requires explanation. Regulation provides that savings and loans cannot place a mortgage in an amount in excess of two-thirds of the appraised value of a multi-unit housing project. Since the value was set at $1,350,000 and the builders needed a mortgage of $1,075,600, additional security had to be uncovered to bring the mortgage risk within the two-thirds limit.

This security, in the amount of $184,200, was pledged by the Cleveland Development Foundation. Organized in June 1954, by 100 of the city's largest corporations, the foundation has a revolving fund of $2 million to be used for the express purpose of furthering Cleveland's urban renewal program Foundation Executive Director Upshur Evans quickly agreed that Community Apartments was a most worthwhile project, and the Foundation approved the pledge. The $184,200 was put in trust and each participating association receives its pro rata share of the pledge as construction payouts are made.

CLEVELAND BANK NAMED AGENT

At this point you probably are wondering who handles the accounting and how it is done? Cleveland's Union Bank of Commerce, in which all but one of the participating associations maintained an account, was designated agent. The builders and Cleveland Development Foundation also had accounts in this same bank.

After a payout is approved, the bank charges each account with a pro rata share and credits the builders' account. At the same time, the bank credits the associations with a pro rata share of the pledge and debits the Foundation. Later, after occupancy of the dwellings, rents and mortgage payments will go to the agent who, in turn, will credit each of the savings association accounts in the same manner.

As so often happens with a new venture of this kind, a problem arose from an unexpected quarter. It was discovered in June that the associations could not enter into a construction loan agreement with the builders because the six federals would be acting outside Federal home-loan bank regulations. A FHLB proviso stipulated that a mortgage of this kind could not be made for more than 50 percent of value when the term was for more than 15 years and there were more than 12 units in the project.

This presented no problem to the State-chartered participants, because Ohio's savings and loan code had been modified last summer to permit 25-year amortization.

Bryan immediately contacted Joseph Whittaker, supervisory agent of the FHLBB and vice president of the Home Loan Bank of Cincinnati.

Whittaker told Bryan to write a letter outlining the program. The next day Whittaker advised that he had talked to Washington; that they were interested and would call an immediate hearing. Bryan led a delegation to Washington to explain the Cleveland plan.

Within a week after his first call to Whittaker regulation changes were issued authorizing Federal associations to make multiunit housing loans for a term of 25 years provided a Government entity certifies to the Federal association, in advance of making of the loan, that the development, alteration, repair, or improvement of such property is essential to, or in furtherance of the objectives of, a program of slum clearance or urban renewal which has been or is expected to be undertaken in whole or in part by such governmental entity.

ONLY ONE MORTGAGE, SEVERAL NOTES

On July 1 James T. Yeilding, director of Cleveland's Redevolpment Agency, issued the certification, and the last roadblock to completion of financing arrangements was eliminated.

There is only one mortgage and several notes. Each association has its own original promissory note for the amount of its participation, and an original pledge agreement for its share of the security pledged by the Cleveland Development Foundation. The promissory note permits each association to bring a foreclosure proceeding if there should be default. One association does not have to wait for all in the group to agree there is a serious default.

But all other original documents such as the title, mortgage deed, executed copies of the several agreements, insurance policies, etc., are held by the agent. Photostat copies of all of the documents are on file in each participating association, however.

The participating associations are assured a high degree of performance from the building firm because:

1. A completion bond had to be posted by the builders before construction started;

2. The architect was hired by the associations and is responsible to them, although his fee is paid by the builder. The architect is authorized to make inspections and approve payouts. "This arrangement is a safeguard to assure that construction proceeds in an orderly manner and according to plans and specifications," Bryan explained.

Community Development, Inc., broke ground for the 148 dwellings on August 20, and on December 1 all units were either sold or rented. Ninety percent of the future occupants have indicated an intention to buy by making minimum down payments. All the occupants will be Negroes, and it is the opinion of the builders that all the units will be owned outright by 1959 under a special trust agreement to be set up 6 months after completion.

The 2-bedroom units can be purchased for $8,750 and 3 bedrooms for $10,800. Rents are $79.50 and $95.75, respectively, with a nominal monthly charge for "personal repair and decorating."

The high percentage of purchase intent expressed by future occupants is attributable to attractive mortgage terms, as compared to monthly rental charges. A 2-bedroom unit can be purchased outright with a down payment of $1,750 and a 24-year 4½ percent mortgage payable at $59 monthly, and a 3-bedroom apartment for $2,000 down, and an $8,800 mortgage with monthly payments of $71.50. The monthly carrying charges cover interest and principal, taxes, insurance and services.

The builders already have started to negotiate refinancing of the mortgage upon completion of the project. Biggest reason for this is to create a revolving fund of the savings and loan capital now tied up in the Community Apartments mortgage.

EXPECT TO SELL MORTGAGE SOON

"Several insurance companies have expressed interest in buying the mortgage, and there isn't any doubt in my mind that we will sell," declares Chat Paterson. "We have an agreement with the savings and loans that the funds they now have invested will be made available for another project."

Said Cuyahoga League president Sotak: "We sincerely hope this will work into a revolving fund and that more associations will participate in the future. Our league has 41 members, with assets of $770 million (less than half participated in the first venture), and the only limiting factor is that this type of financing must be within our 15-percent ratio."

Perhaps the finest tribute to the men of Cleveland who zealously worked to put Community Apartments on the map can be extended to them by making this comparison:

In September 1954, 6 months before negotiations started for Community Apartments, the Cleveland Development Foundation began to negotiate with the Federal Housing Administration for mortgage insurance to cover 480 units in Cleveland's Garden Valley urban renewal project. On November 1, when construction of Community Apartments already had progressed to the second floor of all of the units, the foundation and FHA still were wrangling over costs. Should the FHA-insured section of Garden Valley ever get beyond the talking stage, it is conservatively estimated that the housing units, which will be comparable to Community Apartments in size, will cost $2,000 more per unit than those at 79th and Woodland.

Exclaimed builder Paterson, "Do you see now why the entire basis of negotiation between ourselves and the savings and loans was that Federal Government assistance would not be involved?"

Free TV or Fee TV

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 17, 1956

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following radio address I delivered over station WMEX, Boston, Mass., on Saturday, August 20, 1955:

Only one letter separates "free TV" from "fee TV," but the opposing viewpoints might just as well be stationed at the North and South Poles, remote from one another and remote from any compromise, or so it might seem.

The Federal Communications Commission has been subject to much lobbying pro and

con as to whether it should permit pay-as-you-see television, also known as subscription televison.

At the present time, TV programs are paid for by sponsors, who, in turn, are given the opportunity to advertise their products or services. Of course it is the American consumer who pays eventually and indirectly through his purchases of the goods and services that are advertised.

Under the fee system, advertising would be eliminated; and for a certain small price per program he could choose to see an outstanding movie, a championship sporting event, or any one of many special presentations.

I shall not go into the technical details of the various systems that would make it possible for you in your own home to pay and choose and see the subscription program of your choice.

I am concerned with the larger question as to whether or not free television, as we now know it, should have a commercial rival.

Offhand, it might seem that competition would best serve the public.

But should a Government agency, the Federal Communications Commission, decide this question, or should it be left to the good judgment of the American people?

The large networks are lining up against pay-as-you-look television, while the smaller stations and the general public seem to favor it.

The issue, however, has not been fully debated on a large scale.

I believe, therefore, that the public should become acquainted with the pros and cons of this controversy, so that it shall have a voice in its solution.

First, may I bring you some of the arguments against free TV.

Since the end of World War II the television industry has grown from infancy to an industry in which the American people have invested more than $10 billion in television sets (more than 36 million of them), and in which the annual volume of television advertising, set sales, servicing, and operating runs close to $4 billion per year, under the traditional American broadcasting policy of freedom to listen and freedom to look.

The promoters of pay television would change the American system of free broadcasting to a restricted system of paid narrowcasting. Their standard of interest is: "No fee, no see."

Coexistence between free television broadcasting on the basis of competitive private enterprise, as we know it today, and pay television, as proposed by its promoters, is impractical. Opponents believe that pay television would degrade and ultimately destroy the present system of free TV broadcasting.

The greater the circulation of any medium, the greater becomes its advertising value. As applied to television broadcasting, this has meant that as the size of the television audience has increased the free television broadcaster has had more available to spend on improved programing.

Under the present system, the broadcasters give, at their own expense and as a public service, addresses by the President and national, State, and local government officials. They also carry, as a public service, educational, religious, operatic, and other cultural programs. Many of these programs have limited audience appeal and are not sponsored. The broadcasters bear the very substantial cost of presenting these unsponsored public service programs, including interconnection charges and refunds of revenue to sponsors whose programs have to be cancelled to make room for free public affairs programs.

One of the greatest contributions that the free television system has made to the public interest has been the strengthening of the democratic processes in this country by helping to create an informed public opinion on important national and international issues. Anything that tends to weaken the free television system would automatically tend to reduce its ability to continue to render this costly and invaluable service.

If the pay-television promoters should be successful, the more than 8 million people living in single station areas would be deprived of all free television service whenever pay-television programs were broadcast. These more than 8 million people would be forced to contribute to the cash boxes of the pay-television promoters for their TV programs or have none at all.

Unlike the present free system of television, pay television would come into the homes like gas and light and telephone service for which the consumer pays. The rates and other aspects of such public utility services are now regulated by the Government. If pay-television broadcasting were to be authorized, the public interest may require that it likewise be treated as a public utility and made subject to similar regulation by the Government. In such an event, the practical difficulties of maintaining part of the American radio and television system free and part regulated would seem almost unsurmountable. Such a situation might ultimately lead to Government regulation, on a common-carrier basis, of all radio and television broadcast services, a result that no one advocates but all must guard against. Only the Congress can set the legal bounds of such regulation.

Our American principle of freedom to listen and freedom to look is chiefly responsible for the growth of the most dynamic industry in the world today. It has made the American people the best informed in the world, and it has done so without discriminating between the poor and the rich.

As EMANUEL CELLER, chairman of the Judiciary Committee of the United States House of Representatives, said, and I quote in part: "As a Federal legislator, expected to consider carefully the overall results of any innovation such as this, I am dismayed at the probable effects of fee TV on our tax structure, employment, those in low-income brackets, transportation, and other industries. Will our movie house, theaters, sports arenas, etc., be thrown into the discard? What happens to the tremendous investments in such real estate? Free broadcasting and free television have been undisputed boons to the industry of this country. I shouldn't think the sponsors would be happy at the prospect of killing the goose that laid their golden eggs, but they are strangely reticent at this time on this subject. In closing may I say I shall continue to oppose all efforts to foist fee TV on the American public."

Now to the other side of the coin.

What are some of the arguments put forth by those who favor pay-as-you-look programs?

A spokesman for Phonevision claims that one of the largest manufacturers of raido and television equipment that also maintains a large network, has always opposed any new electronic development which it does not control, and that its opposition to subscription is another illustration of this policy.

All we ask, he argues, is an opportunity to show that we can bring to the public for a small fee programs which are much better than those they have been getting on an advertising-sponsored basis. We think that the public is entitled to the best—not the worst—that Hollywood and Broadway can create. We propose to supplement with great box-office programs the present continuous stream of 20-year-old horse operas and other hackneyed programs that now fill in most of the short spaces between the long commercials.

The public will turn away from an advertising sponsored program to a subscription program only if the latter is so much better and more interesting that it is worth the price. The networks and the motion picture theater owners are afraid that subscription programs, such as great first-run motion pictures, full length hit plays from Broadway, and grand opera every week in season, will be so popular with the public as to threaten their profits. This is the same kind of argument the buggy whip manufacturers made against automobiles 50 years ago. Why not let the public, which owns the air, decide for itself whether it wants the right to pay a small fee for programs that can never otherwise be brought to television?

Proponents of pay-as-you-see television claim that you take what the big broadcasters and big advertisers send you or nothing at all. You are given no choice. No wonder TV is being criticized for trying to corral the largest market by pitching to the lowest common denominator. First, conventional TV was attacked because it was too sensational. Now, there are many complaints to the effect that it is not growing up. All parents want good programs available for the entertainment and instruction of their children, but they also want a few adult programs for their own enjoyment if they can only manage to get the children to bed at a reasonable hour.

Supporters of pay TV brand as ridiculous the charges that the new system would take over advertising sponsored programs. To spike this propaganda, they are asking the FCC to adopt a rule that no station can use more than 15 percent of its operating time on subscription TV. They are also asking the FCC to keep the existing networks out of the business of supplying subscription television programs. This will guarantee that pay-as-you-see television will fulfill its promise of being a supplemental service, in free and open competition with the present networks. Under this provision, at least, 85 percent of the program fare in any community would be without direct charge.

As the Chicago Daily News observes, and I quote: "But, in any case, it does not seem to us to be the proper function of the FCC to decide whether or not free television should have a commercial rival. The progress of America is due to the leeway given to just such competitive forces. To say that nobody should be allowed to take the risk of offering competitive entertainment, at a price, would seem to us an indefensible substitution of bureaucratic decree for the judgment of the market place."

In this broadcast, I have merely sketched some of the arguments on both sides of this question.

I have been speaking to you over the medium of radio, which has been most generous in alloting me time as a public service.

This broadcast has been coming to you heard but unseen over a local station.

While talking about the "battle of the giants" I have not forgotten the indispensable role played by your radio station in serving the business and cultural needs of the general area in which you live.

Your present receiving set should be a constant reminder that it is people like yourselves who must control mass media of communications to serve all of your various needs and to prevent the development of monopoly in any form.

Defense Against Communist Infiltration

EXTENSION OF REMARKS

OF

HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, January 9, 1956

Mr. REUSS. Mr. Speaker, under leave to extend my remarks, I include an article on an educational campaign

against communism written by Dr. H. Truman Gordon, well-known lecturer and economic consultant. Dr. Gordon, formerly a resident of Wausau, Wis., now lives in Waterloo, Iowa.

The article follows:

HOW TO BUILD THE STRONGEST DEFENSIVE AGAINST INFILTRATION OF COMMUNISM IN THE UNITED STATES

(By Dr. H. Truman Gordon)

During the past 5 years I have observed with interest the investigations by at least 3 congressional committees dealing with communism.

In the judgment of this writer, no practical proposals have come from congressional investigations as to just how we can put a stop to the infiltration of communism in the United States.

This writer believes that an honest, fearless campaign of education must be launched very soon in the United States if we are to defend ourselves against communistic infiltration. We must get the truth about communism to the American people. They must know the whole truth about communism, the enemy of freedom.

Following are my suggestions for this educational campaign:

1. All patriotic newspapers, magazines, and trade journals should launch a determined anticommunism crusade to tell the whole truth about communism.

2. Arrangements should be made by our large and small business and industrial managements so that every capable lecturer and public speaker who is fully informed on communism can devote their entire time and effort to addressing public meetings, groups of industrial workers, labor union meetings, business organizations, civic and luncheon clubs, Parent and Teachers Associations, etc., throughout the United States.

3. The facilities of every radio and television station should be brought into this campaign.

4. Every church and synagogue in the United States should either open their doors and pulpits to qualified anticommunist speakers, or the ministers, priests, and rabbis should obtain all of the information available and fearlessly tell the whole truth about communism, the great destroyer of liberty and freedom, to their congregations.

5. It also might be well for public school officials, State school superintendents, school boards, etc., to require that every public schoolteacher above the fifth grade and up through the high schools assume the responsibility of teaching the truth about communism, the enemy of freedom, to all of their pupils and students.

This kind of an educational crusade in the United States will very soon make it impossible for the deceiving, misled advocates of communism to make any progress in this country.

In this article I can present only a part of the beliefs, teachings, and practices of communism, but I want to make crystal clear four of the major things that communism seeks to accomplish.

At the outset, let us remember that the first tenet of communistic belief and teaching is that there is no God, and that all churches of religion should be abolished. Only very recently the International News Press quoted Nikita Khrushchev, the head of the Russian Communist Party, as revealing that the new soft Soviet policy will not extend to religion, when he stated: "We remain atheist * * * we do everything we can to liberate the people from the opium attraction of religion. Is it not plain to all of us that communism is organized atheism?

Some of the things that communism seeks to accomplish are:

1. Destruction of the capitalistic system, "the root of all evil," by a violent revolution, if it cannot be accomplished by peaceful infiltration.

2. Establish the dictatorship of the proletariat. This means, of course, the dictatorship of the Russian Kremlin, and, as William Z. Foster, head of the Communist Party in the United States, said: "The Red Army stands ready to enforce the dictatorship of the proletariat."

3. The liquidation of all classes of society that have been contaminated by capitalism. Well informed American writers on the subject of communism have stated that when communism takes over the United States Government about one-third of our population will be executed for they are said to be contaminated by capitalism.

4. Communism intends to bring about, in the United States, "the reeducation of the total remaining population in a new relationship of labor to the communistic, Soviet Government."

It is my opinion, gleaned from conversations and interviews with tens of thousands of our United States citizens, that far too many are completely in ignorance of what communism really is, and what this godless dictatorship intends to do with our "American Way of Life". Rest assured of one thing, the beliefs, teachings, and practices of communism, and the objective of gaining the domination of the whole world by communism, remain exactly the same today as in the ill-fated year of 1917 when this godless tyranny took over the government in Russia.

But, I believe that even worse than the ignorance about communism is the smug complacency and attitude of indifference expressed by far too many American citizens. In spite of the terrifying conquests already made by communism in such a very large part of the world in these last 37 years, too many American citizens still insist that "It just can't happen here; it will not happen in the United States." I claim that it can happen in our country, if our citizens are not made clearly aware of the grave danger that threatens us.

J. Edgar Hoover, the Director of the FBI, made an address less than 1 year ago, in Washington, D. C., where he stated in part: "There was only 1 Communist for every 2,245 people in Russia when communism overthrew that government in 1917. It is now a known fact that we have 1 Communist for every 1,870 people in the United States."

An educational campaign such as I have attempted to outline in this article, will convince all American citizens that:

1. Communism seeks to destroy our American form of government.

2. Under communism all of our business and agricultural establishments will be prohibited.

3. Our economic and public welfare principles, our social and religious institutions and all of our strictly American enterprises, which have made our country the greatest nation on the face of the earth, will be prohibited if and when communism takes over the Government of the United States.

Certainly we can best know how to fight an evil only when we know just what that evil is.

Alaska Mental Health Bill

EXTENSION OF REMARKS

OF

HON. EDITH GREEN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, January 16, 1956

Mrs. GREEN of Oregon. Mr. Speaker, under unanimous consent, I insert in the Appendix of the RECORD several items, editorials, and letters which have appeared in the newspapers of Alaska in regard to the treatment of Alaska's mentally ill.

Fairbanks News-Miner, July 16, 1955:

A mother in Fairbanks writes:

"DEAR NEWS-MINER: I sent the following telegram to a Representative in Congress. We don't care what you do with this letter; if you would like to publish it, it doesn't matter to us, or if you don't. Just as long as we get a mental hospital.

"'DEAR CONGRESSMAN ———: Our son graduated from college just 1 year ago. He lost his mind 1 week later due to overstrain in some manner. If we had mental hospitals in Alaska, he could have been treated here, near his family who loves him. Because there are no facilities in Alaska for sick minds, he had to be placed in jail, on a mattress on the floor, and have a trial such as might happen to the most hardened criminal. We had to send two escorts with him to Morningside Hospital (in Portland, Oreg.) since he was so sick, making the transportation tremendous in cost. Even a Congressman should hate to have a thing like this on his conscience, such as blocking a bill that would provide mental hospitals for hundreds of Alaska's sick minds. I have been to Morningside Hospital. I have seen the homesick children there, 1,600 miles away from their loved ones. Give us a hospital for Alaska's mentally ill.'"

Fairbanks News-Miner, July 16, 1955:

The mental health bill before Congress provides for humane treatment of Alaska's mentally ill. It takes them out of jails, and provides for an institution within the Territory where they can be treated. At present, a mentally ill person is jailed, tried by a jury, then transported to the States by airplane in the custody of an officer. By no stretch of the imagination can this treatment be considered humane.

Anchorage Daily Times, July 20, 1955:

The primary purpose and greatest provision of the bill is that of eliminating the barbaric treatment of insane persons. It would modernize the legal procedures for declaring a person insane and providing for his treatment. * * * The new committee procedures have won the endorsement of every trained technician in the field of psychiatry who has studied them. The bill has the support of every health and welfare agency that has been involved. It has the support of the Interior Department as well as the Health, Education, and Welfare Department.

Former Gov. Ernest Gruening writes:

The disposal of these unfortunates has been the subject of repeated protest by the people of Alaska for over 40 years. The system of trying them as if they were criminals, sentencing them for the offense of being insane, without requirement of medical advice, and then committing them under a contract system to an institution hundreds of miles away from their families, arose, to be sure, half a century ago, when ignorance and consequent cruelty in the treatment of the mentally ill was almost universal.

Since that time, psychiatry has become a science and much progress made in the therapy of mental disease. But the people of Alaska have been unable to change the obsolete and barbaric method of treating their mentally ill. For the Organic Act of 1912 specifically forbids Alaska's Legislatures to modify the provisions of the Nelson Act of 1905 in which the existing procedures regarding the insane were established.

Benjamin Franklin

EXTENSION OF REMARKS
OF

HON. JOHN P. SAYLOR

OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 17, 1956

Mr. SAYLOR. Mr. Speaker, on this 250th anniversary of the birthday of Benjamin Franklin, the entire country pauses to pay tribute to this great American.

The life of Benjamin Franklin was amazing because he was not only a printer, but an editor, publisher, writer, soldier, seer, wit, scientist, inventor, legislator, statesman, and philosopher.

Probably no other American has ever had such far-reaching versatile influence on this country as Benjamin Franklin. It is fitting and proper, therefore, that an address delivered by the Honorable Alfred H. Williams, president of the Federal Reserve Bank of Philadelphia, at the Founders Day Academic Convocation held at Franklin and Marshall College—the school that bears his name—should receive wide circulation because it will not only create in each of us a new and finer appreciation of Benjamin Franklin, but will cause us to think a little more about today and its problems as they affect each individual.

The address follows:

LOOKING AT LIFE THROUGH BEN FRANKLIN'S BIFOCALS

(By Alfred H. Williams, president of the Federal Reserve Bank of Philadelphia)

It is a pleasure to come to Lancaster to take part in this convocation of Franklin and Marshall College. One hundred and sixty-eight years ago other Philadelphians came to Lancaster to attend your first convocation, the one at which Franklin College was dedicated. These men brought financial pledges of their own and others in the amount of £2,500. Incidentally, the largest contribution was for £200 and, unlike some of the other gifts which later proved difficult to collect, was in cash. It came from an 81-year-old patron of higher learning who, though not a college man, held degrees from Harvard, Yale, William and Mary, Oxford, Edinburg, and St. Andrews, as well as the Gold Medal of the Royal Society of London. The 250th anniversary of his birth will shortly occur and President Hall has suggested that this talk center on him. I refer, of course, to B. Franklin, printer.

Can anything really new be said about this unique individual, who is said to have been "the first civilized American"? Historians, professional and amateur, have accounted for every day of his life for which there is any conceivable record or reasonable conjecture. We know him to have been outstanding as printer, journalist, publisher, businessman; moralist, humanitarian, sage; gadgeteer, inventor, scientist; lobbyist, legislator, public administrator; debater, linguist, educator; humorist, songwriter; and, not to be overlooked, admirer of the ladies.

Carl Van Doren asserts that he possessed "the most eminent mind that has ever existed in America, a mind that moved with perfect ease to its countless tasks." Physicist Robert A. Milliken, of California Institute of Technology informs us that:

"Franklin without any previous training whatever in either the technique or the history of physics, and with almost no contact with what others were doing or had done, within 2 years of the time of his first experiment, had acquired a keener insight into the fundamental nature of electrical phenomena than anyone had acquired, not merely up to his time but even for the next 150 years; about 1900 the scientific world returned essentially to Franklin's views."

But Franklin was also an inventor. He was, as Thomas Carlyle put it, "the father of all Yankees." He was our first gadgeteer and may be said to have founded today's "do-it-yourself" movement. He produced the first electric battery, a smoke-consuming stove, a flexible metal catheter, bifocal eyeglasses, a highly efficient clock, a harmonica, a combination chair and stepladder, and, of course, the lightning rod. He had a proposal for crop insurance, and the essential idea of the present-day plan for paratroop warfare. It is to be expected, moreover, that he had thought about a cure for the common cold, but, like all others, he also was defeated.

Science and invention are but two of scores of aspects presented by this brilliant star, one of the most luminous in nature's galaxy of human individuals. Henry Steele Commager holds that:

"Franklin is the most complete and the most characteristic of Americans. * * * Washington is remote; Jefferson belongs indubitably to the 18th century; John Adams is pure Yankee; Hamilton never accepted his adopted country and never understood it. But Franklin could fit into American life at any point, in any decade, and accept it all cheerfully enough and set about improving it with efficient amiability; he is as contemporary as today's newspaper, as entertaining, as informative, as indispensable and, in the best sense, as commonplace."

Reading this, I was inspired to put Franklin to the test by giving free reign to my imagination and speculating how this bold and resourceful, wise and benign man, who lived in such harmony with his own age—the age of enligthenment—would handle some of the basic problems of the present age—an age so swiftly paced, so vastly intricate, so frustrating. The result is this talk, entitled "Looking at Life Through Ben Franklin's Bifocals." I feel sure that Ben himself would not object to this approach. He never ran away from problems; he was never at a loss for ideas; furthermore, he loved to talk. Time limits us to a glimpse at three broad sectors of present-day life—those occupied by the individual, the local community, and the National Government. These will be discussed in reverse order.

The United States is confronted with deep-seated and persistent international problems. Indeed, almost all the 65 sovereign nations are thus plagued. It seems as though the entire human family is on the move, driven as it were by a consuming zeal for social justice, variously defined. Power politics has become polarized around two nations—Russia and the United States. Huge quantities of mankind's resources—spiritual, mental, and physical—are being expended for overt or potential warfare. What would Ben Franklin say about this conflict between the sovereign powers? What advice would he give his Government?

There is reason to believe that he would express a clean-cut philosophy—one based on his vast experience in international affairs. During the period 1757–85, he spent 16 years in London and 9 in Paris. Most of this time was devoted to representing the Colonies, arguing claims, making alliances, raising money, and negotiating treaties. In all of this work, some of it insuperably difficult, he was highly successful. Students of Franklin's life, as well as students of American foreign policy, have sought the reason for this success. It is explained in part by his high standing abroad as a scientist, his humanistic philosophy, his wit, humor, and rare social charm which the French found so appealing. But this leaves unanswered the questions: What is the guiding principle of Franklin's approach to foreign policy? Is this principle applicable to America's present-day struggle in the realm of international power politics?

Franklin's success in the field of foreign relations was achieved by consistently following the policy of enlightened national self-interest. The key word here is enlightened. In keeping with his general character, he looked at all sides of each problem of international relations. He never failed to study both our short-run and long-run interests. Likewise he took pains to put himself in the position of the other nation and study its national interest. In doing this he brought into play his superb intellect, rare commonsense, vast experience, his serenity, good will, lack of illusion, and innate desire for justice. Thomas Jefferson's appraisal of the way Franklin handled the French is in point here:

"The fact is, that his temper was so amiable and conciliatory, his conduct so rational, never urging impossibilities, or even things unreasonably inconvenient to them, in short, so moderate and attentive to their difficulties, as well as our own, that what his enemies called subserviency, I saw was only reasonable disposition, which, sensible that advantages are not all to be on one side, yielding what is just and liberal, is the more certain of obtaining liberality and justice."

Lest I give the impression that Ben could not be taught, it must be understood that he never gave up his belief that, while attempting to secure peace, one should be prepared for war. As one authority has put it: "When everything else failed, Franklin faced the necessity of the use of force calmly and with complete determination."

Ben often made what appeared, offhand, to be "screwball" suggestions. Bearing in mind that he once laid the basis for converting an enemy into a friend by borrowing one of his enemy's prize books, it would not surprise me if Ben were to hint that we should ask the Russians to send a task force of Siberian experts over here to help us develop more effectively our Alaskan resources.

I turn now to another aspect of Ben's life, the one that reveals his attitude toward the place in which he lived. When he left Boston and came to Philadelphia he found life most appealing. The Quaker town was religiously tolerant, balanced and bustling as to its economy, and intellectually alive. And as if to show his gratitude, he extended his passion for self-improvement to include civic improvement. With imagination and resourcefulness and with his natural aptitude for leadership, he was never without a project. He was the energizing, galvanizing source of two-thirds of the town's important enterprises. The list of projects he started on a voluntary basis includes a fire company, a night watch or police patrol, a hospital, a weather reporting service, a meeting hall for all religious sects, local mail delivery, street cleaning, a debating club, a philosophical society, a circulating library and an academy. In this area, as in most other areas, his activities have drawn superlative praise from a competent scholar; Verner W. Crane states: "By midcentury the most completely civic man in America was Benjamin Franklin, printer." Although the bulk of his time in the last 30 years of life was spent abroad, he kept in close touch with local affairs and remained at heart a homebody.

Suppose Ben were to return and take a look at local community life in America. What would he think? I removed his bifocals from my eyes and reflected:

A community is a place where most of us live most of our lives. A community is a bundle of habits. To me, Philadelphia is among other things the Evening Bulletin,

the River Drive in springtime, the Media Local, the Penn-Cornell game on Thanksgiving Day, the Mummers parade. A community is a social organism. As such it is alive and possesses a distinctive body, personality, and spirit. Cities are vigorous or apathetic, friendly or reserved, efficient or slovenly, distinguished or common. A community is a place where something is shared. And the quality of that is shared—life in common—depends on the balance and resilience of the economy of the city, the efficiency and integrity of its government, and the depth and genuineness of its culture. And the spirit of a community is based upon and evoked by such elusive elements as the role of tradition, the way the amenities are observed, the desire to cooperate, the quality of public taste, the use of leisure, and the role of religion.

While in the mood that had been generated by Ben's love of his home town and by his efforts to promote her welfare, I recalled a statement made almost a half century ago by a professor of philsophy, Josiah Royce:

"We need in this country a new and wiser provincialism. I mean the sort of provincialism which makes people want to idealize, to adorn, to ennoble, to educate, their own province. * * * Further centralization of power in the National Government, without a constantly enriched and diversified provincial consciousness, can only increase the estrangement of our national spirit from its own life."

And it was then that I saw clearly why Ben, in his wisdom, had helped to found the college which has brought us together today to keep green in memory his name and deeds.

And now finally we turn to a third side of Ben Franklin where he shows his attitude toward himself and his fellow men as individuals. He occasionally despaired of mankind en masse but he never lost interest in individuals as individuals. And one person who could always command his attention was B. Franklin. He had a tremendous sense of self. It was an objective sense, permitting him, as it were, to step outside his own being and turn to look at himself with discernment and good humor. This sense of self was revealed in many ways: his zeal for self-improvement, his early desire to form a personal and almost equal relationship with the deity, his personal written code of moral conduct, the care he took to preserve his personal correspondence and other records that would establish his place in history.

His interest in other individuals is similarly manifested in varied ways. He maintained over many years ties of friendship by means of correspondence that must have required much time from a crowded schedule of official duties. Worthy apprentices were befriended by helping them to establish print shops of their own. He loved children and they loved him because he treated them as individuals and met them on their own terms. His comments about persons from whom he had been separated for many years reveal that he had observed them clearly and was conscious of each as a unique and individual person. In the light of the foregoing, what comments would Ben make to young men and women now preparing to enter maturity?

To answer this question it will help if we forget Ben for a moment because, as his biographer, Carl Van Doren, states in the concluding sentence of his 800-page book, "He seems to have been more than any single man: a harmonious human multitude." I suggest that we focus our attention on a normal, healthy, intelligent, ambitious American college student. What requirements does the age in which we live place on him, if he is to live a full life, a life that will employ all his talents and increase his stature as a man? There are, it seems to me, four requirements:

1. Professional competence: It goes almost without saying that an individual should strive for excellence in his chosen field of work. We do not know very much about what determines the choice of field in the first instance; about why a person wants to be a physicist, a writer, a surgeon, an electrical engineer, or a teacher. There are some aptitude tests which seem to help a bit, and counseling can be of assistance, but the best process is still largely one of self-discovery. In this process young men or women can help themselves by being alert to the problems they like to tackle, to the types of activity in which they feel free and easy, where they get the best results. Ben (I cannot get away from him) was taken by his father to a variety of Boston shops to watch different types of skilled artisans at work. The modern problem is not that simple.

In a chosen field, what furnishes the drive that pushes one on to mastery? In large part it lies in a rudimentary professional spirit. This, in essence, is the love of work as work; a feeling that we are affirming or asserting ourselves, our innermost being, in our work and by our work. The true professional spirit causes us to care greatly for excellence. It is one of the ways in which we feed our ego, in the best sense of that much maligned word. An individual can serve his fellow man and worship his Maker by the means of work. Few people really stretch their ability to attain excellence in work.

2. Wide-ranging intellectual and cultural interests: The case of the requirement that each individual should strive for breadth of outlook on life can, perhaps, be quickly made. It is one of the chief means by which each of us comes to know more about himself and others; more about the nature and possibilities of life. By means of broad cultural interests, we enter the mind and spirit of countless other human beings of past ages, other climes, different religions. Most leaders have some knowledge of fields beyond their specialties; moreover they use this understanding as grist for their own mills. Thus a knowledge of history gives one a sense of the continuity of social change and furnishes some protection against unfounded prejudice, against panic arising from short-run change. It makes for social stability by making us conscious of our debt to our forefathers and of our obligation to the oncoming young. It gives a feeling for trends and of need to intelligently adjust to them. James Logan, foremost classical scholar in the colonies, gave young Franklin access to his famous collection of original editions of Greek and Roman classics. Ben made full use of the privilege and, in order to do so, taught himself Greek and Latin; later, he learned Spanish and French.

Literature, likewise, illustrates the value of broad interests. Good literature enables a person to get inside the other fellow. It furnishes insight into motives, fruitful analogies, and awareness of values other than our own. In the same manner, a knowledge of government and international relations broadens our understanding of other ways than our own of living together; it forms a basis for comparing the relative strengths and weaknesses of our brand of democracy. The natural sciences evoke a sensitivity to the wondrously intricate ways in which the balance and harmony of nature is achieved and leads many people by rational steps to a conclusion they cannot accept by faith, namely, a belief in a Supreme Being. These and other areas of thought all add to an individual's understanding and enjoyment of life. They can, in later life, cross-fertilize with one's specialized professional knowledge. Equally important, they will provide avocational fields to which one can turn from the daily job for surcease and refreshment. To all young people who aspire to leadership in their professions I advise: If you have a spark of interest in areas beyond your chosen field, keep it alive; fan it into a flame. The truly great leader is never provincial.

3. Social intelligence: The term intelligence may be roughly defined as the capacity to solve problems and the term social intelligence is here used in the restricted sense of the capacity to solve the problems which arise when men assemble in groups and try to work together. Some people have skill in man-to-man relationships but find it difficult to grasp and solve problems which involve groups such as labor unions, employers associations, school boards, professional societies, legislative bodies, and I might add, college faculties. And the developments of science, technology, industry, and government, indeed, of life generally, make it increasingly necessary that we understand group behavior.

These growing problems should be fascinating and attractive to young people. There are no white rabbits to be pulled out of the hat; we shall add to our knowledge the hard way by sweating it out. Some of the elements in the study of human behavior are: better oral and written communication, sound channels of communication, varied ways of effectively defining problems, more constructive ways of achieving compromise: There are rich opportunities in all fields for men and women with social intelligence as here defined. These are the thoughts that came to the fore as I reflected on Ben's relations with his fellow colonists and with leaders abroad.

4. Unified moral and spiritual values: This calls for the weaving of a set of ethical and moral and spiritual beliefs into a unified philosophy of life. These should be bound together in the sense of being internally consistent. The result is knowing what you believe and why you believe. These are the beliefs one cherishes and holds dear. It is, as you know, not easy to achieve such a set of values. When constructed, however, they produce the inner poise and strength so necessary in these times of change, of international and social and industrial tensions, of personal insecurity and frustration and seeming defeat. All of us do a lot of muddling on this front and the results are not much to look at. And he is a brash person who does not think it necessary to check frequently his own beliefs and motives. Ben was at the task from early youth to the end of life.

This morning I have tried to hold before you fragments of a picture of a great man, Ben Franklin. If you have been helped to form some estimate of his nature, if you have been stimulated to think of his relationship to you and to all other men, my efforts will have been richly rewarded. We have been thinking about a particular man. But in him I perceive each of you, myself, and all men. A prime question of future policy for American civilization is:

Is the individual person important?

Alaska Mental Health Bill

EXTENSION OF REMARKS
OF
HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1956

Mrs. GREEN of Oregon. Mr. Speaker, I have received numerous letters, telegrams, and statements from various individuals and organizations in Alaska in

regard to the Alaska mental health bill. These have been from doctors, church groups, fraternal groups, business groups, educators, city managers, and members of health councils. They are unanimous in their support of the Alaska mental health bill, H. R. 6376.

Under unanimous consent, I include in the Appendix of the RECORD several of these statements, letters, and telegrams.

Byron A. Gillam, a member of the Alaska Board of Health:

Our mental health program is at this time criminal in its operation. The method dates back to one abandoned by all States as reprehensible. The Alaska mentally ill are taken to jail and then placed on trial before a jury of laymen—and with the exception of rare instances—none of these laymen are qualified to pass on the worst case, let alone those where there is hope for recovery. After being adjudged insane, this mentally ill person is remanded to the custody of a United States Marshal and transported to Morningside Sanitarium in Portland, Oreg.

Does this system work? Of course it does. The owner has made more than a million dollars in the last 18 years.

City of Seward Health Council:

We urge passage of the mental-health bill, H. R. 6376, without amendments.

Methodist Women's Society of Christian Service:

Request passage of H. R. 6376 modernizing Alaska mental health laws.

City manager, Seward, Alaska:

The people of Seward request every effort be expended to pass the mental health bill and consider it a dire necessity for Alaska. Any effort expended in our behalf will be sincerely appreciated.

Fairbanks Chamber of Commerce, July 15, 1955:

Fairbanks Chamber of Commerce deplores the Dark Ages outlook of those opposing Alaska mental health bill. Alaskans intolerant of huge profits and poor care of its mental patients at Morningside.

Community Service Council, Fairbanks, June 9, 1955:

DEAR MRS. GREEN: Our organization is composed of the social agencies of Fairbanks and we are concerned with the present situation where the mentally ill are confined to jail until such time as local action and commitment can be made. We feel that this is not just treatment for mentally-ill citizens.

We also feel that the person should be institutionalized nearer his home so relatives could see the individual occasionally and be available for aid in the therapeutic treatment of the person concerned.

Alaska is the only territory under the United States jurisdiction that does not have custody of its citizens when they are declared mentally ill. It is not fair to transport them 3,000 miles away from their home for care and treatment. Facilities could be made available in the local hospital area to care for these persons.

The persons who are living in Alaska are no different than the persons living in the States. They would like to keep their family together and would like to have their loved one near them. One State does not have to send its patients to another State for treatment and it seems as though the Territory of Alaska should have the same rights and privileges.

JACK FRANKEL,
Chairman.

Alaska Board of Health, Dr. Earl Albrecht, M. D.:

DEAR MRS. GREEN: The Alaska Board of Health has, over the years, considered the handling of Alaska's mentally-ill patients as one of the chief problems that must be corrected.

At the last annual meeting of the Board of Health, again there was action taken favoring the present Alaska mental health bill being enacted. This motion carried unanimously.

We request that you bring this letter as evidence to the House of Representatives that the Alaska Board of Health favors the early enactment of the Alaska mental health bill now before Congress.

Very truly yours,
C. EARL ALBRECHT, M. D.,
Secretary, Alaska Board of Health.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Printing and binding for Congress, when recommended to be done by the Committee on Printing of either House, shall be so recommended in a report containing an approximate estimate of the cost thereof, together with a statement from the Public Printer of estimated approximate cost of work previously ordered by Congress within the fiscal year (U. S. Code, title 44, sec. 145, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on Printing, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

DISTRIBUTION OF THE CONGRESSIONAL RECORD

To the Vice President and each Senator 100 copies; to the Secretary and Sergeant at Arms of the Senate, each, 25 copies; to the Secretary, for official use, not to exceed 35 copies; to the Sergeant at Arms, for use on the floor of the Senate, not to exceed 50 copies; to each Representative, Delegate, and Resident Commissioner in Congress, 68 copies; to the Clerk, Sergeant at Arms, and Doorkeeper of the House of Representatives, each, 25 copies; to the Clerk, for official use, not to exceed 50 copies; and to the Doorkeeper, for use on the floor of the House of Representatives, not to exceed 75 copies; to the Vice President and each Senator, Representative, Delegate, and Resident Commissioner in Congress there shall also be furnished (and shall not be transferable), 3 copies of the daily RECORD, of which 1 shall be delivered at his residence, 1 at his office, and 1 at the Capitol.

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. The money derived from such sales shall be paid into the Treasury and accounted for in his annual report to Congress, and no sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

Appendix

Address by Congressman Benjamin F. James, of Pennsylvania, at Commemorative Exercises Marking the 250th Anniversary of the Birth of Benjamin Franklin, at the Government Printing Office, January 17, 1956

EXTENSION OF REMARKS
OF
HON. J. VAUGHAN GARY
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 18, 1956

Mr. GARY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an address delivered by our distinguished colleague, Representative BENJAMIN F. JAMES, at the commemorative exercises marking the 250th anniversary of the birth of Benjamin Franklin, at the Government Printing Office, January 17, 1956.

We all know that the gentleman from Pennsylvania is a valuable and able Member of the House and an impressive speaker. I have particular knowledge of and admiration for his ability, because we work together on the Committee on Appropriations. His selection, however, as the principal speaker for this commemorative occasion was peculiarly appropriate. He is not only the namesake of the great American patriot, but also now owns and operates the printing business which Benjamin Franklin established and operated. I know that his remarks at the ceremony will be of unusual interest to this House:

Let me say at once I feel highly honored with the privilege of having a part in this fine program commemorating the 250th anniversary of the birth of the amazing Benjamin Franklin—the first civilized American and the patron saint of printers.

From the earliest time that Benjamin Franklin became a popular subject for authors, biographers, and orators, until the present—250 years after his birth—something over 1,000 separate works about him (some of them very extensive indeed) have been compiled and published.

There has been a tendency in Franklin scholarship that has emphasized the philosopher, the scientist, inventor, diplomat, the man of broad international culture, the patriot, and the author, and even the lover, all at far greater extent than Franklin the printer.

This despite the fact that Franklin's phenomenal success as a printer and a publisher was the springboard—economically and politically—for his advancement in the many and varied fields of endeavor that claimed his interest.

Eulogies in vast numbers have been pronounced on many occasions.

The shortest and pithiest of these was by Whitelaw Reid, himself a distinguished journalist, who once said, rather incidentally in a speech about something else:

"I honor the memory of Benjamin Franklin because he was a philosopher who wrote commonsense, an officeholder who did not steal, and a journeyman printer who did not drink."

Then there is the little story of a young scholar whose class was given the assignment of writing a brief composition about Benjamin Franklin. This lad turned in the following:

"Benjamin Franklin was born at a very early age in Boston, on a street called Milk. He went to school for 2 years and then went into the printing business with his brother. He didn't like his brother so he took a boat and went to Philadelphia. He was very hungry when he got off the boat so he bought two loaves of bread and carried one of them under his arm while eating the other. This made a young lady smile at him, so he married her and discovered electricity."

That is brevity in rare form, but it does make the point that in the public mind two things about Franklin are preeminent—his association with the printing business, which was real, and the completely false notion that he discovered electricity.

This evening I should like to speak particularly about Benjamin Franklin, the printer. It seems most appropriate that I should do so here in this, the greatest of all printshops in our day.

It will not be my purpose, however, to trace an orderly account of his career in printing, of his experiences as an apprentice with his brother, James, or with his partners in Philadelphia and also in five of the colonies, in Jamaica and in Antigua.

However, some discussion of the social and economic climate in which Franklin learned his trade and then followed it as the leading master printer of his time will be helpful to an understanding of the role of a printer in colonial America.

The printer then was a jack of many skills and trades, which in these times of specialization and modern equipment are all separate and distinct callings.

Were we able to compress into one person a typographer, pressman, advertisting man, author, magazine and newspaper publisher, reporter and editor, stationer and bookseller we would have an amalgam somewhat resembling the early American master printer.

At the time that Franklin became an apprentice in his brother's shop in Boston the printer had not yet achieved an honorable and influential status in the American Colonies except possibly in the city of Philadelphia and doubtless that exception was owing to the broad, tolerant policy of William Penn.

As late as 1733 the Governor of New York felt obliged, for some offense, real or imagined, to stop the press then running in that city.

In 1718 the Governor of Virginia, when advertising a reward for the capture of pirates, was compelled to send to Philadelphia to have the handbills struck off. On another occasion that same Governor thanked God they had no press in Virginia.

Earlier—in 1686, Governor Bradford of Massachusetts had forbidden anyone to print without his consent.

Four years before that, the General Court of Massachusetts had decreed that there should be no printing press used except one at Cambridge, and that one only under the supervision of two licensees.

These restrictions were apparently deemed necessary to prevent editorial and printed abuse of the constituted and privileged authorities.

Even in Philadelphia in those days printing was not regarded as a preferred occupation, but the road to better conditions in that city in the printing trade was yet to be plotted by Benjamin Franklin.

Alhough printing dealt with making books, of which the youthful Benjamin was so much enamored almost from babyhood, he was not inclined to look with favor upon learning the printer's trade. However, the decision was his father's and he was apprenticed, or bound, to his brother James, a master printer in Boston, for a term of 9 years.

His father's first choice for the boy's future had been the trade of the cutler, but the terms demanded by the master cutler required that he be paid a sum equal to about $100, whereas the price named by James Franklin for his brother's instruction in the printer's art was equal to about $50.

It might be said, the want of $50 made Benjamin Franklin a printer instead of a cutler.

In addition to the payment of a lump sum for instruction, his brother would, of course, have his free services during the term of the apprenticeship.

A rather elaborate contract had to be drawn between Franklin's father and his brother James, in which Benjamin was bound to a number of obligations such as keeping his master's secrets, gladly performing his lawful commands, he must not frequent taverns, inns, or alehouses—play at cards, dice tables or other unlawful games—he might not contract matrimony nor absent himself from his master day or night—but, above all, demean and behave himself toward his master during all the said term.

In consideration of all this, the master also assumed a few obligations. The following is from the document given by James Franklin to the father of Benjamin Franklin:

"The said James Franklin, master printer, for and in consideration of the sum of ten pounds of lawful British money, to him in hand paid by the said Josiah Franklin, the receipt of which is hereby acknowledged, the said apprentice in the art of a printer which he now useth he shall teach and instruct, or cause to be taught and instructed, the best way and manner that he can, finding and allowing unto the said apprentice meat, drink, washing, lodging and all other necessaries during the said term."

Further terms of the contract are quaint and somewhat amusing. The master was obliged to provide apparel for the apprentice, described thus:

"A pair of deerskin breeches coming hardly down to his knees, which, before they could be allowed to come into the presence of ladies, at meeting, on the Sabbath, were regularly to be blacked upon the preceding night, in order to give them a clean and fresh appearance for the Sunday; a pair of woolen yarn stockings, a thick and substantial pair of shoes, well greased and ornamented with a pair of small, brass buckles (the latter however to be a present for his good behavior)—a speckled shirt for all the week—and a white one for Sunday—which was always carefully to be taken off as soon as he returned from meeting, folded up and laid by for the next Sabbath."

Franklin once commented that the leather breeches, after several years of wear, became greasy as they grew old and could only be kept flexible when worn, by the superflux of youthful heat.

Thus was Benjamin Franklin, a lad of but 12 years, launched upon a career destined to land him, when only 42 years of age, at the port of wealth and influence, and bring him, in his riper years, greater and greater distinction—not only in his beloved land, but throughout the civilized world.

James Franklin proved to be a mean taskmaster and occasion presenting itself, Benjamin broke the indentures that bound him and though but a lad of 16 years, fearlessly started out to make his way elsewhere.

He arrived in Philadelphia on a Sunday morning in October, in the year 1723, and though his apprenticeship in point of time had been but half completed, he was even then a competent journeyman printer, as well as something of a writer. He found ready employment in the shop of Samuel Keimer, one of the two printers then established in that city. Keimer was slovenly in person and in business, according to Franklin—suspicious and something of a knave withal. This employment was not happy nor did it last long.

The following year a trip was made to Boston at the suggestion of Governor Keith of Pennsylvania, who had become attracted to young Franklin, but who proved to be a very unreliable patron. At Keith's suggestion Franklin sought assistance from his father, Josiah, to the purpose of starting a printing business of his own in Philadelphia.

His father, however, took a dim view of the lad's plans, saying that "Keith must be of small discretion to think of setting up a boy in business who still wanted 3 years of being of man's estate."

Though help was refused by the elder Franklin, advice was generously given, "telling me," as Franklin says, "that by steady industry and prudent parsimony, I might save enough by the time I was 1 and 20 to set me up; that if I came near to the matter he would help me out with the rest."

In December 1724, Franklin sailed for England, again following irresponsible advice and promises by Governor Keith, which were never kept.

The journey was not without profit, however, for he spent nearly 2 years there working for two of London's foremost printers; much improving his knowledge of the business and his skill as a craftsman.

In 1726 he returned to Philadelphia, again went to work for Keimer, for—though still determined to go into business on his own, earnings were neeeded in the meantime.

An incident occurred at about this time of lasting interest, for he fell ill of the pleurisy and in the certainty that he was about to die, he wrote the famous epitaph, which to this day remains one of the most remarkable and widely known writings of its kind. In it he proudly identified himself for posterity with his craft, just as he did later, in his last will—as Benjamin Franklin, Printer.

In the spring of 1728 there was a day to mark the beginning of a new era in the history of printing in America.

The types and press ordered earlier from a London firm by Benjamin Franklin arrived in Philadelphia and were being installed at No. 51 High Street, and the firm name, Franklin and Meredith was hung above the door.

Meredith was a printer in Keimer's shop and a friend of Franklin's. He had been given to overindulgence in drink and Franklin, by advice and example, had redeemed him to a very creditable degree. In gratitude Meredith's father furnished a sum of money, though not wholly adequate, for the purchase of equipment, in return for a partnership—and probably further moral support—for his son. This partnership, however, was dissolved, in 1730, and Franklin became sole owner of the business.

In his autobiography Franklin says that at the time of the beginning of this new firm it was freely predicted that Franklin and Meredith must fail as there were already too many printers in the city. Yet there were only two, one of them Andrew Bradford, the other Samuel Keimer, and neither had the grasp and knowledge of his business possessed by the youthful Franklin.

Franklin did not just hang out his sign, announce that he was in business and wait for customers.

When he and Meredith opened for business, the public printer of Pennsylvania was Andrew Bradford, a dilatory man whose competition had been negligible and only from the highly incompetent Samuel Keimer.

Evidently, the bounty of the public purse was just as alluring in Franklin's day as in our times and political security was then, as now, a dangerous illusion.

Franklin therefore aimed his first competition at Bradford's most lucrative plum, the public printing of the Assembly of Pennsylvania which promptly fell right into his lap.

To use his own words "Bradford had printed an address of the House by the Governor, in a coarse, blundering manner." We reprinted it elegantly and correctly and sent one to every Member. They were sensible of the difference; it strengthened the hands of our friends in the House, and they voted us their printers for the year ensuing.

This, I venture to say, was the beginning of modern lobbying technique in America.

From that year, 1730, until his retirement, Franklin remained the official public printer of Pennsylvania.

In 1736 he clinched the contract by getting himself appointed clerk to the assembly, thus insuring, without interference, the direct transmission of printing orders from the assembly directly to the printer.

This clerkship was Franklin's first political post and his first step in a long career in public service.

Undoubtedly the public printing business was the foundation and side walls of Franklin's Way to Wealth.

At about the same time that he took the job of clerk to the assembly he also broke Bradford's monopoly in the newspaper field.

Keimer, in competition with Bradford's paper, the American Weekly Mercury, had issued on December 24, 1728, his first edition of a weekly called by the impressive title, "The Universal Instructor in All Arts and Sciences and Pennsylvania Gazette."

Within 6 months Keimer was through. He never had over 100 subscribers so he offered the paper to Franklin for what Franklin called a "trifle."

On October 2, 1729, Franklin began publishing the paper with a more reasonable title "The Pennsylvania Gazette." That paper was published regularly until 1815, 25 years after his death.

Franklin was a keen newspaperman. He knew that controversial issues created reader interest, and he has told of controversies he published which, as he says, "Got the publisher and editor talked about by the principal people involved and in a few weeks brought them all in as subscribers."

There is no complete list of books that Franklin and his various partners published from 1728 until 1766, when he sold his interest in the firm to David Hall whom he had taken into a partnership 18 years earlier.

The most reliable count of Franklin's imprints, made about half a century ago, recorded at that time 759 titles.

Next in importance to the public printing were religious works and sermons and books on theology, as a group.

He was not a sectarian publisher and the religious works he wrote, or edited, and published amply covered the field of all sects sheltered under William Penn's "freedom to worship" policy.

Next to religious works and very important profitwise were his almanacs. Of the 759 knows items Franklin published, religious titles accounted for 148 and almanacs for 119 items. Very likely even more have now been accounted for.

One item—Poor Richard's Almanack, regularly published for 26 years, far outsold all of its competitors, but he did not carry all of his almanac eggs in one basket. In one year, 1751, he issued six different almanacs, one in the German language and one in the export field called The Barbados Almanac.

I have mentioned briefly some of the important items printed and published by Franklin but there were other and very profitable items such as forms, letterheads, announcements, and such materials as the job printer and stationer supplies.

In those days it was the custom to print certain business forms, such as bills of lading starting with the words "By the grace of God." Franklin felt that some users of these forms might prefer to have those words omitted so he advertised that he would supply bills of lading with or without the grace of God.

Nor have I accounted for the great numbers of pamphlets which he wrote and printed on the philosophical society, the university, and the library company—all of which he helped to found: on his stove, on electricity, medicine, and on politics.

At 42 years of age Franklin had made amply secure his future, financially, and then retired from active participation in the business so that he might have more time for the increasing burdens of public service and his many other interests.

It may be fairly said that Poor Richard's words of worldly wisdom, his pamphlets, his pen, and printing press did more to mould the new American character than any other influence in his time.

A delegate to the First Congress assembled in America at Albany, N. Y., in 1754, he presented his plan for the union of the colonies, which unquestionably awakened in the minds of the colonists a new national consciousness. Many regard this as Franklin's most significant contribution in behalf of the independence of our country.

George Washington, to whom we refer affectionately as the Father of Our Country, was in that same year, 1754, a lad of about 20 years, mainly occupied with the task of surveying his family's estates in Virginia.

Franklin died at the age of 84 years and 3 months, soon after Washington, at the age of 57, was inaugurated first President of the United States.

I would like to now conclude this discussion of Benjamin Franklin, printer, by recalling, what we must believe he valued among the finest rewards of a life of devoted service to his country and to mankind.

It was a letter that he received on his deathbed, but while he was still in possession of his faculties and ability to clearly comprehend, which I now read:

"If to be venerated for benevolence—if to be admired for talent—if to be beloved for philanthropies—can gratify the human mind, you must have the present consolation to know that you have not lived in vain; and I flatter myself that it will not be ranked among the least grateful occurrences of your life to be assured that, so long as I retain my memory, you will be recollected with respect, veneration, and affection by your sincere friend, George Washington."

Build Up Allies or Enemies?

EXTENSION OF REMARKS
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 18, 1956

Mr. SIKES. Mr. Speaker, under permission granted me to extend my remarks, I request that the attached article by Mr. David Lawrence, entitled "Build Up Allies or Enemies?" which was carried in the January 20, 1956, issue of U. S. News & World Report be inserted in the CONGRESSIONAL RECORD:

BUILD UP ALLIES OR ENEMIES?

(By David Lawrence)

Shall the United States engage in a competition of spending in foreign lands?

Shall our taxpayers write a blank check and leave it to the Department of State to decide where and how much money will be allocated to foreign countries?

Shall the Department of State tell the American people, and particularly the Congress, the facts about each country involved so that the people of the United States may form their own judgment as to the wisdom of the policies proposed?

These questions go to the heart of the issue of granting economic and military aid to other countries in the crusade to avert a third world war.

Speaking last week in behalf of the President, Secretary of State Dulles puts the case this way:

"The present period in history may one day be recognized as a major turning point in the struggle between communism and freedom. It appears to be clearly a shift in the cold war, in which economic and social problems have moved to the forefront."

Mr. Dulles tells of the way the Soviet Union has been "jumping military as well as political barriers" as in India, Egypt, and Burma. He then says:

"We believe that the United States must counter these Soviet efforts. We can succeed, not by outbidding communism in sheer amounts of economic aid, but by making newly independent and newly articulate peoples feel that they can best satisfy their wants by becoming and remaining part of the community of free nations."

This is all right as far as it goes. Perhaps a warning can be read into it that the United States will be interested in helping only those countries which become members of or remain members of the free world. But there is need for further definition and for an explicit statement.

We cannot recognize such a thing as neutralism or neutrality in our foreign-aid program. The phrase "foreign aid" means "aid for the defense of the United States." Unless appropriations can clearly be allocated for such a specific purpose—for the defense of America—the money of American taxpayers should not in all honesty be used merely for a philanthropic enterprise or adventures in competitive coexistence.

As between right and wrong, there can be no neutrality. Nehru of India, for example, condones the murder and torture of American boys in Korea. Nehru, moreover, defends the right of the Soviet Union to commit acts of treason against the United Nations. For it has been formally conceded by the Soviet Union that it furnished arms and ammunition to the North Korean and Chinese Communists to repel the armies of the United Nations.

The obligations of the Charter of the United Nations require fidelity to the principles of peace as opposed to aggression.

Yet Nehru is on the side of the aggressors and wants to reward the Red China Government with a seat in the Security Council of the United Nations.

Why, therefore, should a single dime be spent to help India unless her Government abandons the tricky neutralism of Khrisna Menon, who manages to persuade the naive Nehru to do his bidding?

It's time to face up to the international blackmail to which we are also being subjected in the Middle East. The United States cannot police local wars and disputes. That's the task of the United Nations. But the decision of the Soviet Union to sell arms to Egypt and Egypt's readiness to accept such arms indicates that Prime Minister Nasser is trying to play one side off against the other. That kind of neutralism should not be supported with American dollars.

Prime Minister Nasser is represented as saying he really wants to be with the West but wishes to avoid signing any treaties or making any public commitments to the West. Why?

Vague assurances are not enough. Acts must definitely demonstrate that the nations which profess to be friends are actually on our side and not ashamed of it—and certainly not at the same time playing games with the enemy.

It's time to be realistic. We cannot outbid communism. For the Soviet is making fake bids. We are in the habit of keeping our pledges whereas the Communists make offers but rarely fulfill them.

The policy of the United States should be applied at all times to protect the people of the United States. If American funds can be effectively used abroad for that purpose, let Congress appropriate on a selective basis. Nations which insist on being neutral in the struggle between slavery and freedom and between morality and immorality can do as they like—just as we can do what we like with our own money. For this is a war—whether we call it cold or hot. Our objective is to help build up our allies, not to build up our enemies.

Our motto should be: "Billions for allies, but not one cent for neutrals."

Farm Subsidy Inevitable, but Why Deplete the Soil?

EXTENSION OF REMARKS
OF
HON. HARRIS ELLSWORTH
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 18, 1956

Mr. ELLSWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Chicago Daily News of January 10, 1956:

FARM SUBSIDY INEVITABLE, BUT WHY DEPLETE THE SOIL?

Even before last year's harvests, the Government owned more than 2 billion bushels of grains, 8½ million bales of cotton and comparable quantities of other commodities, including 407 million pounds of cheese. It is against that mountain of surplus food, now costing a million dollars a day merely for storage, that President Eisenhower's new farm program must be read.

Basically, his position is that it is better to pay farmers to conserve and rebuild the fertility of the soil than to mine it by growing unwanted crops.

Since in today's political climate subsidies to farmers in some form are inevitable, we agree with the President that it makes more sense to create a "soil bank" than to deplete the fertility of the land in producing food solely for sale to the Government. For, as Mr. Eisenhower pointed out truthfully, a Government warehouse is not a market.

The President's special message went to some lengths to analyze the growth of the farm problem. He said the initial error was to continue for too long the wartime production incentives. He referred to the price supports at 90 percent of parity, which was simply a way of guaranteeing farmers that they would not lose their shirts by responding to a patriotic appeal to increase production.

The President's motive here seemed obviously to obstruct the plans of some Democratic Congressmen to restore the 90 percent support level.

The somewhat complicated soil bank proposal is two-pronged. An acreage reserve program would offer inducements to withdraw up to 20 percent from land devoted to major crops under the allotment program. A conservation reserve would seek to place additional acres in woodlands or soil-building crops.

For participation in these programs, farmers would receive warrants entitling them to receive, from the surplus board, the amount of produce they would have grown, or its net value in cash.

This is essentially the plan approved by delegates to the American Farm Bureau Federation meeting in Chicago last month. It is designed to reduce the Government's surplus stocks while building the fertility of the soil for future needs, and reducing the over-expanded agricultural plant for the present.

There were other morsels for farmers in the lengthy message: Refunds of taxes on gasoline used in farming; assurance of adequate credit; more money for research to improve crops, and markets. More are to come in another special message on means of stabilizing farm income in the drought-plagued Great Plains States.

On the Chicago Board of Trade, where futures prices are sensitive to influences on the market, the response was hardly more than a yawn. This is probably less of a commentary on the plan itself than a recognition that any farm legislation is going to be subject to a great deal of pulling and hauling in Congress.

The Democratic bid for the farm vote is still to come.

The President's program is assuredly no panacea, yet the judgment of the Farm Bureau is that it is a workable method of attacking the burdensome surpluses. There is already a formidable bureaucracy administering the various programs for the benefit of the farmer, and conceivably the new one would require no great addition to it.

The President made a point of the fact that a way of life for millions of people, as well as our basic industry, was at stake in the farm problem. If it is really the family farm—instead of the industry—that Congress is concerned about it can make this clear by adopting the recommendation for a limit on single payments under price supports.

It is the great farming corporations, many of which collect Government cash high in the hundreds of thousands, which have brought about the revolution in mechanized farming, raised output and cut production costs. We can think of no more reason for the taxpayers to insure their income than to subsidize the cobblers on the ground that we all need shoes.

If it is to be a fixed public policy that several million families shall be kept living on small farms, even thought they can't earn a living there, it would be easier, cheaper and more honest to do it with a direct dole, although that might be harder on the feeling of self-respect and independence than these elaborate subsidy schemes.

It would cure the problem of surpluses, however, for in a free market production would quickly adjust itself to demand. The concern must be for people, not produce.

Address by the Vice President on the 250th Anniversary of the Birth of Benjamin Franklin

EXTENSION OF REMARKS
OF

HON. FREDERICK G. PAYNE

OF MAINE

IN THE SENATE OF THE UNITED STATES

Wednesday, January 18, 1956

Mr. PAYNE. Mr. President, last evening the Vice President delivered an excellent address before the golden anniversary dinner of the Poor Richard Club in Philadelphia on the 250th anniversary of the birth of Benjamin Franklin. I ask unanimous consent that the Vice President's address may be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

TEXT OF ADDRESS OF THE VICE PRESIDENT OF THE UNITED STATES BEFORE THE GOLDEN ANNIVERSARY DINNER OF THE POOR RICHARD CLUB, BELLEVUE-STRATFORD HOTEL, PHILADELPHIA, PA., JANUARY 17, 1956

This is a very special occasion for me for several reasons:

Because I am privileged to share with you the 250th anniversary of the birth of the most versatile, the most complete man in our history, Benjamin Franklin.

Because, at the same time, I share also the golden anniversary of this club, which bears a name which both Dr. Franklin and my mother thought well of.

Because you have so highly honored me by allowing me to join the distinguished group of men and women who have received your gold-medal award in years gone by.

In accepting the award may I suggest that it could have more appropriately been presented to many others, but particularly to one who is in this audience. The citation speaks generously of the contribution to good will and understanding I may have made in serving in my present office. May I be permitted to tell you a little story at this point.

When we returned from our two-and-a-half-months' trip to Asia in December 1953, the President and Mrs. Eisenhower very generously invited us to the White House upon our arrival. As we were sitting in the White House apartment on the second floor enjoying a cup of tea, the President turned to me and said, "I've had some good reports on you, DICK, on this trip." And then he turned to Mrs. Nixon and said, "But the reports on you, Pat, have been wonderful."

Now Benjamin Franklin was a most gallant man. As you recall, on being chided by a lady as to why he had not come to call, he replied, "Madam, I am waiting until the nights are longer." I am sure he would agree that this club would have done better to honor the lady rather than the man tonight. In that spirit, then, I accept this award with humility and gratitude.

And now I embark on one of the most difficult tasks which could confront a speaker.

To speak on Benjamin Franklin before this group is like carrying coals to Newcastle. Or, as Foreign Minister Shigemitsu of Japan, put it when he was here a few months ago, like carrying Sake to Nada. You have had distinguished speakers galore tell you again and again of Franklin's life, his achievements, his priceless anecdotes.

But I should like to consider this versatile man Franklin tonight in his role as a public man and a public servant. Because in addition to his many better-known talents he was a superb political operator. He was a businessman who recognized the importance of politics and public service. He was a governor. He was our first Postmaster General. He was our first Ambassador to a foreign country.

I, of course, would like to claim that he was the first Republican, but the terms "Democrat" and "Republican" in the sense we think of them today were not known to him. I am sure, however, that it would not be inaccurate to state that he was a moderate.

And since leading figures in both political parties see the merits of moderation today, that makes any praise of Franklin which I intend to indulge in completely bipartisan in character.

We have only to read the concluding sentence of his famous speech to the Constitutional Convention which had such a great impact on that historic body to find the true guide lines for moderation.

"I cannot help expressing the wish that every member of the Convention who may still have objections to it, would with me on this occasion doubt a little of his infallibility and to make manifest our unanimity put his name to this instrument."

No one could read or hear these words without agreeing that Franklin was in truth a moderate in the best sense of the word.

Let us now see what advice this infinitely wise man might have for us on the great issues which confront our Government today.

We do not have to look far to find what his position would have been on national defense. It was Franklin who said:

"The very fame of our strength and readiness would be a means of discouraging our enemies, for 'tis a wise and true saying that one sword often keeps another in the scabbard. The way to secure peace is to be prepared for war."

And I can assure you that we are following Franklin's advice today in our national policy.

Today America's military strength, combined with that of our allies, is greater than it has ever been in war or peace. We can, if necessary, with our allies meet and defeat any aggressor who dares to launch an attack.

And I am sure that the great majority of the American people will agree when I say that as long as a malignant aggressive force threatens the peace of the world, the understandable desire we all share for cutting our taxes and balancing our budget must never be allowed to compromise our judgment as to the necessary level of our military strength during this period of international tension.

Franklin also, even in those early days of the Republic, was a full-blown, practical internationalist in every sense of the word. It is true that his famous statement, "We must indeed hang together or assuredly we shall all hang separately," was made in reference to the American Colonies and not with regard to the United States' relations with other countries, but other statements show the trend of his thinking. With amazing foresight, he virtually predicted NATO and the United Nations.

And there is no doubt whatever but that he would have been a strong proponent of reducing barriers to trade between nations and of providing foreign aid when the interests of the United States as well as the countries aided would be served. It was he who said:

"I am sorry to find that that wisdom which sees the welfare of the parts in the prosperity of the whole seems not yet to be known in this country. We are so far from conceiving that what is best for mankind, or even for Europe in general, may be best for us."

I can imagine that if Franklin were here today he might have given us a new definition of an internationalist. I submit one on his behalf. "An internationalist is a nationalist who recognizes that in the final analysis what is good for our friends abroad is good for the United States, and what is bad for them is bad for us."

In line with this definition, may I at this point say some things about foreign economic aid which I think very desperately need to be said and understood by the American people? What I say now has not been cleared with the White House or with the Department of State, but it represents my own personal estimate of a deadly danger which confronts the United States and the free world.

We seldom have any difficulty in arousing the American people to the necessity of providing men and arms to defend the frontiers of our allies against armed aggression. Korea was a prime example of this truth.

And I am sure that if the Soviet Union were to launch an armed attack against Indonesia, Afghanistan, Syria, India—any of the countries of the Far East, Near East, or Africa—the people of the United States would realize that such an attack endangered our own security and would take appropriate action to meet it.

The reason we are so ready to take up arms and send our men to fight on foreign shores is that we recognize that if a potential enemy is allowed to overrun either free or neutral countries our own world position is weakened and we eventually will be next on the list.

What we must realize today is that sinister new means have been developed by the Communists for taking over countries without ever launching armed attack across a border.

Since World War II the Communist conspiracy has added 600 million people and a quarter of the earth's territory to the area which it dominates. The significant fact about this accomplishment is that the gains were made without the loss of a single Russian soldier in combat.

What it adds up to is that the major danger the free world faces today is not defeat in hot war but defeat in cold war—a cold war in which potential enemies undeterred by any moral restraint use political, economic, phychological and other tactics which are just as effective in taking over territory as armed aggression—and much less costly. This is the way the Communist nations operate.

We hear today a chorus of opposition to the so-called "giveaway foreign aid programs" while at the same time we find virtually no opposition to programs which build up our armed strength at home and that of our allies abroad.

But if we examine the problem realistically we will find that the men in the Kremlin are waging not only a great ideological offensive against the free world but a very subtle and economic offensive as well—an offensive in which they are attacking what they think are the weak spots of the neutralist and the free world with offers of economic aid.

They are not making these offers because of any highly developed sense of philanthropy. The realistic men in Moscow know that a country which becomes an economic satellite will inevitably become a political and military satellite as well.

Our foreign aid program is not designed to buy the friendship of peoples in the countries to which our aid is given. That is why both neutrals and allies should share in that program.

What we are trying to do is to shore up their strength so that they can be free economically and politically of any foreign domination—so that they can be independent members of the family of nations. This in the final analysis is the best guaranty of our own freedom and our own independence.

An economic offensive is potentially just as dangerous and in some ways more dangerous than a military offensive which might be launched against us or one of our allies.

If we want to keep our freedom and our independence we must recognize this threat and deal with it imaginatively, boldly, and effectively.

I am sure that Franklin who, in speaking of the benefits of peace, said, "What vast additions to the conveniences and comforts of living might mankind have acquired if the money spent in wars had been employed in works of upblic utility," would have approved wholeheartedly of President Eisenhower's conduct at the Geneva Big Four Conference.

He would have recognized that the millions of the world's people want peace and he would have argued the necessity and rightness of his country being on the side of peace.

And the Geneva Conference which for the first time since World War II got the United States off the defensive and on the offensive on the great issue of peace and did so without one concession of liberty or territory would in Franklin's judgment have been considered a memorable success.

But the man who said, "There never was a good war, or a bad peace," would certainly not have been an appeaser. We must remember that he was a revolutionary leader. It was he who said, "They that can give up essential liberty to obtain a little temporary safety deserve neither liberty nor safety." Surely we can find no better guideline for our conduct in the world conflict which engulfs us today.

He would have been proud to have read and heard the statement the President made recently on the subject of the captive countries. "The peaceful liberation of the captive peoples has been, is, and until success is achieved, will continue to be a major goal of United States foreign policy."

In summary, I rather imagine that Franklin would have approved wholeheartedly of President Eisenhower's recent statement—"We must wage peace with our eyes open, our heads cool, and our tempers well under control, yielding neither to Soviet threats or Communist blandishments in our crusade for a free, peaceful, and prosperous world."

I believe too that Franklin would undoubtedly have approved of good will trips of every type and description. He was himself a man of infinite good will, beloved in every country to which his journeys took him.

And it was he who uttered these eloquent words, "I think it cannot but have a good effect in promoting a certain interest too little thought of by selfish man, and scarcely ever mentioned, so that we hardly have a name for it; I mean the interest of humanity, or common good of mankind."

I personally again can testify to the truth of his statement. It has been my privilege to visit 30 countries in the past 3 years and I have no doubt whatever but that as people know each other the prejudices which otherwise would drive them apart will inevitably melt away. I had heard before I visited these countries how different the people of each nation I was to visit were. These people were supposed to be reserved, others were supposed to be arrogant, others were anti-American.

But I found that while there were differences in food, religion, customs, and languages, a smile, a handshake, a friendly gesture, got the same reaction abroad as in the United States. That was true everywhere we went in Asia. And, in Latin America my memories are full of gestures of good will.

And may I say that one of the reasons I am particularly moved by receiving this medal tonight is that this organization recognized the importance and the contribution that can be made by public officials when they go abroad offering no treaties, no arms, no economic concessions, but simply an abundance of American good will.

This very practical man would have had some appropriate comments on some of our more mundane but nevertheless important domestic problems.

I am confident that the subject on the domestic scene which would have fascinated him the most would be the current controversy which is developing over automation. There are a number of reasons for this conclusion.

Franklin invented all types of labor-saving devices. A machine to copy letters. A long arm for taking down books from high shelves. A rocking-chair with an attachment which caused a fan above the chair to move rhythmically back and forth cooling the sitter and shooing the flies.

He was a man who valued time more than any man in history. It was he who said, "Lose no time, be always employed in something useful, cut off all unnecessary action."

He even carried his passion for saving time to extremes which might not be approved in some quarters. He noticed that it always took a considerable time for his father to ask the blessing at the dinner table. He studied the situation and came up with this ingenious idea. He suggested to his father that he could bless all the food in the barrels at one time and thus save the time of blessing each portion of it at the table.

Rather than engaging in gloomy predictions as to unemployment and dislocation which might be caused by further automation, he would probably have pointed out these salient facts:

There has been no significant rise in unemployment in these days when automation is increasing.

On the contrary, employment, wages, and income for America's workers are the highest in history.

There is no appreciable unemployment in those industries in which automation is furthest advanced: chemical, electrical, communications, and automobiles.

And looking to the future he would have noted these facts:

Today the labor force includes approximately 42 percent of our population.

By 1965, it is estimated that it will be less than 38 percent of our population at that time.

On the other hand, the number of nonproductive persons will have increased from 34 percent of the population to over 49 percent in the same period.

These percentage figures are based on a projection by the Bureau of the Census which indicates that by 1965 the total population of the United States will increase about 25 millions while at the same time the number of persons aged 26 to 64 will increase by only 8 millions.

This brings us to an inevitable conclusion. The only way to make up this growing difference between the relative number of workers and consumers is by better management of the Nation's productive resources. It will not be enough to go on doing as well as we have done. We will have to do much better, and that means we will have to have much more automation.

I am sure Franklin would have gloried in this situation. He would have seen that here is truly a new frontier for America, and, with that gentle humor of his which always glowed but never seared, he would have laughed out of court the prophets of doom, the reactionaries who see such grave consequences in this new vista of progress for America and the world.

All in all, considering the manifold problems of the diversive regions, groups and interests in America, we can be sure that Franklin above all would have been a true statesman. It was he who said, "To serve the public faithfully, and at the same time please it entirely is impracticable."

I think that he would have been immensely proud of another man of good will, one of whose actions I would like to describe briefly to you now.

This is an incident which occurred in a Cabinet meeting. It is not necessary to identify the bill involved or the people involved because this incident is so typical of the man who heads our Nation today. A question arose as to whether he should veto a bill if it passed Congress. Though the bill would cost several millions more than everybody in the President's Cabinet believed should be appropriated for the particular purpose, one of those present urged that he not veto the bill on the ground that history showed that vetoes by previous Presidents of such bills had proved to be politically damaging because of the political power of the group favoring the bill.

The President looked him straight in the eye and said: "I have studied the history of such bills also and I agree that in the short run such veto action may have been politically unwise. But I have always found in my life that you never get into trouble in the long run doing what is right, and I am not going to be black-jacked by any group in America to do something which I do not think is in the best interests of all the American people."

I am sure that Benjamin Franklin would say that this kind of statesmanship which we have learned to expect from our great Presidents, both Republicans and Democrats, is what has made America the great country it is today.

Of course, I realize that up to this time I have not commented upon the major political question of the day, and I must admit that even Franklin on this subject appears to be somewhat inconsistent. On the one hand he said, "The first mistake in public business is the going into it." But then again he said, "I shall never ask, never refuse, or never resign an office."

All that I can say is that I know that 32 million Republicans and Democrats who voted for President Eisenhower are hoping and praying that he will see fit to follow the advice Franklin gave in the second quotation rather than the first.

Finally, tonight, I think that your great Philadelphia philosopher would have had little advice for me.

A careful reading of most of what he said unfortunately shows no direct advice to public speakers. But after reading and rereading source materials, I finally ran across this gem: "It is ill manners to silence a fool, and cruelty to let him go on."

Now I don't mean by this quotation that Franklin meant that all Vice Presidents and/or orators are fools. And I know the members of the Poor Richard Club in this City of Brotherly Love could never be cruel or rude.

But I do know that Franklin, a man who loved life, good humor, and good fellowship, with the knowledge of the delightful entertainment that is to follow the speaking part of this program, would say, "Anyone who talks any longer at this point is a fool."

So may I conclude my remarks by saying to you again—

Thank you for the honor you have conferred upon me through your award.

Thank you for the privilege of allowing Mrs. Nixon and me to share this historical event with you.

And may the years ahead for each of you be filled with the wisdom, the good humor, the great humanity with which the creator of Poor Richard was so abundantly blessed.

Address by Hon. Alexander Wiley, of Wisconsin, at Marshall College

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, January 18, 1956

Mr. WILEY. Mr. President, on Monday it was my pleasure to address a forum at Marshall College in Huntington, W. Va., on the subject of the administration's foreign policy in the European area.

I was pleased to share the platform with my distinguished colleague from Minnesota [Mr. HUMPHREY], who discussed the problems of our relations with Asian lands.

I send to the desk the text of my own address, and ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SENATOR WILEY COMMENDS EISENHOWER ADMINISTRATION FOREIGN POLICY; SAYS NONPARTISAN UNITY MORE ESSENTIAL THAN EVER BEFORE; URGES DEMOCRATS MAKE THEIR CONSTRUCTIVE CRITICISMS, IF ANY, "MORE SPECIFIC"

It is a pleasure for me to address this fine assembly, and to share the platform with my colleague from my neighbor State of Minnesota.

One of his many important services these days is his chairmanship of an exceedingly important subcommittee of the Senate Foreign Relations Committee, devoted to the vital problem of disarmament proposals.

SENATOR HUMPHREY'S POSITION AND MINE

My colleague has become somewhat of a specialist in disarmament. But I trust that when he gets around to any references to the Democratic Party, that his remarks tonight will not prove too "disarming."

Seriously, I know that you will enjoy his remarks, because Senator HUMPHREY has shown great interest in the problems of Asia and real understanding, just as he has been very alert to our problems in Europe as well.

Before I proceed further, may I say that, although my good friend from Minnesota and I have frankly disagreed at times on some domestic issues, we have voted side by side and fought, shoulder to shoulder, on some of the key international questions of our time.

We have both been supporters of the basic policies aimed at constructive American leadership in the contracted world of the air atomic age.

We have both fought against those narrow, backward-looking forces which, ostrich-like, would try to "bury America's head in the sand."

We have both fought for a strong technical aid program to uplift the standards of living in the under-developed areas of the world. And I could cite other instances of our unity as well.

Later on, I shall refer to the points on which we differ somewhat—points which will become apparent to you, as we both proceed to the substances of our remarks.

EUROPE—A KEY TO THE WORLD BALANCE

But first, let us turn to the European area, as such—Europe, the industrial, political, and cultural cradle of our own Western civilization, Europe—the area of our principal ancestry, Europe—the principal arena of the forces that have molded the 20th century.

It is in Europe that communism first established its beachhead. It is in Europe that it gained its home base for aggression. It is in Europe that it made its first spectacular advances. It is in Europe that it posed its most serious threat after World War II. And it is in Europe, where, thanks to the Marshall plan, NATO, and now the Western European Union, that a rough equilibrium has been achieved, stopping communism, at least temporarily, in its tracks.

Most observers, I think, would agree that our most impressive successes in postwar foreign policy have tended to be in the European area, whereas our most significant and ominous problems tend to be in the Asian area, to which Senator HUMPHREY will refer.

EUROPE, ASIA INTERRELATED

Europe and Asia are hardly disconnected, however. They can hardly be spoken of, as if they were separate problems.

Although I shall confine my own remarks principally to the European area, as requested, it is almost inevitable that some of my comments will lap over into the Middle East, Africa, Asia, and, indeed, South American areas as well, just as will Senator HUMPHREY's comments overlap somewhat.

One cannot talk, for example, about continued prosperity of Great Britain without referring to her considerable dependence upon pound sterling earnings in the troubled Middle East and southeast Asia.

One cannot talk about France, without immediately bringing up the sore problem of self-deterioration in North Africa.

One cannot speak in terms of our NATO relations, without almost automatically bringing up problems of our relations with the colonial and former colonial areas which belong now or used to belong to some of the NATO powers.

Obviously, the world today is an interrelated unit—economically, politically, militarily, socially. Of course, this world is divided by the still formidable Iron Curtain. Nevertheless, a solution to our problems in Europe is crucially dependent upon success of our decisions in other areas, and vice versa.

Thus, when you think about our relations with our friends in, say, Portugal, it is more than a European problem. You must also bear in mind the problems of our relations with our friends in India and the specific, difficult problem of Goa.

You must think, however, as well, of those crucial Azores bases—belonging to Portugal—which are an indispensable link in our own Atlantic chain of defense.

KEEP BROAD PERSPECTIVE

We need, therefore, to keep an overall and broad perspective.

A segmented view of the world—a view of merely Asia's or Europe's problems—all by themselves—may tend to be narrow and distorted.

Our problems are complex and interwoven. We dare not ignore dangerous side-effects and after-effects of our European actions in Asia, nor of our Asian actions in Europe.

A BALANCE SHEET OF EUROPEAN POLICIES

Now, let us draw up a balance-sheet in Europe.

What does it show? How successful have our policies been there?

I believe—very successful indeed, although obviously far from perfect.

On the "plus" side of the ledger, our achievements in Europe have been:

1. The coming into being of the Western European Union, as a substitute for the European Defense Community.

WEU is not a perfect substitute, but it is an effective wroking alternative for achieving greater unity, principally between those two traditional enemies—France and Germany.

2. A second success is the reentry by the people of Germany into the family of sovereign nations.

Unhappily, it is only the people of the Federal Republic of Germany, that is, West Germany. But we are continuing our efforts looking toward the earliest possible unification of both zones, along free and democratic lines.

3. The regaining by the people of Austria of their long-sought independence.

4. The settlement of the bitter Italian-Yugoslav dispute over Trieste.

5. Progress under the High Coal and Steel Authority, and steps toward other economic integration.

6. The taking of the necessary steps to bring into being the United Nations Atomic Agency. These steps have been spearheaded by the Atlantic powers which have made the most progress in peaceful application of atomic energy. But non-European powers are of course also included.

7. The continued strengthening of the North Atlantic Treaty Organization, including efforts, most recently, designed to lead toward a NATO radar system.

8. The entry of additional free European powers into the United Nations, including countries such as Ireland, Italy, and Spain, which had heretofore been arbitrarily excluded by Soviet veto.

9. The continued booming prosperity of Western Europe which, while it is occasionally marred here or there, has been surpassing almost all prewar records in production and consumption.

These are a few elements of the positive side of the ledger. These are the assets, the gains, the pluses.

THE PROBLEM SIDE OF THE LEDGER

No one should, however, ignore the continuing difficulties.

1. Foremost among those difficulties is, of course, that faced by our friends in the uneasy Republic of France.

You are all familiar with the serious parliamentary deadlock between the forces of the right center and the left center, led respectively by former Prime Minister Faure and former Prime Minister Mendes-France.

You recognize how the diabolic Communists will continue to attempt to throw the monkey wrench into France's parliamentary system, by virtue of the fact that they now command 145 seats in the French Assembly out of 594. You recognize too, the unsettling effect of the 52 Assembly votes on the extreme right.

2. Secondly, you are familiar with the disarrangement of the Saar agreement by the recent pro-German votes.

The Western European Union is, of course, hinged on French-German agreement on the Saar.

So, a great deal more must still be done to patch up the obvious differences which have occurred in that iron- and steel-rich area.

THREE DANGERS IN NORTH AFRICA

3. Thirdly, everyone is all too aware these days of the threat posed to the Atlantic powers by the continued serious disturbances in North Africa, particularly in Morocco and Algeria.

The riots and fighting there are not only of grave concern to our French friends, but are of particular concern to ourselves in view of three facts:

(a) The strategic stake which we have in the areas because of the presence of our Strategic Air Command bases. (These bases, I need not remind you, are a crucial part of America's principal deterrent against world war III.)

(b) The dangerous effect of the disturbances on the whole Moslem world—stretching from North Africa through the explosive Middle East—through Pakistan and all the way to Islamic Indonesia.

(c) The fact that France has drained off 300,000 troops for North African duty, and thus has seriously depleted NATO strength in Europe.

DEPRESSED AREAS IN ITALY

4. Another of the continuing problems is the fact that in some areas in Europe, there are still considerably depressed segments of national economies.

The principal example is, of course, in our good ally, Italy. There, in spite of an enormous financial commitment by the United States, and in spite of strenuous efforts by the Government, a vast unemployment problem continues to exist. Meanwhile, land redistribution in Italy has not achieved anywhere near its fullest goals, and there is considerable want and privation among many of the Italian people, especially in the south.

HOW LARGE SHOULD NATO'S GROUND FORCES BE?

5. Another key question relates to NATO's adequacy in the light of changing facts of the air-atomic age.

We must remember that the ground area of Western Europe is actually comparatively small.

That means that supersonic jet planes—fighters and bombers—could streak from Soviet bases across the entire NATO area in a matter of minutes and hours.

Moreover, the Soviets are constantly modernizing their armed forces. And so, we have an enormous problem in terms of modernizing NATO forces, as well.

NATO weapons are quickly becoming obsolete. The question is: Who is to foot the new bill? How much can Uncle Sam afford to provide?

A related question is: How large should NATO's ground forces be, considering the fact that the principal threat to NATO may come from air-atomic weapons, rather than from the traditional-type infantry—ground assault?

Inevitably, the Western European countries find themselves pinched in their military budgets. Inevitably, there is pressure to reduce the size of their ground forces. (This is so, particularly, in view of occasional Soviet smiles and sweet talk.) One can see the impact in virtually every one of the NATO powers. Thus, in some of these powers, there is a tendency drastically to shorten the period of military enlistment, indeed, to make it so short that the men may not have sufficient specialized training at all.

PARLIAMENTARY PROBLEMS IN THE WEST

6. We turn to a sixth problem, relating to recurrent parliamentary crises. Even so relatively stable a country as Britain—which has had only 3 changes in the postwar era, in comparison to France's 22 governments since 1945—even Britain has had her parliamentary conflicts.

Prime Minister Eden, for example, has found himself in difficulty because of a combination of crises in the Middle East—where Britain has traditionally exerted a paramount influence—and because of the United Kingdom's serious economic problems as well.

OUR REVIEW OF THESE PROBLEMS

These, then, are but a few of the problems which exist.

No one should underestimate these problems. Senator HUMPHREY and I, as well as our colleagues on the Senate Foreign Relations and House Foreign Affairs Committees, "wrestle" virtually every week with these problems.

Very shortly we will be making an intensive review of the administration's mutual-security requests for the coming fiscal year; and, no doubt, many of these specific problems will be coming up.

THE CONTINUING CRISIS IN MIDDLE EAST

Also looming large will be the continuing crisis in the Middle East.

I need not tell you that a match which might be lit near that powder keg could explode in a manner which might quickly engulf not only Europe, but Asia and the Western Hemisphere as well.

Secretary Dulles has, of course, been making an intensive effort to compose the bitter Arab-Israeli dispute. Progress has been made. Agreement has been approached on Eric Johnston's Jordan water-development plan. But obviously a great deal more constructive work still needs to be done.

THE PROBLEM OF FOREIGN POLICY AND NOVEMBER 1956

This, then, for brief summary purposes, must be our general outline of the situation in Europe.

In the few moments which are remaining to me I should like to say just a few words with regard to the relations here at home between the two political parties over our foreign policy.

No one need remind you that in this crucial election year of 1956 it is inevitable that both parties may, to some extent, try to use foreign-policy arguments to their own advantage.

It is inevitable that the Eisenhower administration will "hold with pride," and that some of our Democratic friends may tend to "view with alarm."

It has been my hope (indeed it has been the hope, I believe, of most thinking Americans) that we can keep partisan disputes on foreign policy to an absolute minimum.

We must keep the argument to manageable proportions. We must not allow foreign policy to be completely dragged into the political arena, where it might be kicked around to such an extent that America's prestige declines throughout the world.

The eyes of all mankind are upon us. Our friends are not slow to note our shortcomings, and our enemies are quick to seize upon our shortcomings.

GENERALIZED CRITICISM OF FOREIGN POLICY

Now, let me say just a word with regard to some of the criticisms which have been leveled against our foreign policy.

One quickly notes that one uniform characteristic of these criticisms is that they have really been confined to generalities and not to specifics.

Occasionally the criticisms become specific. One example is the hindsight possibility that we might have become involved in the Indo-Chinese fighting at the Communist siege of Dien Bien Phu.

Well, a lot of things might theoretically have happened in the past and a lot of things might theoretically happen in the future. This is a world of alternative risks and dangers. We could spend time indefinitely discussing risks which we took in the past or alternatives which we might have taken, but didn't.

THE SURPLUS OF ABSTRACT ADJECTIVES AND ADVERBS

Basically, however, as you read most of the Democrats' criticisms, you will see that generally our Democratic friends merely say, in a completely unspecific way, that our foreign policy is "not clear enough." And they use dozens of other abstract adjectives and adverbs as well.

When you try to pin them down, when you try to ask them for their own constructive counterproposals, when you ask them what they would actually do, differently than what we are not doing now, there is a comparative silence. I say "comparative," because silence is not a noun generally associated with the Democratic Party. Basically the Democrats do not really have specific alternative plans to the ones which the Eisenhower administration is now following. The Democrats want us to achieve all of these "lovely" adjective goals which they set forth—flexibly, dynamic, etc.—but they do not tell us how—concretely.

Let me assure you that I, for one, very definitely want our foreign policy to be clear, dynamic, flexible, and so forth.

But I believe that right now it basically does strive for these objectives. And I believe that no two people are working harder for those goals than are Dwight D. Eisenhower and John Foster Dulles.

DEMOCRATIC ADMINISTRATIONS ESTABLISHED PRESENT OUTLINES

Lest my position be misinterpreted, let me quickly state that this Nation is indebted to the previous Democratic administrations for the broad outline of leading policies which have proven successful in Europe and emphasized in Europe.

This Nation is indebted to an ex-Secretary of State like Gen. George C. Marshall, who recently observed his 75th birthday. And it is indebted to other men of great stature who served this Republic well in the field of foreign relations during the long period of Democratic occupancy of the White House and control of the Congress.

It is my hope that, thanks to the great talent and ability of both major parties, we will continue to make a success of our policies in Europe, as well as in Asia, and elsewhere.

PRINCIPAL THREAT TODAY IN ASIA

In my judgment, the principal Soviet threat today is not in Europe. It is in the Asian theater, where conditions of colonialism, of widespread poverty, illiteracy, and disease provide ripe opportunities for communistic intrigue. About this we shall hear more from our good friend from Minnesota.

CONCLUSION

It has been a great pleasure to be with you tonight, and I look forward to the opportunity to respond to your questions.

The Problem of Seizing the Foreign Policy Initiative From the Communists

---

EXTENSION OF REMARKS

OF

HON. FREDERICK G. PAYNE

OF MAINE

IN THE SENATE OF THE UNITED STATES

Wednesday, January 18, 1956

Mr. PAYNE. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD an article entitled "Eisenhower Should Lead the Godly Against the Reds," which appeared in the Portland (Maine) Press Herald of January 6, 1956.

This article, which was written by May Craig, offers a bold and constructive approach to the problem of how to seize the foreign-policy initiative from the Communists. It should be read by all thoughtful Americans concerned with the problem of how best to combat the campaign of distortion and deceit which the Communists are waging against the free world.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

INSIDE WASHINGTON—EISENHOWER SHOULD LEAD THE GODLY AGAINST REDS

(By May Craig)

WASHINGTON, January 5.—Now that the Kremlin and the White House are blasting each other—last remnants of the Geneva ghost blown out the window—why should we not start on a little positive policy of our own? About all we do is to react to the Reds. They are positive enough. They lead us around by the nose for all the world to see. This makes the wavering small nations decide they better get on the Red side, though they do not want to.

Bulganin and Khrushchev went off to Asia and said anything that they thought would please the Asians. They pushed down hard on the colonialism pedal, never mentioning the dread Communist type of colonialism that the Reds impose anywhere they get a foothold.

They told India that India should have Kashmir, which is a part of Pakistan and where most of the people are Moslems and do not want to live under Hindu India. The Reds told Indian that India should have Goa, a small province of Portugal on the edge of India. They offered money and arms and steel mills and atomic plants and anything else they could think of. Now, we may start bidding in this auction. This will cost us money, and the offer costs the Reds nothing. We don't want Reds swarming in as experts along with the mills and the dams and the arms, so we will react by bidding, as in Egypt.

One thing we could do is to rally all the people who believe in religion. The Communists dare not have a god, or a religion, because people must follow the Communist Party line, and not their conscience or the commandments of God or the prophets. This is something that East and West have in common, religion.

In addition to arms and surplus foods and dams and steel mills and NATO and SEATO and U. N.—why does not President Eisenhower call on all nations of virtue and religion to join against the godless Bolshevik.

Christian, Jew, Hindu, Moslem, Buddhist—let all the people of the world who believe in God or gods, or religion of any sort, band together and fight this atheistic materialism of communism.

Let our President lead the holy war if you want to call it that. Let him summon the moral forces as we have summoned the democratic forces. We believe in freedom and in democracy—why do we leave in the scabbard the great weapon we have, the weapon of religious belief?

The Russians are going around the world seeking to gain the alliance of people who need the material things she promises—in the very same breath that Russia condemns the capitalism of the United States which shows the world the greatest production of material things. Where we have surpluses of food, the Communist countries have deficiencies. Where we have comforts, they have shortages. We tell the world about our material advantages, we give them bread.

Why not begin a crusade against communism which has said, over and over again, that religion is the opiate of the people? That would be something positive—something the Russians could not match, because godlessness is essential to communism and the all-mighty state.

Instead of merely reacting to what the Communists do, offering a merely negative bidding against what the Russians offer, why not offer the only thing they cannot match without destroying themselves?

When we talk of material things we run into financial arguments. When we talk of democracy and systems of government, we run into arguments.

India is a religious country—it nurtured a Ghandi. The Moslems are among the most religious people in the world—their religion is imbedded in their daily life. The Jewish religion is a way of life. The Buddhist religion is one of the purest and loftiest in the world. Why should not this great power be harnessed against the ruthless power that would destroy religion as it would destroy freedom?

Instead of the Pope's talking about abolishing nuclear warfare, which would delight our enemies, who would then proceed with other kinds while they stored up their nuclear weapons till ours were destroyed, the Pope could join a religious war on the Communists with all the power of the Roman Catholic Church. Remember that some years ago we scrapped a lot of perfectly good naval ships because we had a disarmament agreement? Nobody else destroyed anything and when the Japanese decided they didn't want to keep down to their quota in the pact, it all went out the window and we had to build new battleships.

Nehru, of India, Nasser, of Egypt, the King of Saudi Arabia, the Greek Catholics of Russia itself, the Buddhists and the Shintoists, the Jews everywhere—all could join this moral and religious war, without infringing on their local quarrels. Only the Communist political philosophy could be hostile to a mobilizing of the religions of the world. It could be a link to bind free people together, because all the children of God, all those who believe in the path, and a good way of life, could come together to fight the godlessness of communism. Godlessness is necessary to communism; that is why they have the League for Militant Godlessness in Russia. Why not a League for Militant Godliness?

M. L. Benedum: The Oilman of the Century

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Wednesday, January 18, 1956

Mr. MARTIN of Pennsylvania. Mr. President, it was my privilege on October 12 last to take part in honoring a great American whose distinguished achievements have brought him worldwide fame. On that occasion, in the city of Pittsburgh, I had the pleasant task of presenting to Mr. M. L. Benedum a plaque designating him as the oilman of the century.

This was a proper and richly deserved tribute paid to Mr. Benedum by the Allegheny County Oil Industry in its observance of Oil Progress Week.

It was a testimonial of love and respect for a man whose vision, courage, and rugged individualism have made him famous as the "King of the Wildcatters."

His outstanding career renews our faith in the traditional American system of free enterprise. It was that system which caused men like Mike Benedum to go into all parts of the earth in search of oil to lighten the burdens of humanity and to stimulate progress for world betterment.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD my remarks in presenting the plaque to Mr. Benedum, and also his most inspiring words of acceptance.

There being no objection, tht matters were ordered to be printed in the RECORD, as follows:

REMARKS OF UNITED STATES SENATOR EDWARD MARTIN, OF PENNSYLVANIA, IN PRESENTING TO M. L. BENEDUM A PLAQUE DESIGNATING HIM AS THE OILMAN OF THE CENTURY AT THE OIL PROGRESS DINNER OF THE ALLEGHENY COUNTY OIL INDUSTRY INFORMATION COMMITTEE, IN THE WILLIAM PENN HOTEL, PITTSBURGH, OCTOBER 12, 1955

It is always a pleasure to join in honoring a distinguished American for outstanding achievement.

It is a proud part of our American heritage that a long list of men of humble origin have led this Nation to great heights.

That is the essence of American progress. It is made possible by freedom of the individual, strengthened by freedom of enterprise and supported by individual responsibility.

Reward for individual effort is the foundation of the greatness of our economic system. It is the right of every American to acquire and own property and to enjoy the fruits of his labor, energy, and initiative.

This concept of individual freedom, written into our fundamental law, made America a land of opportunity. It holds out to the youth of our land equal opportunity to reach the highest place in every activity that upholds the American way of life.

Our paramount obligation as free citizens of our great Republic is to keep it that way. It is our responsibility to keep alive the freedoms and the opportunities that have made the United States the greatest Nation on earth. It is up to us to leave to future generations the same kind of America that we have been privileged to enjoy.

The man we honor tonight is a brilliant product of those priceless American assets—freedom of the individual and freedom of enterprise.

By his own efforts, without social or economic advantages, he reached the pinnacle of success in the toughest and most hazardous form of industrial enterprise—the search for oil.

Those of us who have followed his brilliant career have some knowledge of the great personal and financial risks involved.

We know of the dangers and the hardships that are encountered by those who venture into the most inaccessible places of the world in the hope that oil might be found. We know of the disappointments and discouragements that are part of this extremely uncertain business.

Those were some of the obstacles that gave way before the vision and driving energy of our guest of honor. Every new venture differed from from the other. Every one brought new and more difficult problems to be solved.

But determination, resourcefulness, and hard work won out and in 60 years of wildcatting M. L. Benedum has brought in more producing oil wells from wildcat territory than any other man in history.

We honor him tonight because his rugged individualism will live as an inspiration to generations far into the future.

In him are represented all the finest elements of our national strength and character—faith, vision, courage, integrity, hard work and devotion to the public welfare.

We do not measure the worth of an individual by the dollars he has accumulated, but rather by his service to his fellow man. In that respect I can find no better example than his own words which sum up the noble philosophy by which he lives.

Last July, when interviewed by newspaper reporters on his 86th birthday, Mr. Benedum said and I quote:

"I have always felt that I am merely a trustee of money and that it is my responsibility to use it in the public interest."

No words of mine are adequate to express our high regard for Mr. Benedum. Nor is it necessary for me to dwell at length on the love and esteem in which he is held by this group of his warmest admirers.

He has richly earned all our praise and gratitude and it is a high privilege, on behalf of the Allegheny County Oil Industry, to present to you, Sir, Mr. Benedum, this plaque which rightfully and properly designates you as the "Oilman of the Century."

REPLY OF MR. M. L. BENEDUM ACCEPTING PLAQUE DESIGNATING HIM AS THE "OILMAN OF THE CENTURY"

Mr. Toastmaster, Senator MARTIN, ladies, and gentlemen, I am indeed grateful to this fine group of the oil fraternity for the honor you have conferred upon me, and for this beautiful plaque. I am also grateful to this truly great American, Senator MARTIN, for his gracious and generous remarks.

I have been in the oil business for 65 years and sometimes I feel that I have not learned too much about it, but I have learned a lot about the people in it. In the early days many of the men in the oil business were real diamonds in the rough. Underenath, however, they had honor, integrity, and a high sense of dignity. They respected their obligations, they kept their word, they tried to improve the lot of their more unfortunate fellow men. In short, they lived up to the highest concept of Christian citizenship.

There have been great changes in the business since I started in it, but the oil man still retains those traits which mark the real measure of a man. His word is still his bond. He still believes that a man's wealth is calculated in terms of the confidence and respect of his fellow men rather than in dollars.

Please believe me when I say to you I would rather have the confidence and respect of the men and women of the oil industry than of any other group on earth.

Science and invention to a great extent have pointed the way to all of the progress of the last century so we must give much credit to the scientific men. It is their genius that has sparked the fantastic progress in oil as well as in all American business.

As an oil man, I am proud that our industry has more than kept pace with the industrial revolution. It has been out front most of the time, blazing a trail for the others to follow. There is scarcely a single thing that has been developed in the last 50 years that has not required oil to help in its completion and in many cases it is necessary to use it for its operation. (Take for instance the auto, the aeroplane, and all kinds and characters of machinery that we use daily.) In fact, as I see it, oil is the mainspring of our industrial life. Did you ever stop to think that the economic and social progress of the last 75 years has been in direct ratio to the consumption of oil? The more oil people use—the better they live.

I often wonder what would happen in the world if oil should be suddenly taken from us.

If it were given me to live my life over, I would still want to be an oilman. I am grateful to providence that either through lucky chance or divine guidance I became an oil man.

Several days ago, a Washington newspaper man asked me how I, at 86 years of age, occupied my time. I replied, "I expect to pass through this life but once: I have already lived 16 years beyond the allotted time; I have lived to see most of my associates and loved ones leave; therefore, I now live for those left whom I love; I live for the tasks which God has assigned to me, and for the good that I may be able to do for others."

Again, I thank you from the bottom of my heart for the honor you have conferred upon me tonight. I shall always cherish this beautiful plaque and the memory of this pleasant occasion. God bless you and good night.

Present Agricultural Policies—A Historic Choice

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Wednesday, January 18, 1956

Mr. JOHNSON of Texas. Mr. President, many people today are doing some hard thinking, and some constructive thinking, about the problems of our farmers. The farm situation is bad and getting worse. Here in Congress we need and welcome suggestions from the American people as to how that situation can be improved.

Such a suggestion has reached me in the form of an editorial written by Walter Malec, editor of the Hallettsville, (Tex.) Tribune. This is a semiweekly newspaper published in the heart of a rich Texas farming area. Mr. Malec knows at first hand the nature of the farm problem. He sees what is happening to his friends and neighbors, and he is deeply concerned.

In order that all Senators may have the benefit of Mr. Malec's words of wisdom on this subject, I ask unanimous consent that his editorial be inserted in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A HISTORIC CHOICE

Congress will again have its historic choice.

It can go on subsidizing big farmers as they have been. That's what the present farm policies were doing. This especially in one of the ungraduated allotments, and only in acres, instead of also in lint.

That's what the soil bank will keep on doing. Big farmers get most of the cotton money, including most of the cotton loans. Hence they will be getting most of the soil bank money too.

The soil bank is what the big farmers want and what they will get.

Favored as they have been, the big farmers were prospering and growing in numbers, while the family farmers were going down as never before. Texas alone lost half of its farm population already and will keep on losing. This has been one choice so far.

Or Congress may take the other choice. Instead of subsidizing the big farmers, it may treat the family farmers as the foundation of this country, as they are.

No special favors are needed or asked. Just the same commonsense as in the income tax, making the cotton allotments too graduated.

Since it's the bales that count at the end, why not the bales at the beginning—in the allotments? Why not consider the lint, as well as acres in figuring the allotments?

Also, why not free our cotton of its artificial handicap? Why not sell at the market price? Not merely a domestic allotment, but sell at the market price both abroad and here—to sell more cotton.

And why not pay the parity separately, limited more to the family farmers—to have more farmers?

This would not cost half as much as the soil bank would. And it would be safe and natural. It would be also a natural answer to our surpluses.

If Congress goes on subsidizing big farmers, that's what this country will have. We'll have mostly big farmers—and big cities. With small farmers also our small towns are bound to go down.

Today Congress is subsidizing big farmers. Tomorrow it will have to subsidize—one way or other—those people driven from farms into big cities. They will still have votes and power to get almost anything they want.

This talk of big farms being more efficient and the age of small farmers being gone, should fool no one. Communists evidently feel the same way when wiping out small farmers and making workers out of them.

Congress needs only stop the policies destroying small farmers.

As Senator LYNDON B. JOHNSON warns, "So many farmers are moving to the cities and so few young people stay on the farms. It's bad—very bad."

It's very bad indeed—far worse than the people, the press, and Congress generally realize so far. That's the core of our farm problem. And the soil bank will not even touch this problem.

Accomplishments of the Army National Guard and Air National Guard

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Wednesday, January 18, 1956

Mr. MARTIN of Pennsylvania. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Guard and Defense," written by Hanson W. Baldwin, military analyst and published on January 13, 1956, in the New York Times. In view of the intense interest of Congress in National Guard and Reserve programs, and the critical nature of recent reports in the press of the Nation, it is indeed refreshing to note the recognition extended by such a distinguished military writer to the programs and accomplishments of the Army National Guard and Air National Guard. This is particularly true because of the unfortunate manner in which the accomplishments of the Army National Guard and Air National Guard have been overlooked by those who have been greatly concerned over the lack of an adequate, well trained, strictly Federal Reserve. The Army National Guard and Air National Guard constitute our most potent reserve force in being and, with the continuing guidance and support of the Congress, will continue to show outstanding progress.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Times of January 13, 1956]

GUARD AND DEFENSE—A COMPARISON OF ITS GROWING MIGHT TO WEAKNESS OF ARMY RESERVE FORCE

(By Hanson W. Baldwin)

The investigation by Congress of the Nation's military reserve forces will be able to detect one ray of sunshine in the Pentagon's package of gloom.

The National Guard, part of the country's first-line Reserve forces, is in pretty good shape. Its most recent strength figure (as of November 30) of almost 435,000 is the highest in its history.

The condition of the Guard is in startling contrast to the lean-and-hungry look of the Army's Reserve forces, as presented by the Pentagon in congressional testimony. Last year's Reserve Forces Act, which was supposed to rehabilitate the Reserve, was actually compromise legislation.

A provision for a voluntary 6-month training program, which it was hoped, would flesh out our paper Reserve units was included in the bill. The response to it, as Pentagon witnesses testified last week, has been discouraging. Few young men have volunteered for the 6-month program.

The Army's Organized Reserve forces are, so far, little better off than a year ago, except that they are somewhat more realistically organized. On the other hand, the National Guard, which was somewhat discriminated against in last year's legislation, has continued steadily to increase its strength. The Reserve Act did not provide for the assignment of men who have completed their period of active duty to National Guard units.

GUARD'S ROOTS ARE DEEP

Nevertheless, the guard, with a well-established system of recruiting and roots deep in local communities—a situation in strong contrast to most Reserve units—has moved ahead in both quantity and quality. It is by no means an M-day (Mobilization Day) outfit, as it is supposed to be, and probably it never will be under present conditions.

But the National Guard, as well as many units of the Navy and Air Force Reserve, stands in strong contrast to the almost complete unreadiness of the vast mass of Army Reserve Forces.

In the year ending June 30, 1955, the National Guard increased its net strength by 51,000. That increase is continuing and during the current fiscal year ending next June 30, the guard hopes to expand its total strength by more than 75,000 to a grand total of almost half a million men.

The Army components of the guard numbered 358,241 last June 30, and are scheduled to reach about 425,000 next June 30. The Air Guard strength last June was 61,306 officers and airmen, which is scheduled to increase to 70,400 by next June 30.

The troop basis for the ground guard units are now 21 Infantry divisions and 6 armored divisions, an increase in armored strength. There are also 2,614 nondivisional units, including 9 regimental combat teams, 9 armored cavalry regiments, 123 antiaircraft battalions, and 74 field artillery battalions.

The Air National Guard is organized in 27 combat wings. At full strength there may be a maximum of 75 planes to a wing. These include 87 fighter, light bomber, and tactical reconnaissance squadrons and various support units. Of the strength of 7,900 officers, scheduled to be reached next June 30, 3,950 will be pilots.

Two types of guard units, both assigned to air defense, are now in a semiactive alert status and in a far higher state of readiness than in any prior peacetime period. Selected National Guard antiaircraft battalions in many critical industrial and population areas have taken over from the Regular Army the duty of full-time manning of antiaircraft-gun positions.

Ninety- and 120-millimeter antiaircraft guns, many now manned by the Guard, supplement the Nike guided missile battalions manned by the Regular Army.

This replacement of the Regular Army by the guard at selected sites will continue progressively until mid-1957. Crews of 15 National Guardsmen, hired as civilians, man the gun sites around the clock. They are supplemented by the remainder of the personnel in the battalions, who drill one night a week on the guns and are available at all times for emergency calls at their nearby homes and places of business.

All the 87 squadrons of the Air National Guard are on a 24-hour-a-day-7-day-a-week duty call basis.

Some selected air units, equipped with modern day jet fighters, are on immediate alert or runway alert status to aid the Air Defense Command against a sneak enemy attack. These units are prepared to be airborne and combat ready within 5 minutes, 24 hours a day, every day in the year.

Combat crews for these special units are rotated, and are on active duty for the time they serve in the runway alert status.

What Makes a Good Newspaper

EXTENSION OF REMARKS
OF
HON. FRANCIS CASE
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Wednesday, January 18, 1956

Mr. CASE of South Dakota. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "What Makes a Good Newspaper," which appeared in the Sisseton, S. Dak., Courier on January 5, 1956. The Sisseton Courier, published by Mrs. Grace Adams and her son, Jack, is highly respected in its own community as well as in newspaper circles throughout the State of South Dakota.

There being no obection, the editorial was ordered to be printed in the RECORD, as follows:

WHAT MAKES A GOOD NEWSPAPER

A good newspaper, first of all, should have a decent regard for truth. It should report the truth, without fear or favor, and then it should comment on and analyze what the truth means. A good newspaper ought to "comfort the afflicted and afflict the comfortable."

But the job of presenting the news objectively is one of the hardest jobs given the mind of man. What is objectivity? A reporter begins with a sheet of blank paper. But he also begins with his own selective mind which must sift out the wheat and chaff; if you, as reader, think it is easy, try to write in 7 or 8 paragraphs a speech which takes an hour to deliver. Try to be fair and transmit to the reading audience the heart of what the speaker is trying to convey.

"Achievement in such matters is hardly given to man," observed the late great editor of the Manchester Guardian, C. P. Scott. "We can but try, ask pardon for shortcomings, and there leave the matter."

Along with its feeling of responsibility and fairness a good newspaper must try to be reasonably interesting and entertaining. For if it is dull and poorly written it will not be read, and its influence will diminish.

This is a good time for newspaper readers to examine their responsibility to the cause of a free, unfettered press and their obligation to protect the press both from the "disreputable twins of dignity and docility."

Thomas Jefferson said if he had to choose between a free press and a free government, he would choose a free press. What he said 150 years ago is still true today. The press ought to be the conscience of the community, the State, and the Nation.

An enlightened public can help keep it that way.

The Supreme Court Decision on Segregation in the Public Schools

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES

Wednesday, January 18, 1956

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Setting Aside the 10th Amendment Is Not Liberalism," published in the State of January 16, 1956.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SETTING ASIDE THE 10TH AMENDMENT IS NOT LIBERALISM

"Today the Supreme Court has proclaimed that the Federal judiciary has the right to determine who shall or shall not attend public schools. This disregards the wishes of the States as expressed in their laws and respective constitutions. It is a short step now to selection of teachers and to the designation of a curriculum by Federal authority."

The above words do not come from some Southern newspaper, conscious that the Supreme Court has stepped beyond all bounds granted it by the Constitution of the United States, but from the nationally circulated weekly, U. S. News & World Report, and its editor, David Lawrence.

Quoting the 10th amendment which reads, "The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people," Mr. Lawrence commented that, "Time was when the 10th amendment * * * was as sacred as any other provisions of the Bill of Rights, about which we hear so much from today's 'liberals'."

Elsewhere on this page, the full editorial from U. S. News & World Report is reprinted, and we suggest that it be read. Therefore we shall deal with it here only in epitome.

The title of the editorial is "A Call to Liberalism." The point is made that "liberalism has been undergoing a strong erosion. The so-called liberalism of today is a philosophy of coercionism in conflict with the spirit and letter of the Constitution. It is not true liberalism. Time was when liberalism meant freedom from excessive government—freedom from encroachment upon the rights of the people."

But today this is not true.

"Control of education, of course, was one of the powers reserved to the States and to the people," it is pointed out. "No power of the Federal judiciary has until recently been exercised to set forth standards of education or to examine the rule upon physiological influences that may or may not prevail in the classroom * * *.

"Today's 'liberal' acquiesces in this usurpation of power."

As we have commented in these columns before, the dawn seems to be breaking. These seems to be a growing realization that the Supreme Court decision of May 17, 1954,

affects more than school segregation—that it cuts a deep gash in the body of a great American principle, guaranteed under the Constitution. The ruling has meaning far beyond its immediate application. Yet the very branch of government set up to protect the rights of States and of people under the Constitution is the one to toss the 10th amendment into the ashcan.

The Lawrence editorial takes up other instances in which the sacredness of the 10th amendment is violated, but we shall not go into them here. We shall quote, however, the concluding paragraph of his timely comment:

"True liberalism must be revived in America. It means a government of laws under a written Constitution—not a government by the caprice of men who temporarily hold public office * * *.

"There is only one course for the true liberal—to oppose the ideology of those who, in the name of emergency, expedience, convenience, or profit would forsake both the letter and the spirit of the Constitution."

A Balanced Budget

EXTENSION OF REMARKS
OF
HON. JOHN MARSHALL BUTLER
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Wednesday, January 18, 1956

Mr. BUTLER. Mr. President, the question is frequently asked, "Why balance the budget?" In the December 11, 1955, issue of This Week magazine, former President Herbert Hoover gave an excellent answer which to my thinking should be brought to the attention of all Americans. I therefore ask unanimous consent that this brief article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHY BALANCE THE BUDGET?
(By Herbert Hoover)

Question: Wendell W. Vaughn, of Dallas, Tex., asks: "Is it possible for our Government to balance the budget without disturbing our present level of prosperity?"

Because former President Hoover's recent report on the Government has a direct bearing on the problem, we turned to him.

Answer: To help answer that question, let me say that we now have, for the first time, a complete stem-to-stern, top-to-bottom picture of the functions of the executive branch of the Federal Government.

In the past there have been plenty of studies and surveys—I've made some myself. But this one is different. The first Commission study of 6 years ago was conducted for the most part department by department, agency by agency. This resulted in better organization within the executive office and the departments, in greater efficiency and considerable savings. But our second investigation took a look across practically the entire picture, from department to department, to find out how and where similar functions are being carried on in other departments or agencies.

When these similar functions are arranged cheek by jowl, the waste and overlappings show up in a spectacular manner. For instance:

There are 26 agencies engaged in some kind of medical care with five separate hospital systems and 40 percent empty beds.

Some 104 agencies engage in lending or guaranteeing loans, or insurance activities, amounting to some $240 billion—apart from the public debt and social security.

Various United States agencies conduct some 3,000 businesses in competition with private enterprise.

These are only three instances of the functions we investigated. There are 17 other investigations and reports, with recommendations. Added together, if we could eliminate the waste, we could balance the budget and make a handsome reduction of taxes for every family in our country, without lessening our defense or welfare activities. Of course, we stepped on the corns of some pressure groups, but most of the proposals are not controversial.

All this leads to a whole set of questions that often comes my way:

"Why balance the budget anyway? What difference does it make? Aren't we having good times? And if so, what is wrong about going along as we are with an unbalanced budget—what's wrong about a budget deficit?"

The answer is that for any nation there is great danger in unbalanced budgets. Without going into the detailed steps, the poison of an unbalanced budget is that every time the Government borrows money from the banks to meet a deficit it inflates credit or currency or both. This process has a twin poison also when the Government expands installment credit by loans without sufficient equity or other checks. We are doing both these things. For most of 23 years we have had deficits and for some 10 years constant inflation through installment credit.

A theory is advanced that we can keep down prices and the cost of living and thus inflation by increased production and consequent sharper competition. It might conceivably work in some circumstances if the industries by lowering prices could still earn enough to increase their plants—but this is doubtful. We have tried a similar theory in agriculture with dire results to the farmer, the consumer and the Treasury.

For the last 2 years we had a fairly steady cost of living—the best index of purchasing power. But we should not fool ourselves. That period has proved to be only temporary. Again, wages and prices are increasing, and they will express themselves in increased cost of living. There is only one way to stop this upward spiral. That is, to keep taxes sufficiently high, reduce government expenses and curb credit inflation generally until we are in balance.

Those hardest hit by this inflation spiral are the people in the white-collar, salaried groups and those who live on pensions, savings, interest, rents, and other fixed income. The value of all savings-bank deposits, life-insurance policies, annuities and retirement funds, the purchasing power of our college and hospital endowments go down, all amid tragedies and distress for millions of families.

WHAT $3,840 BUYS TODAY

If anyone does not believe this, he had better look at the past twenty-odd years of unbalanced budgets, expanded credit and taxes. Today, a family requires an annual income of almost $3,840 to obtain the same goods provided by $1,500 23 years ago.

I could cite a dozen nations whose economies and representative governments have been wrecked because of failure to apply these brakes. The difficulty of all representative governments the world over is that the legislative representatives find no political profit in keeping taxes up, reducing expenses, or curtailing easy loans.

Moreover, the host of debtors like inflation for, in effect, it reduces loans and mortgages. And there is another ally of inflation in the host of holders of equities in lands and stock who like it also. So also do speculators.

In 1927–29, when I had the duty to warn and protest against the inflation then going on, I was frequently told, "This time it is different; this is a new economic era." I read the same slogans again today. Even in a partly free economy, Old Man Economic Law is a grim reaper. It is time to stop, look, and listen.

Regulation of Natural Gas Producers

EXTENSION OF REMARKS
OF
HON. J. WILLIAM FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Wednesday, January 18, 1956

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "If Gas Producers Can Be Regulated, So Can the Corner Grocer," published in the Saturday Evening Post of January 21, 1956. The editorial pertains to the bill now being debated by the Senate.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

IF GAS PRODUCERS CAN BE REGULATED, SO CAN THE CORNER GROCER

There is a shocking absence of understanding about the potentially destructive results of governmental regulation of individual enterprise. For evidence we refer you in advance to arguments made against the Fulbright bill.

The Fulbright bill is the Senate version of the Harris bill passed by the House last session. Both seek to release producers of natural gas from regulation by the Federal Power Commission. In June 1954, the Supreme Court ruled that FPC should regulate such producers, although the Natural Gas Act of 1938 had specifically stated that it should not.

This is not a remote legalistic controversy. It involves a housewife in a Chicago suburb who learns with dismay that she cannot obtain the inexpensive natural-gas service which she had expected for cooking and heating in her new house. At about the same time an Oklahoma housewife flips a switch in her house and a light glows. These two events are related. The electricity which fired the Oklahoma lamp bulb was generated in a utility plant fueled by the natural gas which had been intended for the Chicago housewife, but which she didn't get.

The reason for the diversion is simple. Oklahoma gas producers had planned to deliver to a pipeline a supply of natural gas which would have served the Chicago housewife and 265,000 waiting Illinoisans. But when the Supreme Court ruled that sales of gas by producers across State lines were to be regulated—that is, price-fixed—Oklahoma producers abandoned negotiations for the sale. Instead they sold their product within their own State, a transaction that was exempt from FPC control.

So many natural-gas producers were alarmed by regulation that the volume of gas committed to large interstate pipelines in 1954 declined approximately two-thirds from 1953, a loss to prospective consumers of more than 4 trillion cubic feet. And in 1955, drillers completed 10 percent fewer gas wells than in the previous year, while at the same time oil-well completions rose.

Those who want regulation speak in the name of consumers who are supposed to believe that Federal regulation of producers is

needed to curb monopoly and keep cost at a reasonable level.

Take cost first. The argument is that natural-gas producers, although competing against one another in discovery, production, and sale of gas reserves, are in a position to hike the gas bills of city consumers unless they are controlled. Why, then, in the years 1928 to 1954, when producers were free, did gas costs in the field rise less than one-fourth as much as the cost of living? Moreover, the cost of natural gas in the field on the average is only 10 percent of the city consumer's bill. Ninety percent lies in transmission and distribution—two services which are properly under utility-type regulation because they enjoy certain monopolies. Anyway the proposed legislation contains specific protection for the consumer from unwarranted price increases.

But aren't the producers of natural gas a monopoly? There are 8,000 of them, none producing as much as 5 percent of the total. If they constitute a monopoly, then three-quarters of American industries are in exactly the same class, since natural-gas production is less concentrated in number of owners than are most industries.

It is curious that those who most violently predict high cost and monopoly are blind to the fact that regulation of producers will inevitably bring about exactly what they profess to fear. Natural gas has been cheap because it could be bought and distributed in a volume huge enough to distribute the expense of pipelines and city mains among millions of consumers. Cut down that volume and a smaller number of consumers will have to bear the transmission and distribution costs. Houeshold bills will go up, not down, and unwillingness of producers to sell outside their own States could eventually deprive distant consumers of gas altogther.

What, then, becomes of the monopoly charge? A producer cannot gouge a consumer with whom he will not deal. The monopoly will become one of States, not of people, as producing States not only keep their gas at home but as a consequence attract industries from consumer States into their own areas. This is already happening. More than half of all natural gas is now consumed in the States where it is produced.

There is another sinister threat in this controversy. The regulation of producers of natural gas is the first example of regulation of a competitively produced commodity. It would hardly be the last. Natural gas is more often than not intermixed with oil production. Could we regulate the gas and not the oil from the same field? Then why not coal, lumber, iron and on right into a complete statist straitjacket?

Sometimes we wonder if this is not the goal which the regulation advocates have had their eye on all along.

Foreign Aid

EXTENSION OF REMARKS
OF
HON. JOHN MARSHALL BUTLER
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Wednesday, January 18, 1956

Mr. BUTLER. Mr. President, in connection with the forthcoming consideration of appropriations for foreign aid, I invite the attention of my colleagues to an editorial entitled "The Unanswered Question," which appeared in the Wall Street Journal on December 21, 1955, and ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

REVIEW AND OUTLOOK—THE UNANSWERED QUESTION

Secretary of State Dulles yesterday clarified an unofficial report that the administration would ask nearly $5 billion for foreign aid in the next fiscal year, as against some $2.7 billion it got this year. But the clarification still leaves a lot unclear.

The administration does plan to ask Congress to authorize further foreign spending of some $4.9 billion, Mr. Dulles explained. As is customary in these matters, however, the $4.9 billion, if received, would be added to the foreign aiders' reserves, or carryover funds. Some of it would be spent next fiscal year, some later.

In this way, thanks to generous carryovers from the past, the administration is actually spending about $4.2 billion this fiscal year on foreign aid, not just the $2.7 billion it received at the start of the year. Next year, actual spending is supposed to be only about $200 million higher than this year's.

So the impression is left that the furor over a huge increase" in foreign aid was just a tiny tempest in a bureaucratic cornucopia, based on a misunderstanding of Government gobbledygook.

This impression is misleading. It is perfectly true that the difference between the money Congress authorizes and the money actually spent in a given period can be considerable. It is not true that the authorization has no relation to spending.

A sum of $4.9 billion authorized for foreign aid is $4.9 billion to be spent, whether next year or the year after. It is $2.2 billion more to be spent than could be spent if the administration were to ask only as much as it received this year. It is, in short, an additional $4.9 billion to be extracted from all of our pockets.

The administration argument is that unless it has this addition to its foreign-aid reserves, which will amount to some $7 billion at the end of this fiscal year, it will be unable to continue actual foreign-aid spending at current levels. But that is exactly the point; the spending should not be continued at present levels. Congress, by cutting requested authorizations, has repeatedly served notice to that effect.

The significance of the new request is the opposite; the administration wants to continue spending $4 billion or more a year indefinitely. Why? One big reason advanced is the continuing need for heavy military aid. It is said, for example, that a lot of the weapons we have been sending abroad are growing old and have to be replaced.

Well, naturally, if this country is going to undertake the replacement of its original gifts, there can be no end to the thing. It might be supposed that after $50 billion worth of aid in the last 10 years, much of it military, the recipients would be able to take care of their own replacements. If not, the military-aid program was remarkably ill-conceived. Certainly this kind of perpetual drain was not contemplated by Congress.

As long as the foreign aiders will have $7 billion or so on hand at the end of this fiscal year, there is nothing much Congress can do about spending in the next fiscal year. But there is a great deal Congress can do about this forthcoming request for nearly $5 billion more. Only by holding firm against such demands can Congress hope even to control future foreign spending, much less bring it to a long-overdue end.

And, as the administration attitude makes abundantly clear, the question of when it is to end is one that only Congress can clarify.

What Meat Ax?

EXTENSION OF REMARKS
OF
HON. J. ARTHUR YOUNGER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 18, 1956

Mr. YOUNGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial taken from a recent issue—January 4, 1956, page 12—of the Wall Street Journal:

WHAT MEAT AX?—HOOVER GROUP USES CAREFUL SCALPEL ON BIG GOVERNMENT

(By John Chamberlain)

When Congress starts talking this session about turning the recommendations of the second Hoover Commission on Government reorganization into law, the uproar is apt to be terrific.

The issue is joined between those who think the projected reorganizations would give us modern streamlined Government and those who think they would take us back to the days of Calvin Coolidge. The controversy will have its first airings in Senator JOHN F. KENNEDY's Reorganization Subcommittee of the Senate Committee on Government Operations and in Representative DAWSON's comparable body in the House.

The very magnitude of the sums involved—$6 to $8 billion is the Hoover Commission's estimate of possible annual savings in the cost of Government—means that vested interests will combine in the effort to kill any proposed legislation. Six or more billions means a lot of porkchops, perquisites, subsidies and the prolongation of ancient bureaucratic habits. Because so many perquisites are threatened, the Hoover critics have been more loudly vocal than the voluntary Citizens Committee for the Hoover Report. Indeed, the propaganda against the Report has been first-rate of its kind—and any story on the Hoover Commission's accomplishments must begin by clearing the air.

The reason why the Hoover Commission has particularly worried its critics is inherent in the Commission's original mandate. Back in 1953 it was empowered by a unanimous vote of Congress to consider the worth of Federal policies as well as functions and programs. Looking at the mandate to consider policy, and basing their fears on what is contained in certain task force reports which were by no means accepted in their entirety in the Commission's final recommendations, the critics of the Commission have jumped to some pretty wild conclusions.

FROM ALL DIRECTIONS

The Commission has been accused of trying to turn the clock back past Coolidge's time to McKinley's. Public-power groups have scented a plot to asphyxiate the Rural Electrification Administration and to hand TVA over to the power lobby. Dean Acheson, a member of the first Hoover Commission, has whacked the second commision in his recent book for departing from Fair Dealism. The Secretary of the Navy, a Republican, has remarked that the Commission is out to destroy the Eisenhower administration. And the American Legion has even charged the Commission with trying to socialize medicine merely because it had the temerity to recommend a means test for veterans who look to Government to pay hospital charges for non-service-connected disabilities.

The important point to note, however, is that nowhere has the Commission attacked

spending as such. Despite the minority views of certain members of a group that has been bipartisan since its inception, the Commission as a whole has not adopted an a priori position against the welfare state in laying down its recommendations. It has never questioned the power of Government to increase social services, or to intervene in the economic process, or to spend for the general welfare.

Indeed, the first thing that strikes the reader of the Commission's own recommendations (as distinct from some of its task-force reports) is the mildness and sweet reasonableness of their tone. Even more flabbergasting to one who has listened to the critics is the discovery that, in many instances, the Commission has actually recommended an increase in Government spending for certain things.

The rationale behind the Commission's recommendation of certain increases is that quality of service, if sustained by appropriations not now being made, will pay off in unforeseen ways over the long run. For example, there is the recommendation that calls for the establishment of a senior civil service. In ex-President Hoover's own mind, this is the most important of all the Commission's recommendations.

In combing over the whole question of Government personnel, the Commission discovered a woeful paucity of good men in the positions just below those of noncareer and policymaking administrators. To fill the yawning gap the Commission recommended the addition of some 1,500 civil servants with senior status, at salaries ranging from $10,800 to $17,500. It also recommended doubling the number of noncareer officials from 7,000 to 14,000.

All of this would cost considerably more money than the civil service now requires. But members of the Commission think it would result in more efficient Government—and efficiency would create its own ultimate savings.

The Hoover Commission Report on Research and Development in the Government also contains recommendations for increased spending, both within the Department of Defense and outside of it. For basic research in the Department of Defense, the Commission urged an increase above its present $20 million of annual expenditure. It also advocated more money for basic medical research.

THE PRACTICAL FACT

In the extremely controversial field of water resources and power the Commission rejected its own task force's recommendation that Federal power projects be sold to private industry. "We do not entertain the idea of the sale of dams and their powerhouses," said the Commission. "Nor do we entertain the idea that the electrical facilities in these multipurpose projects could be sold to private enterprise."

All through the Commission's reports there runs a vein of bipartisan respect for the practical fact. The Federal Government is in the abaca, or hemp-raising business in Central America. Remembering that the Japanese cut United States access to Eastern Hemisphere hemp in 1941, the Hoover Commission recommended continuing the Federal abaca program as a strategic measure. Similarly with the federally financed Cuba Nickel Co., the Commission wanted this continued, and advocated its transfer to the General Services Administration.

In Alaska the Government runs a railroad, complete with certain ancillary hotels and commercial services. Although the Commission urged the Government to sell the hotels, it did not advise it to get rid of its railroad.

The Bureau of Mines has had a long-standing program of extracting oil from shale. Since oil from shale has never yet been able to compete with oil from Texas, Venezuela, or Saudi Arabian wells, it might seem logical to argue that money could easily be saved by closing down the program. Nevertheless, the Commission recommended that the Government-supported extraction of oil from shale be continued "until cost data under new methods are fully available." In other words, let the Bureau of Mines spend money for educational purposes that may help industry when oil from shale has become a necessity.

ADDING TO THE BUDGET

Details such as these can be plucked from the Commission reports like raisins from a piece of raisin bread. Moreover, the Commission's concern for the quality of overall control of Government business has led it to suggest the creation of administrative devices such as a new Federal Water Resources Board inside the White House, to be composed of Cabinet officials plus five public members. While the creation of such a Board would undoubtedly help to eliminate the duplication of functions and services within the Department of Interior, the TVA, the Army Engineers, and the Department of Agriculture, it would add something to the Federal budget in itself.

In the light of the Hoover Commission's concern for the quality of Government administration as something that stands quite apart from the question of spending, the attacks on the Commissioners for cheeseparing and for wielding a meat ax fall rather flat. Indeed, the Commission might logically be criticized for not going far enough in its advocacy of smaller, less costly Government. But politics and logic are not always compatible—and it is important to see the Commission for what it is.

Eisenhower Versus Truman

EXTENSION OF REMARKS
OF
HON. WILLIAM E. MINSHALL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 18, 1956

Mr. MINSHALL. Mr. Speaker, there appeared in the Cleveland Plain Dealer on January 16, an editorial which our distinguished colleague, WILLIAM MCCULLOCH, asked me to insert in the RECORD for the attention of every Member of Congress.

My good friend, Congressman MCCULLOCH, is sincerely concerned, and many of us share this concern, over the enormous agricultural surpluses that have been built up over these past many years. This is a serious problem—it deserves a straightforward approach toward solution—but the capricious captain of Battery B is at it again.

While the Plain Dealer has correctly found Harry Truman's latest volley to be sheer nonsense, I hope that each of my colleagues will read this accurate and well-written rebuttal to the erroneous line the former President is attempting to sell.

The editorial follows:

EISENHOWER VERSUS TRUMAN

Former President Truman has returned to the political wars, and he hasn't changed a bit. In a speech at St. Paul, Minn., Saturday, he had the audacity to charge that President Eisenhower and Secretary of Agriculture Benson were responsible for the "mess in agriculture."

There were two things that Mr. Truman conveniently overlooked. One was that the decline in prices of farm products began long before Mr. Eisenhower took office. The other was that Mr. Truman's own agricultural policy was responsible for overproduction and the constantly mounting surpluses, the existence of which tends to depress prices.

The former President obviously was attempting to answer statements made by President Eisenhower in his farm program message to Congress last week. In that message the President said:

"Of the many difficulties that aggravate the farm problem, mountainous surpluses overshadow everything else. Today's surpluses consist of commodities produced in a volume imperatively needed in wartime, but unmarketable in peacetime at the same prices and in the same quantity.

"The plain fact is that wartime production incentives were too long continued. * * * Today, almost without regard to the livestock or crop he produces, nearly every farmer is adversely affected by our surpluses."

So what does Mr. Truman propose should be done about it? He said it would help if price supports were restored to 90 percent of parity—in other words, to continue wartime production incentives and pile up more surpluses.

It has been said that you can fool some of the people some of the time, but Mr. Truman evidently believes he can fool all the farmers all of the time. Or are farmers smarter than Mr. Truman thinks they are?

Misinformation About the Farm-Loan Program

EXTENSION OF REMARKS
OF
HON. FRANK E. SMITH
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 5, 1956

Mr. SMITH of Mississippi. Mr. Speaker, a great deal of misinformation has been published in recent weeks about the participation of large farms in the farm-loan program.

Several of the cases of large loan participation cited in reports issued by the Department of Agriculture, and picked up by various newspapers and magazines, involve farmers of whom I have personal knowledge. In none of the cases was the cotton sold to the Government. It was placed in the loan to help promote an orderly marketing of cotton, usually at the urgent request of the Department of Agriculture. The cotton was later withdrawn from the loan, and the Government paid the interest required by law. In most cases the Government probably profited by the transaction.

As an example of the real facts in one case, I include a copy of a letter to the magazine U. S. News & World Report, from C. R. Sayre, president of the Delta Pine & Land Co., of Scott, Miss.:

DELTA PINE & LAND CO. OF MISSISSIPPI,
Scott, Miss., January 8, 1956.

MR. CARSON F. LYMAN,
Managing Editor, U. S. News & World Report, Washington, D. C.

DEAR MR. LYMAN: My attention has been directed to the article, Not All Farmers Are In Trouble, in the December 30 issue of your publication.

I am sure that you and your staff are trying most diligently to make a real contribution toward providing an adequate perspective for your readers at this important juncture in farm-policy matters. With that in mind you should correct several errors in the article to which I refer.

First, in the second paragraph the article states, "Since the market was below the 'loan' price at the end of the marketing year, the company kept the money, turning the cotton over to the Government to pay off the loan." The facts are as follows: Out of the 7,554 bales of Delta & Pine Land Co. cotton which went into the loan from the 1954 crop only 68 remain in the loan. Here is a part of the background for our use of the loan program. The United States Department of Agriculture urged an increase in cotton production from less than 10 million bales in 1950 to 16 million bales for each of the years 1951 and 1952. As the stocks began to pile up cotton growers were urged to follow an "orderly marketing program" rather than flood the market at harvest time.

May I use our company's cotton loan operations for the 1953 and the 1954 crops to show both the sequence and the net results of orderly marketing, as it relates to the Commodity Corporation funds.

1953 crop

	Placed in Government loan		Withdrawn from Government loan		
	Bales	Amount	Bales	Amount	Interest paid
1953—September	1,094	$203,077.78	4	$717.90	$0.31
October	2,080	367,285.05	70	11,867.51	21.75
November	3,153	547,905.46	476	80,357.56	291.49
December	893	151,224.38	1,450	361,161.92	1,518.90
1954—January	10	1,773.00	589	98,168.21	570.63
February			392	63,922.24	375.02
March			2,240	397,346.94	6,018.80
April			325	59,640.99	1,177.56
May			139	24,216.40	462.65
September			2	373.38	12.90
1955—March			9	1,612.78	67.24
April			485	85,901.98	4,804.70
May			483	86,233.77	5,327.47
June			485	86,136.05	5,656.49
July			5	947.56	67.33
Total loan	7,230	1,271,265.67	7,154	1,258,605.19	26,373.24
Withdrawn	7,154	1,258,605.19			
Loan balance	76	12,660.48			

1954 crop

	Placed in Government loan		Withdrawn from Government loan		
	Bales	Amount	Bales	Amount	Interest paid
1954—September	1,424	$257,286.19			
October	1,939	339,241.31	173	$29,682.92	$19.21
November	3,910	650,556.01	539	86,311.86	140.62
December	245	39,060.63	90	14,544.04	42.28
1955—January	14	2,233.10	431	70,980.92	331.77
February			3,060	523,099.34	4,712.92
March	22	4,096.01	10	1,505.49	13.44
April			863	149,936.22	2,334.57
May			864	148,820.85	2,689.67
June			864	148,761.94	3,098.69
July			592	108,328.46	2,985.22
Total loan	7,554	1,292,473.25	7,486	1,281,972.04	16,368.39
Withdrawn	7,486	1,281,972.04			
Loan balance	68	10,501.21			

You will note that only 76 bales remained in the loan from the 1953 crop and, as noted above, 68 remain in the loan from the 1954 crop. The total CCC funds tied up for those 2 years is $33,161.69 insofar as our cotton is concerned. Currently, the market value for those 1 1/16-inch and 1 3/32-inch staple length cottons is very close to the 1953 and 1954 loan values. So, at most, the CCC could only have lost the storage costs on the 144 bales of cotton. Storage costs on the remainder were paid by our company as the cotton was redeemed from the loan.

The last sentence in paragraph 2 is incorrect, also. The article states, "No interest was charged on the loan under Federal law." I have included the interest paid by this company for cotton loans for the 1953 and 1954 crops in the above tabulations. The total for the 2 years is $42,741.63. The 1953 cotton loans carried a 4-percent rate of interest. The 1954 rate was 3.5 percent.

I am somewhat at a loss to understand why your Messrs. Vanderschmidt and Ragsdale would conduct an interview here a few weeks ago without attempting to get the facts for this particular area of farm policy when your heading indicates, "This article represents the result of extensive research on a problem of outstanding importance." The subsequent publication of the interview without corrections, such as the above, will imply that I concur in the statements in this article in the December 30 issue. It would appear to be highly desirable that the interview should not be published or it should be revised to permit me to correct such inaccuracies.

Without reference to the interview it seems to me that you should publish the full story of CCC loan operations and not just a part of the story. I believe we agree that farm-policy problems are sufficiently confused without the distorting slants of your special report of December 30.

I trust that you will give this matter early consideration and that you will move appropriately to provide your readers with the facts.

Cordially yours,

CHARLES R. SAYRE.

Segregation in the Public Schools of Virginia

EXTENSION OF REMARKS

OF

HON. WATKINS M. ABBITT

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 18, 1956

Mr. ABBITT. Mr. Speaker, on January 9, 1956, Virginians voted overwhelmingly to continue segregation of the races in the public schools of Virginia. The issue was simple and clear cut. I am proud of the great progress that Virginia has made in building up a great public school system. We have a splendid system but on May 17, 1954, the Supreme Court of the United States of America struck our school system a staggering blow which will eventually wreck our schools unless the proper steps are taken to combat the decision. The only hope to save public education in Virginia is the will and the determination of our people to resist tyranny on every occasion and to fight the grasping usurpation of power on the part of those people in this country who would change the habits, customs, mores and traditions of the people of the Commonwealth of Virginia.

The white and Negro races in Virginia each have much to be proud of. We have a fine relationship between the two races. If let alone by outside influence of misguided people we can work out our problems to the mutual satisfaction and advantage of all. I am convinced that if we are to remain strong and aggressive and continue to progress, we must keep intact the integrity and identity of the two races. I believe that mongrelization of the races will lead to deterioration of the stability of the people of our State and will be ruinous to our advancement as a people. Our people are not going to accept integration of the races in the public schools or the mongrelization of the races. We in Virginia are fighting for a principle that we know to be right and just. We know that the decision of the Supreme Court of the United States in declaring segregation in the public schools unconstitutional was without authority in law. The Court, against all legal precedent, followed the theory of a foreign-born sociologist who, I am informed, has connections with several groups that have been listed as subversive. This means that we can no longer anticipate what the Court might do or where it might strike next. The Constitution is simply what the nine judges might say it is. They have abrogated unto themselves rights, privileges, and authority that were never given them by the people of this Nation. We of Virginia cannot sit idly by and see the privileges and rights of our people taken from them against their will and in violation of the Constitution by a Court following the theories of a foreign-born sociologist who knows nothing of the ways, habits, customs, traditions, and mores of our people. To stand idle at a time like this would be traitorous to our forefathers

as well as to our children and grandchildren. We must not fail by supinely submitting to such desecration. One of the men who has been in the forefront of the fight to continue our way of life in Virginia has been the Honorable W. M. TUCK, Member of the House of Representatives from the Fifth District of Virginia. Representative TUCK is one of the outstanding men of our generation. On every occasion he has been in the forefront fighting to preserve the rights of the people. On January 5, 1956, at Farmville, Va., in my congressional district, Governor TUCK delivered to a large audience an address which in my opinion states the issue clearly and distinctly. Under leave to extend my remarks I include herewith the address of the Honorable W. M. TUCK:

ADDRESS OF REPRESENTATIVE WILLIAM M. TUCK, DEMOCRAT, VIRGINIA, JARMAN HALL, LONGWOOD COLLEGE, FARMVILLE, VA., JANUARY 5, 1956

Mr. Chairman, ladies and gentlemen, I am glad to have this opportunity of appearing before you in support of the proposed constitutional convention in the election to be held on January 9, 1956. I intend to go to the polls early on that date and vote for the convention and to do everything I can appropriately do to insure a large majority at my precinct and in my home county of Halifax.

The issue is a simple one. It concerns itself only with the amendment of section 141 of the Virginia constitution, which at present forbids the appropriation of public money for the support of any school or institution not wholly owned or controlled by the State or some political subdivision thereof. The proposed amendment will authorize the general assembly, if in its discretion it deems wise so to do, to enact a law making it possible for the State and the localities to appropriate public funds or make available grants in aid to individual parents or pupils who wish to attend a private nonsectarian school. These grants will apply to both races alike.

We do not vote next Monday on whether we shall have public schools or on any of the many other extraneous matters which have crept into the debate on this subject. The only question at issue next Monday is: Shall there be a constitutional convention to amend section 141 of the Virginia Constitution to authorize the general assembly to enact a law which will permit the State and localities to make funds available to parents who wish to send their sons and daughters to private nonsectarian schools. There is nothing in this proposal to require the general assembly to do anything. It simply expands the constitution to give our representatives more leeway and latitude in dealing with this important and far-reaching subject.

The people of this great Commonwealth understand the problem confronting us. The question is, shall we operate our schools according to the time honored policy of local self-government, or shall we supinely submit to an unwarranted attack upon our rights and liberties and be forced to integrate?

In this matter there is no middle ground. We cannot harmonize, compromise, or temporize. The issue must be met head on. I have said from the very time that this iniquitous decision was rendered, and I shall repeat at every opportunity, that in Virginia we do not intend to send our children to mixed schools.

I have held public office in Virginia for 35 years. There are few others in Virginia now living who have been thus honored and for so long. I shall ever cherish the honors conferred and the trusts imposed, but I would be unfaithful and unworthy if I did not in this tragic hour of our history speak frankly and unequivocably on this subject so close to our hearts and so vital to the welfare and safety of us all. Whether it is popular or unpopular, expedient or inexpedient, polite or impolite, I want it distinctly understood that I am opposed to the mixing and the intermingling of the races in our schools, and I intend to use whatever power and influence I may have to prevent it.

If stating these unequivocal and positive views on this inflammatory subject requires that I be classified as an immoderate or extremist, I will without cringing bear the odium. There is one thing certain: it will never be said of me that I collaborated and that I joined up, directly or indirectly, or in any other way, with our traducers, who would not only expose us to calumny and shame, but who would if they could, encompass the complete destruction of our way of life. We must not let them do it.

This is the issue and I hope and believe that the people of Virginia will be Virginians and vote like Virginians, and will give the proposal an overwhelming endorsement. Although I would warn against overconfidence and taking too much for granted and urge that every possible pro voter to go to the polls next Monday, I predict with complete confidence that the proposed constitutional convention will carry by a substantial majority. Thus, we will have brushed aside with a resounding voice the spurious statements and charges which have been spread to becloud the clear-cut issue.

The constitutional proposal originated with the commission headed by Senator Gray and composed of 32 members of the general assembly from all sections of Virginia and various schools of political thought, who, after giving more than a year's study and consideration to the subject, unanimously recommended it. Governor Stanley approved the proposed constitutional amendment and recommended its adoption. The general assembly at its recent special session approved the amendment by a vote of 131 of its 140 members, with 3 absent. It is a nonpartisan matter, because all Virginians, irrespective of political party affiliations, are affected and have a deep interest therein. In fact, it comes to us on a nonpartisan basis. The referendum was approved by every Republican in the House of Delegates and by all Democrats except 5, and in the Senate by all Democrats and 2 Republicans with only 1 Republican voting against.

I commend the Governor and the general assembly on the forthright, dignified, and patriotic manner in which they approached the consideration of this problem. In fact, one of the many things for which Virginia is noted and for which she has a just right to be proud is the high caliber of her legislators. Hon. John H. Daniel and Senator James D. Hagood from this legislative and senatorial district are examples of the high qualities of character and leadership which mark the membership of the bodies to which they belong. I am sure that the voters of this district would have no hesitancy in trusting them with matters of public concern and involving the education and training of their children.

I cannot find words sufficient and adequate to commend the people of Prince Edward County for their courage and forthrightness in standing firm against this infamous assault upon our rights. The people of Prince Edward County have enhanced the standing of Virginia and have made pages of history which will ever be cherished by patriots everywhere. Had it not been for your firm and unswerving stand, I fear that we would have already had integration.

I also commend the Defenders of State Sovereignty and Individual Liberties, in which I am proud to hold membership, for its defense of the right of the localities to determine what type of school system they shall operate.

There has been created in Virginia much misunderstanding and unnecessary confusion by the opponents of the referendum. Whether it was intended or not, the facts are, a smokescreen has been set up to hide the real issues and to prevent the matter from being settled upon its merits. When these clouds are dispelled and dissipated and we get down to the plain unvarnished facts and naked truth, there is but one question, and that is whether or not we favor or oppose the mixing of the races in the schools. Those who vote for the amendment will be credited as being opposed to the mixing of the races and those who oppose the convention will be considered as favoring the mixing of the races in the schools. As a matter of fact, many, if not most, of the individuals and organizations who publicly oppose the constitutional change have already declared themselves as favoring the integration of the races, and it is my opinion that if you scratch down deep enough the others who have not so publicly declared themselves are at heart true integrationists.

Now as to whether or not the adoption of this amendment will prove to be against the public interest and so destructive of Virginia's institutions, I would, in addition to our governor and the members of the general assembly list as supporters of this change the names of both of our United States Senators, BYRD and ROBERTSON, two of our former governors, Battle and Darden, the latter of whom is a noted educator and president of our highest seat of learning, the University of Virgina, and now delegate to the United Nations. It has also the support of our State board of education, our superintendent of public instruction, Dr. Dowell J. Howard, as well as all former superintendents including Dr. Harris Hart, and Dr. G. Tyler Miller, now president of Madison College, and Dr. Dabney S. Lancaster, former president of Longwood College at Farmville, at both of which institutions our Virginia teachers are trained. Dr. Lancaster is so firmly convinced of the necessity and soundness of the program that he has charge of the organizational drive with headquarters in Richmond. He is attempting to see that the people are properly informed as to the facts, and will on January 9 vote for the convention. No persons in Virginia have contributed more to the education and training and culture of the people of Virginia than have these distinguished educators who have devoted a lifetime of service and toil in that field of endeavor. In their endeavors in this direction they are supported by members of school boards, school superintendents, and teachers who have the welfare of Virginia and her people at heart.

The eyes of our Southland and of the Nation are focused upon Virginia and her electorate as never before in recent times. Not in a long time have we had a more challenging situation than that which confronts us. Virginia ranks high in the sisterhood of States, and what we do here may well determine or to a large extent affect the course of other southern States. May the vote on January 9 be a resounding victory for the convention, reflecting the confidence of the people in Virginia leadership, particularly at the educational level, and the course which she is undertaking to establish. May the vote and verdict be such that liberty-loving people everywhere will have a renewed and invigorating faith in the determination of our people to chart their own destiny, free from these evil and extraneous influences from without, which threaten to engulf us and the things which we hold dear.

Unless we choose to resist these outside influences now, the hour may be too late, and we will have accepted without challenge political and judicial doctrines which we hold to be untrue and without foundation.

On December 28, we witnessed in the columns of the newspapers a flagrant and unbridled attempt by outsiders to influence the outcome of next Monday's referendum in favor of integration. It is shocking that this outsider was none other than the United States Department of Justice, and although I have no way of knowing, I have cause to believe that it was the Attorney General of the United States himself. In our daily Virginia newspapers, and in fact all over the Nation, a statement was published as coming from a high Justice Department official in Washington to the effect that such action as we contemplate to set up tuition grants for pupils to attend private schools rather than submit to the unconstitutional act of forced integration of the races would be declared invalid, and that individuals and organizations in Virginia and in the South are being investigated. This self-made and self-appointed law giver and conscriptionist who, for reasons best known to himself, hides behind the cloak of anonymity, would declare the laws of a sovereign State invalid even before they are enacted, and would prevent us in the Commonwealth of Virginia from holding free and untrammeled elections. I demand information as to the authority by which the Justice Department or the Attorney General has set up a secret gestapo to impose upon the people and government of this sovereign Commonwealth a supermonitorship. I dispatched to the Attorney General of the United States a prompt and vigorous protest against this bold and brazen attempt at intimidation and coercion, and I shall continue to make known to those outside meddlers that we do not intend to be bullied by the Attorney General of the United States, the Department of Justice, or others.

In the matter of race relations we have never dealt unkindly with the Negroes. In this regard I can stand upon my record. In 1926 as a young member of the House of Delegates of Virginia I supported the antilynch law enacted at that session recommended by Governor Byrd, the strongest antilynch law on the statute books of any State in the entire Nation. Since that date Virginia has not suffered a single death by lynching. Among other things, during my own term as governor, I recommended in my very first message to the general assembly an appropriation of $15,000 for the establishment of a monument to a Virginia Negro, Booker T. Washington. This appropriation was made, and I know of no other State in the Nation, north or south, that has made an appropriation to memorialize a Negro. I entered an executive order setting up a large sum of money for the establishment of a State park for Negroes in Prince Edward County. I entered another order setting aside a day to be known as Joseph Jenkins Roberts Day in honor of a Virginia-born Negro who became the first president of the Republic of Liberia. On another occasion during my term I drove to a small town on the outskirts of Philadelphia to participate in the dedication of a monument to the Negro composer and musician, James A. Bland, who penned that nostalgic song, "Carry Me Back to Old Virginia." That monument, incidentally, was erected by the Lions Clubs of Virginia, and that song was adopted as our official State song by resolution of the General Assembly of Virginia, and there is not a Negro among the membership of either body. I recommended as governor, and the general assembly enacted into law, the largest single general tax increase in the history of the Commonwealth, of which many millions of dollars went for public health and education among both races. I ask where were these lovers of public education then? They were with us until we passed the collection plate and then they vanished and left us to fight the battle alone. My interest and zeal in the education and training of our youth has not diminished since that time. We must make whatever sacrifice in expenditures and effort as may be necessary to ensure the education of our Virginia children, but in separate schools.

After I returned to my home in South Boston, the late Dr. Roper, director of public health, wrote me that during my term, and upon my recommendations, more money had been appropriated for capital outlay in the eradication of tuberculosis in Virginia than had been appropriated through all the combined years that had intervened from the founding of the Virginia Health Department down to that time, and most of this was spent for Negroes, where the disease existed and where the need was greatest. I cite these facts as to my own record for the purpose of demonstrating that I have never exercised authority conferred upon me by the people in a manner unfair or unjust to any minority group, and what is more I never will.

In Virginia our people, I am glad to say, have on the whole kept themselves free from the faithless and perfidious conduct so characteristic of some of our leaders on the national scale who have not hesitated throughout the years to use the Negro as a political pawn.

These modern-day abolitionists and latter-day reconstructionists know nothing about the Negro and his problems and care less. Their principal interest in the Negro is to use him as a vehicle upon which to ride into high public office and to secure their vote in pivotal States to control the election of Governors, Senators, and Presidents. Their actions remind me of Billy Mahone, of Virginia, who was a brave Confederate general under Lee, but who after the war and in the dark days of reconstruction by making wild and chimerical promises succeeded in forming a coalition among the worst elements of both races in our Commonwealth and captured control of the government of Virginia. He himself was elected to a seat in the United States Senate. John Jasper, the celebrated colored preacher of Richmond, had no faith in Billy Mahone and refused to yield to his blandishments. The colored people excel in at least two particulars in that they have superior powers of illustration, and the other is that they can instantly recognize a gentleman, and vice versa. In order to illustrate his lack of faith in Mahone, the Reverend Jasper told his congregation that he had dreamed of going to heaven and that St. Peter refused him entrance because he was walking. As he dejectedly descended from the pearly heights he met Billy Mahone approaching by foot, his face lighted and filled with hope and ambition. After John had related his difficulties, Mahone replied: "Shucks, John, I can remedy that. Get down on your all fours and I will get on your back and ride you right through the pearly gates and then we wil both be in heaven." John succumbed to his plea, particularly since Mahone weighed less than 100 pounds. After again wending his weary way to the celestial portals with Mahone on his back, the latter knocked, and St. Peter said: "Who comes there?" Mahone replied: "This is United States Senator Billy Mahone, of the Commonwealth of Virginia, late a major general in the Confederate States Army of America." "Are you riding, or are you walking," said the keeper of the gates. "I am riding, sir," replied Mahone. Then the heavenly gates opened and Mahone tied his faithful "horse," John Jasper, on the outside, deserting the vehicle upon which he had gone to glory, and went in to enjoy the pleasures of heaven.

I am proud of the fact, as all patriotic Virginians should be, that the white and colored people have lived here in our Commonwealth in peace and harmony for more than 300 years—longer than any other place in the Western Hemisphere. We understand each other's problems and we have been able to maintain mutual respect. I confidently predict that we will continue to coexist on the same sort of basis despite the handicaps imposed upon us by the decision of the United States Supreme Court, which has inflamed bitterness and anger where it previously existed and has spread it into areas where it did not heretofore exist. It has fostered and provoked anger, discord, and distrust. As harsh as it may seem, I am constrained to say that any Christian gentleman would be ashamed of being the author of such a situation. The dangers and implications of the Supreme Court decision transcend the race question because it threatens to destroy the basic political philosophy upon which our Nation was founded. The Court has undertaken to override the constitutional division of powers by judicial fiat, without respect to its own previous decisions, and in contravention of the same, and in violation likewise of the powers of the legislative branch of the National Government, as well as the constitutional powers of the respective States.

The authority cited for this monstrosity was the maudlin views of at least one sociologist of questionable repute and loyalty, whose name blackens the pages of the reports of the Un-American Activities Committee of the United States House of Representatives. On such authority the Court has attempted to reverse the exact intention of the framers of the Constitution, not by the due processes of constitutional amednment, but by arbitrary decision unrelated to the law precedent or the facts. Because the Supreme Court has strayed so far beyond the constitutional framework, it behooves the people to adopt such measures as may be necessary to restore the traditional balances of power which have raised this Nation to a position of greatness.

For more than 50 years, the Supreme Court of the United States had stood by the principle of separate but equal school facilities for the races. At least five previous decisions of the United States Supreme Court of this period have upheld the constitutional rights of the separate States to control their own schools. It is strange that this long chain of opinions and the constitutions of many States, including our own, should be upset, reversed, nullified and scrapped, jeopardizing the public schools of a large segment of the country, as well as the wishes, traditions and the rights of millions of our citizens.

This is one sample of what can happen when we deviate from government based on the Constitution. Under the cloak of judicial robes a "super legislature" has arisen with a veto power over the rights of the States and the people. It is time that we, through our State governments, reasserted the powers that were reserved to us under the Constitution. On the basis of Constitutional considerations, as well as common sense, the States have every right to operate their public schools as they see fit. We here in Virginia have not become so destitute of mind and character, as well as of ability to govern ourselves, that we are ready to ask anyone to cross over the Potomac and indoctrinate us with false and spurious doctrines that are alien to our American way of life.

If we are to maintain our liberties and freedom as well as our State functions, we have a long, hard fight and rocky road ahead. It will require sacrifice, endurance and patience. If we are to succeed we must unite and stand together. With the weight

of the long line of judicial and historical precedents to support us, and with right on our side, and determination in our hearts, how can we fail in the venture to protect our children and children's children.

What can or shall we do in this momentous hour? There are 2 things we can do, yea, 3 and more. First, we can go out early next Monday morning and vote for the constitutional convention. Secondly, we can join the Defenders of State Sovereignty and Individual Liberties and ally ourselves with that patriotic organization which was conceived in love not hate. Thirdly, we can stand upon the ramparts of liberty unruffled, unashamed and unafraid, and let these impertinent meddlers know that we are determined never to surrender our freedom. We will also let them know that we will not forsake our children and grandchildren who in their innocence and helplessness are now playing around the family fireside and hearthstones and have none but us to whom they can look for deliverance from these flagitious forces who would not only mongrelize them and destroy the identity of both races, but also deprive and deny them and all others the constitutional guarantees for which our forefathers struggled so hard and which we have enjoyed for so long. In such a crises with so much at stake we shall not flag or fail, we will resist to the end. Our children will rise up to love, to praise, and to bless us. They will never, no never, have cause to look upon our faces or reflect upon our memories in dishonor, disdain and scorn. Hence, we will go forth inspired by an infallible and unflagging courage so well exemplified by Napoleon's 14 year old drummer boy on the battle fields of Austerlitz 150 year's ago, to be exact the 5th day of December, 1805, and we will never beat a retreat. In that battle Napoleon's trained soldiers and seasoned troops were retiring from the field in disorder. This brilliant but heartless general and dictator was faced with what he thought was certain defeat and in an effort to restore some semblance of order among his troops, he galloped up on his steed to the 14 year old drummer boy and commanded him to beat a retreat. The young man looked up into the face of his mighty and gallant commander and replied, "Sir, in the Army of Napoleon I have never been taught to beat a retreat, but I can beat a battle charge that will wake the dead upon this field." Napoleon then commanded him to do so. The men of that army were so stirred by the musical notes emanating from the drum, as well as the courage of that boy, that they reformed the battle lines and won the battle of Austerlitz, thus bringing to the Emperor Napoleon and to France one of the most glorious victories ever established on any field of battle in the annals of military history. Sustained by such unfaltering determination and imbued with quality of character which constitutes manhood and which enables us to meet danger with a firmness of spirit that knows no fear, victory on Monday will surely be ours to claim.

In the dark days of World War II when England was being bombarded by day and night and an invasion of the channel and the fall of that country was imminent, the late King George in one of his speeches used this quotation, "I asked the man who stood at the gate of the year to give me a light that I may tread safely into the unknown," and he replied, "Go out into the darkness, put your hand into the hand of God, that shall be to you better than a light and safer than a known way."

"God of our fathers, known of old,
Lord of our far-flung battleline,
Beneath whose awful hand we hold
Dominion over palm and pine,
Lord God of Hosts, be with us yet,
Lest we forget, lest we forget."

Liquor in the Air

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 18, 1956

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein an article which appeared in the Christian Century of December 28, 1955, by Methodist Bishop Gerald Kennedy, of the Los Angeles Area entitled, "Liquor in the Air."

The article follows:

On September 5 my wife and I boarded a Scandinavian Airlines System airliner at the Los Angeles airport and flew to Copenhagen over the Arctic circle. For about an hour before the flight, which took off at 12:01 a. m., liquor was served in a special room at the airport to all passengers desiring it. By the time we were ready to embark the people all around us were drunk, while the usual stupid and raucous noises which accompany drunkenness made sleep impossible for several hours. There was no letup in the serving of liquor, and the fact that it was obvious that a number of people already had too much did not affect the stewards and stewardesses.

In front of us a buxom, slightly more than middle-aged matron got rid of her inhibitions by talking baby talk in a voice with all the mellowness of a finger nail being scraped on a blackboard. Behind us, an elderly man walked around sitting in other people's seats and snarling at his wife, who was trying to make him behave. He never did get sober and was an embarrassing spectacle to all the passengers, as well as a problem for his wife and male secretary. And for the whole flight there was a superabundance and a wide variety of liquors being peddled to anyone who thought he could hold a few more drops.

That was our worst experience, but there have been some other situations that were bad enough. An American Airlines plane from Dallas to Los Angeles had served enough drinks to make the lounge passengers, all men, forget that there was anyone else on the plane. The profanity that burst forth from time to time and the loud talk made the flight like a forced 6 hours in a bar.

Now I am a Methodist and I have certain convictions concerning this whole business. Not everyone shares these convictions, and I will agree that no right has been given me to force them on everyone else. I have no confidence in forced conformity, nor do I desire any unnecessary legal restrictions placed on individual liberty. I despise self-appointed censorship and all pompous guardians of other men's consciences. But I venture to suggest that this drinking in the air does not fall into such categories. To make clear what is in my mind, let me set forth six protests.

1. I protest being forced to listen to drunken conversation. I have to listen to enough useless talk without being overwhelmed with that most stupid of all speech. Commercials on TV can be shut off, but try shutting off a brother who is suffering from the alcoholic delusion that he is a wit or a philosopher. There are few experiences more distressing than being sober yourself and yet having to be in company of inebriated conversationalists.

2. I protest being forced to attend a cocktail party. There are some who like them and apparently they have become a popular part of the social scene. But this does not usually affect me personally, unless I meet someone on the highway returning from one of them. There is a great expanse of the social scene which has no appeal to me anyway, so I simply turn my eyes elsewhere. But you cannot do that on a plane. Even the biggest of them are not larger than a small room. It seems to me amazing that this simple fact is ignored completely by the commercial airline officials.

3. I protest being denied a sober environment on a public carrier. When I ride the train I do not have to stay in the club car, and what goes on there is not of direct immediate concern. When I go out on the *Lurline* to hold the Hawaii mission conference, it is not necessary to spend time in the bar. It is a matter of choice whether or not one goes to the captain's champaigne party. But on an airplane the situation is entirely different. There is no hiding place up there. And I am unreasonable enough to insist that I have a right to sobriety in my immediate environment.

4. I protest having to pay for other people's liquor. I have some Scottish blood which goes up several degrees when I realize that the price of all this drinking is added to passenger fares. Where else could it come from? I am told that the stuff is very expensive and the cost of the liquor locker on a transoceanic flight must be terrific. At the very least, let those who want it pay for it. It just might be one way of cutting down on the consumption.

5. I protest the argument that competition forces the airlines to serve free liquor. We have long ago outgrown the philosophy of public institutions being allowed to do anything they desire in order to increase business. Society assumes the right of regulation and, if necessary, prohibition. If private enterprise will not discipline itself, then it asks for governmental interference. It is a long time since any business leader has said publicly, "The public be damned." But that is what the airlines are saying to a considerable section of the flying public. If I am told to use some other means of transportation if I do not like their policy, the answer is that with life geared to the present tempo I have no choice but to fly. It ought to follow that if there is no alterative, I am deserving of some consideration.

6. I protest the utter disregard of children. I have watched youngsters stare with troubled wonder at the semi-drunken antics of grown men and women. In the old days it was not considered proper for children to be in a saloon, but you may say that times have changed. Not for some of us! We still want our children protected from free-flowing liquor, and we do not believe that this kind of environment is beneficial. The chance of being forced to throw your youngsters into the midst of such a situation for several hours is, to put it in the mildest possible terms, intolerable.

At the risk of summing it all up in the form of an anticlimax: My personal liberty is being interfered with, and it makes me mad.

Resolutions by the Department of Kansas, American Legion Convention

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AVERY
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 18, 1956

Mr. AVERY. Mr. Speaker, under leave to extend my remarks in the REC-

ORD, I would like to insert three resolutions which were passed by the Department of Kansas, American Legion Convention, on September 5, 1955, at Hutchinson, Kans.

These resolutions pertain to matters which are of concern to the Congress of the United States, and I feel they are vital and that every Member of Congress should be apprized of the thinking of the membership of the Department of Kansas, American Legion.

The resolutions follow:

RESOLUTION 9

Whereas under existing laws both the Veterans' Administration and the service departments are permitted to independently determine whether or not death in service was incurred in line of duty; and

Whereas in many cases conflicting decisions, based on identical facts, are rendered by the Veterans' Administration and the service departments causing the loss of benefits to deserving survivors, unwarranted embarrassment to families, and numerous other injustices; and

Whereas the service departments base their decisions upon the facts gathered from their own investigation of the conditions under which death occurred and have, therefore, taken a more realistic approach in determining line-of-duty and not-line-of-duty situations: Now, therefore, be it

Resolved, That the American Legion, in convention assembled this 5th day of September 1955, directs the National Rehabilitation Commission to request a more liberal attitude by the Veterans' Administration in determining line-of-duty death.

RESOLUTION 12

Be it resolved, That the Department of Kansas of the American Legion in regular convention in the city of Topeka, September 3–5, 1955, endorse the Veterans' Employment Service and urge the Congress to appropriate sufficient funds to enable the Veterans' Employment Service to do adequately the job so essential to the security and welfare of the veteran.

RESOLUTION 13

Be it resolved by the Kansas Department, the American Legion, in convention assembled at Topeka, Kans., this 5th day of September 1955, That we favor and respectfully petition the Congress of the United States to appropriate sufficient funds to fully staff all veterans' hospitals so that the same may be utilized for the hospitalization and treatment of the veterans of World War I, World War II, and the Korean war.

Higher-Priced Bikes

EXTENSION OF REMARKS

OF

HON. HERMAN P. EBERHARTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 18, 1956

Mr. EBERHARTER. Mr. Speaker, under leave to extend my remarks, I include the following editorial from the Washington Post and Times Herald of August 22, 1955, entitled "Higher-Priced Bikes":

HIGHER-PRICED BIKES

President Eisenhower's ambivalent decision on the bicycle tariff is the kind one must expect as long as the escape clause is in the Reciprocal Trade Act. Congress must share with the President the reproach for this decision, for it has been constantly whittling away at the act. The protectionist amendments that have been tacked on to it over the years make it difficult if not impossible for the Executive to administer a trade program of the kind so often enunciated by Mr. Eisenhower. His task was complicated by the fact that he was acting on a recommendation of a high-tariff Tariff Commission which is partly his own creation. To his credit he refused to raise the rates as steeply as the Commission proposed. But even so the result will be a 10 percent increase in the price of most bicycles sold in this country.

Under the escape clause, the President is bound, unless he can find compelling reasons to the contrary, to grant relief to an industry when the Tariff Commisison finds that it has been injured by foreign competition. There was strong political pressure on the President to raise the tariff and very little political pressure for him to refuse. He tried to compromise the issue, but his comment that this Nation's "firmly rooted policy of seeking ever expanding levels of international trade and investment is in no way altered by this decision" might better have been left unsaid. The policy has been altered by the President's very act in raising new barriers to international trade. It does not become the President to try to make his decision sound like a victory because it is not quite so bad as it might have been.

Overseas the decision is interpreted as another protectionist move by the United States. It looks to foreign traders too much like another example of the American propensity to talk freer trade until the shoe begins to pinch. The British particularly have reason to be distressed. They created the market for the lightweight bike in the United States. Now the President makes it more difficult for the British to stay in the market here. Yet it might be remembered that while their exports to this country have increased substantially in the last few years the number of bikes manufactured by American companies has remained fairly stable. It is ironic that the world's leading free enterprise country resents this sort of enterprise.

Mr. Eisenhower made it clear in his statement that he believed much of the trouble lay in the lack of enterprise on the part of the American bicycle manufacturers. They have deeply resented this charge in the past. Now, the President said, they are "showing encouraging signs of stirring to meet the challenge from abroad." He sensibly commented that innovations by the industry rather than intervention by the Government "are the domestic industry's real hope for the future." Certainly the industry cannot place any great reliance upon the tariff increase which the President approved. It is too moderate an increase to stem the tide from abroad. But it is large enough to permit a price increase.

The Agricultural Conservation Program in Wisconsin

EXTENSION OF REMARKS

OF

HON. GLENN R. DAVIS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 18, 1956

Mr. DAVIS of Wisconsin. Mr. Speaker, on December 27, 1955, Mr. Robert M. Koch, executive secretary of the National Agricultural Limestone Institute, Inc., 619 F Street NW., Washington, D. C., addressed a letter to members of the Wisconsin congressional delegation. The first paragraph of Mr. Koch's letter was as follows:

I am writing to you and all the other members of the Wisconsin congressional delegation, at the request of the Wisconsin Aglime Producers Association at their annual meeting December 16, at the Park Hotel in Madison.

The letter, aside from an offer to furnish more detailed information, concluded as follows:

If the Wisconsin congressional delegation wants to render a real service to Wisconsin farmers, they will prevail on Mr. Merriam to allow Wisconsin farmers the opportunity to use Wisconsin limestone in their conservation program, just as the National Practice A–4 allows farmers throughout the Nation to.

In between, Mr. Koch outlined two pages of criticism of the agricultural conservation program in Wisconsin. In order to obtain authoritative information relating to Mr. Koch's allegations, I submitted the contents of the letter to Mr. William R. Merriam, the chairman of the Wisconsin Agricultural Stabilization and Conservation Committee. Mr. Merriam's response is set forth in full below. Mr. Merriam methodically deals with the various paragraphs of Mr. Koch's letter. In my opinion he quite thoroughly demonstrates that the agricultural conservation program in Wisconsin is, under the direction of the committee consisting of Mr. Merriam; Mr. John Dale, of Menomonie; and Mr. Ivan Kindschi, of Marshall; proceeding on a sound, constructive, and progressive basis.

I am submitting this material because I believe the implied criticism of Mr. Merriam and his committee is unjustified and because I believe that Mr. Merriam's letter contains information relating to the program in Wisconsin which is a source of pride to all members of the congressional delegation from the Badger State.

Mr. Merriam's letter is as follows:

MADISON, WIS., *January 13, 1956.*

Hon. GLENN R. DAVIS,

House of Representatives, House Office Building, Washington, D. C.

DEAR CONGRESSMAN DAVIS: This is in reply to your letter of December 29, 1955, asking for an explanation of the policy of the State ASC committee in connection with the agricultural livestone program in Wisconsin. Your inquiry was prompted by a letter you had received from Mr. Robert Koch, executive secretary of the National Agricultural Limestone Institute, Inc. We are enclosing, for your information, a copy of our 1956 State agricultural conservation program. We have checked in red in the margin the practices included in our program in which application of liming material is involved.

We are replying below to Mr. Koch's letter. You will note that we have quoted the paragraph or paragraphs from Mr. Koch's letter in advance of our reply to each paragraph or group of paragraphs. We hope this will facilitate your following our reply.

"Did you know that Wisconsin led all the States in the Nation in 1954 in the percent of agricultural conservation program funds returned unused; 49.38 percent, $2,101,704?

"Did you know that only 21,590 farms of the 186,796 farms in the State or 24.4 percent participated in the program in 1954?"

1. There are many factors involved in the fact that a large part of the 1954 ACP funds allotted to Wisconsin were returned. We list some of them below. The degree of in-

fluence each had in the end result is a matter of conjecture.

(1) Prior to 1954 in Wisconsin all farmers were visited at their farms in an annual ACP signup. This was not the case in all States. Beginning with the 1954 program the signup was conducted in county ASC offices or in signup meetings held in townhalls or trade centers. This change in method of signup was not optional with the State committee but was a matter of national policy. In citing this the State committee does not intend to imply that they were in disagreement with this national policy. This change in method of signup, however, does account for some of the drop in participation and return of funds. Although all farmers were contacted by circular letter advising them as to this change, there was widespread thinking on the part of many farmers that they would be personally contacted as in the past.

(2) Because of the high number of farmers participating in programs in past years the average payment to each participating farmer amounted to only $40–$50. Many farmers, when advised that they would have to attend a meeting or go to the county office to sign up did not consider that it was worth while to make this effort in order to obtain a relatively inconsequential benefit.

(3) The change in administrative setup away from full-time county committee administration to institution of office managers with the county committee serving only part time as a policy body was not approved by the bulk of county committeemen. Due to this fact the 1954 ACP was presented to farmers by disgruntled committeemen. Many farmers who did attend sign-up meetings were advised that the new AC program contained nothing for them. Even now 2½ years later we encounter farmers who believe that there is no cost-sharing available under the ACP for application of liming materials.

(4) Attention officially given the program by Mr. Koch's organization at this time was purely negative and helped to encourage the misunderstandings engendered by disgruntled committeemen. This was not true of all members of Mr. Koch's organization, some of whom entered actively into a lime-selling program, sought to fully understand the new provisions in regard to lime cost-sharing and to disseminate correct information to their potential customers.

(5) Policy changes and operating procedure changes in ACP in 1954, caused additional administrative work in preparation for issuing the program. Accordingly the program was not announced as early as would have been desirable for maximum participation and there was honest misunderstanding of some of the new program provisions on the part of some county office employees.

"Did you know that in 1943, 82.1 percent of Wisconsin farmers were carrying out some conservation practices?"

2. Under the 1943 ACP liming materials could be applied on any agricultural land and earn benefits. Potash and phosphate applied to grain seeded was also eligible for payment. These were practices followed, even at that time, by a majority of farmers so it was very easy for a farmer to participate in the program. As pointed out above each farmer was contacted at his farm by a committeeman so that it was practically impossible for a farmer to miss applying for and earning a conservation payment. It should also be kept in mind that in 1943 we were at war and national policy was to encourage all-out agricultural production. Under the 1954 ACP (and 1955 and 1956) the national regulations do not allow cost-sharing for fertilizer applied to grain seeded in regular rotation and restricts cost-sharing for liming materials to application of land seeded or to be seeded in 1955. Thus even under the provisions of the national program for 1954 it is not as easy for a farmer to earn cost-sharing as it was in 1943 and rightly so in regard to these practices in a time when agricultural surpluses are a national problem for which even Mr. Koch probably does not have a ready solution.

"Did you know that Wisconsin has the most restrictive practice for using agricultural limestone in the Nation?"

3. Practice A–4 of the national program is entitled "Initial treatment of farmland to permit the use of legumes and grasses for soil improvement and protection." Federal cost-sharing is limited to the application of liming materials. The practice is applicable only to farmland devoted in the program year to legumes of perennial grasses, and to farmland which the county committee determines will be devoted to such eligible uses in the following year.

This practice in our Wisconsin program includes the following specifications not included in the national program.

(1) Liming materials applied on land already devoted to legumes or perennial grasses is not eligible for cost-sharing because our agronomists and soils specialists advise that top-dressing with liming materials is not effective; thus the purpose of the practice as stated in the title quoted above would not be accomplished by encouraging application on existing stands.

(2) It is required that in order to be eligible for cost-sharing for liming materials applied under this practice under the 1954 program the farmer must apply a minimum amount (not less than 100 pounds of available potash and phosphate in terms of commercial fertilizer analysis 250 pounds of 0–20–20 or 0–10–30 or any other equivalent).

In the 1955 State program the farmer was permitted to substitute 14 tons of manure to meet the fertilizer requirement.

In the 1956 State program the farmer is permitted to meet the fertilizer requirement by covering the area being limed with barnyard manure if he does not wish to use commercial fertilizer.

In all three programs the application of fertilizer is not required if a soil test shows no need for potash or phosphate.

We are informed by our soils experts that the application of lime alone is a soil-depleting practice rather than a soil-conserving practice because it makes available for plant use the potash and phosphate in the soil thereby reducing the amount left for future crops to use. This is such a well established principle that a ditty has frequently been used to express it in somewhat the following wording: "Lime and lime without manure, makes both farm and farmer poor."

If we are, in truth, trying to encourage farmers to perform initial treatment of farmland to permit the use of legumes and grasses for soil improvement and protection, it appears that application of potash and phosphate along with lime where the soil is deficient in such elements should be required not only in Wisconsin but in all States for all of the soils experts we have consulted state that such would be their recommendation to any farmer, and even Mr. Koch has admitted to us orally the agronomic soundness of such a practice; it is the popularity of the provision with farmers that he is questioning.

It is the contention of the Wisconsin State committee that if this program is to provide Government financial help for farmers to initially treat farmland to permit the use of legumes and grasses for soil improvement and protection, such financial assistance should be extended to farmers who are willing to perform the practice so that it will accomplish this end and not for any other purpose such as purely to promote lime sales, or to win popularity with farmers by paying them for doing an inadequate practice, or to increase the number of farmers participating by paying them to perform a practice which is recognized as a regular farming operation by a majority of farmers.

"Did you know that Wisconsin soils specialists are among the leading in the Nation and that their stressing of the use of agricultural limestone has been primarily responsible for making Wisconsin the leading producer of alfalfa?"

4. We are pleased to note Mr. Koch's compliment to Wisconsin soils specialists and count ourselves fortunate to come from a State where lime needs were early recognized, accounting in part for our outstanding alfalfa production. It is our belief that our forward-looking, intelligent Wisconsin farmers will not now sacrifice efficient production of this valuable crop by failing to supply lime needs even though our AC program allows Federal cost sharing only in accordance with the sound practice of accompanying application of phosphate and potash in commercial form or in the form of manure. The same soils scientists Mr. Koch compliments so highly, when speaking without regard to ACP cost sharing, recommend that farmers apply lime in accordance with the specifications of our practice 12 (national practice A–4) except that they recommend in most cases even heavier application of potash and phosphate than our program requires.

These soil specialists, for whose scientific accomplishments and knowledge we have great respect, have left the field of soil science, in which they are expert, to advise on an administrative policy matter dealing with how funds available under ACP should be distributed to farmers in connection with lime application. On this administrative policy matter of cost-sharing fund distribution we are pleased to have their advice, but feel that the final decision on such a matter is well left in the hands of the State committee, along with representatives of other agencies who assist in making such final decisions on formulation of the State AC program, in accordance with the provisions of the national ACP handbook.

It appears that possibly at times even soils specialists like to bask in the glow of popular approval which it is often thought emanates from farmers pleased at receiving a Government payment for expenditure of as little effort as possible.

"Did you know that the use of agricultural limestone by Wisconsin farmers dropped from a peak of 2,283,650 tons to 1,133,151 tons in 1954 when the Wisconsin State ASC Committee, of which William R. Merriam, of Janesville, is chairman, required farmers to use 250 pounds of 0–20–20 per acre to be eligible to obtain ACP assistance on agricultural limestone? No other State required this."

5. This paragraph implies that the drop in use of agricultural limestone usage went precipitately from 2,283,650 tons to 1,133,151 tons, which is not the case. The following are figures on total State lime usage obtained from the Wisconsin State Department of Agriculture back to 1946:

	Tons
1954	1,133,151
1953	1,566,000
1952	1,786,000
1951	1,514,000
1950	1,841,000
1949	2,012,000
1948	1,926,000
1947	1,974,000
1946	2,003,000

The drop in usage in 1954 over 1953 is due at least partially to some of the factors listed in item 1 above. Some of the drop in usage may also be due to the fact that 1954 was the first year in which a soil test

was required under ACP prior to approving cost-sharing for liming materials. The soil test requirement is a part of the national program and must be adopted by all States except those where a showing can be made that there are insufficient testing facilities. In Wisconsin there was and is no lack of testing facilities. The State committee believes the soil test requirement is a good one but during the first year (1954) it was in effect it was another new piece of information to get across to farmers and ASC offices did not get underway on a free sampling program for farmers as rapidly or enthusiastically as might have been desired. Hence many requests for cost-sharing on practices involving lime application could not be approved due to the failure of the farmer to supply the soil test showing how much lime he needed per acre or due to the failure in some cases of ASC offices to get samplers out to do sampling where that service had been offered farmers.

"Did you know that while the State committee has modified this some for 1956, many counties are continuing to require it?"

6. The 1956 requirements are mentioned in item 3 (2) above. County AC programs are formulated by a group including the county ASC committee, the county agent, the ranking soil conservation service technician in the county and the forester serving the county. This group seeks the advice of representatives of all other agricultural officials in the county including the soil conservation district supervisors, the Farm Home Administration representative, the State conservation department game and fish representatives, etc.

The county program formulation group has the privilege of making the county program more restrictive than the State program if they believe the agricultural conservation goals of their county will be better served thereby. The State committee does not have the authority to refuse them this privilege nor would they desire to do so.

"Did you see the enclosed article by Emeritus Professor Emil Truog, one of the Nation's outstanding agronomists?"

7. Our comment on soils specialists' advice on ACP administrative policy matters is given above under Item 4.

"Did you see the enclosed editorial by the Wisconsin Agriculturist and Farmer?

"Did you know the Wisconsin State Legislature passed the enclosed joint resolution asking the State Committee to eliminate these restrictions?

"With the college, legislature and farm press asking for a practical approach to Wisconsin lime needs—just what is provided in the national program and what farmers of all other States in the Nation have—why does the Wisconsin State Committee maintain this stubborn attitude and position?"

"Why should you vote Agricultural Conservation Program funds each year and have this Wisconsin State Committee attach requirements which Wisconsin farmers either cannot or will not comply with?

"We have met with the State committee many times. At first it was our opinion against theirs. Now these facts are available from official USDA records and they still will not allow Wisconsin farmers the same opportunity to participate in the program as other farmers in the Nation. Secretary Benson allows a State to have more restrictive features than in the national program if they wish so the USDA administrators cannot overrule the Wisconsin State Committee."

8. The State committee and cooperating agency representatives who have the responsibility of final formulation of the State program are attempting to keep in mind the guiding policy statement included in the National Agricultural Conservation Program handbook under "Principles" which states in part:

"The national program contains broad authorities to help meet the varied conservation problems of the Nation. State and county committees and participating agencies shall design a program for each State and county. Such program should include any additional limitations and restrictions necessary for maximum conservation accomplishment in the area. * * *

"Costs should be shared only on practices which it is believed farmers or ranchers would not carry out to the needed extent without program assistance. Generally, practices that have become a part of regular farming operations in a particular county should not be eligible for cost sharing."

Certainly the application of lime alone—anywhere, any time—can be considered a part of regular farming operations in Wisconsin. The "initial treatment of farmland to permit the use of legumes and grasses for soil improvement and protection," which as we have explained must include the application of needed potash and phosphate along with lime and must include the working of the lime into the soil is truly conserving of soil fertility and is not so widely accepted a practice as lime alone—anywhere—anytime.

We fail to find in the "Principles" any statement which says the primary purpose of the program is above all to spend all of the funds made available by Congress, or which says that our every effort must be expended toward having 100 percent participation by farmers regardless of the amount of true conservation accomplished or that says that primarily our object must be to sell for the limestone industry a record tonnage of agricultural lime.

"We took the problem to the 4,300 county and community committeemen who are elected by the farmers. Enclosed is the survey: 99.22 percent disagreed with the State committee and only 0.78 percent agreed with the State committee. Still the Wisconsin committee, in our opinion primarily because of the chairman, William Merriam, will not change."

9. There is some apparent contradiction between the results of Mr. Koch's survey and his statement earlier that in the 1956 program many county committees are continuing to require the original 1954 program restrictions in their practices written under national practice A–4. Judging by Mr. Koch's own statement, either the committeemen in favor of the practice as we use it did not reply to the survey or the committeemen working out the 1956 program are of a different opinion concerning the desirability of these restrictions than were those reportedly answering Mr. Koch's survey.

We would like to close by making a preliminary report to you on our accomplishments under the 1955 ACP. Due to the fact that many of the practices started in 1955 remain to be completed in the spring of 1956 final figures on funds expended and the amount of practices carried out will not be available until July 1956. However, due to enthusiastic support of participating agencies across the board, due to a more favorable and enthusiastic attitude on the part of present ASC committeemen and personnel and due to the working out of administrative bottlenecks and tangles often characteristic when extensive program changes are made, Wisconsin farmers have greatly increased their use of ACP.

Earlier this fall we were quite sure that all funds would be used because we had a heavy fall signup. However, due to the early freezeup last fall many practices such as shallow ditching, terrace and diversion terrace construction, etc., were not performed. Failure to earn all funds available under the 1955 program will be due to a considerable extent to the fact that lime vendors did not complete making delivery of all the lime ordered by farmers under the 1955 program. Deliveries were not completed in Ashland, Barron, Bayfield, Crawford, Douglas, Florence, Forest, Iron, Langlade, Lincoln, Marathon, Marinette, Oconto, Oneida, Polk, Portage, Rusk, St. Croix, Sawyer, Taylor, Vilas, Washburn, and Wood.

The accomplishments under 1955 ACP are more notable when it is remembered that early signup under this program was hampered by cross-compliance regulations tying eligibility for cost sharing to compliance with acreage allotments—a provision which Congress later repealed.

We hope that this rather extensive reply to Mr. Koch's letter will give you a clear picture of our position on the issues he raises and that you may see your way clear to join us in looking with some pride on Wisconsin's pioneering again to try to build and interest Wisconsin farmers in a conservation program in line with the national program principles even though some rather strong pressure groups are opposed to our efforts.

Yours very truly,

WM. R. MERRIAM,
Chairman, Wisconsin ASC Committee.

Fiftieth Anniversary of Planters Co.

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 18, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the Wilkes-Barre Times Leader, Monday, January 16, 1956, on the occasion of the 50th anniversary of the Planters Nut & Chocolate Co., which had its inception in Wilkes-Barre and where the company's national headquarters are maintained.

The editorial is as follows:

PLANTERS' JUBILEE

To Wilkes-Barre, the observance of the 50th anniversary of the founding of the Planters Nut and Chocolate Co. has special significance as well as sentimental appeal, for it was here that the firm which has become an international enterprise was launched by the late Amedeo Obici and Mario Peruzzi. Locally, the occasion will be marked by a jubilee dinner in Hotel Redington on Tuesday evening, with Ralph Lisman, a member of the board of directors and head of the National Peanut Corp., a subsidiary, presiding.

The roots of Planters Nut and Chocolate Co. are deep in this community where national headquarters are maintained. Wherever Planters products are made and sold, Wilkes-Barre will be brought to mind, because the names of the city and the company are linked so intimately they are, to all intents and purposes, synonyms.

Wilkes-Barre is indebted to Planters not only for the jobs and opportunities it has provided local residents, but for focusing the national spotlight on the city. Mr. Obici and Mr. Peruzzi had a warm spot in their hearts for Wilkes-Barre and, even though they are gone, it perseveres in the Planters' organization, which is quite understandable.

Mr. Obici and Mr. Peruzzi built well when they established and developed Planters Nut and Chocolate Co. While they naturally are missed, particularly on such a milestone as the 50th anniversary, the fact that the organization is functioning smoothly testifies to their foresight and genius.

Planters heads for the century mark with the best wishes of its native Wilkes-Barre.

Swiss Watches

EXTENSION OF REMARKS
OF

HON. RICHARD E. LANKFORD

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 18, 1956

Mr. LANKFORD. Mr. Speaker, when President Eisenhower increased tariffs on Swiss watch imports by 50 percent in July 1954, many people were concerned that this action marked a backward step in the avowed foreign-trade policy of this administration. The tobacco farmers in southern Maryland, which I have the honor to represent, were concerned about the effect this action would have on their sales of tobacco to Switzerland, for the Swiss are the largest and best customers for our high-grade export tobacco.

These fears have been realized. In the past 9 months of 1955 Maryland tobacco exports were 21 percent below the exports for the corresponding period of 1954. The Maryland tobacco farmer thus has visible proof that international trade is a two-way street.

As if the escape clause action were not enough there have been over the past year and a half further harassments directed at the importation of Swiss watch movements. The tobacco farmer is justified in interpreting these new restrictions as being directed against our tobacco exports to Switzerland.

It is my understanding that the Commerce Department is planning a further reverse in duty rates on Swiss watch imports. I hope the Secretary of Commerce and other administration officials charged with the responsibility of such matters will read once again President Eisenhower's stated position on international trade. If they do, they will discover that any further restrictions against Swiss watch imports would be contrary to the President's position. I would like to remind these officials as well as my colleagues that free access to the market for Switzerland's fine time-keeping products carries with it substantial benefits not only for the tobacco farmers of my district, but for many other industries as well as for American consumers. In addition, incentives for scientific progress in the development of new and better watches and the force of competition essential for the proper working of the free enterprise system whether in Switzerland or the United States results from expanded trade relations between the United States and Switzerland.

In the past few weeks the press has devoted considerable space to new demands on the part of watch protectionists' actions to cut down on the imports of Swiss watches.

On this matter, Mr. Speaker, I insert in the RECORD two excellent editorials from outstanding business publications commenting on this subject: one from the Wall Street Journal of December 27, 1955, and the other from the New York Journal of Commerce of December 28, 1955:

[From the Wall Street Journal of December 27, 1955]

THE FEDERAL SHELTER

A year and a half ago the United States ordered an increase of up to 50 percent in the tariff duties on imported Swiss watch movements. The reason was the complaint of the American jeweled watch industry that it was suffering from Swiss competition.

Now the American watchmakers want more Government help. The reason is that they are again suffering from Swiss competition. The domestic producers explain that labor costs have gone up here while the Swiss have reduced their prices. So the tariff boost was not a very lasting boon after all.

It is hardly surprising. Though designed as bars to trade, tariffs are no longer the most efficient bars. Clever governments have devised better methods. Perhaps with this in mind, the domestic watch manufacturers are now suggesting not merely a further increase in tariff rates but other possible solutions as well.

These include a quota on watch imports, a Government subsidy to the domestic producers, or an increase in Government orders from them. A quota, if it could be rigidly enforced, would accomplish what the present tariff rates have not; they would hold down Swiss imports no matter how much the Swiss cut prices. Under a Government subsidy, or a fixed volume of Government orders regardless of need, it would not matter to the American companies how many movements were imported from Switzerland; they would still have their cozy little Federal shelter.

For all that can be positively proved, such measures may be necessary. The domestic industry claims it is essential to defense, and the Pentagon has agreed though only after considerable uncertainty. If so, and if the domestic industry has actually done all it can to meet the Swiss competition, then there would be a case for outright subsidization.

But let's not kid ourselves that it would be a solution. Any industry that thinks so need look no farther than American agriculture, which enjoys both quotas against some foreign imports and lavish subsidization; the subsidization has become its chief woe. At the very best, there is no way a subsidy can solve the problems of competition.

An industry which wants no more than a comfortable home may be able to find it for a while in the Federal shelter. An industry interested in making its way in the real world must look elsewhere.

[From the New York Journal of Commerce of December 28, 1955]

HOW MUCH COINCIDENCE?

Not satisfied with a tariff increase that has cut Swiss watch sales in this market by nearly 17 percent in a little more than a year, jeweled watch manufacturers in this country are now seeking more protection—a lot more.

They have appealed to the Office of Defense Mobilization for support in getting them a further tariff increase plus import quotas which will insure them a larger share of the American market and, coincidentally, hold Swiss sales here to fixed limits.

All this is being asked in the name of national defense which was, as most of our readers will remember, what President Eisenhower had principally in mind when he ordered a tariff increase of up to 50 percent on jeweled watch movements in July 1954. It is the position of the watch manufacturers seeking this extra protection that high labor costs here and lower prices on Swiss watches have erased whatever advantages the higher tariff originally gave them.

This newspaper does not know, of course, how ODM will react to this latest plea. The fact that importers will be given a chance to present their views to its Special Advisory Committee on the Watch Industry late next week indicates that, officially, at least, its mind is still open.

But we recall well enough that it was ODM as a whole that, in May 1954, approved defense essentiality as a reason for a watch tariff increase without letting it be known at the time that a special Defense Department study had brought in findings of a quite different nature.

The Defense Department, which one would normally suppose to be as much concerned with defense problems as anyone, saw no need for special action to protect the American jeweled watch industry, but the full ODM did, and now it is to ODM that the domestic producers have turned again, thus bringing the case to a full circle.

We have long noted something curious about the number of obstacles Swiss watch manufacturers have found along their approaches to the American market in the past few years. It might be helpful to list some of them:

July 1954: President Eisenhower raised the tariff.

October 1954: The Justice Department filed an antitrust suit on watches and movements aimed primarily at the Swiss.

March 1955: The Treasury Department issued a directive which, in effect, banned the upjeweling of Swiss watches coming into the United States market.

April 1955: A Senate subcommittee instituted an investigation of watch adjustments on allegations of fraud.

July 1955: A measure (H. R. 7466) was introduced in Congress which would amend the Tariff Act to tighten the ban on upjeweling.

December 1955: The Justice Department filed a new suit charging restraint in the watchmaking-machinery industry—of which the Swiss were the prime targets.

December 1955: The United States jeweled-watch industry returned to ODM asking further protection on the grounds of defense essentiality.

Although some of the Swiss practices now under fire go back as far as 30 years, no United States official has ever admitted that there is anything more than coincidence in this sudden outcropping of so many different actions against a single foreign industry.

Others, however (and we count ourselves among them), will find it a little hard to believe things are quite so simple. There have been too many coincidences—for example, the suppression of the Defense Department report—for the whole thing to look like a coincidence. It looks less and less like one with every new action that is launched against the Swiss watch industry.

Those who are not in Washington's confidence in this matter are more likely to muse over two more practical suggestions of what is in the wind: Either Swiss business practices are far more nefarious than anyone in official Washington has yet hinted, or someone wielding a good deal of influence in official Washington is conducting a vendetta against the Swiss watch industry.

As we have stated previously, the matter at issue involves a great deal more than Swiss watches. It involves the whole conduct of our trade policy.

It would be a serious matter for American exporters of all kinds of goods, as well as for the Swiss and the American consumer, if our overseas trade relations should be injured by the suspicion, no matter how small, that a foreign industry can be subjected to official persecution if it proves embarrassingly successful in this market. There can be no denying that such a suspicion does now exist.

The time has come for some plain speaking on the part of someone who can speak for

the President, if not on the part of Mr. Eisenhower himself. Someone must know the reason for these simultaneous actions against the Swiss. If it is a good reason, nothing but harm can come of keeping it quiet.

Examination of Conscience

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 18, 1956

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following article from the Pilot, Boston, Mass., October 15, 1955, concerning the case of Emmett Till which has aroused great resentment among people who believe in law observance and law enforcement:

THE LESSON OF EMMETT TILL

Now that people have had a chance for second thought and time has begun to wear away our initial feelings of wrath and fury, it might be helpful to take another look at the case of Emmett Till. A Negro lad from Chicago murdered in Mississippi in a brutal manner; his alleged murderers brought to quick trial and acquitted; an honest judge with a feeble apparatus of justice available to him—all of these, and so much more, add up to a situation which will trouble the American conscience for many years ahead.

It is, of course, easy for us so far away from the scene and the social, economic, and cultural problems which are part of it, to take a superior attitude and exercise our moral indignation on the basis of the miles which geographically (and sociologically) separate Mississippi from Massachusetts. As American citizens we shake our heads over the fact that the majority element in the small Mississippi community are not registered voters, and so are among other things unavailable for jury duty. The waves of fear, fear of beating and even death, not to mention economic reprisals as serious as starvation itself, moved almost visibly, if intangibly, across the courtroom, and it shivered spines all over America. All in all, this was the greatest democracy of the world showing itself very nearly at its worst.

Our temptation, far away and so very moral ourselves, is to find inexcusable all that was done there, to condemn without qualification the straitening of justice, to recoil from the brutality and the fear, to blush for the denial of human rights, and finally to be satisfied that it happened in Mississippi. This is all very acceptable except for the last item. With its own gradations, something very much like what happened to Emmett Till is happening in many other communities of America, even those that pride themselves on being supercivilized. To be sure it is seldom that anyone is so murdered and it is almost impossible to imagine a court as hamstrung as the one in Mississippi, but there are many more subtle, equally deadly forms of hatred which flourish almost unchecked among us.

We have problems in housing and problems in hiring—the Negro family that moves into the somewhat better neighborhood and the educated Negro who applies for a better job. We have the social questions of the club, and the bar, and the dance. We have another area worth considering in the school—especially the private school. A test always helpful here is the children we think proper for companions to our own children. There are many, many more things we could mention but the point must be clear. Those who draw back in proper disgust from something like the Till case are too often the same ones who, in small ways, make the same kind of judgements as those who murdered Emmett Till. Of course they don't endorse murder—neither did the anti-Semites ever aprove of Dachau.

It is a good thing that we should feel hurt for what America did to Emmett Till but we should be careful with what dispositions we condemn his murderers. "Let one who is without sin cast the first stone"—this was the Lord's reminder in a situation slightly parallel. Few of us can afford to be self-righteous, but all of us can use the occasion for an examination of conscience. If we make excuses for ourselves, we are excusing his murderers. If we make small allowances for ourselves, we are giving them allowance too. But if instead we set out to cleanse our own souls, we are beginning the necessary purification of America.

Soviet Foreign Policy Since Stalin

EXTENSION OF REMARKS
OF
HON. FRANK E. SMITH
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 5, 1956

Mr. SMITH of Mississippi. Mr. Speaker, under unanimous consent, I include a very lucid and penetrating analysis of Soviet foreign policy since Stalin, delivered at the annual meeting of the American Historical Association, December 28, 1955, by Prof. Thomas T. Hammond, of the University of Virginia:

We all know that after the death of Stalin there was a dramatic change in Soviet foreign policy. The ending of the wars in Korea and Indochina, the settlement of the dispute with Tito, the evacuation of Austria, and the establishment of diplomatic relations with Western Germany are only a few of the manifestations of what has been called the New Look, the new course or the peace offensive of the Soviet Union.

What were the motives behind this change? Was it a result of Soviet weakness? Were the gestures of friendship by Khrushchev, Bulganin, and company merely parlor tricks designed to mesmerize innocent Americans? Was the spirit of Geneva only a drunken stupor imparted by too much vodka? Or did Soviet foreign policy change fundamentally?

Let us look at some of the possible explanations for the New Look in Soviet foreign policy and attempt to assay the validity of each.

One explanation commonly put forward is the supposed economic weakness of the Soviet Union. Chancellor Adenauer, for example, declared recently that the Soviet Union "has to fulfill such a mass of * * * economic, social and cultural tasks, that it would like to devote its entire power to their fulfillment." Secretary Dulles put it more bluntly when he told a congressional committee that the Soviet economic system "is on the point of collapsing."

What are the facts? There can be no doubt that one sector of the Soviet economy—agriculture—has failed miserably. Mr. Khrushchev himself admitted that the number of livestock in the U. S. S. R. in 1953 was less than in 1928. Early this year he confessed that the production of grain had not kept up with the growth of population. His program of plowing up virgin lands has not proved successful.

There is no evidence, however, that the food situation in the Soviet Union has so far become serious enough to cause a change in foreign policy. Of the many Western visitors to the Soviet Union in the last 2 years, none has reported that the supply of food is any worse than previously. Thus it seems dubious that the situation in agriculture is responsible for the New Look.

Some commentators have argued that the rulers in the Kremlin feel that they must follow foreign policies that will permit them to invest more of their resources in consumers goods, so as to meet the demands of the Soviet people for a steadily rising standard of living, and thus mollify discontent.

This argument is likewise unconvincing. The leaders of the Soviet Union have never put living standards first in their thoughts, and they are not doing so today. Nor is it easy to understand why they should be particularly worried about morale. Real wages have risen steadily since the war, with the result that Soviet citizens are living better now than they have in many years—perhaps better than in any year since the revolution.

Another variety of the argument regarding Soviet economic weakness has to do with the high cost of armaments. The Soviet economy, it is said, might somehow be able to hobble along and avoid complete collapse if it were not for the fact that the armaments race, and particularly the competition in nuclear weapons, absorbs so much of its economic resources.

But when all of these economic arguments are added together, they still do not constitute reasons sufficient to have forced the Soviet Union to adopt a more conciliatory foreign policy. The overall picture of the Soviet economy is one of impressive strength, and of strength that is increasing at a rapid rate. The postwar years have seen a steady rise in industrial production and in the standard of living, despite the high cost of armaments.

It is doubtless true that the Soviet leaders would like to have peace and a relaxation of tension for several years, so as to be able to ameliorate their various economic problems, imporove living conditions, and develop the economies of the other countries of the Soviet bloc, particularly China. But this is far from saying that the Soviet Union is seeking a relaxation of international tensions because of the overwhelming pressure of economic weakness.

Occasionally the argument is put forward that one of the chief objectives of the New Look is the restoration of East-West trade, particularly the removal of restrictions on strategic goods. It is said, rather hopefully, that the American-imposed ban on strategic commodities is putting a serious strain on the Communist economies, is limiting their military power, and is thereby forcing the Communist nations to become more conciliatory.

These suppositions seem overly optimistic. The Soviet Union is almost completely self-sufficient, and foreign trade has never loomed large in its economy except during brief emergency periods. The ban on the shipment of military commodities has not prevented Soviet development of top-quality jet fighters, long-range jet bombers, or atomic weapons. The other Communist states, especially China, have probably been hurt more by the restrictions. However, in these countries the great decline in western trade is due not only to American legislation, but also to a deliberate Soviet policy of consolidating its control over the Communist bloc and cutting it off from dependence on the West.

There doubtless are some special items that the Soviet Union would be pleased to purchase. Accessibility to outside markets also would allow the Soviet Union to make up for temporary shortages caused by faulty planning or underfulfillment of production goals. But the need for these commodities

is hardly great enough to have caused a major change in foreign policy.

INFLUENCE OF POWER STRUGGLE

It is sometimes maintained that the New Look in Soviet foreign policy is a reflection of the struggle for power among Stalin's successors. But no one has shown just how a struggle for power automatically produces a foreign policy of conciliation. If the death of Stalin had been followed by a policy of increased belligerency and intractability, we may be sure that this also would have been explained by some as a reflection of the struggle within the Kremlin.

It is difficult to see just how a struggle for power is necessarily connected with any particular foreign policy. Isn't it just as logical to assume that one of the contestants, or one of the competing factions, could gain support by advocating a "get tough" policy? History provides many examples of leaders embarking on foreign adventures as a means of increasing prestige at home and diverting attention from internal problems. Furthermore, the ability to make concessions to foreign powers without fear of domestic difficulties is a sign of a strong government rather than a weak one. Admittedly a contest for power has been in progress since the death of Stalin. But there is no clear indication that the purge of Beria or the demotion of Malenkov were connected with disagreements over foreign policy.

TWO OBJECTIVES

If the new look is not due primarily to economic weaknesses or to other internal problems, what then is the explanation? No doubt a number of factors are involved, but two objectives stand out.

One is to reduce the danger of a big war by effecting a relaxation in the diplomatic atmosphere, to eliminate the possibility that the advocates of so-called "preventive" war will come to dominate American policy, to bring an end to the flammable atmosphere in which some accident could serve as the Sarajevo of an atomic holocaust, and, if possible, to devise some method of preventing the use of atomic weapons.

Isn't it reasonable to suppose that the preponderant motive behind the adoption of the new policy was the urgent desire to avoid a thermonuclear war which the U. S. S. R. might lose? The Soviet leaders know that we have large stockpiles of atom and hydrogen bombs, and they are painfully conscious of the geographic advantage we derive from our airbases in Greenland, Iceland, Alaska, Western Europe, North Africa, and the Middle East. The Strategic Air Command is like a loaded gun pointed at the vitals of Russia, and the rulers in the Kremlin must be desperately eager not to pull the trigger.

A second objective of the present Soviet "peace" policy is to lull us into a false feeling of security, to get us to relax our guard, and thus make it possible for the Soviets to inflict an atomic Pearl Harbor, or to extend their domination by other means. The present talk of peaceful coexistence is a siren song intended to lure the free nations off their course and wreck them on the shoals of disarmament, disunity, pacifism and neutralism. The New Look apparently is designed to bring about the closing of American overseas air bases, the withdrawal of American forces from foreign countries, the prevention of West German rearmament, and the weakening of such defensive arrangements as NATO, SEATO, and the Baghdad Pact.

The Kremlin wishes, moreover, to reduce the widespread fear of the Soviet Union, thereby removing the cement which has united the free world, and creating an atmosphere in which conflicts among "capitalist" states can flourish. That this policy is having considerable success is shown by Britain's decision to reduce its armed forces one-eighth, by the Cyprus dispute, by the weakening of Yugoslavia's ties to the West, and by Egypt's decision to buy arms from Czechoslovakia—to cite only a few examples.

WHY NEW FEARS?

If fear of an atomic war is one of the chief causes of the New Look, then why wasn't this policy adopted during the period from 1945 to 1949, when we had the A-bomb but Russia did not?

A number of answers can be made to this criticism. In the first place, there is considerable difference between the early-type atom bombs, equal to about 20 thousands of tons of TNT, and a modern hydrogen bomb, equal to 20 millions of tons of TNT, and spreading deadly dust over thousands of square miles. It may be that Stalin, along with many people, looked upon the atom bomb as just another more powerful weapon, one which did not require a change in Soviet foreign policy.

Furthermore, it should be remembered that the years when America had a monopoly of the A-bomb were also the years in which we were demobilizing our Army and withdrawing most of our forces from overseas. It was not until after the start of the Korean war that western rearmament began in earnest, and it was some years later before we had built up western military might.

One factor delaying the shift may have been the personality of the aging master himself, Dictator Stalin. Old, irascible, and set in his ways, he probably found it difficult to change his policies or his methods. His successors, on the other hand, were happy to bring a halt to policies which had succeeded in uniting much of the world against the Soviet Union.

RECENT EVENTS

But what about the events of the past few weeks? Such actions as the sale of arms to Egypt, the inflammatory speeches of Khrushchev and Bulganian in Asia, and the attack on Eisenhower have led some observers to the conclusion that the New Look has now been discarded in favor of a return to the Old Look. What has happened to the spirit of Geneva and all that it implied?

The answer may lie, first of all, in the fact that the meeting at the summit was oversold to the world public, and we have since been experiencing the inevitable letdown. There has been a gradual abandonment in the West as well as in the East of the unusually restrained language that prevailed immediately after the July meeting.

Secondly, Geneva signified a general acceptance of the idea that since weapons have become so destructive, and since both East and West have large quantities of these weapons, neither side is likely to risk a large-scale war. Recognition of this fact has had two effects: On the one hand, the Soviet leaders feel that they need not speak so sweetly now, since the danger of war has lessened. On the other hand, some nations that formerly felt threatened by the U. S. S. R. now believe that they no longer have to concern themselves so much with building up defenses against a possible invasion by the Soviet Army.

Part of the explanation for what looks like a shift in Soviet policy since Geneva may lie simply in the fact that there are two main variants of the new look—one for nations committed to the West, and another for nations that are neutral. In those countries receiving American military aid, or belonging to Western-sponsored blocs, the objective of the Kremlin seems to be to reduce the fear of the Soviet Union and persuade them that military expenditures and military alliances are unnecessary.

In those former colonies that have remained aloof from Western blocs, the Soviet Union is using four different tactics. One is to denounce colonialism. Another is to offer these countries the armaments that the West has refused to supply, as in the case of Egypt. Still another is to promise trade, technical assistance, and diplomatic support, as with India, Burma, Afghanistan, and Egypt. A fourth tactic is to put the diplomatic squeeze on pro-Western countries like Pakistan and Israel, by supporting the claims of their enemies.

To Western-bloc nations the Soviets say: "Why burden yourselves with expensive armaments if there is going to be no war?" To the former colonies of Asia and the Middle East they say: "Keep out of Western 'imperialist' alliances, and we will give you aid, with no strings attached."

FUTURE POSSIBILITIES

What then of the future? There seem to be three possible courses which future Soviet policy might take hot war, cold war, or cool war.

First, and worst, would be a hot war. It is reckless to assume that the Soviets would refrain from starting a hot war if they became convinced that they could defeat us without suffering a massive counter attack. As Bulganin said recently, "It is wrong to assert that inasmuch as East and West possess hydrogen weapons the possibility of a thermonuclear war is automatically excluded."

Second is the possibility of cold war. It is certainly not difficult to imagine that in the next few months, as in the past few months, the spirit of Geneva will continue to melt away, polite language will again disappear from Soviet-American intercourse, and we will revert to the former situation of open disputes, openly arrived at. East and West may return to a condition of irreconcilable antagonism, full-scale political warfare, and unrestricted competition for military supremacy.

Third, we may have a continuation of what might be called the cool war, the situation in which we now find ourselves. Such a relationship differs from the cold war in such superficial aspects as the exchange of cultural and scientific delegations, the release of western prisoners from Communist labor camps, and a change in the tone of the propaganda war. More important, the cool war has brought a willingness of the Soviet Union to bargain and to make concessions on points which, if not crucial to Soviet security, still cannot be brushed aside as insignificant. Examples are the Soviet withdrawals from Austria and from the Porkkala Peninsula. It is perhaps too early to tell whether the cool war has also brought a willingness on the part of the Soviet Union to make a genuine effort to control the use of atomic weapons; we can only hope that it has.

In a cool war the struggle between communism and the free world continues, but it is carried on within certain limitations. The primitive slugfest, you might say, has been replaced by a boxing match in which padded gloves are worn and certain rules are observed. The Soviet Union may be wearing brass knuckles under its gloves and it may occasionally hit below the belt, but at least it feels constrained to hide these actions and it no longer openly proclaims the contest to be a fight to the death.

From the point of view of the West, the cool war has both advantages and dangers. We have as much as the Soviets to gain from the avoidance of further killing and destruction. The chief danger is, of course, that we might relax and become demoralized, lower our guard, and thus lay ourselves open to a Communist knockout.

The situation today may be one of coexistence, but it is a highly competitive coexistence. The open struggle of the past 10 years is merely changing its form. It is war, but with certain weapons barred. It is, to reverse the phrase of Clausewitz, war continued by other means.

Miserable Islands

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 17, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following column by Joseph and Stewart Alsop, which appeared in the Washington Post and Times Herald, Sunday, January 15, 1956, in which they discuss the problem confronting the administration with respect to possible attack by the Chinese Communists on the islands of Quemoy and Matsu.

The article follows:

MATTER OF FACT—NO FORGETTING MISERABLE ISLANDS

(By Joseph and Stewart Alsop)

Behind the smooth facade of public optimism, the Eisenhower administration is currently driven by a grave and decidedly pessimistic debate about Far Eastern policy. The question is how to deal with a Chinese Communist attack on Quemoy and the Matsus, the little islands Chiang Kai-shek still holds in the Formosa Strait.

This inconvenient question has been put off for many months, while the Communists built up their military power and pushed forward their logistical preparations in the Formosa Strait area. Despite appearances to the contrary, Secretary of State John Foster Dulles and other leading American policymakers have argued that the Peking government was giving first priority to its drive to get into the United Nations. Therefore, it was said, the Communists would avoid any taint of aggression at this time.

A minority of policymakers always contended that the Chinese Communists would not miss the smallest chance to realize a territorial claim, in order to gain membership in the heavenly choir itself. Whether rightly or wrongly, this minority is now becoming a majority, because of a series of signs suggesting that "this is where we came in before."

Where we came in before, of course, was last year's Formosa crisis, culminating in the evacuation of Chiang's forces from the Tachen Islands. The pattern now is remarkably similar to the first stages of the pattern of Communist pressure on the Tachens.

All the little warning flags have already been raised. Communist reconnaissance planes have flown over the Matsus. There has been a short but sharp action between Communist and Nationalist PT boats in the neighborhood of the Matsus. Quemoy Island, which is squarely in the mouth of Amoy harbor and almost entirely surrounded by Communist gun emplacements, has lately been brought under heavy artillery fire.

In addition, the official Chinese Communist news agency has bitterly accused the United States of stalling in the interminable negotiations which have just been resumed in Geneva.

Peking wants voluntarily cession of the offshore islands, suspension of the trade embargo against Communist China, agreement on admission of China to the United Nations, and a lot of other things President Eisenhower and Secretary Dulles are unwilling to concede.

Maybe the Communists are bluffing and will not move even if Ambassador Johnson does not satisfy them. But if they are not bluffing, what must be expected this winter or early spring is easy enough to foresee.

The second stage of the pressure on the Tachen Islands was the invasion of Ichang, a small island within artillery range of the main Tachen positions, followed by a preliminary blockade of the Tachens. This preliminary blockade, rather than the pleading of President Eisenhower, was what persuaded Generalissimo Chiang to evacuate the Tachens.

Kaoteng, another little island that is rather lightly held has almost exactly the same relation to the Matsu Islands that Ichang had to the Tachens. A landing on Kaoteng is the first step that is now feared.

After that will come heavy artillery fire on the defenses of both Quemoy and the Matsus, combined with a Communist aid blockade cutting off the Quemoy and Matsu garrisons—120,000 troops, the core and flower of Chiang Kai-sheks' forces—from all contact with Formosa.

The surrender of the offshore islands and the loss of Chiang's best troops must inevitably follow, unless the blockade is broken.

The question the administration policymakers are debating is what to do about this prospect. The official American policy concerning an attack on Quemoy and the Matsus is to meet force with force, if the attack on the offshore islands is clearly preparatory to an attack on Formosa. But the "if" is so big and all-important that this is nothing but indecision dressed up as decision.

Furthermore, the Chinese Communists are now locally stronger than all the air squadrons of the Pacific fleet, plus all the units of the United States Air Force in the Pacific, plus the Chinese Nationalists.

Except for nuclear weapons, we have not got force enough in place to meet the force of the Chinese Communists. Hence, fighting for "those miserable little islands," as they are called at the State Department, now seems so unappetizing that any such fighting is highly unlikely.

Wait and see if the worst really happens, is likely to be the motto.

Woodrow Wilson Praised

EXTENSION OF REMARKS
OF
HON. HARLAN HAGEN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1956

Mr. HAGEN. Mr. Speaker, under leave to extend my remarks, I call to the attention of my colleagues a news story from the Washington Post and Times Herald under date of December 28, 1955. It should be observed that the article contains words of praise for former President Woodrow Wilson from our only two living ex-Presidents, Mr. Truman and Mr. Hoover. That Mr. Hoover should commend the works of President Wilson is singularly noteworthy:

WOODROW WILSON PRAISED

NEW YORK, December 27.—The only two living former Presidents today inaugurated the coming Woodrow Wilson Centennial Anniversary Year.

Herbert Hoover and Harry S. Truman urged observation of 1956 as the 100th anniversary of Wilson's birth.

Hoover said: "There can be no doubt that Mr. Wilson made the major contribution to lifting oppression from millions of people and setting them upon the road to hope."

Truman commented: "Woodrow Wilson labored for what at one time seemed hopeless causes. He sought to establish an effective world organization. He urged us to lead the world in search for a just and lasting peace. * * * The seeds Wilson planted have now borne fruit."

Joining in the tribute was Secretary of State John Foster Dulles, who worked with Wilson in World War I.

Speaker Rayburn Lends Power of His Voice to Public Shock and Alarm Following Disclosure of Brink of War Philosophy and Practice on the Part of Secretary Dulles—Calls It Pitiful Performance

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 18, 1956

Mr. EVINS. Mr. Speaker, many millions of alarmed American citizens—as well as many of our allies—are reading today with relief and gratification that the calm, reasonable, and powerful voice of our distinguished Speaker, Hon. SAM RAYBURN, has been raised in condemnation of the suddenly disclosed brink-of-war philosophy which, it seems, is being practiced by our State Department; at least it has been practiced, by his own admission, by the Secretary of State, Mr. Dulles.

Speaker RAYBURN, in a press conference statement on yesterday, called Mr. Dulles' practiced brink-of-war philosophy a pitiful performance and many will find themselves in complete agreement. For my own part, I can see only one bright result coming out of Mr. Dulles' self-praiseworthy disclosure of his diplomatic tactics—and that is, that having revealed his tricks of the trade to an appalled world, Mr. Dulles may find them impossible for successful practice further in the future.

In this connection, Mr. Speaker, I include excerpts from the report of Mr. RAYBURN'S press conference statement, as written for the New York Times by Mr. William S. White, in the Appendix of the RECORD.

The excerpts follow:

RAYBURN ASSAILS STAND BY DULLES—HOUSE SPEAKER SCORES PITIFUL PERFORMANCE AND CHARGES PERIL TO UNITED STATES ALLIANCES

(By William S. White)

WASHINGTON, January 16.—House Speaker SAM RAYBURN added his power today to Democratic attacks on Secretary of State Dulles.

* * * * *

As Mr. RAYBURN broadened Democratic charges of election-year irresponsibility against the Secretary of State, President Eisenhower coincidentally asked Congress to grant him the right to pledge foreign economic aid for some time into the future.

The Speaker * * * accused Mr. Dulles of a "pitiful performance." Mr. RAYBURN said the Secretary had endangered the United States' alliances by a statement in an interview in Life magazine that the administration's diplomatic skill had saved the peace after the Nation had walked "to the brink of war."

Speaker RAYBURN's denunciation of Secretary Dulles was of unusual significance.

It was the first instance in which a member of the Democratic congressional leadership had joined what had heretofore been rank-and-file criticism of Mr. Dulles over the "brink of war" statement, which appeared in an interview in Life magazine.

* * * * *

Mr. RAYBURN's action was one of the rare times he had assailed the administration on foreign policy since President Eisenhower took office in 1953.

The Speaker asserted at a press conference that Mr. Dulles' interview was likely to lose friends abroad who were needed by the United States more than ever.

"That [the article] may be a satisfactory thing for Mr. Dulles," Mr. RAYBURN declared, "but it is a pretty dangerous performance for the country. All in all, the article and Mr. Dulles' quotes in it were a pitiful performance.

"The brink of anything is too close for me. I think we need friends now more than we ever needed them. I fear that by a performance like this we may have fewer of them in the future than we have now."

If They Would Only Let Us Determine Our Own Destiny

EXTENSION OF REMARKS
OF
HON. HERBERT C. BONNER
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 18, 1956

Mr. BONNER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington (N. C.) Daily News of January 13, 1956:

IF THEY WOULD ONLY LET US DETERMINE OUR OWN DESTINY

Right now Members of Congress are figuring out ways and means to increase the tension and feeling which exist down South regarding the race issues which have become so important.

One Congressman would introduce a resolution, we are told, which would impeach the Representatives from Mississippi. Another would force an antilynch bill through Congress. Another wants a bill passed which we have come to know as the Fair Employment Practices bill or FEPC. And, of course, the removal of the poll tax as a requirement for voting always comes up when Congress meets.

Northern politicians just do not know the tension which prevails just now in the Southland. And in so many cases what they are trying to do is designed to get votes for them rather than to be great humanitarians.

If the Northern politicians would just leave us alone now, we could work out our own destiny in peace and dignity. But when fuel is added to the fire ever so often, the flame roars ever higher and stronger.

We do not defend the poll tax payment as a requirement for voting. We do not in any sense uphold lynching. We do not uphold sinister practices which deny God-given rights to any man. But we do object to the constant stirring of the race issue by politicians who would do well to improve the lot of their own constituents before they try to crusade for a better way of life in the Southern States. It seems that they should have enough to do in their own backyards without meddling and stirring up trouble down here.

If left alone, we'll work out our own problems. Issues and hatreds are being created today which did not exist here a while ago. We are being made the pawns in this great game of politics.

The Southerner has as much sense as the Northerner. Prejudices cannot be erased overnight. All we ask is to be left alone for awhile.

"Do Big Oil Companies High-Pressure Local Gas Stations?"

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 18, 1956

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following radio address I delivered over station WMEX, Boston, Mass., on Saturday, October 15, 1955:

Greetings. In the maze of congressional activity the evidence developed through some hearings and investigations does not receive the attention that it deserves.

Take the case of Pete, who runs the gas station around the block. We may drive the many cars in his neighborhood, but he is the one who provides the services that enable them to run.

Pete is a pleasant man, who seems to delight in waiting on us.

Even though he is kept busy all of his long day, in his little supply office, at the gas pumps, or under the hoist.

Pete is a small-business man.

We know that he works hard, but we figure he enjoys the fact that he is independent.

There are some 200,000 others just like him, who lease their stations from the major oil companies.

Offhand, Pete would seem to be far removed from the great national and international issues that come before the Congress of the United States for study, debate, and decision.

Pete, however, has his own special problems.

Being a small operator, and dependent upon his big suppliers, there is always the danger that he will be subjected to power pressures.

After receiving many complaints, the Small Business Committee of the United States House of Representatives authorized an investigation.

Subcommittee No. 5, under the chairmanship of Congressman JAMES ROOSEVELT, held numerous hearings concerning alleged coercive and discriminatory practices used by oil company suppliers against retail gasoline operators.

Sixty-four witnesses were heard.

Thirty-one were retail gasoline-station operators.

Fifteen were retail gasoline trade association officers or attorneys.

Twelve were officials of oil company suppliers mentioned in the testimony, or retail operators of the company who testified on behalf of company policy and practices.

In addition, the subcommittee accepted for the record, statements presented under oath in affidavit form.

On the basis of the testimony, the subcommittee reached the following conclusions:

1. A substantial proportion of all sales of refined gasoline of major oil companies to the general public is made through retail outlets where the dealer has a short-term lease from the oil company supplier, usually for 1 year. The importance and the proportion of the total retail market serviced by such short-term lessee dealers has been increasing.

2. The dealer operating his station under a short-term lease with the oil company supplier, oftentimes is not independent and is subject to control by the oil company supplier.

3. The short-term leases and sales practices of major oil companies in relation to sponsored products have had the effect of operating against a dealer's freedom of choice in using or dealing in competitive products, and operate to substantially lessen competition and tend to eliminate price competition.

4. Price discrimination: oil company suppliers have held the level of their prices generally while at the same time cutting their prices to one or more dealers at a particular location. In such situations, the lower price has prevailed until the low price, off-brand dealer saw fit to increase his price. This policy or practice has had the immediate effect of fomenting price wars among the retail dealers, and results ultimately in eliminating a substantial amount of price competition between and among both brand and off-brand gasoline. Moreover, short-term lessee dealers in many instances have been coerced or induced by their oil company suppliers into so-called price wars in an effort to secure the business enjoyed by the low-price off-brand dealer. It was also established that on occasion price wars have been started when some dealers engaged in price-cutting activities on their own initiative.

5. The lessee dealer needs immediate and permanent relief to enable him to fulfill his role as an independent businessman.

Let's take some testimony at random.

A lessee dealer in Manchester, Ga., testified company representatives told him that he had to abide by the policies of the big oil company and that they had a quota of TBA products (tires, batteries, accessories) to meet. His station had to meet this quota and that they were going to do it one way or another.

Despite these threats, the dealer refused to purchase the required items. Shortly thereafter his lease was canceled pursuant to a 10-day notice provision. Forced to move from the station all equipment and stock other than the oil company's products, the dealer suffered a loss of approximately $1,500.

Another dealer in Rockville, Md., testified as to pressure, both as to one big oil company's TBA products, and the retail price of its gasoline as posted. Because of this pressure, he was forced to take a competitive brand of tires out of his station and hide them in another location although he felt that the competitive brand tires were cheaper and had a stronger guaranty than the company-sponsored tires.

Detroit, Mich., lesse testified that he was told by a company representative "to get out of his station all merchandise competitive with the company's TBA items. Following his refusal to do so, his lease was not renewed, and he stated that company representatives told him one of the reasons for the refusal was that he did not sell enough TBA items and lubricants.

A Johnstown, Pa., lessee testified that another big oil company's salesman—"caught me with two winter tires manufactured by a competitor which I had bought on special request for a good customer. The salesman told me that if I could not adhere to the policies of my supplier, he would put someone in my station who would. Every time he wasn't too well pleased with my oil or gas sales, displays, or hours, he would tell me about the fellows in training at the

big company's station, who would replace me on short notice."

This dealer was canceled out of his station on December 24, 1954, the company refusing to buy its own brand stock in his inventory.

A Seattle, Wash., lessee testified: "* * * That there was one point my big company supplier made very clear, that you do carry their complete line * * * I carried this line for one reason, to try and keep peace with them. Even though I don't like their complete line of merchandise."

He further testified that he could have bought the same TBA items he purchased through the company distributor, at a cheaper price from an independent jobber.

The effect of the heretofore described practices of certain oil companies upon the free competitive economy, was brought forth in the testimony of officers of the 'Blank' Oil Company of California. Its president said that his company sold its oil strictly through independent dealers. With reference to motorcar and repair shop dealers, the company was able to sell to approximately 75 percent of such dealers. With reference to service-station dealers, it was only able to sell to approximately 35 percent of the total number of such dealers. Of the 35 percent of the retail gasoline station dealers who did purchase the 'Blank' Co.'s oil, a majority would not display this product, but kept it hidden.

This official states that: "In many instances our delivery truck cannot even deliver to their place of business. They are afraid they will be caught by the major company representative, and so we deliver oil and it is written right on the order that our delivery truck carries it to a man's home, or to a small independent business alongside of him with whom he is friendly. Our oil is stored in the back of automobiles, is stored in locked-up cabinets, in restaurants * * * it is stored where the major gasoline company representative is not likely to find it."

A substantial part of the complaints of retail operators dealt with alleged coercive and discriminatory practices of the major oil companies in relation to the retail price of gasoline.

As one off-brand dealer testified: "Nobody can afford it when a major oil company deliberately goes out and subsidizes a station. Well, the intent is so obvious, in my opinion; it is for no other purpose than to force me out of business, or force me to 'up' the price so that they can dictate the price I can sell at."

The oil companies testified that discounts are given to "meet competition." It is significant when the off-brand station is forced to raise its price to the 2-cent differential, that the discounts are withdrawn, the price war ends overnight, and retail prices return either to their former or a higher level. The evidence therefore, is to the effect that the oil companies concept of "meeting competition" involves a practice which results in the isolation, and then the destruction, of competition.

As a result of these hearings, the subcommittee recommended that:

1. The antimonopoly laws designed to protect and preserve small and independent business enterprises as necessary to our free and competitive enterprise system, should be strengthened.

2. That all oil company suppliers consider liberalization of their policies regarding leases with retail dealers.

3. That the full House Select Committee on Small Business continue and expand its study of the problems of the small-business men in the petroleum and other industries who are dependent upon large suppliers.

4. That the record of the hearings be forwarded to the antitrust division of the Department of Justice and the Federal Trade Commission. With the intent that these agencies (a) consider the utilization of existing laws to the extent possible to eliminate the harmful practices shown in the record and the committee's report, and (b) to report to Congress those areas in which existing laws are not adequate to achieve relief, and what further legislation is necessary in order to achieve comprehensive and permanent relief.

Filling station owners should not be forced to carry certain tires, batteries, and other accessories which the big oil companies want carried, whether the neighborhood or roadside dealer wants them or not.

Legislation will be proposed to divorce oil companies from the retail business, just as motion-picture production has been separated from motion-picture exhibition.

Retail trade is the last stronghold of little business.

It must be protected from the high-handed pressures of monopolies.

Anthracite Coal Looks Up

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 18, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the Wilkes-Barre Record, Monday, January 16, 1956, which states that output of anthracite coal has reversed its downward trend and showed a marked increase in 1955 over the previous year. This is as it should be. Anthracite fuel is, and always has been and will continue to be, the king of the fuel industry. There is none more efficient and economical than anthracite coal. It will continue its upward spiral and retain its rightful position in the fuel industry.

The editorial follows:

As the new year was about to begin, the Record directed attention to a statement by F. W. Earnest, Jr., president of Anthracite Institute, to the effect that the outlook for the hard coal industry had improved. He is not alone in that opinion. From the State mines department last week came figures showing that anthracite has reversed its downward trend with 1955 showing output of a million tons better than 1954 with its all-time modern low of 26 million tons.

Interpreting the figures, a department spokesman said that they indicate that the sharp decline in production in recent years has been halted. In the current issue of the United Mine Workers Journal appears an article by Justin McCarthy saying that the new year will be a better year for both the anthracite and bituminous coal industries. He said that this is the point of view of President John L. Lewis and Vice President Thomas Kennedy, of the UMWA, of Francis O. Case, president of Glen Alden Corp., and of top leaders in the soft-coal industry. Supporting statements by Mr. Lewis, Mr. Kennedy, and Mr. Case were published in this issue of the Journal.

Expanding domestic and foreign markets offer more encouragement to coal investors and coal producers than has heretofore been known, Mr. Lewis was optimistic enough to say. He also referred to a process clearly evident in the region, the fact that production is being concentrated into a lesser number of physical plants of larger capacity.

In Mr. Kennedy's judgment, with reasonable winter weather, and in view of several other factors pertaining to the anthracite industry, it looks as though the anthracite industry, like bituminous, is well on the way to increased production and stability. One of the factors in his view is a substantial and growing increase in mechanical combustion of anthracite in modern heating methods.

Mr. Case was "conservatively optimistic" about anthracite. He said it would appear that the precipitous decline in anthracite consumption has tapered off considerably. He too saw that as reflecting successful industry efforts to merchandise automatic furnace equipment.

All these statements are from men who are as close to the picture as anybody can be. They are accustomed to giving careful thought to their expressions of opinion.

Bill of Rights Day: December 15, 1955

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 18, 1956

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to bring to your attention, a scholarly and moving address by the Reverend William J. Kenealy, S. J., dean of Boston College Law School.

It was delivered at historic Faneuil Hall, Boston, Mass., in celebration of Bill of Rights Day on December 15, 1955.

It concerns the faith by which we, as Americans live.

Believing, as we do, in the natural and inalienable rights of every human being on the face of God's earth.

And it assures us that we have a firm ally in the Catholic Church, as we defend the American philosophy of life, and liberty against "the cynical terror of race and blood and Communist class hatred."

Father Kenealy's tribute to the Bill of Rights, as based on the eternal truths of the natural law, should make us proud that we are Americans.

It reconsecrates in us, the determination to make the rights and responsibilities of freedom prevail.

The address follows:

CIVIL LIBERTIES

(Address by the Reverend William J. Kenealy, S. J., dean of the Boston College Law School, in celebration of Bill of Rights Day, Faneuil Hall, Boston, Mass., December 15, 1955)

One year ago this evening, the Honorable Earl Warren, Chief Justice of the United States, delivered an address on the Bill of Rights. A few days previous to his address, a group of State employees charged with responsibility for determining what announcements could be posted on the State employee's bulletin board refused to permit the Bill of Rights to be posted on the grounds that it was a "controversial document." A bitter altercation arose, and only after the Governor of the State vouched in writing for its noncontroversial character was the Bill of Rights permitted to occupy

a place along with routine items of interest. The Chief Justice in his address, commenting on this extraordinary incident, stated:

"And this happened in the United States of America on the 15th day of December 1954, the 163d anniversary of our Bill of Rights, declared by proclamation of President Eisenhower to be Bill of Rights Day. It is straws in the wind like this which cause some thoughtful people to ask the question whether ratification of the Bill of Rights could be obtained today if we were faced squarely with the issue."

I share the amazement of the Chief Justice in contemplating a dispute of this kind in the United States of America. As an incurable optimist, however, I have no doubt whatsoever that the Bill of Rights would be thunderously ratified tomorrow by the vast majority of our citizens. In fact, I feel sure that the Bill of Rights would be unanimously ratified tomorrow, if all our people could only understand and appreciate the philosophy which underlies it.

I. THE AMERICAN PHILOSOPHY

The philosophy of American democracy and of the American Bill of Rights is expressed in two immortal documents: the Declaration of Independence and the Constitution of the United States. The two are inseparably linked together, for the Supreme Court of the United States has told us several times that, while the Declaration of Independence is not part of the organic law of the land, it is indeed the spirit and thought of which the Federal Constitution is the body and letter. And the spirit and thought of this living political philosophy is epitomized in the following familiar words of the Declaration:

"We hold these truths to be self evident: that all men are created equal; that they are endowed by their Creator with certain inalienable rights; that among these are life, liberty and the pursuit of happiness; that to secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed."

In accordance with this philosophy, government is not an end in itself, but a means to an end. And the end of government is not merely the establishment of order, because order itself is but a means. The end of order is justice; but justice is itself only a means and its end is liberty. Finally, liberty is simply the condition necessary to enable human beings fully to achieve their perfection, their happiness, and their destiny during this life on earth. Thus, the real end of earthly government is a just and ordered liberty. But the essence of earthly liberty is the free exercise by the human person of the fundamental rights proper to human personality. Wherefore the first purpose of government is the protection of the individual person in the exercise of his personal rights. And therefore the prime test of all forms of government lies in the degree of success they attain in maintaining that protection.

Now the distinguishing characteristic of democratic government, as contrasted with other forms of governmental machinery, is that it is rule by the majority. But contrary to a strange and modern popular fallacy, true democracy is not a mere matter of form; and not a mere matter of majority rule. Let us not forget that, only a few years ago, a distressed Italian people flooded the piazzas of Rome shouting "Duce! Duce! Duce!" Let us not forget that, at the same time, the squares of Berlin resounded with the cries of "Heil Hitler" and a bewildered German people voted Adolf Schicklgrubber into power. No one ever received greater majorities than Joseph Stalin. No, there is no magic in mere forms; and mere majority rule is capable of effecting a tyranny as atrocious as that of any oriental despotism. Democracy, as a mere form, would be a faceless and gutless-philosophy of government.

On the contrary, because the essence of liberty is the freedom to exercise personal rights, true democracy must consist in minority rights under majority rule. But never in history has there been, and never in the future can there be, minority rights under majority rule unless the majority repudiates the blasphemy that mere numbers make truth and that might makes right; unless the majority faces and accepts the fact that there is an objective moral order, within the range of human intelligence, to which human societies and voting majorities are bound in conscience to conform, and upon which the peace and happiness of personal, national and international life depend.

The mandatory aspect of this objective moral order is called by philosophers the natural law. In virtue of this natural law, fundamentally equal human persons are endowed by their creator with certain natural rights and obligations which are inalienable percisely because they are God-given. They are antecedent therefore, both in logic and in nature, to the formation of civil societies and the casting of majority votes or the braying of filibusters. They are not granted by the beneficence of any State, democratic or otherwise; wherefore the tyranny of any State, democratic or otherwise, cannot destroy them. Rather it is the high moral responsibility of all civil societies and all majorities, through the instrumentality of civil law, to acknowledge their existence and to protect their exercise, by a wise and scientific implementation of the natural law.

In its essence, granted the existence of Almighty God, the natural law is a simple thing. It is man's participation in the eternal law of God. It implies that we know, independently of School Street, or Beacon Hill, or Washington, or London, or Moscow, or of the Vatican, for that matter, that we are all the children of God, endowed with immortal souls, destined for ternal life, bound in conscience to pursue that destiny, and possessed of inalienable rights to enable us to do so. It commands us to be patriotic, but warns us that the state is our servant and not our master; because it directs that we institute governments and laws precisely to protect our natural rights and to help us to attain, in human dignity, our divine destiny.

Thus it gives a rational and spiritual basis for our civil rights and liberties. Thus it gives a reason for the essential equality of man; it supplies us with a measure of the essential dignity of human personality. It tells us why the Chinese coolie is the equal of the Roman cardinal; the Australian bushman the equal of the European scientist; the African tribesman the equal of the American millionaire: because they are all created by the good God to enjoy Him fully for all eternity—a breath-taking destiny which completely dwarfs all temporary accidentals, physical, intellectual, economic, social and racial; a destiny of awesome dignity which demands decent human liberty for every child of God on the face of God's earth, regardless of race, creed, color or national origin.

This is the philosophy of the natural law. It is not pietistic pap. It is not self-righteous twaddle. It is not a cloud of theory. It is the soil of freedom. It is the philosophy upon which this Nation was founded and to which this Nation, by its most solemn covenants and usages, is dedicated. The Declaration of Independence and the Bill of Rights reaffirm the philosophy of the Constitution of this Commonwealth. The Preamble of that constitution solemnly declares:

"We, therefore, the people of Massachusetts, acknowledging with grateful hearts the goodness of the great legislator of the universe, in affording us in the course of His providence, an opportunity . . . of forming a new constitution . . . and devoutly imploring His direction . . . do agree upon, ordain and establish the following declaration of rights, and frame of government, as the Constitution of the Commonwealth of Massachusetts."

Article II of the Constitution of our Commonwealth refers to Almighty God as the "Supreme Being, the Great Creator and Preserver of the universe." Indeed, there should be peace in our minds, there should be a song in our hearts, because what a man is before God, that he is before the Constitution of the country and the Commonwealth we love. Despite the cynics, the materialistics, the secularists and the positivists in some academic halls, the glory of the American political system is that, for the first time in recorded history, a great people, formally and explicitly, made human rights the cornerstone of its political structure—and did so in the form of a definite profession of politico-religious faith. Ours is a country with a God; and, precisely for that reason, ours is a country whose philosophy exalts and respects the dignity and liberty of His human creatures.

II. THE TOTALITARIAN PHILOSOPHY

The tragic irony of democracy is that at the very moment when our American Republic was born in a grand profession of politico-religious faith—faith in the existence of God, in the reality of His natural law, in the fact of inalienable rights beyond the reach of any government, at that very moment the foundations of that faith were already shaking in a large part of what we used to call Christendom. The young Republic had not yet attained its maturity before it was assailed and buffeted from across the sea by a maelstrom of political and social theories which pounded away at the foundations of her political philosophy. Thomas Hobbes' theory of the Leviathan state laid the foundation of modern totalitarianism. David Hume's skepticism cast doubt upon the ability of the human mind to attain to any objective truth. Jean Jacques Rousseau's anti-intellectualism cast aspersions upon any rational explanation of human life. Jeremy Bentham's utilitarianism repudiated the age-old norm of morality. Emmanuel Kant drove a wedge between the legal and the moral orders. Herbert Spencer's sociological evolution cast aside fixed principles of morality and of the natural law. John Austin's jurisprudence completed the legal bridge to the modern totalitarian state. These philosophies, and the materialistic concepts of Hegel, Marx, and Engels, melted down into an amorphous philosophy of so-called positivism and pragmatism, these are the ideas fighting for dominance in this country and in the world today.

The battle is on, make no mistake about it. Our modern legal and sociological positivists pooh-pooh the very notion of the natural law as a medieval fiction, which served a useful purpose in its day, but is now obsolete—and never had any objective existence. To them, therefore, inalienable rights are so much metaphysical nonsense. There are no duties in conscience; because morality, in its last analysis, is merely current good taste. There are no principles; there are merely prevailing formulae of expediency. Above all, there are no absolutes; no absolutes, that is, except pragmatic public policy—which means the absolute state.

The rise of positivistic state absolutism to challenge the American philosophy of government so impressed the late Justice Robert H. Jackson, of the United States Supreme Court, that in a lecture, which his untimely death prevented him from delivering, he wrote:

"* * * The 19th century closed with Americans repeating the phrases of the Declaration of Independence about the laws of nature and of nature's God, but the real attitude was that attributed by Knickerbocker to the Connecticut Yankees, who resolved to be governed by the laws of God—until they found time to make better ones. The so-called positivists took over, and any command that some authority had physical power to enforce became law. Since the Nuremberg post mortem of the Hitler regime, few will believe that these positivist doctrines are weapons in the struggle to preserve liberty.

"Meanwhile, Marx and Engels, two strangers to the actual workings of our American system, had formulated the revolutionary scheme of values which under new leadership is now our worldwide rival. Their doctrine teaches that there is no such thing as natural law or impartial justice, that the law is and should be a weapon of the class in power and administered in its interests, that law rests on the authority of force and not on any inherent rightfulness, that the object of its protection is the dominant group rather than the individual, and that it should not be administered by neutral judges but by class-conscious and class-serving judges. The Communists reject our claims to liberty as abstract intellectualism, if not hypocricy, and claim that our free Government is a sham to conceal economic exploitation of the most numerous class—the proletariat—which should be aroused to support the Communists in containment of our system and its eventual overthrow." (The Supreme Court as a Unit of Government, p. 5.)

It is the tragedy of our generation that the philosophy of a country with a God is not the philosophy of the predatory nations now threatening the destruction of civilization. In reality, our civilization is faced with the age-old conflict between the idea of the natural law and the idea of the absolute state. The modern name of the absolute state is totalitarianism; but its name is its only novelty. It is a retrogression to ancient Caesarism; the deification of the state, upon the specious grounds of public policy, to the degradation of human personality. The state is not the servant but the master, the alpha and omega of all things, the ultimate criterion of truth and the last norm of right. Human beings, their nature, purpose and destiny, have significance only by the yardstick of state utility. Will is substituted for reason; might becomes right; law becomes organized brutality. The fires of human liberty are extinguished, because there are no inalienable rights; there are no inalienable rights, because there is no natural law; there is no natural law, because there is no eternal law; there is no eternal law, because there is no God—no God, that is, but Caesar.

III. THE TRAGEDY OF THE CONFLICT

Do you think that philosophy is a mere matter of irrelevant theory? Do you doubt that ideas have the awful power within themselves to make and destroy and remake civilizations? Then come back 14 years to the time when mankind was entering one of the greatest catastrophes of human history. The United States was not as yet, formally at least, involved in World War II; but the impact of the armed conflict raging in Europe transformed America into 48 vast debating societies. The air was filled with strident shouts of argument and rebuttal, of invective and recrimination, of fear and hysteria. In the Halls of Congress, in the headlines and over the air, at every public and private gathering, statesmen of renown and unknown men in the streets furiously debated the paramount issue of the day: Intervention or isolation, should we enter the war or stay aloof? But suddenly our voices were stilled. The issue was brought to a head and settled by others. For, on December 7, 1941, the bloodstained fist of totalitarianism reached across the Pacific and plunged a dagger in our back.

The roar of a plane, the crash of a bomb, and the cries of mangled and dying Americans echoed over the waters into the hills and plains and valleys of our land. Who does not remember the shock of Pearl Harbor? The maddening messages which broke over the radio that peaceful Sunday afternoon? Who does not remember that initial moment of stunned and bewildered silence? But who does not remember the very next moment, the instant of unanimous and unified action. Our disputes were over. Our debates were at an end. Our arguments were done. All over the land, from home and school, from farm and factory, from career and ambition and loved ones, in a stupendous dedicatory action, there rushed American youth—millions of them—to camp, to ship, to plane, to foxhole. A united voice from platform and pulpit, from radio and press and newsreel, inspired them to do battle against the scourge of totalitarianism, against this new Caesarism which had the world by the throat; inspired them to fight, to suffer, to die if necessary—not in the name of skepticism or cynicism or materialism or pragmatism or positivism—but, in so many words, for the American philosophy and way of life, for the inalienable rights of man, for the dignity of the human personality, for the liberation of small nations, for the four freedoms everywhere, that by their sacrifice the lights of human liberty might go on again all over the world. And so inspired they fought, they suffered, and many thousands of them laid down their young lives; on the seven seas, and in every land from Berlin to Tokyo.

Who can forget those who did not come back? I cannot. I cannot, because it was my privilege to know many of them, to live with them, to laugh with them, to fear with them, to grieve with them, to confess and anoint them, and to love them. I cannot, because in the acrid smoke and lurid flame of battle I saw them go down; and I buried them at sea in the pitch blackness of the night, in the Marianas, the New Hebrides, the Philippines. Yes, these, our own, are dead. I cannot wipe away the sadness of their passing. But neither can I lose the inner peace and the fierce pride which stems from the conviction that they died, under the living God, for something worth while. They had a country with a genuine brotherhood of man, because it was predicated upon the fatherhood of God. And their reward is now the eternal company of their God.

Would you judge the philosophy of a country without a God by its fruits? Then come with me to the Nuremberg trials and hear a Nazi commander calmly testify to the efficiency with which, under governmental orders, he supervised the systematic murder of 2,500,000 innocent human beings in the extermination camp at Auschwitz. Smell the smoke of the ovens of Buchenwald, listen to the silence in the Katyn Forest, hear the riveting of chains in the slave labor camps of Siberia, hear the tramping feet of faceless Zombies marching in the Red Square of Moscow; see the screaming fanatics storming over the Yalu River to waste their lives in the red mud of Korea; behold the mangled bodies, the rotting corpses, the crippled minds, the broken hearts, the crushed liberties—the stench of physical and spiritual death—in the lands behind the Iron Curtain where modern Caesars have set up countries without a God. Yes, if you have the stomach for it, read the recent diabolical double-talk of Soviet peace intentions and United States war mongering, emitted by Nikolai Bulganin and Nikita Khrushchev in their recent barnstorming tour through India and Pakistan. Nikolai and Nikita have a country without a brotherhood of man, precisely because they repudiate the fatherhood of God.

In World War II American blood was spilled and American lives were sacrificed for a military victory. Our enemies surrendered. But then came Korea. Our own boys are dead. Hitler is dead, Mussolini is dead, and now Stalin is dead. But totalitarianism is not dead. Totalitarianism is still stalking over a major portion of God's earth, crushing the human spirit, stifling human ambition, and repressing the natural and inalienable rights of hundreds of millions of our fellow human beings. Only the callous can say we have liberated the smaller nations. Only the cynical can say we have secured the four freedoms everywhere. Only the blind can say that the lights of human liberty have come on again all over the world. Is this the victory for which we fought? The wine of victory is turning to gall in our mouths; the flame of peace is flickering to ashes in our hands. Surely this is not the victory for which we fought.

IV. THE CHALLENGE OF THE FUTURE

Why have we been so bitterly disappointed? Is it not because the war was a two-fold war: one of force, and one of ideas? The first, the war of physical force, resulted in military victory in World War II and in a stalemate in Korea. But the second, the war of ideas, has hardly begun. The ideas of our enemies are gathering momentum on the world-wide front. A soldier can be shot down; but ideas are bullet-proof. And this second war of ideas is even more important than the war of force. Because, in the long run, human beings are determined and governed more by ideas than by force. What is the challenge?

First: It is obvious, I trust, that we must build and maintain our military defenses, at whatever cost, to deter the Soviet Union from launching the thermo-nuclear weapons which threaten the end of civilization as we now know it.

Second: We must build and improve an American foreign policy which will deal with all the nations of the world—not on the basis of a cynical "enlightened self-interest"—but on the basis of the natural and inalienable rights and obligations of all.

Third: And this is specific to the purpose of tonight's meeting, we must assume the responsibility of demonstrating to the whole world, both slave and free, by the treatment of all our own citizens that the American philosophy of government must prevail over the totalitarian. This can be done in no better way than by improving the practical program of civil liberties here in these United States. And that program can be improved.

For the fundamental principles of the natural law, universal and immutable as the human nature from which they derive, require rational application to the constantly changing political, economic, and social conditions of civil society. The application of the natural law postulates change as the circumstances of human existence change. It repudiates a naive and smug complacency in the status quo. It demands a reasoned acceptance of the good, and a rejection of the bad, in all that is new. It commands a critical search for the better. It requires an exhaustive scrutiny of all the available data of history, politics, economics, sociology, psychology, philosophy, and every other pertinent font of human knowledge. Of primary importance, it insists that the search for a better corpus juris be made in the light of the origin, nature, dignity and destiny of man; and in the knowledge of the origin, nature, purpose, and limitations of the state.

This is not an easy task. Natural law does indeed imply the existence of some human rights which are absolute and inalienable, such as the right to life, worship, marriage, property, labor, speech, locomotion, assembly, reputation, etc. These are absolute in the sense that they derive from human nature; they are not mere handouts from the state. They are not absolute

in the sense that they are unlimited in scope. It is commonplace in classical natural law philosophy that human rights, even the most fundamental mentioned above, are limited. They are limited in the sense that they are subject to specification, qualification, expansion and contraction, and even forfeiture of exercise, as the equal rights of others and the demands of the common good from circumstance to circumstance, and from time to time, reasonably indicate. Human rights are absolute only in the sense of the minimal requirements of a just and ordered liberty.

The American philosophy of government, the natural law with its inalienable rights, is not self-executing. The Bill of Rights itself, and the other civil liberties guaranteed by articles I, III, IV, and VI, and by amendments XIII, XIV, and XV are not self-executing. These articles and amendments need and demand practical implementation by way of judicial interpretation, statutory enactments, and sincere acceptance in our own personal and private lives.

In the field of judicial interpretation, *Brown* v. *the Board of Education* (347 U. S. 483) and *Bolling* v. *Sharpe* (347 U. S. 497), ending forever the long and disgraceful discrimination against Negroes in public education, is a triumph of first magnitude in the advance of our civil liberties. I think this gathering should salute the courage, the justice, and the devotion to American ideals manifested by our unanimous Supreme Court in these historic decisions. Some progress has been made, and I trust it is only the beginning, by administrative regulations following the lead of the United States Supreme Court.

In the field of statutory enactments, I am happy that the Commonwealth of Massachusetts, by its commission against discrimination, has exhibited inspiring leadership to her sister States. I think we should congratulate the Massachusetts commission on its magnificent work, with the prayerful hope that complacency will never dim its leadership.

In the field of Federal legislation, however, I personally cannot be happy. Responsible political leaders and the campaign platforms of both parties have repeatedly promised Federal legislation in the area of civil liberties. Patriotic leaders from all walks of life have repeatedly and consistently advocated congressional action in the field of civil liberties. In 1947, President Harry Truman's Committee on Civil Rights, after holding extensive hearings, submitted a magnificent report recommending legislation which would eliminate vicious discrimination among citizens of the United States on the basis of race, creed, color, or national origin. Of recent years, over 100 bills have been submitted for the same purpose but to date, despite political platforms, despite the promises of political leaders, and despite the pleas of patriotic leaders in private life, nothing has been done by Congress.

I realize that the job is not easy. The Federal security program is unsatisfactory and needs serious improvement without jeopardizing either security or liberty. In this difficult task there will not be much help from the crackpots of the right or the screwballs of the left, or from the hysteria which befogs the issue from both extremes.

We are still waiting and hoping for the long-promised revision of the McCarran Immigration Act which so shamefully discriminates against the peoples of some countries. If and when the Congress corrects this inequity I shall remember with less embarrassment the inscription on the base of the Statue of Liberty in New York Harbor. That statue facing across the waters of the Atlantic to the countries of Europe has inscribed on its base the following:

"Give me your tired, your poor,
Your huddled masses yearning to breathe free,
The wretched refuse of your teeming shore,
Send these, the homeless, tempest-tossed, to me:
I lift my lamp beside the golden door."

But even with the best of judicial interpretation and the best of statutory enactments, the fullness and magnificence of the American ideal of liberty will never prevail among us unless and until we private citizens accept it with conviction and practice it with sincerity in our own personal and private lives. A symptom of that conviction and of that practice would, for instance, be the disappearance of words like "nigger" and "kike" and "mick" and "wop" and "sheeny" and "heinie" and "frog" and "spick" and "greaser" and the rest of the contemptible language of racial bigotry. In the area of our national security, Sidney Hook has this to say:

"In the long run, however, neither laws nor security agencies, as necessary as they are, can constitute a lasting defense of democratic institutions, if the will to freedom is not strong in a people. * * * The Weimar Republic and Czechoslovakia are both illustrations of what happens when citizens idly watch conspirators paralyze the defensive powers of a democracy, avoid the fatiguing task of exposing and struggling against the conspirators in their multifarious guises and activities in the shop, on the street, in the schools, and rely mainly on the protective arm of the state itself infected with the germs of conspiracy." (Heresy, Yes; Conspiracy, No, p. 118.)

This is neither the forum nor the occasion, nor do I have the competence, to discuss the particular merits of the many and various bills which have been filed in the interests of civil liberty. Wherefore I have devoted most of my time in an attempt to outline the American philosophy of law which demands statutory implementation in order to be effective. And effective it must be, if we are to convince the world that our philosophy is something supremely worth while. For totalitarianism can only be defeated by a total dedication to the American philosophy of life and of liberty. It is, indeed, the age-old philosophy which conquered the ancient Caesar and remade the Roman Empire, which defeated and civilized the barbarian hordes, which overthrew the divine right of kings, which crushed nazism and fascism, and which is now engaged in a titanic struggle with atheistic communism. It is the philosophy which once united all Christendom, and which, some day, please God, will reunite a free and peaceful world.

Finally, my fellow citizens, your American philosophical heritage can never be "divisive"; for the philosophy of the natural law is not specifically Catholic, or Protestant, or Jewish. It is the philosophy which is logically antecedent to the theology of every revealed religion. It is the philosophy of the pagan—in the classical sense of the word "pagan," namely, one who worships Almighty God albeit without the profit of supernatural revelations.

In conclusion, ladies and gentlemen, I would like to state, as a Catholic priest, that there will never be a doubt as to where the Catholic Church will stand in the struggle ahead to defend the American philosophy of life and of liberty. The Catholic Church will be, where she has always been, on the side of the natural and inalienable rights of every human being on the face of God's earth, regardless of race, or color, or creed, or position. Against the cynical terror of race and blood and Communist class hatred, the Catholic Church will teach, as she has always taught, that in the eyes of God there is neither white, nor black, nor brown, nor yellow, nor red; neither Jew nor Gentile nor Barbarian nor Scythian; but all are brothers in Christ Jesus. She will fight, with all her moral power, against the modern Caesars as she did against the old. For in loving obedience to her divine founder, she will continue to render unto Caesar the things that are Caesar's and unto God the things that are God's. And this she will do, come rack, come rope, unto the end of time.

Fiftieth Anniversary of Planters Nut & Chocolate Co.

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 17, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article commemorating the 50th anniversary of the Planters Co., which appeared in the Wilkes-Barre Sunday Independent. This company, one of the finest and most successful enterprises in this country, was begun on what you might call "a shoelace" in my hometown of Wilkes-Barre, and through foresight, ingenuity, and sound production and merchandizing techniques by the late Mr. Obici and Mr. Peruzzi, grew into the great organization that it is today.

PLANTERS FIRM OBSERVING ITS GOLDEN ANNIVERSARY

The 50th anniversary of the founding of Planters Nut & Chocolate Co. in this city by the late Amedio Obici and Mario Peruzzi is being observed this year by the firm. The peanut and nut enterprise was founded in this city back in May, 1906.

The golden jubilee anniversary observance was opened last month when about 400 officials and members of the firm's sales force held a 2-day jubilee conference and get-together at Chicago's Edgewater Beach Hotel. In attendance were personnel from every branch of the multimillion dollar business enterprise that the cofounders, Amedo Obici and Maria Peruzzi, envisioned while the former was still pushing a peanut card around Public Square and the latter was hoping to make use of valuable experience on distribution gained with a European merchandising firm where he worked before coming to this county at the age of 19.

LOCAL OBSERVANCE

Originally plans called for the golden jubilee observance here in Wyoming Valley to follow closely the Chicago meeting but the passing of the late Mario Peruzzi, cofounder of the firm, last month in Mercy Hospital, forced postponement of the dinner party planned for area associates of the firm.

Tuesday night in Hotel Redington, the Wilkes-Barre office of the firm will hold its jubilee dinner party for valley residents employed at the South Main Street office and plant. Dinner will be served at 7:15, preceded by a cocktail hour at 6:30.

Ralph J. Lisman of Kingston will be master of ceremonies. He is a member of the firm's board of directors, executive director of one of the firm's wholly owned subsidiaries, the National Peanut Corp., which operates the famed Peanut Stores in 18 States east of the Mississippi, Texas, and Arkansas, and who has been with the firm more than 30 years.

LONG SERVICE

Michael Kwochka of Mountain Top, with 45 years service and assistant sales director, will give the firm's local associates a report on the Chicago celebration; P. J. Miller, of Tunkhannock, sales manager, who has been with the firm 36 years, will be among the speakers. A message also will be given by Frank A. English of Kingston, vice president of the board of directors, executive director of the parent company, who has 39 years of service.

Thomas Sangiuliano, 302 South River Street, with 49 years of service, and Miss Mary Sapser, 474 North Pennsylvania Avenue, who is completing her 45th year, will be honored.

Included on the program will be an illustrated review of the history and growth of the firm. A varied program of entertainment by the Walsh Trio will be given.

Highlight of the program will be the presentation of service pins to longtime employees. Those having 25 years of service or more—that are 20—will receive service pins with diamond chips in addition to a savings bond. Presentation of the pins will be by Ralph J. Lisman, assisted by Irving Frank, assistant secretary of the board of directors. Service pins will be presented to 44 longtime employees at the dinner Tuesday night.

The Coast Guard Moves in Rough Seas

EXTENSION OF REMARKS
OF
HON. ANTONI N. SADLAK
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 18, 1956

Mr. SADLAK. Mr. Speaker, it is with genuine pride that I point to the ever-present vigilance and courage of the United States Coast Guard as evidenced by the rescue of the Essex yacht *Victoria* off the New England coast. Therefore, under leave to extend my remarks in the RECORD, I wish to include the following article on the subject from the November 24 issue of the Hartford (Conn.) Courant:

THE COAST GUARD MOVES IN ROUGH SEAS

The weather is something that preoccupies the landlubber when it's bad or good, but it keeps up with the seagoing all the time. The recent spell of rough weather hit hard at New England coastal sailors. It marooned a troop of visitors on the radar tower off Boston for 5 days, cut off contact with a Liberian freighter after a distress call on Sunday and trapped the Essex yacht *Victoria* southeast of New York so that it needed a tow back to safety. The Coast Guard had a busy week end.

Victoria was trying to make it to Bermuda. It had been forced back on one start by nasty weather in the sound, but gamely tried again under some handicaps. The weather wouldn't cooperate, and the heavy seas that put her deck awash jeopardized the vessel and the lives of the six aboard.

These are the hazards of the mariner, who has long had to cope with the vagaries of the weather. On balance, *Victoria* and its crew were lucky. It may be argued that they took some calculated risks in setting out in the face of the lesson taught by the sound, but breaking through to calm water has always been the ambition of the sailor, and in the face of a bitter winter setting in, it is a logical goal. But many a mariner, including *Victoria's* team, can give thanks again for the sturdy Coast Guard.

Labor Turns to Radio

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Wednesday, January 18, 1956

Mr. LEHMAN. Mr. President, there appeared in the September 19 issue of the publication Broadcasting-Telecasting an article by an old friend of mine, Mr. Morris S. Novik, entitled "Labor Turns to Radio."

Mr. Novik is one of the veterans in the field of radio and television. He is a pioneer—one of the early pioneers and most eminent figures today—in the use of radio and television as an educational medium by the great labor organizations.

I ask unanimous consent that this interesting article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LABOR TURNS TO RADIO

(By M. S. Novik)

Lest anyone think, from the title of this piece, that labor is a newcomer to radio let the record show that labor started using commercial radio more than 5 years ago; and has been using the medium consistently on a year-round basis since then; and that labor uses radio on a Monday through Friday schedule. More than that, labor plans to continue using radio.

From the commercial aspect, labor in radio is a good success story for the industry. For not only has it been a consistent user but it has also increased its use of commercial time and can point to a number of specific instances where broadcasting really delivered the goods.

And this despite the interesting point that what labor has to sell is a way of life and not a piece of merchandise from a shelf.

The background on how and why labor turned to radio goes back to the days of the NRA and the Wagner Act during the depression. As a result of that legislation the labor movement grew by leaps and bounds. This growth was so tremendous and there were so many new members wanting to learn about trade unions that no union hall, not even Madison Square Garden, was large enough to hold the audience.

For example, one union, the International Ladies Garment Workers Union, had over 150,000 new members. So in February of 1934 I produced, for the ILGWU, the first network labor program. It was a weekly series titled The Union Assembly and its primary function was educational.

To provide the sparkle that would carry the educational portions we used good music—actually, it was the first time chamber music groups like the Gordon String Quartet, the Compinsky Trio and the Coolidge Quartet had been on radio—and show business names like Eddie Cantor, George Jessel, Morton Downey and Molly Picon. All this plus talks by newsworthy personalities like Mrs. Franklin D. Roosevelt, the then Secretary of Labor Frances Perkins, United States Senators Wagner and LaFollette, the then Governors Lehman of New York and Pinchot of Pennsylvania, and New York City's Mayor Fiorello LaGuardia.

This was so effective, on the network level, that in May of 1934 when Local 89, the Italian Dressmakers Union of the ILGWU, found itself with 40,000 new members in the metropolitan New York area, this local union developed a similar program.

Local 89 started with a weekly hour on WEVD New York in the Italian language, using operatic concerts for entertainment and top names for the talks. That Local 89 program which started over 20 years ago is still on the air, using the same format, and now has a regional hookup of stations along the East Coast.

So, when in 1949 the American Federation of Labor considered the use of radio, the labor movement had a precedent.

The reasons for the AFL's move to radio were no secret. As the executive council of the AFL stated in its 1950 report to the convention, "With the vast majority of the press, radio, and magazines still bitterly opposed to labor's objectives and still conducting what amounts to a deliberate campaign of propaganda against labor's policies and activities, it becomes increasingly important that labor present its own side of the story to the public by whatever means possible."

Around the country, at that time, there were eight million AFL members in 30,000 locals. (Now there are 10 million.) A good newscast, on a national network, could reach our members and the general public too. Our problem was to find a network, an experienced and qualified newsman who could build an audience, and to do it all on a limited budget.

On January 1, 1950, the AFL started a Monday-through-Friday quarter-hour newscast over 150 stations of the Mutual Broadcasting System. To stay within the $750,000 budget we broadcast 5 times a week in the 25 major markets, only thrice weekly in the other 125.

In most areas we were no different than any other national sponsor starting a big network program. We worried about the possible competition of the then new medium of television; we fussed about our spotlight ad schedule, and we fretted about notifying our 30,000 locals around the country about the correct time and day and station in their area.

There was one area where we differed and that difference was mighty big: It was in the program content and the commercial treatment. From the very beginning the AFL realized it had to be even more circumspect that Caesar's wife; the news on this program had to be factual, impartial, and comprehensive. The commercials had to be educational, effective, and logical. There could be no vitriolic blasts, no bellicose hard sell, and the name of the sponsor must never be camouflaged.

It was quite an ice jam we had to break in those days back in 1950, but the AFL succeded. Not only have we stayed with radio, but evidence of our effectiveness and vindication of our approach came a year later, when in 1951, the CIO started its own daily newscast on another network.

Today, as most everyone knows, the AFL presents Edward P. Morgan, veteran newspaperman and newscaster who headed the CBS newsdesk for radio and TV before taking the AFL program, while the CIO offers John W. Vandercook, another veteran editor and newscaster and ex-NBC commentator. Both programs are Monday-through-Friday network features and both newscasters have complete editorial freedom.

Another interesting note, and one unusual facet of the commercial treatment, is that the plug does not break into the middle of the program. There's a brief opening and less than a minute of commercial at the very close of the newscast.

One direct result of the success of these network programs by the AFL and the CIO is the use of radio by local labor groups on local stations in their own communities.

Some of these unions sponsor football games, others baseball, still others offer musi-

cal shows, and some participate as co-op sponsors, in their hometowns, of Drew Pearson, Martin Agronsky, Quincy Howe, etc., while others underwrite local newscasts. All of them do this consistently as a method of developing their identity in and with their communities.

In almost every instance, the commercials on these local programs are devoted to the needs of the community. Thus one commercial may call for blood donors for the blood bank and another may stress the union participation in the community chest drive.

As an example of the commercial treatment used by labor, here is what the AFL did on the Edward P. Morgan program during the week of September 5 through 9.

"The upcoming merger of the AFL and CIO will strengthen the campaign for better schools, decent housing, good roads, etc."

"Despite the conference at the summit there is no assurance that Soviet Russia sincerely desires to cooperate for peace. The free world must continue to maintain the strongest possible defense program, etc."

"The merger of the AFL and CIO will result in a united American labor movement with 15 million members standing solidly together for freedom, democracy and human progress, and resisting with all its power any form of dictatorship, including communism."

"The AFL has succeeded over the years in winning substantial advances in the American standard of living. If you work for a living the AFL is working for you."

And here is the complete commercial for Tuesday, September 6, 1955:

"Opening of the new school year underlines the fact that our country has failed to come to grips with its educational problems. The school shortage is more acute than ever. The lack of qualified teachers persists because standards have not been raised to a point high enough to attract young people to this noble profession. The AFL is convinced that this is one problem that time alone will not solve. A coordinated program of action is required—at the Federal level along with community and State cooperation. We have long advocated an effective program of Federal aid to education and we believe Congress should make this its first order of business when it reconvenes in January. The children of our country are its greatest asset and we cannot ignore their acute educational needs without imperiling our free way of life."

These programs have been most effective. This we know just as the national brand advertiser knows if his program is clicking. For the AFL's equivalent of the retailer is the 30,000 union meetings that occur each week all over the country. This considerable grass roots sample soon lets "the home office" know if it's not pleased. And the rank and file like what we do and so do their neighbors and friends.

In the more than 5½ years since the AFL started its network news program, labor has learned a lot about the use of radio. In recent years it has been using the broadcast medium to meet specific local and regional problems.

The United Auto Workers (UAW) created a regional network to air daily reports on the status of contract negotiations for the benefit of its members and their communities.

The Hatmakers Union used radio last year to get its side of a strike story across to its members and their neighbors.

In Miami, where a Hotel Workers Union struck for a new contract, they turned to radio to get their story across.

In New York City last year, the AFL used local radio in its drive to reorganize the waterfront.

Perhaps the best success story of all, about labor's use of radio, is the one that happened earlier this year. After more than a year of negotiation every railroad but one signed new contracts with the railway unions. That one exception was the Louisville & Nashville, a railroad serving 16 southern States. The lack of a contract resulted in a stirke that involved 25,000 workers in some 40 communities throughout the 16 States. Since it was a railroad, the mediation of the strike was under Federal jurisdiction and took place in Washington, D. C.

LABOR TELLS ITS SIDE

As often happens in situations like this, the newspapers, with few exceptions, told one side of the story. Even the statements of union officials were not being used. And since the mediation negotiations were going on in Washington the union had no fast line of communication to its members and to their communities.

All sorts of rumors spread like wildfire. The union members found themselves accused of sabotage, shootings, rioting and wrecking; the familiar reports of back-to-work and break-the-strike started to crop up. The railroad got its story across, the scare rumors cropped up anew each day and, because it had no fast line of communication, the union members were often confused and the townspeople more so. The situation was fluid and, since the economics of the communities were affected by the strike, there were potential areas of violence all over the region.

The answer was a hookup of 89 stations all through the 16 southeastern States involved. Twice daily, at 12:05 p. m. and 8:25 p. m., 6 days each week, direct from Washington where the negotiations were in progress, President G. E. Leighty of the railroad telegraphers and chairman of the joint negotiating committee, reported to the workers and the communities. (When Leighty was in negotiations President T. C. Carroll of the maintenance-of-way employees pinch-hit; the important thing being that again it was a union executive that the members knew and an executive that was participating in the negotiations.) He explained and interpreted what was happening around the bargaining table and covered the reasons leading up to the strike.

For 5 weeks the unions used this regional hookup of stations. After the first week the terrors and tensions disappeared. The union members and the townspeople knew what was happening; some of the newspapers found they had to cover both sides of the story. And, believe it or not, the railroad found it had to buy radio time to justify itself to the people in some of the areas affected by the strike.

This L. & N. strike story is a perfect example of how the speed and coverage of radio quickly and effectively stabilized a potential trouble area that would adversely affect both the unions and the communities. So far as labor is concerned, this series of radio programs opened contact with the general public, as well as the union members, and benefited both.

This successful use of radio by labor didn't come easy; it required a lot of work and doing. When labor first wanted to buy network time, 2 of the 4 national chains would not accept its business and many of the local stations were suspicious of labor and its objectives. Even now, after 5 years, some are still suspicious. Permit me to use some of Ed. Morgan's words, from his July 4 program, to cover this:

"Traveling back and forth across the country, as I have just done, people ask you such questions as these: How much control does the sponsor exercise over your broadcasts? How much editing and censoring of news and comment does the sponsor do? What 'line' does the sponsor dictate that you follow? The answer is, to their surprise, none, on all counts.

"I raise this point for two reasons: first, a reporter likes to try to build up a reputation of what might be called responsible independence. If he takes pride in his work, he wants to avoid becoming, or even seeming to become, a mouthpiece, which means he wants to preserve the right to make his own mistakes. That is why, as I mentioned on January 3, there is nothing in the agreements with the network and/or the sponsor, in fine print or otherwise, inhibiting this correspondent's editorial freedom.

"The second point is more interesting and, I think, generally more important. It stems from this question: Why do people assume, almost automatically, that if a labor union, or a labor federation, sponsors something, it has an ulterior motive, whereas if a business does, it is merely interested in selling a product or a service? The answer to this is not a simple one but I think a large part of it lies in the fact that the public in the past has regarded organized labor in a combative sense, as possibly a necessary but belligerent evil. Only recently has it dawned on the ordinary citizen, including this one, how heavy a stake unions have in, and how positive an influence they have on social progress. If this is a plug for my sponsor, let the most be made of it. It is made as a sincere observation on the basis of experience."

Now, one final word, as to the effectiveness of the AFL's newscasts. In January of 1955 we started on a new network, ABC, with a new commentator, Ed Morgan, at a new time. After 6 months, the ratings show that the program delivers homes at a cost per thousand of $2.36 and delivers listeners at a cost per thousand of only $1.52.

This, we feel, is one of the best, if not the best, buys of network newscasts across the board that any sponsor can make. We're satisfied and so are our members and our listeners.

A Tribute to Free Poland

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 17, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news article which appeared in the New York Times, January 15, 1956, which describes the ceremonies which took place when the merchant ship *Wolna Polska*—Free Poland—joined the world's itinerant cargo trade.

The article is as follows:

A ship manned by Polish refugees took to the sea yesterday as a symbol of a free Polish merchant marine.

A thousand persons bid bon voyage to the *Wolna Polska* (Free Poland) as the 10,000-ton Liberty-type vessel left pier 42, Hudson River, to join the world's itinerant cargo trade. Her first stop will be at Norfolk to take on coal for Genoa, Italy.

A flag resembling the red and white standard of Free Poland was hoisted just before sailing. It is the emblem of the Pulaski Transportation Line, organized by a group of Polish-American businessmen to charter the ship.

Among those at the presailing ceremony were Vincent A. G. O'Connor, Commissioner of Marine and Aviation; Representative Thaddeus M. Machrowicz, Democrat, of Michigan; the Most Reverend Joseph J. Flannelly, auxiliary bishop of New York; Frank N. Piasecki and Walter I. Guzwicz, chairman and president, respectively of the Pulaski Line; and representatives of the Polish-

American Congress and the Free Europe Committee.

The 37 crew members deserted ships in Europe or the United States to escape Communist oppression at home. Flying the flag of Liberia, since she cannot be registered in Communist Poland, the vessel is commanded by Capt. Jan R. Cwiklinski, former master of the Polish liner *Batory*.

Review of United Nations Administrative, Personnel, and Budgetary Problems

EXTENSION OF REMARKS
OF

HON. ALBERT P. MORANO

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 18, 1956

Mr. MORANO. Mr. Speaker, during the recess our distinguished colleague and a hard-working, very able member of the House Foreign Affairs Committee, the Honorable CHESTER E. MERROW, delivered a number of very fine addresses while serving as a United States Delegate to the 10th General Assembly of the United Nations.

There follows the first of these addresses, delivered on October 11, 1955, which is the first time in the history of the United Nations that such a thorough overall review of the administrative progress and problems in the United Nations and its specialized agencies had ever been given:

ADMINISTRATIVE PROGRESS AND PROBLEMS IN THE UNITED NATIONS AND ITS AGENCIES

(Statement by CHESTER E. MERROW, United States Representative to the General Assembly)

As you know, it has become almost a tradition in the United States for the President to appoint at least two Members of the Congress to serve on the United States delegation to the United Nations. As in all countries, such an appointment is one of the highest honors which one can receive. I accordingly consider myself most fortunate to have been asked by President Eisenhower to serve as a delegate to this 10th General Assembly.

In the course of these first days of the General Assembly, I have had an opportunity to meet a number of my fellow delegates from many other countries. We have exchanged views on several topics. One of the favorite topics has been the comparison of assignments. In the course of our discussions, I have been struck by the fact that the Administrative and Budgetary Committee, to which we here have been assigned, is a central and all-important committee. Although the functions of the Committee are comparable to the Appropriations Committees of National Congresses and Parliaments, they also extend to broader problems of administration.

You, Mr. Chairman [Hans Engen], as the respected Ambassador of Norway, a country known for its interest in administration and economy, and the distinguished Chairman of the Advisory Committee, Ambassador Aghnides, are among those whom I have met who share my own view of the importance of this Committee.

Because it is essential that the importance of this body, the counterpart of similar committees in our national parliaments, be fully understood, I hope I may be pardoned if I express my views on the work of the Administrative and Budgetary Committee and on its place in the United Nations structure.

First, and of special importance, is the fact that the Administrative and Budgetary Committee is the only place in the United Nations where the representatives of governments can examine together the organizational, administrative, and financial structure of the various parts of the United Nations system to insure the development of a sound and integrated whole. This opportunity is of particular interest to me. During my service in the Congress of the United States, I have had the privilege of serving as chairman of the House Foreign Affairs Subcommittee on International Organizations and Movements. This subcommittee conducted hearings and studied the operations of the United Nations and the specialized agencies, and other international organizations. I was also head of a mission that visited all of the specialized agencies located in Europe, as well as the branch office of the United Nations. This mission discussed with the key officials of these agencies many of the problems which concern us here. The report of the mission to the Congress has been printed and given public distribution. With Ambassador Aghnides, I share the experience and memory of attending the 1945 conference in London that drafted the UNESCO constitution. All of this makes the opportunity for an exchange of views in the General Assembly especially welcome.

It is well, perhaps, in this 10th anniversary year of the United Nations, to begin with an across-the-board look at the developments in our major fields of concern—organizational matters, budgets and contributions, personnel policy, and coordination of the United Nations and its specialized agencies.

GROWTH OF THE UNITED NATIONS SYSTEM

First, in the organizational field. The years since the establishment of the United Nations have seen a growth not only in the United Nations itself but also the development of 10 specialized agencies of the United Nations. There is the International Labor Organization, which was originally part of the League of Nations and is seeking to raise labor standards and improve working conditions. The Food and Agriculture Organization has been established to improve food and agricultural production and distribution. To promote peace through collaboration in educational, scientific, and cultural matters, there is the United Nations Educational, Scientific and Cultural Organization. The International Civil Aviation Organization aims at developing international air transport and improving standards of international air navigation. The task of facilitating exchange of mail and improving world postal services falls to the Universal Postal Union, one of the oldest international organizations, dating back to 1875. The World Health Organization is dedicated to raising world health standards. The International Telecommunication Union, which stems from an organization established in 1865, is engaged in promoting the rational and efficient use of telecommunication facilities. Better weather reporting is the aim of the World Meteorological Organization, a recent outgrowth of the International Meteorological Organization. The International Bank and the International Monetary Fund undertake to facilitate the investment of capital for productive purposes and to promote currency stability.

In addition to these permanent and regularly supported specialized agencies, there are now five programs operating under United Nations aegis with the assistance of voluntary contributions. These are the International Children's Fund, to promote maternal and child welfare; the Technical Assistance Program, to bring about higher living standards; the Palestine Relief and Works Agency, to provide food, shelter, and gainful employment for nearly 900,000 refugees; the Korean Reconstruction Agency, to relieve the suffering and repair the devastation caused by aggression; and the Refugee Fund, to find permanent solutions for limited groups of refugees.

The activities of these agencies and programs extend to nearly every part of the world—to approximately 90 countries and territories, in fact, thus reaching far beyond the membership of the United Nations itself. The result is a growth in the size of the regular international secretariats until they now total more than 9,000 persons. To this must be added the internationally recruited personnel required to operate the voluntary programs—a total of approximately 2,200 persons. This is exclusive of local assistance which runs into the thousands.

This trend has led to organizational decentralization, and this in turn raises the most difficult kind of management problems, many of which have yet to be solved in a satisfactory manner. Through his organizational survey extending over the last 2 years, the Secretary-General has sought to assess the character of the problems which the United Nations faces in this area. He is now in the process of instituting measures designed to improve overall United Nations management and control of its far-flung operations. Whether current measures are an adequate answer to this problem remains to be seen. I am convinced that efforts in the same direction should be continued in the United Nations and should be undertaken in the specialized agencies.

TOTAL COST OF THE U. N. SYSTEM

The Information Annex to the Budget Estimates for 1956 (Document A/2904/Add.1) shows us that the gross budgets of the United Nations and its specialized agencies, exclusive of the International Bank and International Monetary Fund, total $85 million in 1955. To this should be added $102,500,000, representing the approximate 1955 operating level of the voluntarily financed United Nations programs of the International Children's Fund, the Expanded Program of Technical Assistance, the Refugee Fund, the Palestine Relief and Works Agency, and the Korean Reconstruction Agency. The combined total of regular budgets and voluntary programs for 1955 approximate $187,500,000. This compares to a total expenditure figure of approximately $122,500,000 in 1947, the first fully operative year of the United Nations, the Children's Fund, and the then existing specialized agencies (inclusive of the International Refugee Organization, but exclusive of the International Bank and Fund).

For the period from 1946 to 1954 inclusive, the total of the United Nations and the currently existing specialized agency expenditures (exclusive of the Bank and Fund) amount to approximately $601 million. If the budgets for 1955 are added, the cumulative total to date is $686 million. Add to this $665 million representing the amount spent on the voluntarily financed programs of the United Nations for the same period, plus $412,700,000 expended by the International Refugee Organization, and we see that a total of $1,764,000,000 has been devoted by the international community to the work of the United Nations agencies.

If these facts and figures are to be really meaningful in terms of the task of this committee, it is necessary to analyze them briefly. The 1947 figures represent the initial development stage of the United Nations, the International Children's Fund, and 7 specialized agencies, 1 of which is no longer in operation, namely, the International Refugee Organization. The 1955 figure represents the going programs of the United Nations, 8 of the specialized agencies, and 5 major operating agencies, supported by voluntary funds.

Translated into activities, the growing figures spell cooperative international endeavor

to keep the peace, to raise standards of living through economic and social development, to feed the hungry, to care for the displaced and homeless, to fight disease and ignorance, to facilitate man's efforts to communicate, and to enhance man's enjoyment of work and life. Given these goals, the funds expended can be easily justified, provided this committee and its counterpart in other agencies exercise the necessary vigilance to insure that waste, inefficiency, organizational defects, and unnecessary overhead are eliminated and that the results achieved are commensurate with the outlay of funds. The fact that the United Nations budget seems to have reached a stabilization point does not mean that we should relax our efforts to find ways and means of improving efficiency and eliminating unnecessary activities. This is a continuing responsibility of good stewardship. The budgets of the specialized agencies should likewise be subjected to continuing and careful scrutiny by governments.

SHARING OF COSTS

At the same time that these regular budgets of the United Nations agencies have been increasing, there has been a trend toward more equitable sharing of costs, so that no one member pays more than one-third of the total budget in any agency. The payment record in all agencies would indicate that with few exceptions, where the circumstances are most unusual, assessments upon governments have not exceeded their capacity or willingness to pay. This presents a sharp contrast to the situation existing in the programs financed by voluntary contributions, viz, the United Nations International Children's Fund, the United Nations Relief and Works Agency for Palestine Refugees, United Nations Korean Reconstruction Agency, United Nations Refugee Fund, and the Expanded Technical Assistance Program.

We had a report last week from Mr. Cutts, the chairman of the special committee set up to negotiate and collect contributions for these programs. This report indicated that pledges in particular lag far behind the financial targets which have been set in order to operate an adequate program. This is in spite of the fact that the larger contributors assume a higher proportion of the total costs than is the case with the regular budgets. In the light of the important tasks assigned to these agencies, I believe we should give serious attention to the possible reasons for this situation—whether targets are set too high or governments are ignoring their responsibilities or both.

The support of all member governments—and I stress the word "all"—for the causes served by the programs of the United Nations agencies must be sustained and indeed increased. The form of such support, i. e., through an international agency or otherwise, and the amount of money devoted to it will require a continuing assessment of the following factors, among others:

(a) whether an international agency can be demonstrated to be the best instrument for meeting the needs which are justifiably the concern of the international community;

(b) the degree to which the members of such an agency are willing to bear an equitable share of the financial burdens entailed in assuming such international responsibilities. It is an inescapable fact that, if the brunt of the costs fall upon a few member states, the undertaking is not truly international and misunderstandings will surely result;

(c) and lastly, whether international assistance will be adequately supported and supplemented by national endeavor.

PERSONNEL MANAGEMENT

Another major area of continual concern to this committee has been the development of sound personnel policies. The record will show, I believe, that this has been one of the most challenging but difficult aspects of the development of international organizations. This is due not only to the human and personal problems involved, but also to the vastly different national traditions and approaches in dealing with these problems. Nevertheless, considerable progress has been made in developing among the United Nations agencies good, sound, and consistent conditions of service in respect of such matters as salaries and allowances, pensions, leave, sickness, and disability benefits. Past and current debate in this committee and in the specialized agencies indicates, however, the continued existence of numerous unsolved problems connected with staff morale and with the selection, development, and maintenance of competent staff of the highest integrity.

For example, concern has been reiterated many times on such problems as attracting high caliber staff, equitable geographical distribution, eliminating incompetent or unsuitable staff, giving encouragement and recognition to competent staff, and development of an esprit de corps within the organization. These utterances, together with expressed attitudes and actions of the various staff councils, indicate that far greater attention and emphasis needs to be given to ways and means of improving personnel management. It would appear to be essential, for example, to develop recognized and accepted standards of competence for selection and promotion and to evolve methods for applying these as objectively as possible. Member governments, the staff, and the public at large must be assured that the controlling criteria are the charter standards of the highest integrity, competence, and efficiency, and that to the extent that these standards are met, due regard is paid to recruiting on as wide a geographical basis as possible.

A second consideration is that perhaps the time has come to examine the concept of geographical representation to see whether the interests of the organization might be better served if this is interpreted to be a fair representation of the various cultures indigenous to the various member states. A mere counting of heads by nationality does not serve the purpose of enriching the organization by the provision of diversified training, background, and traditions. Still another factor requiring attention is mentioned by the International Civil Service Advisory Board, a group of international experts in this field, when it emphasized that adequate staff induction and training, as well as effective supervision, are especially important in an international organization. Yet there appears to be little evidence throughout the agencies of specific programs to insure that these needs are met. These are but a few examples, but I believe this recital serves to illustrate how much more can and should be done in the interest of improving effectiveness of the staff.

COORDINATION OF UNITED NATIONS AND SPECIALIZED AGENCIES

While I have sought to present an overall summary of administrative progress and problems in the United Nations and its specialized agencies, such a survey would not be complete without mention of the question of coordination, as such. Considerable progress in coordination among the United Nations and its specialized agencies has been made in the administrative field. There are, for example, a generally comparable salary allowance and leave system, a common pension system, comparable personnel and financial regulations, and certain common administrative services. This accomplishment has been primarily due to the combined efforts of the Advisory Committee on Administrative and Budgetary Questions, the Administrative Committee on Coordination and its subcommittees, and the consistency of positions of many of the governments represented in the various organizations.

In view of this and the work being undertaken by the Economic and Social Council to insure coordination and integration of program planning, it seems timely to my delegation to explore what measures this committee might recommend to improve the combined operations and effectiveness of the United Nations and its specialized agencies.

Before advancing the suggestions of my delegation, let me state briefly what I believe the basic relation of the United Nations and its agencies should be. The central fact is that each agency, regardless of its constitutional autonomy, is a vital part of the whole United Nations system. In the eyes of the world, the success of a specialized agency is considered the success of the United Nations itself and vice versa. Likewise, the weakness of a specialized agency is considered to be the weakness of the United Nations. There is a reality we should not ignore.

RECOMMENDATIONS

Against this background of progress and problems, I shall proceed to outline the views of my delegation on both the issues before us which require immediate action and those on which attention needs to be focused and an exchange of views encouraged if solutions are to be eventually developed.

1. We are satisfied with the role of the Advisory Committee and the Contributions Committee, and we shall on most points support their recommendations for the 1956 United Nations budget and scale of assessment. We note that both committees are authorized by the Assembly to render service to the specialized agencies. The Contributions Committee has been called upon by numerous agencies to provide factual and statistical data. The Advisory Committee received authorization last year to visit the specialized agencies, upon their invitation, to continue the study of administrative and budgetary coordination. It is understood that at least one agency has extended an invitation to the Advisory Committee. It is to be hoped that others will do likewise, since there is a very real need for the budget of every U. N. organization to have the careful and thorough type of expert examination which is given by the Advisory Committee on behalf of governments.

The advantage of having one group do the task for all agencies is obvious. It is a means by which the administration and governments in each agency can obtain objective advice on administrative improvements that would lead to better results for the money expended. It offers a means of identifying and focusing attention on common problems and the solutions thereto. The question arises, however, as to how the Advisory Committee can fulfill its responsibilities to the Assembly and at the same time perform a useful role on behalf of the agencies.

Since article 17 of the United Nations Charter places upon the Assembly certain responsibilities for review of specialized agency budgets, we can all agree that from the standpoint of the General Assembly as well as of the specialized agencies it is important for the Advisory Committee to undertake such a role. The problem therefore boils down to one of practical arrangements. It would appear to my delegation that there are several possible courses of action that would enable the Advisory Committee to fulfill this enlarged role satisfactorily to all concerned. Before advancing any specific suggestions on this matter, however, I think it is more fitting that we should profit from any views the Advisory Committee itself may have on this point. I hope that Ambassador Aghnides, with his usual wisdom, can point the way for a fruitful discussion among delegations and representatives of the specialized agencies.

2. The second major suggestion which grows out of my introductory analysis is in response to the need for giving more attention to achieving better personnel management. This, of course, can only be done successfully if the head of each agency recognizes the importance of this matter and gives it his full support. Otherwise day-to-day operations will tend to crowd out such a program. We would urge that the Secretary-General and the heads of the various agencies give this matter high priority during the course of the next few years. It is important that the U. N. organizations benefit from modern techniques in personnel management. One rather concrete proposal which suggests itself on the basis of current United States experience is the institution of an incentive award system.

The President of the United States, with congressional approval, initiated a program of this kind last November, as a means of enlisting the ingenuity and inventiveness of every member of the United States civil service in the cause of greater efficiency and productivity. The Chairman of the United States Civil Service Commission reported recently that during the first 7 months of operation 138,000 suggestions were received, 35,000 adopted, about $1,500,000 were paid out in cash awards, and the taxpayer benefited to the extent of savings of $40 million. While the unique and complex character of personnel problems in international organizations may require considerable modification of national experience, it is still valid to expect that these organizations can benefit from experience like that of the United States.

We also believe that the International Civil Service Advisory Board could play a useful and more active role in this connection. To date the Board has issued advisory reports covering recruitment, training, and standards of conduct. They provide basic policy guides which can and should be used to better purpose by all agencies, but there has been no followup. More could be done by the Board, particularly in assisting those organizations to plan and develop sound programs of this kind, tailored to the agency's needs.

3. My third major suggestion is directed to both the secretariats and the governments represented here and in other agencies. I believe, and it is the belief of my Government, that greater vigilance and restraint are required in order to avoid an unduly large proportion of international budgets being used for administrative and overhead services. There are a number of specific measures which could and should be employed with greater fidelity to curb this tendency and which should lead to greater economy.

(a) In the absence of exceptional circumstances, major meetings of international organizations should be held at headquarters.

(b) Meetings should be scheduled to avoid peaks and valleys in the workloads for secretariats and governments.

(c) There should be strict publication and documentation control. In this connection, my delegation would like to suggest that the fifth committee might set an example and establish a healthy precedent by foregoing summary records except for important debates. For many items on the agenda, such as those we have just disposed of, the report of the committee constitutes an adequate account of the proceedings.

This is not solely a United Nations problem. The following plaintive note is sounded in the report of the Program Commission of the last General Conference of UNESCO.

"In conclusion, the Commission wishes to call the attention of the General Conference to certain problems which have not only caused delay but have also, in many cases, reduced the effectiveness of its work. First is the problem of paperwork. Never before has the Commission had to consider so many documents as this year. * * * A considerable number of important resolutions were hidden in these piles of papers, from which they had to be sorted out in order to be adopted, or more often than not held over for another meeting, or amended, or re-amended, until one's head began to spin."

This has an all-too-familiar ring and has been echoed in these halls as well as elsewhere.

(d) Meetings should start promptly. In this, some of the technical agencies such as WHO maintain a better record than the United Nations organs. The International Scientific Conference on Peaceful Uses of Atomic Energy in Geneva last August was outstanding on this score. The following excerpt from the closing address of the president of the conference, Dr. Bhabha, of India, points to the fact that:

"Its success is also due to the spirit and the manner in which all the delegates have played their part. From the very beginning meetings have begun and ended on time, and all the speakers have adhered to the time limit set in the program. I am told that this is by no means a usual feature of international conferences. The difference can perhaps be attributed to the circumstance that, in a scientific conference such as this, each speaker has something concrete to communicate. I suppose that, when one has nothing too concrete to communicate, there is no inherent reason why, having started speaking, one should stop."

My colleagues will be greatly relieved, I am sure, to know that I have taken the last comment of Dr. Bhabha to heart and that very soon I will stop.

ADDITIONAL SPECIAL ITEMS

Mr. Chairman, I should like to indicate at this point the United States position on several nonrecurring items which are important primarily in the United Nations context.

My delegation strongly supports the recommendations of the Special Committee on Judicial Review of Administrative Tribunal Judgments and hopes that the report of that committee will enable the Fifth Committee to deal with this item with a minimum of debate.

The United States Government is also gratified to note that the Secretary General plans to complete the headquarters construction in 1956 and, in this connection, to erect a memorial plaque for those who have died in the service of the United Nations. We also consider it eminently just and proper for the Fifth Committee to act favorably on the proposal to establish a memorial cemetery in Korea.

I could not close these general remarks without expressing the appreciation of my delegation for the work of the various standing committees which serve the Fifth Committee so faithfully, such as the Advisory Committee, the Contributions Committee, and the Board of Auditors.

My delegation would also like to associate itself with the thanks expressed by the chairman of the Advisory Committee, in the foreword to the committee's first report, to the persons who have contributed to the work of the Advisory Committee. This particularly applies to the valuable assistance rendered by Mr. Watson Sellar, retiring member of the Board of Auditors, and Mr. Hans Christian Andersen, retiring Controller, both of whom have contributed so much to the sound financial management of the United Nations. The Fifth Committee is indebted to Mr. Sellar, who has served since the inception of the United Nations, for his personal contribution to the development of a thoroughgoing audit system and for the enormous assistance rendered by the staff of his Government department. Tribute is also due the Government of Canada, which has made this possible.

If, as on this occasion and others, we feel it necessary to comment critically on certain details of Untied Nations administration, we do so only out of a desire to be helpful and constructive. My delegation is convinced that the United Nations must continue to examine and improve its administrative practices if it is to fulfill the great hopes that we—and I think the whole world—have for its continued growth as an instrument working for peace in this nuclear age. I have no doubt that my colleagues on this committee are as conscious as I am of the great responsibility we bear as overseers of an organization which embodies so much hope and promise. If the United Nations is to play the role expected of it in this disorderly and uncertain world, those who carry out its mandate will have to function with a high sense of duty and teamwork.

Convinced as we are of the challenge and the difficulty which this administrative task places upon the Secretary-General, we stand ready always to cooperate with him. His term of office has been marked by accomplishments and improvements which merit our sincere pride and gratitude.

I am confident that, if properly supported, the United Nations system as it enters its second decade will grow, develop, and increase in influence and effectiveness. We are engaged in waging peace with an intensity and earnestness of purpose never before experienced in the history of the world. In that great effort the United Nations system serves as one of mankind's major instrumentalities. The charter is a living organism and has developed and must continue to develop as a potent instrument for meeting the many complex problems of international character which know no boundary lines. As we try to project the future, we can be certain that, with a concerted effort on the part of all of us, the United Nations system will succeed and help man realize his greatest hope and that a new and peaceful world will emerge through the instrumentality of the U. N. structure. Toward that goal the Administrative and Budgetary Committee, by making possible more efficient use of available funds, can make a major contribution.

Mr. Speaker, there follows the final address delivered by the Honorable CHESTER E. MERROW, while serving as a United States delegate to the 10th General Assembly of the United Nations. This address was delivered before the General Assembly on December 16, 1955, and gives a thorough review of the United States position on the United Nations budget for 1956 and the need for improved budget procedure and sound fiscal policies in the United Nations. During the 83d Congress, Mr. MERROW had served as chairman of the Foreign Affairs Subcommittee on International Organizations and Movements, and had conducted thorough studies of this subject matter. He thus brought to his U. N. assignment a background of solid and valuable experience.

STATEMENT BY CONGRESSMAN CHESTER E. MERROW, UNITED STATES DELEGATE, IN PLENARY SESSION ON THE UNITED NATIONS BUDGET FOR 1956

My delegation will support in this plenary session the total appropriation for 1956 voted by the Fifth Committee, but it does so with some reservations.

ANALYSIS OF BUDGET INCREASES

With the forewarning which we had received as to the necessity for a large supplemental approrpiation for 1955 to cover such items as the Geneva Conference on the Peaceful Uses of Atomic Energy, it was the expressed hope of my delegation at the outset of the debate in the Fifth Committee that we could keep the 1956 budget to the level recommended by the Advisory Com-

mittee, namely, $46,016,000. Instead, the budget approved by the Fifth Committee has reached $48,566,350, an increase of approximately $1,600,000 over the budget which this Assembly approved last year for 1955.

These increases fall largely into four categories of expenditures; i. e., activities related to peaceful uses of atomic energy, technical assistance in the social welfare and human rights field, operation of field offices and special missions, and salary adjustments. My delegation in the budgetary committee supported important program expansion and some increased expenditures in all of these items except the one relating to salary adjustments. We opposed some of the appropriations voted for program expansion, and we opposed the increase in headquarters cost-of-living allowance. We recognized that changing economic conditions and particularly the increase in United States Federal Government salaries necessitated a reappraisal of the adequacy of the total level of United Nations remuneration. We were opposed to the Secretary General's proposal for a cost-of-living adjustment at this time because, on the basis of prevailing standards in United Nations and the specialized agencies, there is no present justification for this kind of a salary increase.

However, we believe that the establishment of a committee composed of governmental experts to review the salary, allowance, and benefit system in 1956, is a welcome development. Such a review should make it possible to achieve two objectives: Namely, (1) to adjust the common remuneration system of the United Nations and the specialized agencies to present-day requirements for attracting and holding a highly qualified multinational staff in positions in all parts of the world, and (2) to make these adjustments in a manner which takes adequate account of the responsibilities and financial resources of international organizations and the standards of remuneration in national public services.

In this connection, Mr. President, may I state that the United States Government is not satisfied with the present level of participation by United States nationals in the various international secretariats and technical assistance programs. We trust the recommendations of the committee will be such as to encourage an increased number of United States nationals to seek international employment, not only at the United Nations headquarters but also at other international agency centers as well.

While a number of the proposals for additional budgetary increases were resisted by the committee, my delegation was disappointed that the proposals for increased expenditures were not offset to a larger extent by compensating economies. We had hoped, for example, to make some savings by altering the regulations for publication of treaties. Likewise, we had hoped to defer less essential items, such as expenditures for improvement of facilities for conferences and meetings in Geneva.

The net result of all of the financial decisions taken by the fifth committee is that the expenditures to be assessed in respect of the 1955 supplemental appropriation and the 1956 budget will total $51,830,550, the largest in United Nations history (I might add parenthetically that we hope that this 10th General Assembly will securely hold this dubious distinction unchallenged for many years to come). The amount of these appropriations is due not only to the increase of $1,600,000 in the 1956 budget to which I have already referred, but also to the coincidental occurrence of unusually high supplemental expenditures in respect of 1955, without the offsetting savings that were available last year. The supplemental items for 1955 include $1,400,000 of the total cost of $2,361,000 for the International Scientific Conference on Peaceful Uses of Atomic Energy; $1,630,000 representing the last appropriation for reimbursement of national taxes to staff members; and other unforeseen costs relating to such matters as the disarmament meeting in London, and the Secretary General's successful trip in accordance with the General Assembly's directive to obtain the release of 11 United States prisoners and other personnel of the United Nations Command captured in the Korean war.

BASIS FOR UNITED STATES SUPPORT

Despite its concern over the upturn of United Nations expenditures just at the point when we had anticipated stabilization, the United States will support the appropriation recommended by the Fifth Committee for 1956. We do so in recognition of two facts: (1) that the Secretary General and the General Assembly have, over the past 2 years, made a real effort and considerable progress in reducing the regular budget and (2) that a sizable amount of the increased assessments being voted for 1956 is of a nonrecurring character. My delegation strongly urges, however, that the upward trend of expenditures reflected in the 1956 budgets of not only the United Nations but also the specialized agencies not be considered as establishing a precedent for future years.

In an earlier statement before the fifth committee, I expressed the belief that the support of all member governments for the causes served by the programs of the United Nations agencies should be sustained and indeed increased. This should not be interpreted, however, as urging increases in the regular budgets. The avenues by which these causes can be served are many. As I indicated in the fifth committee, the form of such support; i. e., whether through the regular budgets of international organizations, through international voluntary programs, or through such other forms of intergovernmental cooperations as bilateral programs, will require a continuing assessment of the following factors, among others:

(a) Whether an international agency can be demonstrated to be the best instrument for meeting the need which are justifiably the concern of the international community;

(b) The degree to which the members of such an agency are willing to bear an equitable share of the financial burdens entailed in assuming such international responsibilities. It is an inescapable fact that, if the brunt of the costs falls upon a relatively few member states, the undertaking is not truly international, and lasting and bitter misunderstandings will surely result; and

(c) Whether international assistance will be adequately supported and supplemented by national endeavor.

One further fact that must be continuously borne in mind by member states as well as the Secretariat was pointed out to us by the Secretary General last year in his annual report. He stated: "That the very nature of the responsibilities that must be assumed by the Secretary General and his senior staff imposes a limit on the volume of the tasks that can be handled effectively, irrespective of the additional funds, personnel, and facilities that might be placed at their disposal."

All of these factors dictate caution in the expansion by the General Assembly of the permanent establishments and the regular budgets of international organizations. This does not mean that pressing world problems will be neglected by the community of nations represented here and in the specialized agencies; far from it.

Although the sum total of the regular budgets of the United Nations and currently existing specialized agencies for the period 1946 to 1955 inclusive approximates $686 million, an additional amount of more than $1 billion has been contributed to international programs, especially designed to provide relief and rehabilitation for refugees, to give technical assistance for economic and social development, and to promote maternal and child welfare. In addition, very material assistance in promoting economic development is provided through the facilities of the International Bank and Monetary Fund. And augmenting all of these efforts are large national programs of assistance such as the United States technical cooperation plan and regional programs such as the Colombo plan. The value and results which derive from such a flexible, many-pronged approach to these problems cannot be overestimated and should not be jeopardized by premature or unrealistic expansion of the regular budgets and staffs of international organizations.

IMPROVED BUDGET PROCEDURE

In expressing our hopes regarding the budget to be presented next year, I should also like to mention our interest in seeing the advisory committee and the Assembly develop a more simplified form of the budget that will enable the financial control exercised by the Assembly and the Secretary General to be more effective and will, at the same time, reduce administrative redtape.

We welcome, too, the initiative taken by the distinguished delegate of Denmark in the fifth committee in calling our attention to the need for improving the organization and scheduling of the fifth committe's work. This led to a fruitful discussion on ways and means of eliminating delays and of facilitating, in particular, the review of the budget and decisions relating thereto.

The Assembly will note in the report of the fifth committee that the United States suggested that the agenda of the 11th session of the General Assembly might include an item entitled "General Assembly Procedures for Consideration and Adoption of the Budget." We are pleased that the Secretary General will give this matter his attention during this next year.

While experience, particularly this year, has shown the need for procedural improvements, I should like to testify to the skill of the chairman of the fifth committee. With the difficulties we faced, only the direction of a superb chairman could save us. My delegation believes that we, therefore, owe a special debt of gratitude to Ambassador Engen of Norway.

COORDINATION OF U. N. AND AGENCIES

In matters of coordination with the specialized agencies, the decision of the fifth committee to support the Secretary General's request for increases in salaries and in the education allowance was, in our judgment, without sufficient notice to the specialized agencies. This seems a regrettable departure from the repeated emphasis given by the Assembly to the desirability of coordinating administrative policies and practices among the United Nations and the Agencies.

On the other hand, the fifth committee did recommend that the United Nations offer its assistance to the International Telecommunications Union and World Meteorological Organization in constructing a headquarters that would permit them to share the facilities of the Palais des Nations with the United Nations and the World Health Organization. We hope that this will eventuate in closer relationships among these organizations and that it will be ultimately possible for them and us to benefit from the greater use of common services that would result from living under the same roof.

Another step that should be conducive to improved coordination of the United Nations and the specialized agencies in the administrative field is the decision of the advisory committee to undertake a more intensive review of problems in this area. This will be possible by consultations at the headquarters of several specialized agencies during the coming years. We commend the

agencies, the advisory committee, and its distinguished chairman, Ambassador Aghnides, on this constructive approach.

To summarize, Mr. President, my delegation will support the recommended appropriation, in spite of its reservations. We believe that, through the exercise of restraint and the constructive application of our joint efforts, the members of the United Nations should be able to regulate better any further budgetary expansion. We are confident that, by following sound fiscal policies and by inaugurating improved methods of budgetary management and control, the United Nations will be greatly strengthened. The budget is, of course, the reflection of the development of the activities of the organization. The appropriations place in practical effect the provisions of the budget. My delegation firmly believes that, by continued pursuance of sound financial principles, the United Nations during its second decade will increase in influence and effectiveness as the greatest force for helping man to realize his hopes for bringing about a peaceful world.

Hon. George C. McGhee—Part I

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1956

Mr. TEAGUE of Texas. Mr. Speaker, I have previously called the attention of this body to the Student Conference on National Affairs held by the Agricultural and Mechanical College of Texas this past fall.

Among the distinguished speakers present for this conference was the Honorable George C. McGhee. Mr. McGhee has quite a history of service in the field of foreign affairs, having been a former Assistant Secretary of State for Near Eastern, South Asian, and African Affairs; senior adviser, North Atlantic Treaty Council; United States Ambassador to Turkey; Chief, Joint American Military Mission for Aid to Turkey; and Chairman of the United States Educational Commission in Turkey.

Under leave to extend my remarks in the RECORD, I wish to include, in two parts, the speech delivered by Mr. McGhee to the student conference:

AMERICAN FOREIGN POLICY—SOME THINGS IT IS AND ISN'T

(Address by George C. McGhee before the First Student Conference on National Affairs, Texas A. & M. College, College Station, Tex., December 14, 1955)

It is a great pleasure for me to address this first student conference on national affairs, including as it does representatives from 48 colleges as well as many distinguished visitors and participants from all over the country. I will speak to you tonight on American foreign policy—not as it relates to particular problems—but in its more general aspects. What I will say is concerned more with the philosophy and limitations of foreign policy than with its substance. It is difficult to find a subject for such a discourse, however, I have chosen "American Foreign Policy—Some Things It Is and Isn't."

I would like to make it clear at the outset that I do not speak to you in any partisan way. Although the principal architects of our foreign policy, must, under the President and Secretary of State, be leaders from within a particular political party, I consider that political partisanship as such should end at the door of the State Department. Indeed, one of my principal objectives is to seek tolerance and patience for those who conduct our foreign policy, regardless of which administration they represent.

We should welcome constructive debate on foreign policy issues—including debate by political leaders of both parties—indeed this is necessary in a democracy. But even though political advantage may flow from, it should not motivate such debate. Since I know from experience the immensity of the problems our foreign policymakers face, many of them problems which a reasonable man might dismiss as insoluble, and the limitations on the means at their disposal to control the course of world affairs, I would ask you to give them every benefit of the doubt in the carrying out of their difficult task.

There is a story of an oldtimer in Congress who was giving advice to a young freshman Congressman. "Son," he said, "I'll tell you the secret of my success up here. If you will just follow my advice you can stay here just as long as you want to. You will be faced here with many difficult decisions as to how to vote on legislation. Son, when you are ever in doubt, just vote right."

In its ultimate objectives, the foreign policy of the United States can be defined only in such very general terms as "furthering the interests and security of the United States." How this can be done from day to day is pretty much a question of doing the "right" thing. There are, however, certain guide lines which are derived from our particular nature, history, and situation in the world.

America occupies a unique position in the world, resulting from our unique background. We are deeply influenced by the fact that we were a colony for 169 years, between the establishment of Jamestown, Va., and the Declaration of Independence. Although we share in the European tradition, many of our national attitudes are in reaction to Europe. We were and still are highly nationalistic—with a distaste for European colonialism. Since we were relatively isolated, we were until recently free to pursue a policy of isolation.

We have done well in the world and we perhaps give ourselves more credit than is due to the policies that have guided us—freedom from European entanglement, manifest destiny, freedom of the seas, and the open door, just to name a few. The apparent success, for example, of one of our classic policies, the Monroe Doctrine, which served as a warning to European nations to stay out of this hemisphere, has perhaps given us too much confidence that problems can be solved by such simple statements of policy. In fact, the Monroe Doctrine worked largely because of coincidence with British policy and the British Navy.

In practice few problems are solved by such simple policy concepts. The concepts of containment and liberation, for example, which one hears much of today, are both oversimplifications of the complex of circumstances surrounding our points of contact with Russia in the cold war. They are, in fact, as concepts, more misleading than helpful.

Those who guide the destiny of this country in its relations with the rest of the world steer a difficult and unchartered course. In recent years I have traveled through most of the free world and have had the oportunity to meet and talk with the peoples and many of the leaders of these countries. It is true that one finds a great community of interest in the free world centering around the broad concepts of freedom and dignity of the individual, and security, which all free peoples seek. Even with our friends of the free world, however, there remains sharp conflicts of interest: prestige consideration, conflicts of trade, conflicts of colonies and spheres of influence, conflicts over rearmament for the defense of the free world of countries such as Germany, which other countries such as France think could constitute a threat to themselves.

Even in the best of all possible worlds, there would probably be such conflicts. Indeed, one thing which is important for us to understand and which is often difficult for Americans to understand is this inevitability of conflict, between nations as between individuals. Unique solutions will never be provided for all the world's problems at any one particular time. One can only hope to minimize them and to minimize their impact on other and greater problems. It has been said with respect to the Middle East, for example, that no problem was ever solved except through the superimposition of a greater problem. The traditional British policy of muddling through reflects an understanding of problems that cannot be solved but which one can learn to live with.

We in America, protected in the past by great oceans from the centers of conflict in Europe and Asia, were until recently relatively undisturbed in the pursuit of our own national aspirations. Periodically, we have in our relatively brief history been drawn into armed conflict originating elsewhere, but always for a finite period during which we could make a great all-out effort, which we understand very well how to do and are willing to do. After 2, 3, or 4 years, however, the war was over and we could return to our normal pursuits. An apparent solution had been found in the form of a military victory or a peace treaty. In fact, there was no solution, but merely a transition between conflict of interests through wartime and peacetime methods. We perhaps did not realize clearly enough that the basic conflicts in the world persisted.

One thing we need to learn is how to live with such conflicts, when they do not lend themselves to an immediate military solution. The Turks, for example, have lived alongside Russia for approximately 700 years. Since the two countries first came in conflict in 1677, they have fought 13 major wars. In many of these wars Turkey was defeated, although never overrun nor completely conquered. Today, as during most of the past 300 years, Turkey faces an insoluble conflict with the Soviet Union, which wishes to control Turkey politically and to control the straits area militarily. Turkey also knows that Russia could at any time marshal overwhelming military force at her border. Until 2 years ago, when Turkey joined the NATO, she enjoyed no permanent system of alliances with western European countries which gave her any real assurance that the other world powers would assist her in her defense in the event of an attack by Russia.

Despite this the Turks are probably much less concerned about the cold war, less jumpy about the Soviet menace, than we are. They leave no doubt in the Russian mind that they will fight to the last man in defense of their country. However, in the meantime, they live in equanimity under the shadow of a perpetual Russian threat.

The United States has only recently come into direct conflict with Soviet Russia. Indeed, only recently has the atomic age made a military threat to this country possible. Although I am, of course, opposed to preventive war, I wish very much that we could assume more of an initiative in an effort to win the cold war. However, until we do, we here in America must learn to live in equanimity with the threats and dangers which exist today.

Hon. George C. McGhee—Part II

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1956

Mr. TEAGUE of Texas. Mr. Speaker, under leave to extend my remarks in the RECORD, I include part II of a speech delivered by Hon. George C. McGhee to the Student Conference on National Affairs:

Another important factor which I would like to emphasize about the world is how stubbornly it resist efforts on our part, or any one country's part, to control or even to predict the course of its never-ending drama. The forces at play in the world are too great and their inter-relationship too unpredictable.

We have so far developed limited ability to control the weather, through rainmaking, or even to make long range predictions of the weather. We mainly seek to adapt to the weather on the basis of short-range predictions. Most stockbrokers do not venture to predict long-range trends of the market. They seek mainly to predict, on the basis of an analysis of particular stocks, how these stocks will rise or fall with respect to the general market.

Take, if you will, a country such as India—350 millions of people evolving in a unique way from an earlier illustrous past through a period of colonial bondage to its newly won independence in a confused and divided world. The ultimate course India will take will not be the result of policies or pronouncements made in Washington or London or Moscow, and to only a limited degree by strong leaders such as Mr. Nehru in New Delhi. India, as did this country, impelled by some inexorable force, will evolve along some course now uncharted and fulfill its unique destiny in some now unknown way.

A lesson to be derived from this observation is that foreign policymakers should be given less credit, and conversely less blame, for what happens in the world that was really beyond their control. Although there is no precise analogy, we do not give the weatherman credit for good weather but only for predicting good weather. Conversely, we do not blame him for bad weather, particularly if it was predicted.

Mr. Adenauer won the last German election not because of some last-minute statement made in Washington or by the American Ambassador at Bonn, but as a result of the interplay of forces within Germany. Indeed, as is often pointed out, any obvious effort to influence a foreign election usually boomerangs. This fact can be illustrated by pointing out what little influence even a close friend, like Great Britain, could have on the election of the President of the United States or the Governor of Virginia. A British Ambassador got in a lot of trouble one time over a chance remark about an American election, and our British friends are far too sophisticated to attempt such a thing today.

I do not mean to imply that situations do not arise where American efforts abroad cannot help carry out American policies. The point I wish to make is that this is usually possible only where the right elements already existed. The Marshall plan helped the European nations do something they themselves desperately wanted to do, and which coincided with our own interests, namely to effect their own economic recovery and rearmament. The leverage of our aid helped persuade them only in minor ways as to how they could do this best. Our efforts to arm Greece and Turkey and to weld them into the European defense structure were successful principally because the Greeks and Turks ardently desired it.

It took a little over 3 years of negotiations, after the nationalization of the Anglo-Iranian oil properties in Iran, before a new agreement could be reached. In spite of all the efforts that we and the British and others made, it appeared that the great outbrust of nationalist feeling in Iran had to run its course and the full effects of the economic pinch on Iran be felt, before the basic situation could develop in Iran which would make an agreement possible.

Similarly, in Guatemala, the Guatemalan people had to understand fully the horror of a Communist police state before they were willing to arise against the Arbenz regime. Just as timing is the principal ingredient of success to the singer or comedian, the timing of a foreign policy move can mean the difference between its success or its failure.

This does not mean that moves must not occasionally be made, for purely tactical reasons, when there is little prospect of success. Even though it failed, the move for a European army through the EDC had, in my judgment, to be made. For the ultimate security of Western Europe there is no alternative to a rearmed Germany and its collaboration in defense with the other Western European countries, including France. No American Secretary of State could have pursued any other policy than to make every possible effort to bring this about. In the light of the French attitude at the time, the EDC seemed to be the best way to do it. Even though there was no assurance of success, EDC had to be pushed with all possible vigor. Even its failure had value in that it eliminated one course of action and made it possible to clear the decks for another attempt through the Brussels Pact, which was successful.

In 1951 this Government, together with England and France and Turkey, made an offer to the Arab States to join a Middle East Defense Organization. We all know that there was little chance of its immediate acceptance; however, for tactical reasons we felt it must be made. The answer was a slap in the face by Egypt, who renounced her treaty with Britain affecting the Suez base, which was considered the key to Middle East Defense.

The move of three powers, although unsuccessful, was, in my judgment, a necessary move. It showed the Egyptians that its government had been offered an honorable way out of their treaty problem with the British. It stood as a proof to the Russians, as well as the Middle Easterners, of United States determination to assist in the defense of this vital area. Recently, after much patient and persistent effort, the western powers were rewarded by the establishment of the so-called Baghdad Pact, based on the "northern tier" concept, which will achieve many if not all of the original objectives of our original proposals.

What, however, you may ask does this mean to you? You have no direct responsibility for the conduct of foreign affairs and perhaps find it difficult even to follow the intricacies of the problems which face the policymakers in London and Washington. This is, however, only relatively true and much less true today than ever before.

In 1922 an ex-Secretary of State, Elihu Root, wrote as follows:

"When foreign affairs were ruled by autocracies or oligarchies the danger of war was in sinister purpose. When foreign affairs are ruled by democracies the danger of war will be in mistaken beliefs. The world will be the gainer by the change, for, while there is no human way to prevent a king from having a bad heart, there is a human way to prevent a people from having an erroneous opinion. That way is to furnish the whole people, as a part of their ordinary education, with correct information about their relations to other peoples, about the limitations upon their own rights, about their duties to respect the rights of others, about what has happened and is happening in international affairs, and about the effects upon national life of the things that are done or refused as between nations; so that the people themselves will have the means to test misinformation and appeals to prejudice and passion based upon error."

Great progress has been made in the last few years in this country in arousing the interest and expanding the knowledge of the average citizen on the issues involved in the conduct of our foreign affairs. The local councils on world affairs and committees on foreign relations bring to our cities as speakers, scores of national and world leaders every year. Your newspapers publish a great deal more foreign news and intelligent editorial and interpretive comment than ever before. It is you who elect the Congressman who helps decide whether we appropriate X or Y billions of dollars of aid to foreign countries. Your letters and petitions are read by the policymakers in Washington. Indeed, few foreign policy decisions can be made today without considering their impact on American public opinion. The State Department has an extensive organization to analyze American public opinion for this purpose.

True, the day-to-day decisions, the tactics, in the conduct of foreign policy must, of course, be left to the President and his chosen representatives, principally the Secretary of State. Only they are close enough to the details of the problems to decide specific actions.

I would like to propose, however, certain broad generalities which in my opinion will always be applicable to the conduct of our foreign policy. These are principles which responsible citizens, such as this group here today, could, if they believed in, help assure that our Government follows:

1. The core of American foreign policy should always be the well-being and security of this country. It should serve what are, in fact, the true interests and aspirations of the American people taken as a whole. It should not follow any will-o'-the-wisp of purposeless do-goodism on the one hand, or serve the narrow interests of any particular "special interest" group on the other. This applies to religious, economic, ethnic, and all area-conscious groups alike.

2. The conduct of American foreign policy should be free from political partisanship. Those who conduct it should approach it on the basis of a public trust. Actions should not be based on desire for credit for political purposes, nor should criticism of the conduct of foreign policy be so based.

3. We should have clear long-range foreign-policy objectives which are not subject to compromise and should seek in obtaining them mutual support from allies whose broad objectives are similar to our own. With respect to our short-range national objectives, however, we must be prepared as in busines and life within our own country to give and take with our allies, who also have particular national objectives often different from our own. We cannot go it alone in the world of today.

4. Both our foreign policy objectives and the methods used to achieve them should never deviate from the democratic and religious principles on which our society is based. Indeed, they cannot, and we would be deceiving ourselves by bluffing or proceeding under any other assumption. Certain fundamental principles, such as respect for the dignity and freedom of the individual and the desire for peaceful solutions, are too thoroughly ingrained in the American people to be changed. They show themselves inevitably when questions affecting such is-

sues as colonialism or preventive war arise. We cannot be anything but what we are.

5. But, finally, this does not preclude the injection into our relations with other nations all of the determination, toughness of mind, and innate practicality that has made America great. Andrew Carnegie, who gave millions for peace, and John D. Rockefeller, who gave millions for the betterment of the world, were hard, practical men. Your church has a religious purpose, yet the treasurer of your church is probably a tough-minded, practical man who fights against the inclusion in your church budget of anything not required for the purposes of your church.

It is this mixture of idealism and hard-headed realism, which is in my judgment the real contribution we Americans can make toward the peace of the world.

Dr. William Lowe Bryan

EXTENSION OF REMARKS
OF
HON. WILLIAM G. BRAY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 18, 1956

Mr. BRAY. Mr. Speaker, on November 21 Indiana University felt a great loss, and this feeling was shared by friends of the university throughout the Nation. Dr. William Lowe Bryan, president emeritus, passed on at the age of 95.

President Bryan was born on a farm in Monroe County, Ind., only a few miles from the university that he headed from 1902 to 1935.

As the tenth president of Indiana University, Dr. Bryan presided over it in its golden age of expansion and development. He achieved great distinction as a scholar, and as an educator through his peculiar knack of combining the scholarly and the practical viewpoints. Above this, he excelled in the truly human qualities which mark a great man. A sonnet written of him said "A native who returned to serve his own, a prophet honored in his native land!"

The Indiana Daily Student, campus voice of the students of Indiana University, a paper which President Bryan edited more than 70 years ago, repeated some of his best-known expressions following his death. They are:

At the I. U. commencement in 1902 Dr. Bryan said, "The cause we stand for is already victorious because it is rooted in the heart of our democracy."

Concluding the same address he said, "Our motto is Lux et Veritas. We might translate it by the saying of Jesus. We are come, we who represent the university, we who support the university, we are come to all the folk that they might have light and that they might have it more abundantly."

At the I. U. commencement in 1907 the President-Emeritus said, "It is, I think a most certain fact of history that men have not lived by bread alone, but by every word that proceedeth out of the mouth of God."

In his I. U. commencement address in 1908 Dr. Bryan said, "A university has as the first condition of its greatness, not its great plant of buildings, apparatus, and books, but a faculty of quality."

Dr. Bryan stated also in his 1908 commencement address, "what society needs from the university is complete enlightenment."

At the 1910 commencement address at I. U. in 1917 Dr. Bryan said, "The ultimate defense of pure learning is not its actual or possible utility. Its defense is that given by Aristotle. Curiosity, wonder, are instincts as deep and right as hunger. We want to know. We want to comprehend the universe of which we are a part. In pure learning nature rises toward knowing the truth about itself. No greater thing happens in the world than this."

"The best thing which the world of common sense does is to make us work at sensible tasks. This is the best safeguard against insanity, and the best means of developing practical judgment and efficiency.

"But common sense never teaches us the whole truth. It does a man fatal harm to believe that it can. It does a man fatal to believe that he can choose for himself a little world with little purposes, little standards of success, and little rules of cunning, and there can shut himself in safe from the living God," said Dr. William Lowe Bryan, president-emeritus in an address at the 1910 I. U. commencement.

The president-emeritus wrote in The President's Column, in 1926–27, "It is youth which is forever saving the world from the petrified errors of the old."

He also stated, "But beyond any man, however great, who despairs, I value the man who, seeing well the evils of this world, does not despair."

In this same column of 1926–27 Dr. Bryan wrote, "The greatest masters have that which others lack. They have wisdom and wisdom is the principal thing."

"I counsel you to seek wisdom in the matter of changing your ideas. Truth is eternal, but the eternal truth is never wholly in any statement, or theory, or creed of men," said Dr. William Lowe Bryan, the late president-emeritus, speaking at the I. U. commencement in 1909.

"Turn to any great occupation, on its highest level. Find one of its greatest living men, and become his disciple. Get sight of his great idea. Get a sense of the man at his best. See how he works, how he makes his time and energy count. Above all things, see what the man at his best is trying to do. Fill your mind with that. Give yourself to that. And presently the great world values to which your master has pointed the way will have filled you, will have cleansed you from lower habits and ideas and instincts, and will have lifted you into the wisdom and strength of a man." The quotation is from an address at the I. U. commencement in 1909 by Dr. William Lowe Bryan, president-emeritus.

Determined Jobholders

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 18, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the Wilkes-Barre Sunday Independent, January 15, 1956, in which the paper comments on President Eisenhower's health chart and the eagerness of some present jobholders to have him run for reelection.

The editorial follows:

DETERMINED

It doesn't take much of an optimistic rise on President Eisenhower's health chart to have the jobholders insisting that he can run again.

It is to be noted also that they make no predictions on how long he could last after being reelected.

All of which somehow recalls the old wheeze about England being willing to fight "to the last Irishman."

George Washington Carver: Man of God and Science

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 5, 1956

Mr. KLEIN. Mr. Speaker, under leave to extend my remarks, I wish to include an editorial written by Harry H. Schlacht which appeared in the East Side News on January 14, 1956, entitled "George Washington Carver: Man of God and Science":

GEORGE WASHINGTON CARVER: MAN OF GOD AND SCIENCE

(By Harry H. Schlacht)

America honors the memory of George Washington Carver. He was a man of God. He was a Negro scientist. He was a noted American artist. We hail his splendid character, his lofty ideals, his exemplary life and his service to his fellow man.

Here is the stirring saga of a man who was born in slavery and ignorance, who was orphaned in infancy, who was cradled in an atmosphere of hatred and contempt for the Negro, and who was emancipated from poverty and prejudice. Carver was born of a race of beaten backs and branded breasts, which, with Lincoln's Emancipation Proclamation, had been liberated from physical slavery only to face economic and political slavery.

Christ was crucified for claiming to be divine. Carver's people were crucified for claiming to be human. But Carver "lifted his eyes to the hills," whence came his strength, whence came God's grace. It illuminated his human intellect. It steeled his human will.

He possessed the three theological virtues—faith, hope and charity. He understood well the wonderful earthly trinity of the soil, of its fruits and of man. Carver acknowledged God in all his ways. Carver let God direct his path.

He may never have heard the words of St. Ignatius of Loyola—but he reechoed his thoughts. "Receive, O Lord, my entire liberty, my understanding, my memory, my will. From Thee have I received all things. To Thee do I return all things. Give me but Thy grace and Thy love, I wish nothing else of Thee."

When George Washington Carver came to Tuskegee Institute at the invitation of Booker T. Washington, it was a collection of collapsing farmhouses. When Dr. Carver died 40 years later, the Institute was known throughout the land. It had become a splendidly endowed university.

Dr. Carver's fame was worldwide. His name will forever be linked with Tuskegee. Tuskegee's crowning glory was its great educator—Dr. George Washington Carver.

His greatest scientific claim to fame rests on what he accomplished with the "lowly" peanut and the "humble" sweetpotato. He is credited with more than 300 discoveries. He disclaimed credit for his invaluable work. He said: "The things already are there. God, through my hands, brought them to light."

Many honors have come to him. Many colleges have paid him homage. But through it all he walked humbly, seeking no financial gain, desiring no worldly acclaim. His was a saintly life. His was a life of self-forgetfulness. His was a life of sowing seeds of a richer faith in God, of a greater love of our brother.

Indeed, Dr. Carver's life story might be told in the titles of the spirituals he loved so well: "Oh, Mary, don't weep, don't you moan." "You toiled in slavery down in South's land." "And the walls came tumbling down." "And down came the heavenly manna." "And the sweet chariot swing low to carry him home."

Dr. Carver died peacefully as twilight fell at Tuskegee on the evening of January 5, 1943. We memorialize his death day for we do not know his birthday. It might have been a sign from God who, in His providence, concealed Carver's birthday on earth. For the Christian church celebrates the anniversaries of all saints on their death days. It was on this day they were really born. It was on this day they were born into the full sight of the Lord.

Let us—in the beautiful spirit of Dr. Carver—seek to bring forth a nation more firmly rooted to American ideals, more invulnerable to the counsels of hate, more fully conscious of the mission of justice to all races. If we are true to ourselves, if we are true to our traditions, this Nation cannot but fulfill its destiny. Working together we can achieve this lofty goal.

The brotherhood of man is a living, growing reality. The future lies with those who will tear asunder the shackles of bigotry and who will reassert the dignity of man. There is in all of us a real capacity for human kindness. Proud of the power of our country, we can be prouder still of our unflinching defense of the rights of all men. We shall then have remained true to the spirit of America. We shall then have remained true to the promise of America.

Hon. Lyndon Johnson Presents His Legislative Program

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1956

Mr. TEAGUE of Texas. One of the first, if not the first major political speech made by the able majority leader of the Senate, the Honorable LYNDON JOHNSON, following his recuperation from a recent heart atack was delivered in Whitney, Tex., on November 21, 1955.

In his speech, Senator JOHNSON outlined in some detail the legislative program for the second session of Congress for which he as Democratic majority leader of the Senate would work.

We are all happy that Senator JOHNSON is back with us after his illness as his friendship and the esteem in which he is held by his colleagues goes far beyond any personal considerations:

The speech follows:

SPEECH OF SENATOR LYNDON B. JOHNSON BEFORE FUND RAISING DINNER, DEMOCRATIC ADVISORY COMMITTEE OF TEXAS, WHITNEY, TEX., NOVEMBER 21, 1955

Fellow Texans, fellow Democrats, we meet here tonight after 3 years of a Republican administration. And to Americans, 3 strikes are out.

In 1952, a lot of Texans—in fact a majority—voted for a Republican administration. It was supposed to have something to do with an issue called tidelands.

Well, we got a Republican administration. We think we got at least a part of our tidelands back. And that is the last time the Republicans have looked our way.

They gave our Air Academy to Colorado.

They are trying to give Fort Hood to Louisiana.

They are trying to give Fort Bliss to Oklahoma.

And today the Republican Secretary of the Interior is in Texas to dedicate our Big Bend Park. I hope some of our Eisenhower Democrats are out there to keep him from giving it away to old Mexico.

Personally, I think we should be grateful to the old guard Republicans. They have taught us a lot. And they have made more Democrats in 3 years than we could make in a lifetime.

Do you remember the fine flush of enthusiasm that swept the country with the "great crusade?" Even those of us who had held firm for the banner of democracy were impressed. We were going to get: 100 percent of parity, a balanced budget, tax relief for the little fellow, a strong America, more soil conservation and more rural electrification, a Government free of corruption.

It was a fine program—one of the best ever stolen from the Democrats.

There was only one mistake from their point of view. It was a program with a heart and the heart is something the Republican Party just did not have.

Most Republicans realized they had a program they didn't want. Once they got in, they returned it to us.

And that is when the voters started returning the Government to the Democrats.

It would not be hard to catalogue the misdeeds and failures of the Republican Party. But I am not interested in talking about what the Republicans have not done.

I have never believed that a political party should ask for votes because its opponent has shortcomings.

The American people are tired of wrecking crews. They want builders—people who construct. They will entrust their affairs to the party that is constructive. They will turn their backs on the party that is destructive.

We are here because we are Democrats. But even before we are Democrats, we are Americans. We know that what is bad for America is bad for the Democratic Party. We know what is good for America is good for the Democratic Party.

On that principle, we cannot compromise—not even with General Motors.

As a political party, we seek the support of the American people. But we can gain that support only if we try as hard to deserve it as we do to win it.

The Democratic Party has been in existence for at least 150 years. There is no secret about the reason for its vitality.

It is simply that ours is the party with a heart—the party that is concerned with 160 million Americans. It is the party that holds forth hope for men and women and children who want to march forward—to make life better for all.

I have never questioned the patriotism or integrity of my friends who subscribe to another political faith. But even the most rock-ribbed Republican will admit that his party responds a little faster to the fat cats than to the folks.

In the last 3 years, the American people have had a perfect demonstration of the difference between the two parties. In 1952 they selected a Republican President with a Republican Congress, and in 1954 a Republican President with a Democratic Congress.

I don't believe there are very many Americans who have failed to learn the lesson. They found that the Democratic Party—whether in the majority or in the minority—put the country before partisanship. They always thought more about the next generation than they did about the next election.

I will never forget the first conference of Democratic Senators after the 1952 election. The Democrats were in the minority and the future looked bleak. It was the same situation that had tempted the Republicans to wild criticism and irresponsibility for 20 years.

But the situation was so bad that my friends urged me not to become Democratic leader. They said the Democratic Party would be torn with factional strifes and forced into the position of a carping, dissenting and unpopular minority.

I disagreed. When I addressed the Democratic Senators I said:

"I am a Democrat out of conviction—not out of habit. I believe that the Democratic Party is now—and always has been—the party that is best for America. I believe there are forces holding our party together greater than the issues over which we may squabble for the moment.

"Working together, I think we can do more than merely preserve the gains of the past 20 years. I think we can go forward with a positive program—a program that is pro-American and not just anti-Republican. And if we go forward as positive Americans—and not negative oppositionists—I am convinced that the time is not too far distant when the Democratic Party will again be in the majority."

That statement was made in my acceptance speech to the Democratic conference on January 2, 1953.

Two years later, the Senators met again in conference—this time to organize the Senate as the majority party.

It is even more important tonight that we be responsible. There is the smell of victory, and it is keen and unmistakable.

Since 1952, the Democratic Party has won every major contest.

The people have entrusted to us both branches of Congress; 9 governorships that once belonged to our opponents; 7 State legislatures that we took from the Republicans. Even rock-ribbed Indiana has turned city after city over to Democratic mayors.

We can lose in 1956 only if we stop to lick our chops while the Republicans divide us or we divide ourselves.

I have never found it within myself to hate my fellow Democrats—even when I disagree with them. I would rather spend my time uniting Democrats and inviting them back to the party than driving them out. If you run off enough or run out enough you can stay in the minority for a long, long time.

Speaking as a Texan, I hope and believe that Texas will send a delegation to the national convention ready to abide by the decision of the majority and prepared to fight for the election of our nominee.

I do not know who the Democratic presidential nominee will be in 1956. And, in case any of my fellow Texans are wondering, I repeat what I have stated so often: I am not a candidate of any description for any office in 1956. I am not running for anything except complete recovery of my health.

As far as I am concerned, the people who make up our party will select the candidate. And once a majority has spoken, that candidate will have my enthusiastic support.

I will go a step further and predict that he will have the enthusiastic support of the American people. The party that can produce a record of service to the people can also produce a candidate who will appeal to our people.

The Democratic Congress is producing the record, and the delegates to the Democratic convention will produce the candidate.

My prediction of victory has nothing to do with the Republican candidate. I do not believe that the Republican candidacy matters.

The present President is the best the Republicans have to offer. I do not question his integrity or his patriotism. But, I do question his taste in political parties.

To say he is the best the Republicans have to offer is hardly a compliment. And even the greatest men in our history could not have borne the dead weight of the present Republican Party.

But I want to stress that even though I am confident of winning, the next election is no pushover. It would still be possible for us to snatch defeat from the jaws of victory.

The American people will weigh very carefully the qualifications of those who seek to guide their destiny. A party that is overly partisan, overly quarrelsome, and obsessed solely with politics, will lose. The party that is the least partisan and the most patriotic will win.

The American people have rejected the extreme of the left and the extreme of the right. They want to proceed along the path of constructive program and responsible legislation. We cannot permit one party to be torn to pieces by those who are more interested in excluding than, including people.

In calmer times, fiery debate over fine points might be entertaining. But we have a job to do and the quicker we come to the conclusion that we must all unite against Republicans rather than divide against each other, the quicker we will get that job done.

Good Democrats avoid trivialities. We must concentrate on the substantial.

Love of liberty and devotion to the long-range interests of our beloved America dictate that we warn all pressure groups of whatever blend—Democratic, Republican, independent, farm, employer or employee—that the term "public servant" means the servant of the public and not the servant of some organized pressure propaganda outfit. He who truly serves all the public, the public will also serve.

We are meeting tonight in a rural area. I see throughout this room my friends who earn their living from the soil.

Search your hearts and ask yourselves which party shows the most genuine concern about your future and the future of your children.

The question answers itself.

To this gathering have come average businessmen from surrounding counties. I ask you to search your hearts and ask yourselves the same question.

Again, it will answer itself.

There are working men in this audience—people whose toil and sweat have made life easier for all of us. Do any of you need to spend endless hours answering this question?

Of course not!

There may be some of you who will remember my Daddy. He was a public servant and a successful politician. He was successful because he had a short—but simple—formula.

"Take care of the people and the election will take care of itself," he told me.

That thought might be expressed more elegantly. But there can be no better advice for the Democratic Party.

The job before us now is not to select a candidate but to complete a program upon which the candidate can run. And the program will be effective only if it is based upon genuine concern for the needs of all Americans.

During the fall recess I have been in contact with Democratic leaders throughout the Nation, including practically all of the men being considered for the Democratic nomination. I am grateful to them for their kindness in visiting me at the hospital and out at the ranch.

We have spent a great deal of time at the hospital and at the ranch and by correspondence talking about the legislative program for the next session. Out of these talks certain areas evolved which should be high on the agenda. In the last session of Congress, we have a record unequalled in the memory of legislative experts. The Senate passed 1,325 bills and, of these 880 received the approval of both branches and of the President.

In the Senate we confirmed nearly 40,000 Presidential nominations and wound up with our calendar of business practically clean. In the next session, we must carry on that record if the needs of our people—the genuine human needs—are to be met. It is my intention to ask the Democratic Policy Committee of the Senate to consider the following subjects in the hope that they can be brought before the Senate, considered, and acted upon by the Senate:

PROGRAM WITH A HEART

1. A Social Security bill reducing the age limit for women and extending coverage to most self-employed groups.

2. A tax revision to benefit the low-income groups—probably along the line of that previously offered by Senator WALTER F. GEORGE of Georgia increasing exemptions.

3. A health program to aid medical research and to include larger grants for hospital construction at least to the level authorized under the original Hill-Burton Act.

4. A school construction program to meet the needs of our children.

5. A public roads program, probably similar to the Gore bill. The question of taxes to pay for highway programs is part of the general tax program—and I hope it can be handled separately.

6. A farm program which will restore 90 percent of parity supports; extend the benefits to additional products; and possibly include a soil rental program.

7. A natural-gas bill which will preserve free enterprise and of course provide legitimate protection to consumers.

8. A housing program designed for America's families who are yearning to build or rent dwellings they can afford.

9. A water resources program with specific consideration to a higher dam at Hell's Canyon, the Fryingpan-Arkansas project, Niagara development, the Upper Colorado Basin project, the Washita-Oklahoma project, the Ventura, Calif., project, the Passamoquoddy tidal survey project, a New England development project.

10. A program to relieve critical depressed areas on the basis of Federal and State cooperation, including tax measures to encourage industry; additional public works; supplementary unemployment insurance; and surplus food grants.

11. Amendments to the Immigration and Naturalization laws to insure that they are fair and just.

12. A constitutional amendment eliminating the poll tax.

13. Disaster insurance to protect our people from the ravages of nature.

I want to make it clear that this list is not all-inclusive. Some of the measures—after due consideration—may not be passed; others will be modified.

The final form which they will take is not clear. More may be added on the basis of mature consideration of men who will seek to find the best course to serve our people.

This meeting tonight is a moving occasion for me. I can look about this hall and see the faces of old and trusted friends—men and women who are as close to my heart as my neighbors in the Johnson City hills along the flowing Pedernales.

They are the people who came to my help with their thoughts and their prayers a few weeks ago when there was little to preserve my life except prayer. I will always be grateful.

I am not, however, now indulging in a purely personal mood for the sake of sentimentality. What I am trying to say is that the spirit which moved you to prayer is the same spirit which has made the Democratic Party strong and great.

It represented human concern for a fellow human who was in distress. It was an effort to bring comfort and strength to a man who was in need.

And it was completely unselfish.

To me, the Democratic Party has always been the party of human concern. It has always been the party of people who seek to bring comfort and strength to those in need.

I am very proud to be a member of that party. I am very proud of the honor that you are according me tonight.

Like every other human organization, we frequently fail to live up to our ideals. We have our extremes and we have our people who are "just tol'able."

But underlying the whole history of our party is the fact that Democrats at their worst are better than others at their best. They are not necessarily better as individuals but as members of an organization they share the hope and the dream—and frequently the weaknesses—of the American people.

And I pledge you we will always try to do our best.

The motto of my 1924 graduating class at Johnson City High School was: "Give to the world the best that you have, and the best will come back to you."

The Democratic Party would do well to have that as its guiding policy. We will follow that course and we will serve our people and deserve their support.

It's About Time the Secretary Begins To Watch His Words

EXTENSION OF REMARKS
OF
HON. GEORGE M. RHODES
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1956

Mr. RHODES of Pennsylvania. Mr. Speaker, under leave to extend my remarks, I include the following editorial from a recent issue of the Reading Times:

IT'S ABOUT TIME THE SECRETARY BEGINS TO WATCH HIS WORDS

Senator HUBERT H. HUMPHREY, of Minnesota, a Democrat and a member of the Senate Foreign Relations Committee, took the floor of the Senate last week to excoriate Republican foreign policy in general and Secretary of State John Foster Dulles in particular. The New York Times described the attack as "the most vehement ever made upon the Secretary of State within the internationalist wing of the Senate."

The peppery Senator's indictment of the Secretary bristled with fighting words—"fraudulent reassertion," "distortion of history," "indiscretions and miscalculations,"

"one of the most disgraceful periods in the history of American diplomacy." Mr. HUMPHREY was especially incensed at Mr. Dulles' words, as quoted and attributed to the Secretary in an article in Life magazine: "The ability to get to the verge of war without getting into war is the necessary art." Of this, Senator HUMPHREY said, "No other responsible American spokesman in our lifetime has ever so described an American diplomatic objective. I call upon him to repudiate it."

We cannot disagree with the Minnesota Senator. If Mr. Dulles mean what he appeared to mean, that the art of current American diplomacy is to bring the Nation to the brink of war, then avoid war, he is irresponsible and not worthy of holding his high office. Putting the most charitable construction on the words, believing them not to suggest a deliberate attempt to get to the verge of war, we can only conclude that our Secretary of State is grossly inept. And ineptness is a dangerous ingredient in the makeup of any diplomat.

The surprising thing about all this is that we are surprised at the Secretary. We should not be. Remember the New Look in foreign and defense policy? And massive retaliation? And unleashing Chiang Kai-shek? And that agonizing reappraisal? And getting a bigger bang for a buck? Snappy slogans, weren't they? Got nowhere, did they? Let's hope that getting to the verge of war is just another slick observation that won't get us anywhere, particularly in the doghouse with our allies.

Mr. Eisenhower Unveils the Famous Soil Bank Scheme

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 18, 1956

Mr. CANFIELD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Baltimore Sun of January 10, 1956:

MR. EISENHOWER UNVEILS THE FAMOUS SOIL BANK SCHEME

To take the cash aspects of the President's farm message first, the proposal is to start spending up to $1 billion annually to correct the errors of a program for which we have been spending around $1 billion a year. More specifically we are to pay the farmers the additional $1 billion to get their assistance in disposing of the crop surplus which has resulted from our expenditure of an annual $1 billion on the high-level fixed-price support program in the major farm crops.

Just how is the new $1 billion to be distributed? A big chunk of it will go to buy farmer cooperation in what is called an acreage reserve plan. Another big chunk will be spent to buy farmer cooperation in what is called a conservation reserve plan. The acreage reserve and the conservation reserve will together constitute the famous soil bank program which much advance publicity has hailed as the new element of the Republican farm program.

As the bank and reserve terminology suggests, the new program aims to draw land now devoted to raising surplus crops out of the production of those crops. The acreage reserve plan will run only for a few years and will operate directly on the pending surpluses. Under it wheat, cotton, corn, and rice farmers would be paid in the form of certificates for withholding, say, 20 percent of their land from production of these—or any other crops. These certificates could be cashed. Or they could be exchanged for appropriate amounts of present surplus commodities now held in Government warehouses. Either way the effect would be to close the gap between market demand and curtailed current production of wheat, corn, cotton, and rice by drawing down surplus supplies of these commodities.

Looking to the longer future is the conservation reserve plan. This would aim to withdraw from cash-crop production some 25 million acres of low-grade lands and return them to forests and forage. Farmers cooperating in the conservation reserve would get direct cash payments out of the total mentioned above as running up to $1 billion a year.

But if the present trouble is, say, wheat surplus, how does the Government know that the lands withdrawn from wheat would not go into other crops to produce unwieldly surpluses there? Obviously a new and expanded Federal land police would be needed to make sure that acreage reserve lands were really being withdrawn from all uses including grazing, and that conservation reserve lands were being put exclusively to forests, forage, water storage, etc.

It is right there that a major hitch will come. The policing problem implied but not stated in the President's message will be prodigious.

But let's face it: we are now well under the inexorable law that a little governmental intervention often leads to a very great deal. The Government began trying to defend the farmer in 1929 with the Hoover Farm Board. It has been pushing further and further into the control of farm crops, the allotment of farm acreages, the overall dictation of the farmer's business ever since.

The point is that it has to do so. What the Government subsidizes it must more and more control. It must control a crop surplus which threatens to crush all its earlier subsidy operations in a sheer avalanche of unusable commodities. Doubtless the soil bank scheme was the only politically palatable device for doing this.

But the public will insist that if Congress takes the soil bank scheme, it provide for its very rigorous policing. Certainly we don't want a few years hence to start spending another $1 billion a year to correct errors in the $1 billion-a-year scheme now launched to correct errors in the original $1 billion rigid price support program.

And however dubious the soil bank scheme, let it be said with emphasis and admiration that Mr. Eisenhower does not retreat one step from his defense of the flexible (as against the rigid) price supports which afford the best single guaranty against new surpluses in the future.

A Program To Meet Basic Farm Ills

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 18, 1956

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Philadephia Inquirer of January 10, 1956:

A PROGRAM TO MEET BASIC FARM ILLS

In his constructive program calling for vigorous new steps to meet the Nation's farm problems, President Eisenhower has given Congress—and the farmers themselves—a choice of two broad approaches.

One is to enlist the cooperation of farmers in measures which will provide them with a measure of immediate relief and establish an enduring basis on which farm problems could be solved without permanent reliance on huge Government subsidies.

The other is to provide farmers with relief from their admitted higher price-lower income squeeze by relying chiefly on bigger handouts according to the rigid high-support system which has helped create the present unsatisfactory situation on the farms.

Both approaches would cost money. Price tag on the nine-point program outlined by the President has been estimated at up to a billion dollars. The cost of reinstituting the old, discredited 90 percent of parity price supports might go even higher.

But the great advantage of the President's program, which ought to insure favorable consideration by the Democratic-controlled Congress, is that it proposes to deal effectively with the crucial elements of the farm problem in ways that point toward freeing farmers eventually from dependence on the Government for their prosperity.

Heart of the Eisenhower proposals is the soil bank plan. Under it farmers would agree to take a certain percentage of their acreage out of production and turn it over to grass or trees. For this they would be paid, either out of present surplus crops held by the Government or in cash.

Three critical aspects of the farm problem would be dealt with under this scheme. One would be the lowering of present production which, in many crops, is in excess of either domestic or export needs. Another would be a gradual reduction of surpluses, which now cost the taxpayers about $1 million a day just for storage, and act to depress farm prices. The third, and perhaps most important, would be that farm acreage which is not needed now would be preserved for the time in the future when growing population has created a huge additional demand.

In all, nearly 40 million acres would be taken out of production and put into the soil banks. It is particularly gratifying to note that the President has urged that more than half of this be planted to trees, to meet needs for lumber and water conservation.

Another distinctive feature of the Eisenhower program is in his proposal to limit the dollar amount of money that can be paid to farmers in price supports. We usually think of these amounts being in the hundreds, paid to small farmers. Actually, large farm businesses sometimes get Government payments in the hundreds of thousands of dollars, which, as the President pointed out, helps underwrite "formidable competition with family operated farms."

Throughout his long message, the President emphasized his aim of helping the smaller farmers by adjusting their output to what the market can absorb at fair prices. The alternative to such measures as reduction of production through the soil bank plan, using up present surpluses and voluntarily limiting crops, he implied clearly, is to drop attempts at controls and lower supports to competitive price levels.

Since the farm issue is political, as well as economic, the President's program faces anything but smooth sailing in Congress—especially in an election year. Democrats already have indicated they will continue to demand a return to high price supports.

But farmers will remember that these rigid high supports did not protect them from hardship. All Americans, realizing that the farm problem cannot be solved in a year, will recognize the wisdom of the President's view that this calls, not for slogans, but for measures to preserve both the farmer and farm land as vital national assets.

Address of Hon. Albert Conway, Chief Judge, Court of Appeals of the State of New York

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 18, 1956

Mr. MULTER. Mr. Speaker, I am pleased to direct the attention of our colleagues to the following address by the Honorable Albert Conway, one of New York's greatest citizens, which was delivered on December 1, 1955, on the occasion of the 67th annual dinner of the Brooklyn Bar Association:

I was glad to have the opportunity to attend this annual dinner of the Brooklyn Bar Association. There is nothing like returning to one's own borough and to the friends one has made over the years. Many recollections come flooding back on such an occasion: One's attendance at law school, one's clerkship, the public offices one has held, the trials in which one has engaged, the fact that 8 days ago I celebrated the 45th anniversary of my admission to the bar of the State.

Ours is the oldest noble lay profession known to man. The practice of the law has a great tradition and we as lawyers have a great heritage. We find discussions of lawyers and judges at least as far back as the seventh century B. C. While we lawyers and judges never had an army or navy, have no executive powers, have no legislative powers and so never enacted a law, and indeed have very little power, we have always been in the minds and in the writings of emperors and kings, of prophets, of writers of the Old and New Testaments, and of philosophers. I should like to point this out to you by recalling some incidents and occurrences during the last 26 centuries as a background for what I have to say about a pressing problem of today.

When we examine the Code of Hammurabi, King of Babylon, compiled during the seventh century B. C., we find that there were rules prescribed for the conduct of judges even then. I shall take the earliest provision which we find in section 5, enacted nearly 2,700 years ago. That section provided that if a judge pronounced a judgment, rendered a decision, or delivered a verdict duly signed and sealed, he might not change or alter it under penalty of paying 12 times the amount of the judgment, decision, or verdict. It makes one think of the case of *Herpe* v. *Herpe*, in 225 New York Reports in 1919.[1] By section 13, in certain instances, the judge was required to declare a postponement for 6 months.

As we proceed along the stream of time we find the Prophet Moses, as recorded in Deuteronomy, written some 750 years B. C., enjoining upon all judges: "Hear the causes between your brethren, and judge righteously between every man and his brother, and the stranger that is with him. Ye shall not respect persons in judgment; but ye shall hear the small as well as the great; ye shall not be afraid of the face of man; for the judgment is God's" (Deuteronomy 1: 16, 17.)

We find in the New Testament in the Gospel according to St. Luke in 10: 25–29, the account of the questions asked by the lawyer who sought to learn what he should do to inherit eternal life and, when answered, sought to justify himself by asking, "And who is my neighbor?"

Proceeding further in time we reverence the memory of Aemilianus Papinian and of his courage and uprightness. He was a Roman lawyer and later a judge in the second century A. D. You will recall that he was one of the greatest of the Roman jurists and the author of many books on legal questions and 19 books of decisions. He was an intimate friend of the Emperor Severus who, on his deathbed, commended his two sons, Caracalla and Gaeta, to his charge. The sons, however, were jealous of each other and each desired to succeed his father as emperor. Papinian sought to keep peace between them. The brother Caracalla killed his brother Gaeta in order to become emperor following their father's death. Papinian was commanded by Caracalla as emporer and I quote from Gibbon, "to exert the powers of his skill and eloquence in a studied apology for that atrocious deed." Papinian, realizing full well the end-result of his conduct, replied that it was easier to commit than to justify a fraticide and disobeyed the command. He was promptly murdered and his death lamented as a public calamity.

Continuing along, in north Africa we find living in Egypt one of the great philosophers of all time. Born in Spain in the 12th century, he was forced to emigrate at first to Morocco, and then to Egypt, where he lived for almost 40 years. His philosophical thoughts affected not only the thinking of Jewish philosophers but also of the Christian and Islamic philosophers. Yet this man, Moses Maimonides, in codifying and commenting upon the Bible and the Mishnah wrote Book 14 of the Code, entitled "The Book of Judges," the required attributes of a judge as though they were written here yesterday instead of in Egypt in the 12th century. Those attributes were: "Wisdom, humility, fear of God, disdain of gain, love of truth, love of his fellow men and good reputation."

We did not really begin to be the lawyers and judges which we are today until, turning now to England, we find that following the Norman Conquest in 1066 the duty of administering justice was placed upon the shoulders of judges who were known as Commissioners of Assize who traveled on circuit and thus brought uniform law and justice to the four corners of the realm. In the early history of the judicial system the Judges were dominated by the Crown, and the interest of the Crown came first. Judges then did not have the independence which they now have. It took a long time and great bravery upon the part of both the bench and the bar to achieve it, and we must never surrender it. Prior to the Act of Settlement in 1700 a judge served at the King's pleasure, and his service could be terminated by the King if his judgments were not satisfactory to the King. Holdsworth, writing of that period, said "It was quite certain that a judge who was both learned and honest would hold his seat on the bench by very precarious tenure." Chief Justice McRuer, chief justice of the high court of Ontario, in an address delivered in Cleveland in 1947, quoted from a pamphlet issued in 1658 by the Marquis of Halifax addressed to Charles II attacking the judges, in which he said: "Obedience shall be looked upon as a better qualification in a judge than skill or sincerity." I quote again from Chief Justice McRuer two paragraphs, as follows:

"King James II is recorded as having told Thomas Jones, when he dismissed him from the post of chief justice of the Common Pleas, that he was determined to have twelve judges of his opinion. It is to the credit of the lawyers of those days that the King found difficulty in securing one of real ability who would accept appointments to the bench under such conditions.

"Cromwell was just as conscious as the Stuart Kings of the control that could be exercised over judges by a power of dismissal. Chief Justice Rolle of the King's Bench seems to have resigned under pressure because of the displeasure he caused by listening without interruption to the argument of counsel who challenged the constitutional validity of the Instrument [i. e., the constitution for the Protectorate in England, set forth December 16, 1653] under which Cromwell purported to govern the country."

It is amazing how, over the centuries, two innate human traits, with the aid of lawyers and judges, had the power to overcome King and Parliament: one is the desire for justice, which Daniel Webster once described as the ligament which ties all people together; and the second, the power of the common man to resist arbitrary injustice by his rulers. That has always required fearless leadership by lawyers or judges who were willing to risk, and, if necessary, to lose their lives for the principles which fortunately seem to be the lifeblood of lawyers and judges.

I shall instance but two occasions upon which this has been displayed.

Sir Edward Coke, born in 1552, was Attorney General of England for 13 years; he was Chief Justice of Common Pleas and later of the Court of King's Bench for 10 years. He was removed for his opposition to arbitrary and corrupt actions of the King. Of him, some years ago, Mr. Palmer, of the University of Minnesota, wrote: "What were the forces Coke could bring into the fray * * *? He had no great political party at his call. The powers of Parliament were not yet established. He had not the sword or any great tradition of established judicial power. All he had was an unquestioned integrity in an age of corruption, a passionate love of the common law, a consuming singleness of purpose that was ministered to by his very narrowness of outlook, unexcelled learning in the law, unrivaled professional competency, a practical experience with men, and an utter fearlessness, undeterred by arbitrary arrest, imprisonment in the tower, and a very imminent danger of disembowlement and death for treason in a time when heads fell frequently about him at the mere behest of His Majesty the King." At a time when there was belief in the Divine Right of Kings to whom men were subject, and when King James I had put the doctrine in his own published words, as follows: "As to dispute what God may do is blasphemy, so it is sedition in subjects to dispute what a King may do," Sir Edward Coke stood up to the King and made the contrary pronouncement, which thereafter limited the King's power, viz, that the King ruled under God and the law. At another time King James "asked each of the judges whether if at any time in a case depending before them His Majesty conceived it to concern him, either in power or profit, and thereupon required to consult with them, and that they should stay proceedings in the meantime, they ought not to stay accordingly." (Edward Coke, by Hastings Lyon and Herman Block, pp. 205–207.) Each judge in turn yielded, with the exception of Coke, and acknowlelged it to be their duty to do so. When the question was put to him, he answered: "When the case should be, he would that which should be fit for a judge to do." He was dismissed as Chief Justice within a few months by regal fiat.

Over the centuries lawyers have always been remarkable for their dedication to justice and devotion to their clients. Let us consider, for instance, the role of Chretien Malesherbes, of France. His father had been Chancellor, and he, a lawyer, had occupied high place in the legislative body of Paris. When that body was dissolved in 1771 and a new method of administering justice substituted, he protested against the system, and was banished to his country seat. Upon

[1] In the Herpe case, the court of appeals held a trial court had no appellate or revisory jurisdiction.

the accession of Louis XVI he was twice recalled to serve in the Ministry of the Government. In 1792, at the age of 71, he returned voluntarily from Switzerland in order that he might defend the King before the convention, although he realized that he risked death for his act. He presented the defense of the King, and was required to break the news of his condemnation to the King. Thereafter he was arrested and guillotined.

Returning now to England, the second Magna Charta, as far as lawyers and judges are concerned, is the Act of Settlement in 1700, which provided that judges might be removed only upon the action of both Houses of Parliament instead of being subject to the will of the King. Finally, in the reign of George III, it was expressly provided that the rule applicable to all officeholders that their terms of office would expire upon the death of the King should not apply to judges. So the independence of the judiciary in England became a fact, but only after long centuries of struggle.

In our country and in our State it has never been otherwise, because the lawyers who were leaders in fashioning our form of government so that law might become the sovereign and the people the source of all power in Government, saw to it that there were 3 coordinate branches of Government, each powerful in its own sphere, but no 1 of the 3 controlling either of the others. I shall speak on some other occasion of the independence of the judiciary in this State and in the Nation, and of the contributions to good government made by lawyers and judges here.

In every one of the phases of civilization to which I have referred, when the people were seeking justice and resisting injustice, lawyers and judges had many problems—problems such as no other profession has ever had in this world. It is no different today. With industry, perservance, integrity, devotion to the ideal of justice, and with practical commonsense, lawyers and judges have solved the people's problems (which are ours) and the problems of court administration. Those problems have varied in each century. Today is no different than other days. We have a problem—we have a growing problem, the like of which we have never had to meet. Our court trouble today is automobiles and the injuries they cause. The people wish automobiles and insist that the great automobile manufacturing companies manufacture an exceedingly large number of automobiles which will be sold by them in the United States each year. If the people, the customers, wish them they are the ones who call the turn. Despite the number of automobiles now crowding the streets of cities, towns, and villages, I am told that the output for 1956 has been set at 7½ million new cars. That is twice the number of cars in use in all of England. Without counting the 7½ million cars to be produced for next year, there are approximately 56¼ million cars in the United States, of which more than 4½ million are registered in New York State. Greater New York City alone, has approximately 1½ million cars.

Today automobile injury cases are triable before a jury. In 25 years automobiles in this State and in this city have increased by 2½ million and 700,000 cars respectively. In the same 25 years there has not been added one supreme court justice in this city.

When one thinks of the hundreds of automobile injury cases that are commenced each year in this city alone, and that they must be handled by 51 supreme court justices and 21 city court justices, who have not been increased in number in almost 25 years—while one stands aghast at the enormity of the problem presented—one must be lost in admiration at the manner in which these supreme court justices and city court justices have handled the problem, for it is not an easy problem. On October 26 last, in the New York Times, I found on the front page an article entitled "Police Task Force Combats Rise in Auto Deaths at Danger Points." The first paragraph read:

"Police Commissioner Stephen P. Kennedy announced yesterday that traffic deaths had increased 10 percent and traffic accidents 5 percent in the first 9 months of 1955, compared with the same 1954 period."

The second paragraph read:

"As a result of these horrifying figures a special task force of motorcycle, radio motor patrol and radar units has been assigned to danger points throughout the city, he said."

The fourth paragraph read:

"Mr. Kennedy disclosed that, up to October 1, a total of 446 persons, including 65 children, had been killed in traffic accidents. This was an increase of 10.3 percent, or 46 deaths, over the 1954 period."

The fifth paragraph read:

"In addition, 35,242 persons, including 8,333 children, were injured—a 5 percent increase, or 1,568 injuries, over last year's period."

The sixth paragraph read:

"Mr. Kennedy warned that the special task force was merely a 'stopgap measure, born of expediency and desperation.' He said there could be no 'adequate' protection without a heavy increase in police manpower, far beyond the 963 additional men allowed in the 1955–56 budget."

In March of this year the justices of the appellate division of the supreme court, first department, made a public statement to the citizens of New York City in which they pointed out "There is delay only in a single segment of the court's work, in the jury trial of personal injury actions." There followed a paragraph which I shall read to you:

"There are several calendars or classes of cases in the Supreme Court. There is the personal injury jury calendar, that is personal injury cases which are to be tried before juries. There is the personal injury nonjury calendar, that is personal injury cases which are to be tried before a judge without a jury. There is the general jury calendar, that is the wide variety of cases in the court, other than personal injury cases, including all the commercial cases, which are to be tried before a jury. There is the general nonjury calendar; and there is the equity calendar which comprises all the cases in which something besides money damages is sought, that is the matrimonial and child custody cases, the injunction cases, rent cases, tax cases, condemnation cases and a catalog of other cases. Finally, there are the motion calendars on which appear all the thousands of intermediate motions which are made in the various cases during the course of a year. Every one of these calendars in the supreme court of this department is up to date with the exception of the personal injury jury calendar. In other words, seven out of eight departments or operations of the court—every one, with a single exception—are on time."

These appellate division justices also said that the delay in automobile personal injury actions could be overcome in only 1 of 3 ways. Again I read you a single paragraph from this public statement by the justices of the appellate division, first department, earlier this year:

"Simply stated, apart from hopes, accompanied by doubts, that some of us may have as to the benefits which might accrue from further procedural and administrative reforms, delay can be overcome only (1) by qualifying the right to a jury trial in civil cases; or (2) by multiplying the number of judges, courthouse facilities and calls upon the citizenry for jury duty, so that enough courtrooms, with full complements of judges and jurors will be constantly in session to keep pace with the intake of cases; or (3) by taking the automobile accident cases out of the court and placing them in a compensation board like workmen's compensation."

As I have pointed out, we can find records indicating the presence of judges for nearly 2,700 years. Courts have played a very important part in the history of mankind. It may be that we can solve this matter of personal injury cases, but we must look the problem in the eye. We must say to ourselves: We are handling every other segment of courtwork and are doing it well. There can be no criticism of it. Can we handle this automobile problem, or is it a problem which is the result of such unusual circumstances that the courts cannot handle it in this State without being destroyed? What are the unusual circumstances?

1. Mechanical genius which has reached a greater height in the United States than in any other country.

2. Mass production—again, a product of genius of America which has no counterpart anywhere else in the world.

3. The most amazing and richest city in the modern world, situated in the Empire State of the most powerful Nation in the world.

The courts, as today constituted in this State, are too precious a possession of the people to have them destroyed as a result of the increased demand of the people for automobiles in such quantities that they injure more and more people, so that it may be impossible for the courts to try all the automobile personal injury cases—remember, I said to try them—if we had 20 courthouses for every 1 we now have, and a comparable increase in judges to preside at trials in them. One of the manners in which we have managed to keep up with automobile personal injury cases is by pressing the injured citizen and the insurance company to settle the cases. That is not proper work for a judge—he becomes a glorified adjuster. He tends to cease to be a judge, and to become instead something akin to an administrative official. When the people elect their own officials, who hear the cases in public and make the decisions, there is responsibility. Judges should be kept in their proper sphere of responsibility and their status should not be weakened by compelling them to do work similar to that of administrative officials. If by reason of the factors which I have mentioned—the time, the place, and the mass production of the instruments of destruction so that as courts we cannot cope with the problem, then it may be that it will become necessary to put automobile negligence cases out of the courts in order that the courts may be saved. I have watched and listened to Mr. Arthur Ballentine since at least 1927, when he has appeared before the New York State Bar Association and other bar associations. He has argued, at least during all the intervening period, for a compensation board to pay those injured by automobiles. There are those who say that that never should be done in a death case, but that the widow or widower and next of kin must be able to bring an action and try it or settle it as they wish. Others have the same reservation with reference to serious injuries, by which I understand them to mean the loss of an eye, an arm, a leg, and so on. Still others would leave it as a matter of choice to the injured person whether to go before a compensation body or to go to law. This is a lawyer's problem and this is a bar association problem, a social problem, and an insurance company problem, and lawyers should work it out. The trouble is that we put too many automobiles together into territory which we have prepared for only a fraction of that number of horses. I know no better group of men to look at a problem forthrightly and solve it as they have done for nearly 27 centuries than lawyers and judges. Another suggested solution is to

have automobile personal injury cases tried by a judge without a jury. Whatever it is, I suggest that now is the appointed time to take this problem apart and solve it. I suggest that that is the duty of every bar association everywhere. If we cannot solve it within our court structure, the sooner we preserve our courts for other litigation, and rid them of this automobile personal injury litigation, the better for the bench, the bar, and the public generally.

Racial Incidents

EXTENSION OF REMARKS
OF
HON. JOHN BELL WILLIAMS
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES

Monday, January 9, 1956

Mr. WILLIAMS of Mississippi. Mr. Speaker, the favorite pastime of a great majority of the Nation's press from outside the South in recent years has been to hold the South in scorn and ridicule. Apparently they vie among themselves in an effort to slant and exaggerate news stories coming from the South so as to engender hatred against the South, and Mississippi in particular. They appear deliberately to suppress news that would present the South and her people in a favorable light.

The press of the Nation has given an unusual amount of coverage recently to a few isolated incidents which have occurred in Mississippi. By distorting the facts, they have tried in all cases to make these crimes appear as racial incidents, without regard to the real circumstances attendant to the cases.

As evidence of the biased attitude of a great portion of the northern press, they gave little or no coverage to the incidents which I shall relate hereinafter, though Mississippi newspapers made every effort to get these stories before the rest of the Nation.

Under leave to extend my remarks in the Appendix of the RECORD, I am pleased to include a news item that appeared in the Jackson, Miss., Daily News under date of October 28, 1955, concerning my good friends and neighbors, Mr. and Mrs. Richard Herren, of Utica, Miss. Also, I am including an editorial from the December 30, 1955, issue of the Jackson, Miss., State Times, dealing with the heroic rescue of 5 Negroes by 2 young white boys at the risk of their own lives. These articles follow:

[From the Jackson (Miss.) Daily News of October 28, 1955]

FRIENDSHIPS STILL CROSS RACIAL LINES, CHICAGO-UTICA TELEPHONE CALL PROVES

UTICA, MISS.—Stories of friendship across the racial line are quite common in Missippi, in spite of what those who do not understand think and say. Such a story was emphasized at Utica this week.

Richard F. Herren, prominent Utica farmer, has just returned from a Vicksburg hospital where he spent over 2 weeks undergoing several operations. Several weeks ago doctors found that the blood circulation had stopped in both of his legs, and it was necessary to remove one toe and transplant plastic veins into both legs from above the waist to the knees.

One night this week the telephone rang at the Herren home and Mrs. Herren answered. A voice said, "Miss Gertrude, how are you all getting along?" It was the voice of Louiza Brown, calling from Chicago. Louiza and her husband, Oscar, had heard of Mr. Herron's critical condition from their relatives still at Utica and as they said, "Could not rest 'til we called to see how he was getting along."

Oscar came to work for Mr. Herren when quite young and worked 2 years by the month and then after he married Louiza they stayed on to make 16 crops on the Herren farm. The Herrens and the Browns relationship was one of mutual trust as can only be understood by southern white man and southern Negro. Oscar farmed and cared for the cattle with a personal concern.

Oscar decided to seek his fortunes in the steel mills 3 years ago. Upon arriving in Chicago he gave his friend, Mr. Herren, as a reference. A questionnaire came to Mr. Herren and, instead of filling out the form, he wrote a letter assuring the steel mill that Oscar was capable of doing anything they could have for him to do. The questionnaire asked if he would reemploy Oscar if he desired a job. To this the answer was, "If he wants to come back and doesn't have the money, I will be glad to wire it to him." Today Oscar is a stamper in the steel mill and said that he was getting along pretty good.

When the phone rang at the Herren home it was Oscar Brown, or "Man Boy" as the Herrens and others around Utica called him, anxious to know how his good friend Mr. Herren was getting along, and wanting to know if there was anything he could do for him. Oscar and Louiza talked for nearly 10 minutes long distance and the Herrens appreciated it as much as anything that has happened during his sickness.

[From the Jackson (Miss.) State Times of December 30, 1955]

TEEN-AGE HEROES

The courage of 2 Jackson youths in rescuing 5 Negroes from a submerged car is tribute not only to themselves but to their age group.

Thanks to 16-year-old Frank Arnold Jr. and 17-year-old Phil Ray, the Negroes were saved from possible suffocation or drowning when their automobile overturned in a cold water creek near Jackson Tuesday night.

Signaled to the tragedy scene, the boys demonstrated the brand of heroism which marked many of their age bracket during two recent wars. They plunged into the stream and, through teamwork, wrested the victims from the wreckage.

Then the pair, students at Murrah High School, flagged passing motorists who in turn summoned police and an ambulance. Three children—aged 2 to 6— were among the rescued.

This demonstration of cool judgment and bravery under pressure comes in refreshing contrast to recent reports of recklessness among teen-age drivers and delinquents.

It slaps down the oft-heard blanket indictment of modern youth as an irresponsible group unconcerned about the lives of others.

Too, the actions of young Arnold and Ray should help strengthen relations between the races. Their concern over the Negro strangers was automatic.

Contrasting the stigma attached to the Emmett Till case, this outstanding example of two white boys' regard for fellow Negro Missisippians deserves wide play in the Nation's press. We doubt, however, that such recognition will result.

At any rate, we join all residents of our community in gratitude for the heroism of Frank Arnold and Phil Ray.

Classics of American Democracy—I

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 17, 1956

Mr. O'HARA of Illinois. Mr. Speaker, what are the classics of American democracy that should be read and reread by our own people, that should be translated into the languages of the world and universally made available at accessible places and at low cost to all peoples?

This is the question that has been propounded to a jury representative of an intelligent and well-informed American public opinion. The response in its quality, and in the scholarly standing and national prestige of its participants in all the activities of our national life, is truly remarkable. It reflects a tremendous national interest in and an outbounded zest for undertaking a dynamic and winning worldwide battle for the minds of men.

The letters are of such importance, weighed as they are with such rich suggestions and reflective of such thought and research, that it appears to me they immediately should be made available to the reading and study of all the Members of the House and of the other body.

Here is the text of the letter of December 12, 1955, mailed to a select and representative list of Americans, submitting the idea and commencing the poll of what words really inspired our forefathers, best express the concepts of our democracy and should be translated into all languages and sold at reasonable prices to all the people of the world who desire to know:

DEAR ———: In the next session of Congress a group of Members plan to push for enabling legislation directing the United States Information Agency to publish for nominal prices, in the principal languages of the world, a small library of basic statements of democratic political philosophy.

Before stating the proposal in final form, however, we wish to consult the experience and judgment of experts, and leaders and representatives of American opinion.

If you would give us your opinion of the plan as stated in enclosure, part 1, and of the list of books in enclosure, part 2, it would be a much appreciated help. The list is suggestive and illustrative only, and we will welcome any recommendations of yours, additions, omissions, substitutions—of books which you think better meet the purpose of the plan.

Our objective is a list of from 15 to 20 books which, in the majority judgment of this jury of American public opinion, are the basic classics of American democracy. The list so selected will be presented for the action of Congress.

We hope you will give prompt and careful thought to this proposal, and we will give attentive consideration to your reply.

Cordially and sincerely,

BARRATT O'HARA,
Member of Congress.

ENCLOSURE, PART 1. PLAN FOR PUBLICATION OF DEMOCRATIC CLASSICS

It is proposed that the United States Information Agency shall translate and publish in the principal languages of the world a

select list of the time-tested classical statements of democratic theory in their original forms. These books should be published in large quantities at nominal, subsidized cost, not more than a few cents a volume, and should be widely available in each country, not alone from United States agencies. Existing editions should also be widely sold abroad, in quantity, and at cheap prices.

These works should represent the broad historic and international character of the discussion and theory of democratic society and constitutional government, distinct from present domestic or international controversies. This will avoid confusion of advocacy of fundamental democratic ideas and methods, with exclusive or short-run United States interests.

This program would be in addition to the present program and plans of the United States Information Agency, which do not include a similar operation.

The principle of this plan has been approved by the President's United States Advisory Commission on Information and by the Commission's Committee on Books Abroad.

America is known abroad mainly for autos and tractors, for riches and technology, but the specifically American political philosophy and the fundamental ideas of political and social democracy are not widely known in most countries. Therefore, much in the practice of the United States and other constitutional democracies is misunderstood, and democratic methods are not effectively applied to the problems of the various countries, or to international problems.

The Communists owe part of their success to massive, heavily subsidized, publication in many languages of the classics of Communist social, economic, and political theory—the works of Marx, Engels, Lenin, Stalin, and Mao—in addition to a large general and current publishing program.

All available reports indicate that American books of any kind are scarce and expensive in most countries, and democratic political philosophy almost unavailable.

In most of the few cases in which books like those on the attached list (enclosure, pt. 2) have been translated, it has often been in connection with the historic movements for constitutional democracy in the various countries.

There is abundant evidence from various international intellectual agencies that there is in many countries an effective demand for books of this type which is not being met, as this proposal would attempt to do.

This proposal has been advanced by a group of Chicagoans, including the Reverend Harold Fey, executive editor of the Christian Century; Dr. Richard McKeon, professor of Philosophy at the University of Chicago and former member of the United States National Commission for UNESCO; Dr. Jerome Kerwin, professor of political science and chairman of the Walgreen Foundation for the Study of American Institutions at the University of Chicago; John McGinness, president of Pennsylvania Railroad Lodge No. 225 of the Brotherhood of Railroad Trainmen. The Chicago Daily News has taken an active and sympathetic interest in the plan and its editorial article of June 6, 1955, was reprinted in numerous papers. Preliminary discussions by Congressman FEIGHAN, of Ohio, and myself on the floor of the House of Representatives evoked much interest and support.

ENCLOSURE, PART 2, SUGGESTED AUTHORS AND WORKS

Bryce: The American Commonwealth. Modern Democracies.

Burke: Reflections on the Revolution in France.

Dewey: The Public and its Problems.

Emerson: Moral and Political Essays (which?).

Hamilton and Madison: The Federalist Papers.

Hand: The Spirit of Liberty.

Von Humboldt: The Sphere and Duties of Government.

Jefferson: Selected Writings (which?).

Kant: Perpetual Peace.

Lincoln: Selected Papers (which?).

Locke: Letters on Toleration. On Civil Government, Book II.

Mazzini: The Duties of Man.

Mill: On Liberty. Representative Government.

Rosseau: The Social Contract.

Thoreau: Wadlen. Civil Disobedience.

De Tocqueville: Democracy in America.

Wilson: The New Freedom.

Classics of American Democracy—II

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 18, 1956

Mr. O'HARA of Illinois. Mr. Speaker, I am extending my remarks to include the responses of a highly representative group of American editors to the letter of December 12, 1956, the text of which is given in the preceding extension of my remarks:

DEAR MR. O'HARA: I have your letter and enclosures setting forth the plan for the publication and distribution abroad of a series of great books dealing with the democratic processes.

The plan strikes me as a good one, and I endorse it most heartily. You may or may not know that I served for three years on the United States Advisory Commission on Information, and even then some of us on the Commission were trying to get such a project started. I am delighted to know that you and other Members of Congress are now taking the plan under your wing.

The list of books which you enclosed seems admirable to me. My only criticism would be that the list seems to be intended for rather sophisticated readers and may be a bit over the heads of some of the people you are trying to influence.

To reach a wider audience, I would suggest including a few more personalized approaches to the problem, such books as the autobiography of Jacob Riis or maybe a digested edition of parts of Sandberg's Lincoln. There are, of course, hundreds of other books which tell stories of how individuals, many of them immigrants from other countries, have flourished under our free system.

Although I should like to see people everywhere able to obtain the great classics of democratic political theory at a reasonable price, I certainly think a few books of the type I have suggested might well be included.

Sincerely,

BEN HIBBS,
Editor, the Saturday Evening Post.

DEAR CONGRESSMAN O'HARA: I favor the plan for publication of democratic classics to be sold by the United States Information Agency at nominal cost overseas.

I think this plan should be tried in a few selected areas at least, and then later expanded if the demand for these books proves to be large.

Sincerely,

GARDNER COWLES,
President and Editor Look.

DEAR CONGRESSMAN O'HARA: Thank you for writing about the plan for publication of books basic to an understanding of our form of government.

While I do not pretend to be an expert on this type of bibliography, I do feel that you would be performing a singular service by pursuing your plan to a successful conclusion. The plan is so good that I believe the books should be made available in this country as well as abroad. I doubt that many Americans have read all of the items in your enclosure.

Permit me to make a suggested addition to your list. I think you could well add the Library of Congress volume on Formation of the Union (Government Printing Office, 1927). It was recently brought to my attention by Clarence K. Streit, president of Federal Union, Inc., that this book is virtually out of print. It is a volume perfectly suited to your portfolio and, indeed, any group of books devoted to the formation of democratic government should include it. You would be doing the Nation a service if you could make it possible that this book would be kept available for widespread dissemination. Perhaps the printing necessary for the Information Agency could be enlarged so that a ready store of "Formation of the Union" would remain at the Government Printing Office.

Sincerely,

PHILIP L. GRAHAM,
Publisher, The Washington Post and Times Herald.

DEAR MR. O'HARA: We were very much interested in the proposal you outlined in your letter of December 12, and we would be delighted to cooperate in any way that we can. I can think of no other step that our Government could take which is likely to produce such far-reaching results in the ceaseless battle against Communist propaganda at such a low cost.

All of the authors and works suggested in your memorandum seem to me, and to the other editors here, to be thoroughly worth while. You might want to consider, however, whether this list should be supplemented with a few, more recent works; I believe that Judge Learned Hand is the only contemporary author included on your list. Perhaps some consideration might be given to such recent defenses of American society as Frederick Lewis Allen's the Big Change and Dr. Kenneth Galbraith's American Capitalism.

Perhaps, too, you would like to consider works such as: Lerner's The Mind and Spirit of Justice Holmes; de Crevecoeur, Letters From an American Farmer; Thomas' one-volume Biography of Abraham Lincoln; the collected poems of Robert Frost.

Finally, I hope that it might be possible to find a few books of a lighter nature, to balance the rather serious and heavy works which you have listed: for example, perhaps something of Mark Twain's, and a book or two like George Papashvily's Anything Can Happen.

I hope that a copy of your letter was sent to Mr. Dan Lacy, managing director of The American Book Publishers Council, Inc., 2 West 46th St., New York City 36; he and his associates have given much thought to this problem and I am sure that they would be able to make some excellent suggestions.

Sincerely,

JOHN FISCHER,
Editor, Harper's Magazine.

DEAR BARRATT: With regard to your letter of December 12, asking for suggestions about books that should be published in many languages abroad.

I am sure you will receive many suggestions about the American classics, but I have one for inclusion of a modern work that

interprets American society in the light of today's world and in the light of the intellectual appeal of communism to many Europeans or Asians who have not thought through the dangers of totalitarianism. It is "Capitalism In America, A Classless Society," by Frederick Martin Stern (Rinehart & Co., Inc.). I understand he also was writing a high school textbook along the same line.

Sincerely yours,

ROBERT E. KENNEDY,
Chief Editorial Writer,
Chicago Sun-Times.

DECEMBER 28, 1955.

DEAR MR. O'HARA: I have read your proposal for enabling legislation directing the United States Information Agency to publish at nominal prices, in the principal languages of the world, a small library of basic statements of democratic political philosophy.

I am heartily in agreement with the proposal, and also approve the list of suggested authors and works which you enclosed. As to the specific writings which should be included from such authors as Emerson, Jefferson, and Lincoln, I would prefer to leave this to those scholars who are most familiar with the works of these men.

Cordially yours,

RAYMOND B. NIXON,
Editor, Journalism Quarterly, Published by Association for Education in Journalism.

MY DEAR CONGRESSMAN: Thanks for sending me a copy of your proposal to have the USIA publish, at nominal prices, a library of basic statements in different languages. I know nothing about the practical aspects of this problem, but I should think it would be extremely useful to have available, in many languages, the books which you list.

Sincerely yours,

J. R. WIGGINS,
Executive Editor, the Washington Post and Times Herald.

DEAR REPRESENTATIVE O'HARA: Thank you for your letter of December 12.

As you may know, I am thoroughly in favor of a project to translate and publish in the most useful foreign languages a group of our basic documents. If one is to begin on a practical basis, I suspect that a reprint of some of the fine single-volume selections from many writers would be an excellent idea. Perhaps your friends in Chicago do not agree with this. But it seems to me there is great danger of overwhelming readers in a mass of verbiage which is not really pertinent to the basic subjects. From my point of view, the single-volume compilations of selected readings from all these classic texts are more useful to more people than a shelf full of 10 or 12 documents.

If our purpose is to get these great foundational ideas to the thinking of more than just a few intellectuals, we should move in the direction of selected readings rather than whole volumes. I would favor the translation of the best selected-readings volume into a large number of languages. I think that way we would have a magnificent text interesting to the largest possible number of people. This would at least be a wonderful way to start. If we found there were still a need for 10 to 15 different books, we could proceed to that stage. But what better beginning could there be than a widely circulated translation of the best available one-volume compilation? This would give the very heart and kernel of the thinking of all the writers you have listed in your suggestions, and more too, perhaps.

If we find that any of the existing compilations are not entirely ideal, we can revise them, leaving out some selections and putting in others. There is a great deal in the writings of the persons on your list which is scarcely helpful and pertinent to the problem in hand.

I very much hope a practical outcome for this project may be achieved.

Sincerely yours,

ERWIN D. CANHAM,
Editor, The Christian Science Monitor.

DEAR SIR: I have looked over the list of books contained in your recent letter and I agree with you that it would be a good idea for the United States Information Agency to print these up in the form you suggested and distribute them as widely as possible.

As a matter of fact, I would like to have a set myself when they are available.

The only one that I am a little doubtful about is Rousseau's "the Social Contract." As I recall, it is a magnificent statement but I wonder if it might not be misinterpreted in some countries.

If there is any further information you desire or any way in which I can be of service, do not hesitate to call on me.

Sincerely yours,

A. M. PIPER,
Editor, Council Bluffs (Iowa) Nonpareil.

DEAR MR. O'HARA: I certainly agree with you that some of the books which explain the democratic philosophy should be printed in foreign languages and made available to people in the countries where those languages are spoken.

While it is true that the reading of these books will be confined to scholars, we should not overlook the importance of interesting these scholars in our way of thinking.

It seems to me that the fight against international communism must be fought on a hundred fronts. There is not just one fortress to assault, rather a multitude of outposts which have to be attacked in a systematic way.

We are glad to see that you are not going to give Congress the chance to overlook one important piece in the puzzle.

Very truly yours,

ALBERT M. MARSHALL,
Editor-Publisher, Daily Republican Eagle, Red Wing, Minn.

MY DEAR MR. O'HARA: I am wholeheartedly in sympathy with the proposal to make available to the peoples of the world the basic statements of democratic political philosophy. I have read most of the books proposed, and approve of the list, but would make this observation: If these books are to obtain wide circulation, there should be some additions which are of the easier-to-read variety.

Very truly yours,

SCOTT B. CHAMBERS,
Editor and Publisher, the Courier-Times, New Castle, Ind.

DEAR MR. O'HARA: I have your letter of December 12.

I think the plan is excellent.

I'm not so sure about the books. I have read only 10 of those on the list. Most of them, in my opinion, are hard to read. They are not widely read in English and I wonder if they would be in translation.

Many of the books, furthermore, require considerable background knowledge on the part of the reader for their full import to be understood as we would wish to have it understood.

I regret that I am not able to suggest books that would be easier to read and still present the desired facts and ideas. Perhaps that is a job able and popular teachers, say of history at the high school level, could help them.

Sincerely yours,

PAUL F. CRAIG,
Managing Editor, the Springfield, Mass., Union.

DEAR MR. O'HARA: Thank you for your letter of the 12th instant. I have read it with interest and may say I subscribe heartily to the plan proposed. Such a library, in the principal languages of the world, could accomplish immeasurable good in getting over to the people the basic statements of democratic political philosophy. However, I do not believe it goes far enough.

It is our policy on this newspaper not merely to deal with Communist problems as they arise and to denounce them, but to go further and cite the democratic side of the issue involved and to draw comparisons. We do not believe it is enough to say that is the democratic side of the coin—we say this is why democracy is right, and prove it. Our entire editorial policy is based on this. I think this aspect also might be taken into consideration by you.

As editor of the editorial page I work consistently to this end and in addition the editorial writer, Michael Leigh, writes a weekly column, the World and the Week, which interprets Communist policy and world politics, together with those of the democracies, in relation to current events. This also draws comparisons in the simplest possible terms for the easy comprehension of the man-in-the-street reader. In short, there is more, I believe, to the problem than simply stating our case—we must take the current Communist case and by comparison, prove our point. There are over the Nation, I think, similar columns doing the same job and they may be worthy of your consideration as working toward our common goal. Should you be interested, I should be glad to send you the next so related World and the Week to illustrate my meaning.

There is one more point I consider important. Briefly, it may be that writers like Kant, Mazzini, Lock, and Von Humboldt, to quote a few, may write over the heads of the average reader or by reason of outmoded phrasing or use of language be not entirely easy of comprehension. On those grounds, I think that perhaps interpretations of these writers in the simples possible terms might better fit the bill. Toward his end I could add, Justice W. O. Douglas' book, Almanac of American Liberty.

In any event, I may say that I consider the project undertaking a vital and important one and wish you all possible success.

I look forward to receiving your comments.

Cordially yours,

MARION T. GAINES,
Editor, the Pensacola (Fla.) News Journal.

Classics of American Democracy—III

EXTENSION OF REMARKS
OF

HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 18, 1956

Mr. O'HARA of Illinois. Mr. Speaker, I am extending my remarks to include letters from the president of the American Broadcasting System, and from representative editors, together with editorials from newspapers in California, Wisconsin, Washington, and New York, as follows:

DEAR MR. O'HARA: I was happy to receive information concerning the proposal to reprint in the major languages of the world authoritative works on the democratic political philosophy. In my opinion, this plan has merit and should be a significant contribution to our efforts in combating political philosophies alien to the welfare of mankind.

The press of business prevents me from devoting the considerable time necessary to evaluate the selections listed in enclosure—part 2. In order to advance an opinion concerning these it would be necessary to compare them with the many other outstanding books in this field.

Thank you for advising me of this proposal. I wish you and its other proponents success.

Best wishes.

Sincerely,

ROBERT E. KINTNER,
President, American Broadcasting Co.

DEAR MR. O'HARA: Replying to your letter of December 12, I am delighted to hear of your inspiring project for the USIA to distribute abroad, inexpensive books reflective of American political philosophy.

The suggested list seems to me an excellent one. I was surprised, however, to find what I consider to be the most valuable one for such a compendium has apparently been overlooked.

If USIA is given this project, and had only sufficient funds to prepare and distribute one work, I believe that should be a condensation of V. L. Parrington's Main Currents in American Thought. It meets all the requirements you listed, and does so definitively.

Good luck to you in your fine undertaking.

Sincerely,

E. J. PAXTON, Jr.,
Associate Editor, Paducah, Ky., Sun-Democrat.

DEAR MR. O'HARA: I find your letter of December 12, outlining plans for enabling legislation for the placement of books through the United States Information Agency, highly interesting.

May I be so bold, however, as to express the opinion that the tentative choice of books would be of only limited interest in any foreign land. True, some of these books must be included, but I incline to the belief that it is the average man and woman you must reach, rather than the highbrow. There are many, many more average persons than there are intellectuals.

The plan, I must agree, is excellent; I differ with it only in the type of material.

Sincerely,

C. W. JOHNSON,
Managing Editor, Springfield, Mo., Newspapers.

MY DEAR MR. O'HARA: In reply to your letter of December 12, it seems to me that it would be an excellent idea for the USIA to translate and publish in the principal languages of the world, a select list of classical statements of democratic theory in their original form. While I do not feel qualified to compile such a list on short order, it does seem to me that some of the books you have listed should be included in any such project, such as Bryce's "American Commonwealth" and "The Federalist Papers."

Sincerely yours,

CHARLES L. REESE, Jr.,
President, Wilmington (Del.) News-Journal.

DEAR CONGRESSMAN O'HARA: Thank you for your letter on the publication of a library of democratic political philosophy in various languages for world distribution.

Having made a tour of the Far East in 1953 for the State Department, in which I was in close association with USIA, I can say that I believe your project is a practical one. I found our USIA libraries to be widely used throughout the Orient and I think the summary of democratic thinking which you propose is an excellent idea.

Sincerely,

ROBERT W. AKERS,
Editor in Chief, Enterprise and Journal, Beaumont, Tex.

MY DEAR CONGRESSMAN O'HARA: In your round robin letter of December 12, you requested an opinion of the project to have the United States Information Agency publish for nominal prices in the principal languages of the world a small library of basic statements of democratic political philosophy.

In the first place, let me turn to part II of your enclosure with the list of the works. Certainly with these no fault can be found. They are all books which anyone interested in the science of government should study. And I feel sure that the more that these can be brought to the attention of people abroad the better they will understand our own institutions.

From this you may deduce rightly that we have no objection on this newspaper to the actual proposal. However, the second point which has to be brought up in regard to it is the question of cost. I see no figures as regards that. In our present financial predicament, it is not a point that can be overlooked.

Actually, I suppose that comparatively there would not be too great a drain on the Treasury to get this project put over. If it amounts to any sizable sum, there is certain to be criticism as I am sure you are familiar with the fact that the American people regard with a very jaundiced eye the enormous amount of foreign aid expenditures when they are being expropriatively taxed.

Trusting these comments meet your needs, I am

Sincerely,

WILLIAM B. RUGGLES,
Editor, Editorial Page, Dallas Morning News.

DEAR MR. O'HARA: This is a response to your notice of December 12, concerning the plan for publishing abroad a series of inexpensive books on basic American philosophy.

I would like to endorse this plan most enthusiastically. I am convinced we suffer greatly from exporting weapons, and even peaceful material goods, to the exclusion of our basic philosophy of freedom in its modern dress. A few leaders in the awakening countries of Asia, or the neutralist countries of Europe who have had an American education, or something close to it, understand. Meanwhile many don't. And the Russians are exporting their doctrine by the ton and making it available to students everywhere at a cost that is trivial.

The only question I have arises from the tentative list of titles proposed. Obviously they all do explain the historic Anglo-Saxon philosophy. But if the list is to be that short would it not be better to skip Burke, Kant, Locke, Mazzini, Rousseau, and the rest of the foreigners in favor of American authors? The federalist papers are, for example, really preaching American doctrine as expressed by Americans. Would it not be better to omit the non-American writers on freedom, in favor of good biographies of some of our great Presidents? Say the one-volume Sandburg on Lincoln, or one of the other recent good one-volume works? The same could be done with Washington, and with books like the Age of Jackson.

Then should there not be, in addition to early fundamentals of American life, also later material? I note on your list only Wilson's the New Freedom. How about some of Theodore Roosevelt, and, indeed, Franklin Roosevelt? And is it not almost a must, considering that the struggle is in contemporary terms, to include Frederick L. Allen's the Big Change? It seems to me that nothing so well explains the difference between American realities today and the classic, Marxian view of capitalism that others have, as this book. Then, too, there is the cultural field, as for example in Parrington's Main Currents in American Thought.

These are, of course, offhand suggestions. But I hope they will be helpful in speeding along the idea.

Sincerely yours,

HERBERT BRUCKER,
Editor, the Hartford, Conn., Courant.

DEAR MR. O'HARA: I am enclosing a clipping of an editorial which it was my privilege to write from material you were good enough to send us with your letter of December 12. I thought you might like to have it for your files.

Sincerely yours,

D. L. KIRK,
Chief Editorial Writer, Spokane (Wash.) Daily Chronicle.

The editorial follows:

SO THAT FOREIGNERS MAY KNOW US

Congress is to be asked at the next session to pass enabling legislation directing the United States Information Agency to publish, at a subsidized cost of a few cents a volume, a select list of time-tested statements of democratic theory in their original forms.

This would be translated into the principal languages of the world and would be widely available in each country, not alone from United States agencies. The principle of the plan is sound and has been approved by the President's Advisory Commission.

BARRATT O'HARA, Illinois Representative, active in promoting the plan, points out that America is known abroad mainly for its automobiles and tractors, for riches and technology. The fundamental ideas of political and social democracy are not widely known in most countries .

That unquestionably is true. It is true also that language barriers are responsible for a gerat deal of international misunderstanding and intolerance. If these books can be placed in the hands of readers abroad, especially in countries where it will be hard to place them, they should do a vast amount of good. Miracles often are wrought by simple methods just such as this.

DEAR CONGRESSMAN O'HARA: Your letter of December 12 to Mr. J. D. Ferguson, president and editor of the Milwaukee Journal, has been referred to me.

The enclosed editorial from the Milwaukee Journal of December 22 comments on your proposal for publication of democratic classics. As you will see, this seems an excellent idea to us.

Sincerely,

LINDSAY HOBEN,
Vice President and Editorial Editor, the Milwaukee Journal.

The editorial from the Milwaukee Journal of December 22, 1955, follows:

MAKE INEXPENSIVE BOOKS ON DEMOCRACY AVAILABLE ABROAD

An Indonesian editor visiting here not long ago said: "We want to build a democracy in our new country—a democracy like the one your leaders planned."

And who did he think of as our leaders? Jefferson, Madison, Lincoln—"I secretly read them all when I was a young man, and your Declaration of Independence and Constitution, too. They are foundations of democracy."

The United States for generations has stirred democratic hopes over the world. Our traditions and our historic political philosophy have made a strong impression. But today, when democracy needs to be understood more than ever before, and is competing against world communism, our efforts to capitalize on the great truths that are the foundations of our way of life are feeble.

Representative O'HARA, Democrat, of Illinois, and a group of his colleagues are pushing a plan that would carry the words of the great democratic philosophers and writers

to the world. They propose that the United States Information Agency be given funds to print in the principal languages of the world a small library of "basic statements of democratic political philosophy." They would put out inexpensive volumes, susidized in part so that they could be sold cheaply over the world.

It would be a course in democracy, ranging from such writers as Rousseau and Locke to Bryce, de Toqueville and Mill, and including such great Americans as Jefferson, Hamilton, Madison, Lincoln, Emerson, and others whose writings helped shape and develop democratic philosophy.

The aim would be to get such books into the hands of intellectuals abroad—teachers, students, professional people, political leaders, opinion formers.

It's a plan that deserves support. We need to do much more than we are doing to spread our political beliefs and traditions—not only to intellectuals, however, but to many more, even if for millions it has to be done with comic book techniques.

The Communists lose no opportunity to spread their classics over the world—Marx, Engels, Lenin, Stalin, Mao, and others. In India alone the Russian-supported Peoples Publishing Co. has 163 different Communist books and periodicals on sale everywhere. Of that list, 89 can be bought for less than 10 cents, and 65 percent can be bought for 21 cents or less.

We have no cheap editions with which to compete. If we don't provide them, we run the risk of letting millions over the world—who are eager to read and to learn—be indoctrinated by Communist philosophy with no opportunity to know anything else.

Walter P. Jones, editor of the McClatchy newspaper of California, mails me the following editorial that appeared in the December 29, 1955, editions of the Sacramento Bee, the Modesto Bee, and the Fresno Bee:

BETTER SELLING JOB IS PROPOSED FOR DEMOCRACY

For years Soviet propaganda has been flooding the world with low cost translations of the writings of Marx, Engels, Lenin, Stalin, Mao Tse-Tung and other exponents of Communist theory and practice.

American travelers comment on the vast amount of such literature to be found in the new and highly strategic Republic of Indonesia.

In India, Soviet Russia subsidizes the so-called People's Publishing Co. which has a wide variety of Communist books, pamphlets and periodicals on sale at extremely low prices.

And the same setup is duplicated in many other areas.

Now come Congressman BARRATT O'HARA, of Illinois, and a group of his congressional associates with the proposal that the United States Information Agency be authorized to publish in the principal languages of the world and sell abroad for nominal prices a carefully combined list of books setting forth the theory and practice of American democracy.

These books would be printed in large quantities and given as wide circulation as possible, not only through the American agencies but through other available channels.

A tentative list includes excerpts from the writings of such Americans as Jefferson, Madison, Emerson, Thoreau, and Woodrow Wilson and such Europeans as John Locke, Rousseau, Lord Bryce, and John Stuart Mill.

The plan in principle already has been approved by the United States Advisory Commission on Information and its committee on books abroad.

America universally is known for its automobiles and tractors, its Hollywood and technology, its great dams and atomic bombs. But O'HARA and his associates feel it is known all too little with respect to the political philosophy and the social traditions and ideas which undergird the Nation's greatness.

The plan to cure this defect deserves support. It has great potentialities in the struggle for the allegiance of the minds of men now going on throughout the world.

We need to do a better selling job for democracy.

The following editorial appeared on January 13, 1956, in the Buffalo, N. Y., Evening News, of which Edward H. Butler is editor and publisher:

BATTLE OF THE BOOKS

The western democracies are losing one salient battle of the cold war to Soviet Russia and Representative BARRATT O'HARA, Chicago Democrat, will ask this session of Congress for ammunition with which to fight back more vigorously. He wants enabling legislation to direct the United States Information Agency to publish a small library of democratic classics in world's principal languages and distribute them in inexpensive editions where they will do the most good.

The objective is to counter the heavily subsidized worldwide book and pamphlet distribution of the Soviet Union. Marxist and Leninist writings and propaganda material by contemporary Russian writers are available in most countries all over the globe. The so-called uncommitted nations like India are literally flooded with the Moscow output.

With the assistance of scholars, editors, and leaders in business and fraternal groups, Representative O'HARA has compiled a tentative list of books he would like to see printed by the USIA and given wide distribution. On it are many of the classic texts and intepretations of democracy and democratic institutions such as the Federalist by Hamilton and Madison; On Liberty, by Mill; and others by Thoreau, Wilson, Rousseau, De Tocqueville, and Jefferson.

Representative O'HARA points out that the USIA book translation program includes at the present time only a little of Jefferson's best-known writings and some selections from the Federalist as representatives of the basic philosophy on which the American concept of freedom is founded.

The Congressman queried 3,500 educators and others throughout the Nation asking comment on his plan. In his own words the replies were astonishing. It received blanket approval as important and worthy. We'd like to add our hearty recommendation that Mr. O'HARA's colleagues on both sides of the aisle in Congress give it their prompt support.

Classics of American Democracy—IV

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 18, 1956

Mr. O'HARA of Illinois. Mr. Speaker, the following were some of the letters from American scholars and educators received in response to the questionnaire letter of December 12, 1955:

DEAR MR. O'HARA: I have read with interest your letter of December 12 and enclosure. Your plan strikes me as very worthy. The suggested list of books is a good selection which, I think, is representative of the best in democratic thought.

Sincerely yours,

RALPH J. BUNCHE,
Under Secretary, United Nations, and Past President, American Political Science Association.

DEAR SIR: Thank you very much for your letter of December 12, outlining your admirable plan for publication of democratic classics in the principal languages of the world. I have discussed this project with my colleagues here in the department of philosophy, who have all expressed deep interest and basic approval of the concept involved.

Allow me to pass on to you the suggestions resulting from our conversations. The following titles, it was thought, might well be added to the list:

1. Selections from the Army Debates of 1647–1649.
2. Selections from T. H. Green Principles of Political Obligation.
3. Relevant parts of George Sabine's History of Political Theory.
4. Warner Fite's Individualism.
5. The works of Thomas Paine.

I am happy to express my enthusiastic endorsement of this project, with or without the inclusion of the above recommendations.

Cordially and sincerely,

NEWTON P. STALLKNECHT,
Chairman of Department of Philosophy, Indiana University.

DEAR BARRATT O'HARA: I am pleased with your presentation of the idea of listing those books which are basic classics of American democracy. I fully approve this plan, and am willing to underwrite it.

Sincerely,

KERMIT EBY,
Professor, the University of Chicago.

DEAR MR. O'HARA: I endorse the proposal to distribute classic statements on democracy in strongest terms. I think such an effort is bound to pay off far in excess of cost.

I suggest three items for consideration:

Elizabeth Page, the Tree of Liberty (a novel).

Carl L. Becker, Modern Democracy.

A. D. Lindsay, the Modern Democratic State.

Sincerely yours,

CHARLES S. HYNEMAN,
Professor of Political Science, Northwestern University.

DEAR MR. O'HARA: Your letter of December 12 to Professor Vandenbosch has been turned over to me for reply. My field of interest is political theory and political parties. Last year I was a Fulbright research scholar in Norway, hence I have some experience upon the matter at issue. I certainly agree 100 percent in the opinion that a project such as you are sponsoring is badly needed. I could cite instances for the need of cheap editions of American classics in contacts I had last year.

No two persons would agree upon a list of specific titles but I think if American democracy is to be emphasized as a living thing that more books of American authorship should be included. I will suggest a few:

1. Whitman: Democratic Vistas.
2. W. Wilson: Congressional Government.
3. H. Hoover: American Individualism or Challenge to Liberty.
4. Franklin D. Roosevelt: Selected Papers—First Inaugural, War Message of 1941, Arsenal of Democracy, etc.
5. Henry Adams: Education.

6. Henry George: Progress and Poverty.
7. Veblen: Theory of Leisure Class.
8. Calhoun: Disquisition on Government.
9. Frederick Jackson Turner: Frontier in American History.

On the list submitted, I am dubious of the von Humboldt, Emerson, Kant, Mazzini, and Thoreau suggestions.

I wish you well in this worthwhile project.

Sincerely yours,

J. B. SHANNON.
Professor of Political Science, University of Kentucky.

DEAR MR. O'HARA: I have received your letter of December 12 sent to my former address at Smith College. I am now professor of history at City College of New York, New York, N. Y.

I think that your suggestion of publishing, at a nominal price, a small library of basic statements of democratic political philosophy is excellent. I hope it will be carried through.

As regards the selection of suggested authors and works, I have my definite doubts about the following: Kant, Mazzini, and Rousseau. These three authors represent what I would call a kind of utopian liberalism, which can be used as well by the other side as by ours. Otherwise, the selection seems to me excellent. You ask which papers of Abraham Lincoln, Jefferson, or Emerson should be selected. I would say that in each case an expert should be consulted: in the case of Lincoln, the poet Sandburg; in the case of Jefferson, Professor Dumas Malone of Columbia University; in the case of Emerson, Professor George Counts of Teachers College, Columbia University.

In addition I would suggest that you consider the prose writings of the great English poet Milton, especially his Areopagitica, and parts of his Defence. Instead of Rousseau, I would prefer certain writings by Montesquieu, Voltaire, and Diderot, to be selected by an expert on 18th century France.

These are some of the suggestions which I wish to make in reply to your letter of December 12, and I shall be glad to cooperate as far as I can with your very valuable program.

Sincerely yours,

HANS KOHN.
Professor, City College of New York.

DEAR MR. O'HARA: I certainly like your proposal. You are so right when you express the need of democratic books being made available at small cost to the peoples of Asia and Africa. My experience in India 2 or 3 years ago lead me to believe that the Communists were doing a better job in making books on communism available to the people than we were doing with respect to democracy.

I was wondering if some of these books could not be summarized and put out in smaller volumes with the essential portion presented to the public. Whether this could be done with a volume such as The American Commonwealth I do not know. I had in mind the necessity of having the essential principles of democracy presented so that a person will read it who might not read the full volume.

Sincerely yours,

BENJAMIN E. MAYS,
President, Morehouse College.

DEAR MR. O'HARA: I read your letter of December 12 with great interest and it seems to me the plan for publication of democratic classics is excellent. I think it might be well to emphasize that the publications come not only from American writers but from writers of many other countries, thus indicating that democratic ideas are not only products of the United States but of serious thinkers all over the world.

I am going to try to find an opportunity to discuss the list of proposed writers with Jerome Kerwin and Richard McKeon but a few ideas occur to me on first thought. Montesquieu's Spirit of the Laws was certainly far more influential upon the American constitution than was Rousseau's Social Contract. Graham Wallas, Human Nature in Politics (1908) was an important book; also his The Great Society (1913). I should also like to see something from the late Charles E. Merriam included, perhaps his Prologue to Politics would be a good one. Some selections from the late Justice Holmes would also seem to be appropriate, particularly as dissent in the Abrams case. I might also mention Walter Bazehot's Physics and Politics (1869) and the English Constitution (1867).

I note that you take from Edmond Burke Reflections on the Revolutions in France but I wonder whether the speech on "Conciliation with the Colonies" might not also be included. From Lincoln, "The Gettysburg Address" and the "Second Inaugural" should certainly be included among the selections. From Wilson you include The New Freedom. This, I believe, was a collection of campaign speeches. His book on Constitutional Government in the United States might be preferable.

I note the list includes writings from British, French, Italian, and German authors as well as American. It would be effective if something could be included from Russia, or other countries now within the Communist bloc, expressive of democratic theory. Perhaps something from Tolstoy's War and Peace would be appropriate, but I am not certain.

I certainly hope the idea will be carried out.

Sincerely yours,

QUINCY WRIGHT,
Professor, University of Chicago, and Past President, American Political Science Association.

DEAR MR. O'HARA: I have received your recent letter regarding the list of suggested books which might legitimately be translated for foreign distribution.

Quite frankly, I feel that there is not a single deletion which I would make on your list. I also agree that this type of material, if translated and made available abroad, would serve a very real purpose. If I were to make one suggestion, and this by an American author, I would include some of the essays of Justice Holmes.

With many thanks to you for your inquiry, I am

Sincerely yours,

R. TAYLOR, COLE,
Professor, Duke University.

DEAR MR. O'HARA: Your letter of December 12, 1955, arrived while I was preparing for the year-end professional meetings.

Your proposal to publish translations of basic statements of democratic political philosophy is praiseworthy. It would be particularly valuable as textbook material to be used by American teachers when they lecture abroad. Too often there is little in the local language to assign to the students as supplementary reading. A proposal such as yours is a natural supplement to the various programs for the exchange of teachers. I hope that it is adopted.

As to the choice of books to be translated, I am in agreement with those suggested volumes which I know. Certainly Bryce and de Tocqueville are valuable although they are of another era. They give the foreigner's view of the United States of America. Above all else I think the Federalist Papers will be useful. I think I would add Magna Charta and the United States Constitution. Perhaps this could be prepared from the annotated edition with notes by Professor Corwin, setting forth some of the history and the great Supreme Court decisions which were milestones in its interpretation.

I would also recommend Austin's Law, Ethics and the State. As for Jefferson, why not use his First Inaugaural Address, and for Lincoln the first and second inaugural addresses?

I appreciate that any recent Presidents' addresses arouse some controversy, but I should think that a judicious selection from Hoover, Roosevelt, Truman, and Eisenhower would have an important place in a foreign language library on the great ideas underlying our democracy.

Very truly yours,

JOHN N. HAZARD,
Professor, Columbia University.

DEAR MR. O'HARA: I am delighted to make some comment on your project for the publication of important works on democracy in various languages. I have talked to a number of people about it, and some conclusions seem to emerge.

First, a lot of money could be wasted if such a project were not administered within the limits of effectiveness. A lot of books thrown around will not do any good; and if, for example, we could not get copies into China it might not be wise to print works in Chinese.

Second, some of my friends think that two lists should be made up, one for the intellectuals and another for more general or popular reading. I think the idea is good, though I would admit it would be exceedingly difficult to administer with any efficiency.

Third, another criticism is that some of the foreign books hardly represent an American interpretation of democracy. Personally, it seems that von Humboldt, Kant, and Mazzini are rather weak choices. It is quite possible that American writers presenting the same point of view might be used.

The third point just mentioned leads to more specific ideas. Hand's Spirit of Liberty would not seem to be a sufficiently tested or significant work to be included in this list. Instead of Kant's Perpetual Peace, some of Woodrow Wilson's speeches on international cooperation might be more valuable. For von Humboldt, why not substitute some American work, say Andrew Carnegie's Triumphant Democracy, or something like it. My conviction is that Europeans would not be impressed at this time by von Humboldt. Selections from Jefferson must be carefully done, since they can be slanted in almost any direction. Mazzini has had no impact on American intellectual history, and anyway he was pretty much of an anticlerical. If John Dewey, The Public and Its Problems is to be included, some countervailing work should be listed. Why not include Jacques Maritain's Man and the State, which is a great Christian statement for democratic government? Bryce should be represented by selections, since much of his work is quite out of date, or would not be of interest to readers in other lands. I would suggest the inclusion of Walt Whitman's Democratic Vistas, and also a pamphlet including the Declaration of Independence and the Constitution. Millions of these could be distributed, very much as the Communists have distributed the Communist Manifesto and the Soviet Constitution. In the selections from Woodrow Wilson, more than The New Freedom should be used; selections from other speeches and from Congressional Government might be added.

Among the more popular works about the United States, my friends have suggested the following: Carl Becker, The Declaration of Independence; Ben Thomas' and Sand-

burg's lives of Lincoln; Franklin's Autobiography; the autobiographies of William Allen White and Edward Bok; and books on Theodore Roosevelt and Andrew Jackson. Selections from the history by Henry Adams might be quite useful.

Many other suggestions might be made, but in general and with few reservations on my part, I wish you every success in the forthcoming session of Congress.

Sincerely yours,

FRANCIS G. WILSON,
Professor, University of Illinois.

DEAR CONGRESSMAN O'HARA: Thank you for your letter of December 12. I am very favorably impressed by your proposal to make publications on democracy available around the world.

If there is any way in which your suggested list of authors and works could be improved, perhaps it would be in the direction of increasing the proportion of American authors and twentieth century authors. I feel that, other things being equal, an American author has greater advertising value for our country, and that twentieth century authors are more likely to have voices attuned to the ears of twentieth century listeners.

I would propose for consideration for the list:

1. Up-to-the-minute demonstrations of democracy in action, giving the texts of important controversial speeches by Eisenhower and replies by Stevenson. Many other such demonstrations could be found in congressional debates and in majority versus minority Supreme Court decisions.

2. Some of F. D. Roosevelt's most famous speeches.

3. Selections from Bertrand Russell's political writings. Russell is today perhaps the world's best known living philosopher, and his clarity and wit have been attractive to a very wide audience. He is a great individualist and an ardent foe of totalitarianism.

Sincerely yours,

WILLIAM P. KENT,
Associate Professor, University of Utah.

Classics of American Democracy—V

EXTENSION OF REMARKS
OF

HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 18, 1956

Mr. O'HARA of Illinois. Mr. Speaker, continuing my report of the response to my questionnaire letter of December 12, 1955, I am including, among other letters from eminent educators, a letter from the distinguished Dr. Edward S. Corwin, of Princeton, with a copy of the letter sent Dr. Corwin by Dr. William Anderson, professor at the University of Minnesota and past president of the American Academy of Political Science. Dr. Corwin's letter follows:

DEAR REPRESENTATIVE O'HARA: I am sending you a letter to me from my good friend, Prof. William Anderson of the University of Minnesota, because I think you'll be interested to look up the book he writes about. Please return me his letter.

I wish to bring to your attention also Mr. Bruce A. Findlay's Guaranteed for Life. This is a strong cartoon history of the Constitution's safeguards of liberty. For certain kinds of people, those unable or disinclined to read, I believe it will prove rather effective propaganda. The author is associate superintendent of schools in Los Angeles; and it is published by Prentice Hall, Inc., Englewood Cliffs, N. J. (1955).

To my mind the best book ever written on American political institutions is still De Tocqueville's Democracy in America, and I was glad to see it on your list.

Sincerely yours,

EDWARD S. CORWIN,

Here is Dr. Anderson's letter to Dr. Corwin:

DEAR ED: I did thank you, I believe for sending me a copy of the Cornell reprint of your famous article, "The Higher Law Background of American Constitutional Law." It is still as good as it was when you wrote it, and the best thing in its field.

When you get to the Princeton Library some day, you might want to examine a well-edited collection of reading entitled, "Our Long Heritage": Pages from the books our Founding Fathers read. The editor is Wilson O. Clough, the publisher University of Minnesota Press, and the date, 1955. The selections are in some cases rather too short, but they are long enough to give the flavor of each writer. They start in part I with a selection from Thucydides, and go on through the classical heritage, to Justinian; the English tradition to 1700, ranging from Magna Carta to the Declaration of Rights, 1688; the continental stream from Grotius through Puffendorf, Montesquieu, Burlamaqui, Rousseau, etc., and ending with a fourth part called the "Emerging Pattern," ranging from Anthony Ashley Cooper, through a number of English writers and a few colonials down to Richard Price. The whole collection strikes me as being a very good one as a background for students of American constitutional ideas. One shortcoming of the collection is the omission of continental writings of the medieval period, but I think this is justified to some extent on the ground that the continental materials at that time were not as widely read by the colonial readers who brought about American independence and the establishment of the Constitution.

With best wishes to you and Mrs. Corwin for a Merry Christmas and a Happy New Year, I am,

Cordially yours,

WILLIAM ANDERSON.

DEAR MR. O'HARA: I have read with interest your communication of December 12, 1955, in which you proposed legislation to encourage the distribution of 15 or 20 classics of American democracy. The general plan impresses me as having much merit.

I am not in a position to evaluate critically the list of authors and works which you included in your letter. It does occur to me, however, that it might be worthwhile to add to the list a separate publication which would contain the Declaration of Independence and the Constitution of the United States. Doubtless, these documents occur in some of the writings listed. Nevertheless, their appearance as a separate publication seems to be worthy of consideration.

Cordially yours,

JAMES M. MCCALLISTER,
Dean, Chicago City Junior College, Woodrow Wilson Branch.

DEAR MR. O'HARA: This is in reply to your form letter of December 12 about the possibility of publishing for distribution throughout the world a small library of basic statements of democratic political philosophy, consisting of some 15 to 20 books which, in the majority judgment of this jury of American public opinion, are basic classics of American democracy. In connection with a project of this kind it is much easier to be adversely critical than to offer constructive advice. I should like very much to be of help, but I find myself immediately in difficulties with respect to your project. It is one thing to present what are broadly basic statements of democratic political philosophy, and another to present basic classics of American democracy. Among the books which you tentatively list, those by Burke, von Humboldt, Kant, Mill, Locke, Mazzini, and Rousseau are books by foreign authors which are written primarily with their own countries, or at any rate with European countries, in mind. Although they have been used extensively in the United States and have been valuable in the development of American thinking, they are in no sense basic classics of American democracy.

Unfortunately for the educational purposes which you have in mind, I fear that you will be unable to find anywhere basic classics of American democracy in the sense in which the works of Marx, Engels, Lenin, Stalin, and Mao are classics or at any rate embody the postulates of communism. Except for the fact that our democracy started with an ideal of relative freedom, relative equality, and I might say also relative Christianity, we got under way with the establishment of our institutions not with a guiding star in the form of a body of dogma, but with a largely unarticulated ideal as to a way of life. While there may be value in presenting American writings by Dewey, Emerson, Hand, Jefferson, Lincoln, Thoreau, and Wilson, and even the works of foreign authors on American democracy such as those of Bryce and de Tocqueville, these works will present at best a series of incomplete theses with respect to the subject. American authors have written almost universally not merely to portray but to criticize. They have assumed in large part a basic knowledge with respect to ideas, ideals, and living conditions about which you rightly aspire to have Europeans informed. Inevitably, therefore, the writings are incomplete from the point of view of your purpose, and they include critical materials or at any rate critical emphasis which might well serve to mislead foreign readers.

It is of course true that the books of many contemporary authors on various aspects of the subject of American democracy are read abroad. As one of the many authors of such books, I fervently hope that foreign readers recognize the fact that the intended audience is primarily domestic, and that such criticism of personnel, organization, and behavior as may be included is intended for the accepting audience at home. We cannot, however, necessarily assume that this will be the case. It may well be close to the time when American authors ought to begin writing on American institutions not primarily for American audiences but for audiences abroad. If such books were written the strategy would inevitably be very different from that of the current major output. It may or may not be part of the function of your particular committee to look into the question of promoting such authorship.

Returning to the specific subject of your list, I should hesitate, without across-the-table discussion on purpose and strategy with other people interested in the subject, to make firm suggestions of books to be added to the list or to say which of the writings of Emerson, Lincoln, Jefferson, and other American writers should definitely be included in the materials to be distributed. One of my colleagues has suggested inclusion of Philosophy of Democratic Government by an able American Catholic author, Yves Simon, and also An Almanac of Liberty, published last year by Justice William O. Douglas. At the very least I have no doubt that these books are worthy of consideration. I should recommend, furthermore, consideration of books by such men as Robert MacIver, including particularly his The Web of Government. However, to repeat, until the

purpose of the publication is more clearly defined, I should hesitate to offer suggestions with confidence.

Very sincerely yours,

CARL B. SWISHER,
Professor, the Johns Hopkins University.

DEAR CONGRESSMAN O'HARA: I think your proposal to publish some basic democratic American documents is a very promising and significant one. I have always felt that if a proper and balanced selection were made from our own classics, we could give Marx, Engels, Lenin, Stalin and Mao some very healthy competition. It all depends, however, on the wisdom and validity of the selection itself. While I could make some suggestions based upon the suggested list you enclose, I would like to submit a more substantial proposal to you as to ways and means of arriving at this basic list.

There are now living 12 past presidents of the American Political Science Association, a very fine list of scholars and distinguished American citizens who could probably act in a very helpful and constructive manner in advising with you as you arrive at your final suggestions. Their names and addresses follow:

Prof. William Anderson, department of political science, University of Minnesota, Minneapolis 14, Minn.

Dr. Ralph J. Bunche, Under Secretary, United Nations, New York, N. Y.

Prof. John Gaus, Harvard University, Cambridge, Mass.

Dr. Luther Gulick, Institute of Public Administration, 684 Park Avenue, New York, 21, N. Y.

Dr. Pendleton Herring, president, Social Science Research Council, 230 Park Avenue, New York 17, N. Y.

Prof. Arthur N. Holcombe, Harvard University, Cambridge, Mass.

Prof. Harold D. Lasswell, Center for Advanced Studies in the Behavioral Sciences, Stanford University, Stanford, Calif.

Prof. Arthur MacMahon, department of public law and government, Columbia University, New York 27, N. Y.

Prof. Peter H. Oregard, department of political science, University of California, Berkeley, Calif.

Prof. James K. Pollock, University of Michigan, Ann Arbor, Mich.

Prof Leonard D. White, department of political science, the University of Chicago, Chicago 37, Ill.

Prof. Quincy Wright, department of political science, the University of Chicago, Chicago 37, Ill.

I take the liberty of making this suggestion to you not only because of the merits of your own proposal, but because having been a citizen of Chicago for many years and having watched your own fine career, I would be anxious to see you carry out this interesting project with distinction. There is probably nothing more important than telling the world (including our own selves) what are our most genuine traditions and abiding theories of democratic government; but at the same time there is no more hazardous job in the field of either scholarship or statesmanship.

Sincerely yours,

ALBERT LEPAWSKY,
Professor of Political Science, University of California.

MY DEAR MR. O'HARA: In reply to your letter of December 12, 1955, concerning the publication, by the United States Information Agency, of prominent statements of democratic philosophy, I wish to thank you for honoring me by asking for my comments. Permit me to say that I am finding this plan praiseworthy and commendable.

However, much of the success of such an undertaking may well depend on the manner in which it is executed. If it is intended to place before the public abroad a collection of entire essays, or entire chapters of prominent democratic thinkers, I feel that this manner may duplicate existing collections of this kind in practically all countries. For example, in Latin America there is no scarcity of such publications.

What is needed, therefore, is a collection of significant statements which addresses itself to the common man in the various foreign civilizations, and this would require a highly selective procedure. What should be presented are abstracts or parts of the writings of famous political thinkers, organized in a logical sequence, dealing, among other things, with the individual, the community, the governmental institutions, etc. In the second place, it occurs to me that such a collection of materials sponsored by an American agency should confine itself strictly to American writers and such foreign writers who have dealt with American institutions or experience. Therefore, it is suggested to omit thinkers like Kant, Mazzini, and Rousseau, while de Tocqueville should remain on the list. I am also doubtful about the value of including Burke who is usually connected with a professedly conservative and even anti-democratic philosophy. Furthermore, I would strongly suggest adding the recent Harvard lectures by Mr. Lord O'Brian, one of the great spokesmen for the values of a democratic civilization in this country. As to foreign writers not mentioned in the list, I wish to call your attention to Juan Battista Alberdi, the great Argentine admirer and counterpart of Jefferson, whose writings frequently deal with American experience.

I hope this letter may be of some assistance to your plans, which otherwise I heartily endorse. Thanking you for having acquainted me with this matter.

Very truly yours,

KARL LOEWENSTEIN,
William Nelson Cromwell Professor of Jurisprudence and Political Science, Amherst College.

Max Abelman

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 18, 1956

Mr. KEOGH. Mr. Speaker, Max Abelman, of Brooklyn, N. Y., who has spent a lifetime in the service of his fellowman, has received another distinctive honor. He was recently appointed an honorary sovereign grand inspector general, 33d and last degree of the Ancient and Accepted Scottish Rite for Italy and its dependencies as has been attested to by the following letter received by him under date of October 31, 1955:

MASSONERIA DI RITO
SCOZZESE ANTICO ED ACCETTATO,
SUPREMO CONSIGLIO DEL 33D,
ED ULTIMO GRADO,
PER L'ITALIA E SUE DIPENDENZE,
October 31, 1955.

To the LOFTY AND MOST POWERFUL BROTHER,
MAX ABELMAN 33D,
Oriente of New York.

DEAREST AND MOST POWERFUL BROTHER: It's with pleasure that I inform you the supreme council of the grand inspectors of the 33d and last degree of the Ancient and Accepted Scottish Rite for Italy and its dependences, in its ordinary meeting held in Rome on the last week of October 1955, on proposal of the Most Elected and Most Powerful Brother Vincent Castorina, 33d, honorable, venable, lieutenant, grand commander, has unanimously deliberated to appoint you honorary sovereign grand inspector general.

While I rejoice together with you for the sign of deepest esteem to you expressed by the supreme council by means of this appointment, I declare my firm conviction that our community will get from your activity a real contribution of wisdom as of works.

I consign to you the annexed warrant and I beg you to accept along with my sincere congratulations, my triple fraternal embrace in our holy numbers.

VINCENZO CASTORINA, 33D,
Honorable, Venable, Lieutenant, Grand Commander.

LONG ISLAND, N. Y.

Declaration of Interdependence

EXTENSION OF REMARKS
OF
HON. H. ALEXANDER SMITH
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Wednesday, January 18, 1956

Mr. SMITH of New Jersey. Mr. President, for several years a distinguished group of men and women from all over the free world have been working to obtain support for a declaration of interdependence.

A group called the Interdependence Council has been organizing this movement on a worldwide basis. The chairman of the council's executive committee is an old friend of mine, Otto Tod Mallery, of Philadelphia, and an author and distinguished economist.

Today, in Philadelphia, the City of Brotherly Love, in Independence Hall, this declaration of interdependence is to be proclaimed.

The declaration is signed by 1,371 persons from 49 nations. This is a fine movement for international peace and good will.

In order that my colleagues may be able to read about the objectives of this declaration and of the good work of this fine group of public-spirited leaders throughout the world, I ask unanimous consent that this declaration of interdependence and its explanation be printed in the Appendix of the RECORD.

There being no objection, the declaration was ordered to be printed in the RECORD, as follows:

DECLARATION OF INTERDEPENDENCE

"There is a spirit in man and the inspiration of the Almighty giveth him understanding." (Old Testament.)

"He hath made of one blood all nations of men for to dwell on all the face of the earth." (New Testament.)

FOREWORD

People have the power to help or harm each other. Which shall it be?

Nations can live in peace or die in war. Which shall it be?

The fate of humanity depends upon the feelings of individuals toward one another. The common interests drawing people together are stronger than the artificial barriers now keeping them apart.

Impending world events and new scientific inventions can annihilate or benefit mankind. The new situation demands the scrapping of outworn ideas and the spreading of a

deeper understanding of the interdependence of people everywhere.

Mutual human needs and aspirations are stated in the declaration of interdependence. This is not an agreement between governments. Governments, like the hands on the face of a clock, are moved from within. The declaration of interdependence is intended to give individuals, who as citizens move their governments, a direction of movement and a sense of responsible participation in a worldwide fellowship.

In a world so large that one often feels insignificant, the declaration of interdependence offers the individual confidence in himself by affirming: I am only one, but I am one. I cannot do everything, but I can do something. What I can do I ought to do, and what I ought to do I will do.

PREAMBLE

We, men and women of different races and religions, children of a Supreme Being through whom all men are brothers, unite our needs and aspirations in this declaration of interdependence.

No man, no people can stand alone. Out of union of diverse elements we will form durable partnerships to withstand the pressures of conflict. The killing of millions would not diminish the mutual distrust of the survivors. Therefore, we seek to be trustworthy and to find men worthy of our trust. With the ocean's strength and the mountain's patience, we will stand together in creative faith that a free and peaceful world is attainable through cooperative action.

Faith is like the bird that feels the coming light and sings when the dawn is still dark. Faith is the substance of things hoped for, the evidence of things not seen. With such faith we will use the increasing human interdependence of modern times for peaceful progress.

Realizing that man does not live by bread alone and that material progress itself cannot produce peace or the good life, we offer ourselves as partners in the following interlocking program.

PROGRAM

We declare our common purpose to—

Reverence life

Exercise reverence for life and human dignity, abolish racial barriers, and repudiate all doctrines of supposed superiority based upon national origin, color, creed, sex, or class. People are more alike than they are different.

Foster mutual understanding and respect for one another's beliefs and cultural values. Many keys are required to unlock all the gates of truth and beauty.

Uphold freedom to think, to read, to listen, to look, to speak, to assemble. Freedom of information and freedom of expression are not rights only but tools with which to create a way of life. Opinions, like the roots of a tree, require nourishment from all sides. There is no substitute for an open mind. Mutual confidence can be approached only through open minds and reliance upon free discussion. The earth is strewn with the ruins of great powers, but great ideas survive and ultimately rule the world.

Benefit the individual

Increase the opportunity of each individual to overcome ignorance and illiteracy. Famine and poverty are their result: It is hard to make an empty sack stand upright. We will press for universal elementary schooling and fundamental education.

Achieve for youth of every land the opportunity to unfold creative talents, to realize noble dreams and enjoy fruitful, unthreatened lives.

Promote physical and mental health of all peoples as fundamental for the attainment of peace and security. Prevention is better than cure.

Work for equality of opportunity—economic, social, and political—for men and women alike.

Protect the individual against suppression or exploitation by those misusing political or economic power. Each individual is the ultimate minority. To protect minorities is to safeguard each human being. Government has evolved for the benefit of the individual, not the individual for the benefit of government.

Encourage our respective governments to work together in cooperation for the solving of social and humanitarian problems, and the upholding of fundamental human rights and freedoms for all.

Seek justice as the foundation of human relations

Eliminate forced labor.

Secure freedom of association and the right of workers to form unions to bargain collectively through representatives of their own choosing, without interfering with the rights of employers.

Favor the progressive participation of subject populations in the business and government of their native lands.

Assist subject peoples toward self-government and self-determination of their changing relationships to an ever widening commonwealth.

Support land reform and relieve tillers of the soil from unjust forms of land tenure, however imposed. Injustices eat away the foundations of human relations. The impoverishment of any area is of concern to all. Peace to be durable must be endurable.

Lift living standards

Lower trade barriers which reduce the flow of goods essential for raising standards of living throughout the world. Whether people eat or starve depends in part upon how widely goods can be exchanged with mutual gain. Many confluent streams of trade are needed to form a worldwide flow of production; therefore, we oppose discriminatory trade practices, which diminish access to markets and to supplies of goods and services.

Explore workable approaches to strengthen human relations through economic unions and political federations.

There is no alternative to peace

Seek a substitute for the illusion of victory. We do not place our main reliance upon the military power of the state or alliance to which we belong. Spiritual power is superior to physical power. Wars are world disasters and after total war the distinction between victor and vanquished grows less and less.

Reject all propaganda from home or abroad which seeks to justify aggression.

Melt the cold barriers of distrust now creeping over the earth like a glacier. We enlist in a personal campaign against fear, bitterness, and prejudice, and we ask that as much thought and effort be given to the art of increasing understanding as is being given to the means of increasing fear and hatred. Through enlightenment, understanding, and cooperation we will eradicate the roots of war and plant seeds of mutual trust in the fertile soil of good will.

Advocate progressive mutual disarmament with adequate safeguards. War is not inevitable. Men are not created to destroy one another, but to work together on their never-ceasing task to build a better world.

Strengthen the United Nations

Strengthen the United Nations and encourage its evolution as a center for harmonizing the actions of nations in the attainment of these common ends.

COMPACT

Believing that with the assistance of divine guidance we shall succeed,

Knowing that it is better to light a candle than to curse the darkness,

Desiring to help one another to mount, step by step, toward these high summits of human aspiration, and

Voicing the longings of all people for peace, freedom, justice, and security with equal rights for all and special privileges for none,

We hereby agree as partners to champion and cherish the declaration of interdependence, its aims, and ideals:

(Your signature)

BACKGROUND

The declaration of independence originated after World War II when a group of North Americans, disillusioned by failure to remove some of the outstanding causes of war, sought to find the bases of just and durable peace. They asked themselves these questions:

What are the specific conditions required for lasting peace?

How can we apply the spirit of live-and-help-live to both domestic and world affairs?

How can this thermo-nuclear age offer more compelling methods of survival through patient conciliation and cooperation?

What common interests transcend differences in ideology, social dogma, and political institutions?

Since no one nation nor any one race monopolizes wisdom or rectitude, what are the highest common denominators of cooperative action toward peace and progress?

This North American group, centered largely in Philadelphia, the City of Brotherly Love, drafted a tentative declaration of independence. Realizing that people of different cultures would offer various answers, they circulated the draft to others, both in the United States and in many other countries. Each contributed suggestions. Twelve successive drafts resulted and after 5 years (1950 to 1955) the final declaration of independence, studied and approved by people in 49 countries, was at last complete.

Therefore, the declaration is a truly international development.

POLICIES

The declaration does not purport to state the foreign policy of any country. As a cooperative undertaking by private citizens in many countries, it presents specific goals toward which signers everywhere may strive.

Until these goals are reached, the foreign policy of any nation often will leave much to be desired. Based, as it is, on temporary expediency, military strategy or supposed economic or political advantage, a foreign policy may not, at any given moment, conform to the principles of the declaration. The Interdependence Council seeks, however, to discover people of good will in every country whose common faith and mutual trust will bring national policies closer to these goals.

OBJECTIVES

One objective of the declaration is to develop and maintain mutual trust among individuals of good will divided from one another by national frontiers but striving for better human relations.

Superior individuals, not superior force, make a nation respected. Such superior individuals can attain leadership only if the spirit of the declaration of interdependence is acted upon with conviction by a nucleus of convinced followers.

Such persons may be few, but they are mighty. One street light, like one individual of good will, illumines only a small area, but this woud be dark without that single light. Just as a line of small street lights makes the whole street safer for passers-by, so the chain of signers can make safer the lines of communication from person to person. If you wish to be one of these small essential lights, make yourself known by signing the declaration.

Another objective is to lift our aspirations. Fear of war is contagious. Preparations for defense by one nation looks like preparations for war to another. Preparations for peace would also be contagious from nation to nation and each constructive step toward peace by one nation would lead to similar steps by others. Peace begets peace.

FUNCTIONS OF THE INTERDEPENDENCE COUNCIL, INC.

The interdependence council is neither an action body nor a propagandist agency. In disseminating the declaration of interdependence and in presenting the objectives contained therein, it recommends no specific legislation nor any special policy. A signer who accepts the principles of the declaration undertakes only to apply those principles according to the judgment of his private conscience.

The declaration of interdependence rests upon the inescapable fact that the whole world has become one economic and social neighborhood and must now become a spiritual and ethical brotherhood. Signers derive encouragement from the knowledge that, despite fevered propaganda and misrepresentations, men of good will can be found everywhere who are striving for the same common goals of justice, peace, and understanding.

PROCLAMATION

The declaration of interdependence was officially proclaimed during January 1956 in a number of countries, including India, Pakistan, Brazil, Japan, France, Germany, Peru, Argentina, Mexico, and the United States. The American ceremonies occurred at Independence Hall, Philadelphia, Pa., where, in 1776, the freedom of the United States had been proclaimed. An international gathering, representing many countries, jointly presented the original declaration of interdependence, hand-lettered in gold, red, and black and signed by 1,371 persons from 49 nations, to an international organization for preservation. Of these original signers, 33 percent were residents of Asia, 27 percent of North America, 18 percent of Europe, 14 percent of South America, 4 percent of Africa, 2 percent of Central America and Mexico, 2 percent of Australasia.

The proclamation was the launching of a ship laden with ideas. When a ship is launched no one knows all the ports at which it may eventually call. But the Seven Seas are open to it. So also are they open to the declaration.

REGIONAL ACTIVITY

Regional vice chairmen are currently active in 21 countries—Argentina, Bolivia, Brazil, Chile, Colombia, Costa Rica, England, Egypt, France, French regions in west Africa, Germany, India, Italy, Japan, Mexico, New Zealand, northern Europe, Pakistan, Peru, Union of South Africa, and the United States of America. In some of these areas interdependence councils have been formed, each of them wholly independent of the original council in the United States and of each other.

Signers of the declaration, when traveling, are invited to make themselves known to the vice chairmen. These regional vice chairmen have translated the declaration into Spanish, French, German, Portuguese, Italian, Arabic, Japanese, Hindi, and Urdu. These texts are available from the appropriate vice chairmen or may be procured from the Interdependence Council, Inc., 9006 Crefeld Street, Philadelphia 18, Pa., at 10 for $1, or 100 for $7. A supply in all languages is available in the United States without charge to persons overseas.

ACTION

What can you do? Do first what every man ought to do to promote better human relations. Read, listen, meditate, pray. Today's race on earth is between mutual aid and mutual destruction. Enroll with the mutual aid team by signing the declaration and returning the back cover to the address above.

THE INTERDEPENDENCE COUNCIL, INC.

Officers and directors

Honorary chairman: Andre Lalande, member of the Institute of France, professor emeritus of philosophy at the Sorbonne, Paris, France.

Chairman: Otto Tod Mallery, author of Economic Union and Durable Peace; ex-chief economist, United States Department of Commerce; chairman, board of directors, National Recreation Association, Philadelphia, United States of America.

Vice chairmen

For Argentina: Jorge M. Bano, managing editor Nuevo Mundo, professor of the History of Civilization, Buenos Aires.

For Bolivia: Edouard Kunstek, director of the Polytechnic Institute of the Universitad Jecuica de Oruro.

For Brazil: Dr. Genesio Pereira Filho, lawyer, author, president, Grupo Da Estudos Euclides Da Cunba, São Paulo.

For Central America: Dr. Juan Edgar Picado, attorney; active rotarian, San Jose, Costa Rica.

For Chile: Amanda Labarca H., president, Chilean Commission of Intellectual Cooperation; Director of the University Extension Department, University of Chile, Santiago.

For Colombia, Venezuela and Ecuador: Santiago Gutierrez, business executive; secretary-general Movimiento Pro Federation Americana, Bogotá, Colombia.

For England: Captain W. P. Knowles, D. Sc., M. C., Principal of the Institute of Breathing, London.

For Egypt: Mrs. Eva el Masri Sidhom, president, Egyptian Federation of University Women, Alexandria.

For France: Frederic-Charles Lowenbach, business executive, Paris.

For French Regions, West Africa: J. H. Beunde, president of the Association Fraternelle Kribienne (ASSOFRAK), Douala, French Cameroons.

For Germany: Dr. Edith Ebers, writer, geologist; chairman, Munich Branch, Association of German University Women, Munich, Germany.

Associate vice chairman for Germany: Rudolph Hundertschuh, publisher, Garmisch-Partenkirchen.

For India: U. K. Oza, novelist; former editor Voice of India; chairman, executive committee, All India Convention of Race Relations; Vice President Indian Nationals Overseas Congress, New Delhi.

For Italy: Mrs. Piero Carinelli, Doctor of Belles Lettres and Philosophy, educator, Udine.

For Japan; Dr. Tatsuo Morito: president, Hiroshima University; chairman, Japanese delegation to United Nations Educational, Scientic, and Cultural Organization, Hiroshima.

Associate vice chairman for Japan: Bishop Yoshimune Abe, chairman of the board, International Christian College, Tokyo.

For Mexico: Leonides Andreu Almazan, M. D., Ex-Governor of the State of Puebla, Mexico (13) D. F.

For New Zealand: Herbert Sutcliffe, D. Sc., founder International Sutcliffe Schools of Radiant Living, Havelock North. H. B.

For Northern Europe: Prof. Karl J. Ewerts, Accredited Permanent Observer at United Nations; professor of international law and political science, Stockholm and New York.

For Pakistan: Dr. Mahmoud Brelvi, historian; member of executive committee of the Organization for Moslem-Christian Cooperation; general secretary, International Assembly of Moslem Youth; member of the secretariat, Islamic Congress, Karachi.

For Peru: Estuardo Nunez Hague: professor in facultad de letras, University of San Marcos; vice president of Instituto Cultural Peruàno-Norteamericano, Lima.

For Union of South Africa: Rev. Magnus G. Ratter, minister, Free Protestant Church, Capetown.

For United States of America: Karl Scholz, professor of economics, Univeristy of Pennsylvania, Philadelphia.

Board of Directors

Secretary, Harry Emerson Wildes, author of 4 books on Japan and several on American history, 259 South Farragut Terrace, Philadelphia, Pa.

Treasurer, Ralph Page, columnist, Evening Bulletin, Philadelphia.

Assistant treasurer: Mrs. Alice Rhoads Hart, American Friends Service Committee, Wayne, Pa.

Louis L. Austin, business executive; owner of Capon Springs and farms, author of You Are Greater Than You Know; Capon Springs, W. Va.

Joseph Brown, professor of sculpture, inventor, Princeton University.

Glenn Clark, author, the Soul's Sincere Desire; religious leader; founder of Camps Farthest Out, St. Paul, Minn.

William L. Clayton, authority on world trade; ex-Under Secretary of State for Economic Affairs; executive, Anderson, Clayton & Co., cotton merchant, Houston, Tex.

Mrs. William Hammatt Davis, ex-chairman, Women in World Affairs, New York City.

Willard R. Espy, author, Bold New Program and Declaration of Brothers. Board of editors, Reader's Digest, Pleasantville, N. Y.

John Frazer, Jr., staff, National Committee for a Free Europe, New York City.

Earl Parker Hanson, professor of geography, University of Delaware; author of Transformation: Story of Modern Porto Rico, Newark, Del.

George Edmund Haynes, educator, author, expert on African affairs, Mount Vernon, N. Y.

Leslie Pinckney Hill, author, What the Negro Wants; president emeritus, Pennsylvania State Teachers College at Cheyney, Pa. Philadelphia.

Noni Gopal Joardar, doctor of laws and economics, writer on Indian culture, Washington, D. C.

Clarence L. Jordan, retired executive in public relations; chairman, Franklin anniversary committee of the Franklin Institute, Philadelphia.

Frank C. Laubach, specialist in world literacy, inventor of alphabets, author of Wake Up or Blow Up, New York City.

Dr. Hyman Lischner, editor, New Outlook, Santa Monica, Calif.

Fred S. Markham, business executive, Balboa Island, Calif.

Oscar K. Merritt, business executive, founder of North Carolina high school world peace study program, Mt. Airy, N. C.

Joy Elmer Morgan, ex-editor of the National Education Association; president, Senior Citizens of America, Washington, D. C.

Norman D. Palmer, professor of political science, University of Pennsylvania; chairman, Institute for Asian Affairs, Philadelphia.

James G. Patton, president, National Farmers Union; United States adviser to United Nations Food and Agricultural Organization, Denver, Colo.

Arthur D. Pratt, Jr., executive director of foundation for International Economic Development and Education, Indianapolis, Ind.

William L. Smyser, ex-United States Consul to Thailand, lecturer on world affairs, Philadelphia.

Melvin K. Whiteleather, board of editors, Evening Bulletin, Philadelphia.

Mrs. Robert D. Wolf, League of Women Voters, secretary, Institute for Asian Affairs, Philadelphia.

Committee of University Students, Harold V. Semling, Jr., chairman, American University, Washington, D. C.

Heckling of Great Secretary Doesn't Help

EXTENSION OF REMARKS
OF
HON. PATRICK J. HILLINGS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 5, 1956

Mr. HILLINGS. Mr. Speaker, I wish to place in the RECORD an editorial from the Oroville (Calif.) Mercury, of January 14, 1956.

Mr. Dan L. Beebe, editor and publisher of the Oroville Mercury has written an excellent editorial in which he analyzes the splendid work of Secretary of State John Foster Dulles.

The editorial follows:

HECKLING OF GREAT SECRETARY DOESN'T HELP

If the Democrats should win the next election and take over the State Department, and if they should junk the policy of Secretary Dulles, which now they are attacking daily, why then we would be in for another series of Communist advances such as lost the satellites and China to the free world.

The present attack on Dulles, one of the greatest Secretaries of State in our history, is pure politics in a political year and amounts to a play on words.

Comparatively few who read and hear the attacks have read the original article in the magazine Life. What the hecklers are doing is to take a sentence out of context and give it a meaning never intended either by Dulles or the Washington bureau man of Life who wrote the article.

The sentence goes like this: "* * * The ability to get to the verge (of war) without getting into war is the necessary art * * *."

In the four pages of the article, there was that small weakness in wording subject to two interpretations. The rest of the article is more or less ignored, and Dulles is being pictured as a tightrope walker who advances to the brink of war as a sort of stunt, and who could plunge the Nation into war if his foot slipped.

But let us read the paragraph from which that was taken:

"Always, of course, there has been and continues to be risk. Says Dulles 'You have to take chances for peace, just as you must take chances in war. Of course, we were brought to the verge of war. The ability to get to the verge without getting into the war is the necessary art. If you cannot master it, you inevitably get into war. We've had to look it square in the face, on the question of enlarging the Korean war, on the question of getting into the Indochina war, on the question of Formosa. We walked to the brink and we looked it in the face. We took strong action.'"

If the previous administration had been that courageous, we would have saved China from the Reds. We would not have submitted to the loss of Poland and the partitioning of Germany.

Dulles in the article points out that the method of the Eisenhower administration in avoiding war has been to make miscalculation on the part of the enemy unlikely.

There is a classic example of this miscalculation, and Dulles tells about it in the article (which, of course, doesn't endear him to the opposition). The article reads:

"All the great wars of modern history, Dulles is convinced, were started by national leaders who thought they could get away with it. When they found out they could not, it was too late. The Korean war, Dulles argued, had been caused by Moscow's mistaken belief that the United States would be unwilling to fight to stop armed aggression against South Korea. As much as Dulles admired his predecessor Dean Acheson's courageous reaction to aggression he felt that Acheson had made a tragic mistake in suggesting, just 6 months before the Communists attacked, that South Korea was outside the United States 'vital perimeter' area."

So when a pressure play by the Reds, such as the move to capture Formosa, is building up, Dulles quietly lets it be known that the United States will fight. He arranges to have forces concentrated there. And the United States would have fought, he is convinced, and with atomic weapons, if the Chinese Reds had started it. The Reds did not start it. War was avoided, in direct contrast to what happened in Korea.

So it will be seen that the present turmoil is merely a tempest of words, based on a sentence taken out of context, in confidence that only a very small minority of the American people ever will see the entire article. It is political trickery, playing with an American people in a critical period, when all should stand together against the common enemy.

If we wish to surrender more and more to the Communists, we can junk the Dulles policy of opposing strength with strength, and then we can turn tail and run while the Communists take over the world.

Schoolhouses and Scholarships

EXTENSION OF REMARKS
OF
HON. CARL ELLIOTT
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 18, 1956

Mr. ELLIOTT. Mr. Speaker, the most urgent domestic legislation before the Congress is that providing a program of Federal aid to speed up the construction of schools for America's boys and girls.

Schoolrooms are needed for America's high-school students. Scholarships are needed for college students.

Along the line of these thoughts I submit for the RECORD excerpts from an article by Roscoe Fleming styled "Aid to Schools, What's the Next Federal Move?" This article is from the Denver Post of December 28, 1955. I recommend its reading to the entire membership of the House of Representatives:

WHAT'S THE NEXT FEDERAL MOVE?
(By Roscoe Fleming)

The next Congress surely will provide substantial aid to local public school building, probably by grant to State boards of education—at least of those States that shall have retained a public school system.

There's no Federal control implied here, any more than of the Red Rocks amphitheater, the Boulder County courthouse or the Golden high school, all built, I believe, with substantial Federal aid.

Now what's the next step? Maybe we tend to forget that not the teacher, nor the community, nor even the children, are the ultimate objectives and beneficiaries of our solicitude—but the public welfare of the United States of America.

That welfare has always seemed to our forefathers to be based most firmly on education, so that the village school was the next building they built after the church—if the two indeed did not share the same structure.

So our system of popular education, imperfect as it still may be, is yet the world's most stirring and striking example—more responsible, perhaps, than any other major factor for America's leap to the forefront among the world's great nations.

If you want in a few words the American credo of education, I think it is that no child shall be barred for lack of opportunity from following the path of education and of self-development, so far as his will and his intrinsic abilities permit.

So what's next. So our most pressing national need, as we hear over and over again in doomful tones, is for youth adequately trained for the atomic age in the physical sciencies. We need, we are told, 15,000 or 20,000 more yearly than we've been getting.

They are there in potential. One of our tragedies lies in the number of kids that are still stopped short, usually by poverty or lack of self-knowledge, before going as far as they might educationwise. One rapid, economical, and adequate way to meet this situation might be as follows:

Create about 10,000 federally financed scholarships for college or post-graduate training with stress on the physical sciences. Students would be selected by competitive Federal examinations given by, say, the United States Civil Service Commission or the United States Office of Education. These students might enter any accredited 4-year college or university of their choice.

Having to work too hard for a living while trying to go to school is actually a handicap, despite all you hear to the contrary, so these scholarships should be generous enough to eliminate the need for any outside work, save perhaps during vacations.

By itself it might not provide all the trained specialists we need. But it would stimulate interest in the physical sciences all down the line. We should have less of such spectacles as that of a high school with magnificent equipment and visual aids for teaching chemistry and physics plus an able and dedicated teacher—and 40 boys and girls out of 800 taking these sciences so basic for understanding the world we now live in.

Democrat Candidate Jokes Again

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 18, 1956

Mr. DEROUNIAN. Mr. Speaker, Mr. Adlai Stevenson is continuing his 1952 policy of looking at our Government and the American people as a bag of tricks from which he pulls out funny stories. The Washington Evening Star of January 17 carries an article by Gould Lincoln which deals sensibly and seriously with an important issue, one which Mr. Stevenson, still in character, has used as a basis for another of his clever remarks. The American people still wonder if Mr. Stevenson ever faces a problem seriously.

The article follows:

STEVENSON'S MEANINGLESS QUIP
(By Gould Lincoln)

Adlai Stevenson, front-running candidate for the 1956 Democratic presidential nomination, does not like the Eisenhower-Dulles administration of foreign affairs. He has charged that the Secretary of State is willing to play Russian roulette with the life of our Nation. On too many occasions, he has said,

the Eisenhower administration has acted without regard for the Nation's allies. These recent attacks by Stevenson were inspired by an article in Life magazine entitled "How Dulles Averted War."

BRINK OF WAR THREE TIMES

Presumably Mr. Stevenson was not criticizing Mr. Dulles for having averted war. And Mr. Dulles and James Shepley, chief of the Time-Life Washington Bureau, author of the article, showed clearly and in detail how the United States, with Eisenhower at the helm, had gone to the brink of war three times and averted it—each case in Asia. Mr. Stevenson is, again presumably, for peace, not war. Since that is so, he cannot be suspected of opposing actions taken by Secretary of State Dulles, backed by President Eisenhower, which averted a resumption of war in Korea in 1953. For these actions prevented war. He cannot be suspected of attacking the steps taken by Dulles and Eisenhower which in 1954 averted the entry of Chinese Communist troops in Indochina in large numbers, and a consequent overrunning of all southwest Asia. Nor can he be suspected of denouncing President Eisenhower's firm stand in 1955, backed up by a resolution of Congress, which has averted war in the Formosa Straits. Because all of these actions were effective, averted war, and continued peace.

Mr. Stevenson has not said he would undo any of these actions which resulted in peace. Why, then, doesn't he like the Dulles' article in Life?

Mr. Stevenson does not like the article because it is an exposition of the success of the Eisenhower administration's handling of foreign affairs, and because the article reflects upon the Truman administration, which went before. He does not like the political overtones of the article, which is quite natural. Mr. Dulles' description of the victories—for peace—as told by Mr. Shepley, are, in fact, a refutation of the attacks on the Eisenhower foreign policy and its handling that have sprung from the throats and pens of Democratic leaders, as the 1956 political campaign has come nearer.

The Democrats do not like to have the Eisenhower administration take credit for peace—and that's that. Especially, it does not like to have the administration assert that, since 1953 when Eisenhower entered the White House, the country has had both peace and prosperity.

Mr. Stevenson's characterization of Mr. Dulles' action and words as a willingness "to play Russian roulette with the life of our Nation" is a nice quip—if it had any meaning. Russian roulette, played with a revolver containing one cartridge, is a game of blind chance. Mr. Dulles and President Eisenhower played no such game, nor does Secretary Dulles advocate it, or show a willingness to involve the United States in such a game. In every instance, the moves made by the Secretary of State, backed by the President, have followed full study in which all risks were calculated.

The paragraph in Life on which Mr. Stevenson bases his Russian roulette statement quotes Mr. Dulles as saying: "You have to take chances for peace, just as you must take chances in war. Some say that we were brought to the verge of war. Of course, we were brought to the verge of war. The ability to get to the verge without getting into war is the necessary art. If you cannot master it, you inevitably get into war. If you try to run away from it, if you are scared to go to the brink, you are lost. We had to look it square in the face—on the question of enlarging the Korean war, on the question of getting into the Indochina war, on the question of Formosa. We walked to the brink and we looked it in the face. We took strong action."

REDS MISCALCULATED

Mr. Dulles did not say anywhere that this country should make a practice of going to the brink of war as a necessary exercise. He did not advocate anything of the kind. What he did say was that if circumstances brought this country to the verge of war, it should know how to avert war—without giving away its shirt, or the shirt of any other friendly nation or ally. Mr. Dulles is convinced that the great wars of modern times were started by leaders who miscalculated, just as the Communists miscalculated what the United States would do when they attacked the Republic of Korea.

Former Secretary of State Dean Acheson in the Truman administration, 6 months before that attack, made a speech suggesting that South Korea was outside the "vital perimiter" of the United States defense. This was not telling the Reds the United States would fight if Korea was invaded. The Communists miscalculated. There was war.

Religious Freedom in the United States

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 18, 1956

Mr. MULTER. Mr. Speaker, I direct the attention of our colleagues to the following statement of the American Jewish Congress on Freedom of Religion and Separation of Church and State, which has been submitted to the Subcommittee on Constitutional Rights of the Senate Committee on the Judiciary:

RELIGIOUS FREEDOM IN THE UNITED STATES

INTRODUCTION

The American Jewish Congress is dedicated to the preservation of the democratic way of life and to the unity and creative survival of the Jewish people throughout the world. It seeks to eliminate all forms of political, social and economic discrimination on grounds of race, color, religious ancestry or national origin, and otherwise to strengthen and safeguard democratic freedoms and individual liberties. It regards the principle of separation of church and state as one of the foundations of American democracy and is convinced that both political liberty and freedom of worship and belief can remain inviolate only where there exists no intrusion of secular authority in religious agairs or of religious authority in secular affairs. Accordingly, it deems any breach in the wall separating church and state as jeopardizing the political and religious freedoms which that wall was intended to protect.

In accordance with the request of your committee in its letter of invitation to us, we are limiting the scope of this statement to one subject: a brief account of the instances in recent years in which there have been significant impairments of the mandate of the 1st and 14th amendments to the United States Constitution that neither Congress nor the States shall make any law respecting an establishment of religion or prohibiting its free exercise.

We do not discuss in this statement the constitutional question whether the provision against establishment of religion in the first amendment bars nonpreferential as well as preferential aid to religion. We nevertheless think it appropriate to indicate our view that the 1st and 14th amendments impose upon Government in our American democracy an obligation of strict separation, an obligation that precludes all material aid to religion by Congress and the States, whether accorded on a preferential or nonpreferential basis. We so urged in a brief as friend of the court submitted to the United States Supreme Court in the McCollum case in 1948. We have consistently adhered to that position and have expressed it in the resolutions of our governing bodies and in the briefs as friend of the court submitted by us to the United States Supreme Court and many State courts.

We deem it appropriate also to suggest that the current threat to the principle of separation of church and state does not lie in direct attacks upon it. The principle of separation is so deeply ingrained in our tradition and so universally recognized to be a fundamental component of American constitutional democracy that any frontal attack upon it would be futile and self-defeating. The same is true in respect to the other guaranties of the first amendment: freedom of speech, of the press, of assembly, and of petition. The danger to separation of church and state, like the danger to the other first amendment liberties, lies in dilution, evasion, circumvention, and compromise, while lip service is paid to the principle itself.

Finally, we believe that religious freedom and the separation of church and state are interdependent, indivisible, and indeed unitary. Religious liberty can only be secure where church and state are completely independent of each other. Since we are convinced that Judaism, and all other faiths, can best achieve creative survival where religious liberty is secure, we are committed to the defense of the principle of strict separation of church and state.

THE AREAS OF DANGER

We take as our frame of reference the interpretation of the first amendment announced by the United States Supreme Court in the 1947 Everson Bus case and reiterated in the 1948 McCollum Released Time case. This is universally accepted as the most authoritative and comprehensive exposition of the meaning of the religion clause of the first amendment. In these cases, the Supreme Court said:

"The 'establishment of religion' clause of the first amendment means at least this: Neither a State nor the Federal Government can set up a church. Neither can pass laws which aid 1 religion, aid all religions, or prefer 1 religion over another. Neither can force nor influence a person to go to or to remain away from church against his will or force him to profess a belief or disbelief in any religion. No person can be punished for entertaining or professing religious beliefs or disbeliefs, for church attendance or nonattendance. No tax in any amount, large or small, can be levied to support any religious activities or institutions, whatever they may be called, or whatever form they may adopt to teach or practice religion. Neither a State nor the Federal Government can, openly or secretly, participate in the affairs of any religious organizations or groups and vice versa. In the words of Jefferson, the clause against establishment of religion by law was intended to erect 'a wall of separation between church and state.'"

Measured by these standards, we submit that the following are the five major areas in which there are, at the present time, serious infringements of the guaranty of religious freedom and the separation of church and state:

1. Involvement of the public school in religious instruction and observances.

2. Grant of tax-raised funds for religious education and use of Government property by religious organizations for religious purposes.

3. Enforcement of compulsory Sunday laws against persons observing the seventh day as the Sabbath.

4. Restrictions on the erection of houses of worship and religious schools in new residential communities.

5. Judicial and legislative prohibition of the adoption of children by persons of faiths different from that of the children's natural parents even in disregard of the natural parents' wishes.

INFRINGEMENTS AND VIOLATIONS

Religion in the public schools

Since the adoption of the first amendment, the United States has escaped much of the bitter religious conflict and sectarian strife that have risen in other parts of the world and driven men to violence and bloodshed. That good fortune has been due largely to two of the really great contributions the American people have made to Western civilization: the separation of church and state and the free public-school system. The first, by protecting religion against the intrusion of civil authority and by making it impossible for the state to become a battleground for sectarian preference and favor, has preserved both our political freedom and our religious freedom. The second, by providing for the education of our children on terms of complete equality and without cognizance of their differences in religious beliefs or disbeliefs, has been the cornerstone of our American democracy. The intrusion of sectarianism upon the public-school system both threatens the separation of church and state and challenges the integrity of the public schools. That intrusion, if permitted and sanctioned, will destroy the institutions that have preserved religious and political freedom in the United States and that have prevented religious warfare in this Nation.

Nevertheless, by far the most serious threat today to the principle of religious freedom and the separation of church and state lies in the ever-increasing pressures to introduce religious instruction and practices into the public schools. Were it not that some, either through misunderstanding or ill will, equate opposition to religion within the public-school system with opposition to religion, we would hardly need state that our position is in no way motivated by hostility to religious instruction. In Jewish history and tradition, religious education has always been regarded a sacred responsibility of the Jewish community. Today, the majority of Jewish children voluntarily attend after-hours and Sunday schools conducted by local Jewish communities, where they receive their religious education wholly independent of the public-school system. We believe that the responsibility for religious education may not and should not be shared with the public-school system and that invocation of the state educational system to assume what is exclusively the responsibility of church, synagogue, and home in the area of religious education constitutes an admission of spiritual insolvency that we are not prepared to make. We believe with Jefferson that "It is error alone which needs the support of government. Truth can stand by itself."

Our public-school system is one of the most important manifestations of the preeminence of American democracy. Because under our Constitution our public schools must be open to all, regardless of race or creed, they serve as the great unifying factor for a country settled by highly diverse elements. Our public schools inculcate in the American children respect for the rights of minorities which is in essence the basic freedom embodied in our Constitution. When the public schools become involved, directly or indirectly, in disagreements among religious groups, divisiveness is the inevitable result. Such divisiveness affects all American children but is particularly harmful to children of the minority faiths.

Recent intensive efforts to involve the public-school system in religious instruction have been justified on the ground that the alleged increase in juvenile delinquency and the alleged lowering of the moral standards of adult Americans have resulted from lack of religious education on the part of many of our children and that this lack can be remedied by imposing upon the public schools the duty of providing religious training for children. It is further claimed that the public schools have been derelict in their duty to inculcate moral values and ethical standards among our children.

We submit that both indictments are unfounded. We do not believe that there is a greater degree of juvenile delinquency among the youth of this generation than there was in previous generations or that the moral standards of America are lower today than they have been in previous times. On the contrary, we believe that the standards of honesty, integrity, and morality are continually being elevated. Nor do we agree that the public schools are inadequately fulfilling their responsibilities in moral and ethical training. Whatever are the failings of the public schools in this respect result, not from lack of religious education but from inadequate teaching personnel, overcrowded schoolrooms, poor physical facilities, and similar deficiencies.

The most direct instance of public-school involvement in the area of religion is the teaching of religion in the schools either by the regular public-school teachers or religious teachers supplied by church groups. This practice the Supreme Court held to be unconstitutional in the McCollum case in 1948. Nevertheless, it is still prevalent in many parts of the country, particularly in the South and in rural areas. Sometimes only the dominant religion, usually Protestantism, but occasionally Catholicism, is alone taught; sometimes there is separate teaching of each faith. Both programs are equally unconstitutional. As the Supreme Court said in the Zorach case, "government may not undertake religious instruction nor blend secular and sectarian instruction."

A second instance of religious intrusion upon the public-school system is found in many released time programs. In 1952 Zorach case the Supreme Court, in a 6 to 3 decision, ruled that it is not unconstitutional for the public schools to release children for a specified part of the time usually devoted to secular instruction so that the children may receive religious instruction under church auspices. The Court held that the plan was constitutional if the public-school system did no more than adjust its schedule to meet the religious needs of the children. The Court made it clear that the program violates the first amendment if the released time classes are held on public school premises, if the school authorities use their influence to induce enrollment in the released time classes or if the school authorities are in any way involved in the operation of the program. It is unfortunately true that in many schools the limitations set down by the Court are disregarded to a greater or lesser degree. There have been, and continue to be, many cases brought to our attention in which children are pressured by their teachers and principals to enroll in the released time class. In many instances, this results in Jewish children attending non-Jewish religious classes because no Jewish religious classes are held under the released time program. It is not necessary to expound upon the unfortunate consequences of a Jewish child who is subjected to religious teaching violative of his faith by reason of the unconstitutional, unlawful conduct of public-school teachers and authorities.

In many communities it is the practice to engage in devotional reading of the Bible in the public school classes or assemblies. In some schools, deference is paid to the feelings of Jewish children and the passages selected for reading are limited to the Old Testament. We do not consider this an acceptable solution of the problem. All devotional Bible reading we deem unconstitutional, whether it be from the Old or New Testament. The first amendment, as interpreted by the Supreme Court, bars public school involvement in any religious practice. The obligation of the Government is to remain neutral not only as among believers but as between believers and nonbelievers as well. Religious teaching even from the Old Testament is outside the rightful competence of the public schools and should be left for the synagogue, the church and the home.

Recently the Gideons International launched a nationwide campaign to distribute copies of the New Testament to the children of the Nation through the public schools. About a year ago, the Supreme Court of New Jersey in a landmark decision which the United States Supreme Court refused to set aside, held that this practice was unconstitutional. Nevertheless, we regret to say that the Gideon Association has not abandoned its program but continues to use the public schools wherever it can to fulfill its missionary aims.

We believe that religious holiday programs that include Christological pageants, hymns and prayers (undertaken by many public schools to celebrate Christmas and Easter) are an infringement upon the religious freedom of non-Christian children. Moreover, we believe that the inclusion of the Jewish holiday Hanukkah in the school program is likewise a violation of the first amendment and we are, therefore, opposed to it as well.

Lately, a campaign has been launched in a number of communities to introduce a program of teaching moral and spiritual values in the public schools. Examination of these programs shows that in most communities the real purpose is to introduce religious teaching under the guise of moral and spiritual values. This, of course, is unconstitutional and its illegality is not in any way lessened by the innocent label attached to it.

Finally, there has also lately been a good deal of discussion and some experiment in introducing a so-called common core of religious teaching. We are opposed to any public school program that seeks to inculcate as doctrine any body of principles, beliefs or concepts represented to be "common" to all of the major religious faiths. Not only does such a program violate the first amendment but it can lead only to a vitiation of all that is spiritually meaningful in every religious faith.

Governmental aid to religion

A second major area of infringement upon the constitutional guaranty of religious freedom and the separation of church and state is the grant of public funds to religious groups or the use of public property for religious purposes. Our opposition to the appropriation of tax-raised funds for the support of religion is based on a number of interrelated reasons that together underlie the principle of separation and freedom. First, such appropriation infringes upon the religious liberties of our citizens, for it is in effect compulsory taxation for religious purposes. It is significant that the Virginia statute of religious freedom, which was the immediate forerunner of the first amendment, grew out of the defeat under the leadership of James Madison of a measure in Virginia to appropriate tax funds for religious education. It is entirely immaterial that only a small fraction of each citizen's total tax payment may be devoted to this purpose. As Madison stated: "The same authority which can force a citizen to contribute 3 pence only of his property for the support of any one establishment may force him to conform to any other establishment in all cases whatsoever."

In the second place, a policy of permitting such appropriations may well open the door for bitter and dangerous controversy among the different religious denominations as to the shares they shall each receive and will inevitably lead to interreligious conflict and divisiveness. Finally, the price that religious groups may be required to pay for government aid may well far outweigh the seeming benefits. Acceptance of tax-raised funds may result in government control over the manner in which the funds are used. It can hardly be expected that the government will not exercise some supervision of the expenditure of its money. The result must necessarily be the loss by religious schools of much of the independence they now enjoy. As the late Mr. Justice Jackson said: "If the state may aid religious schools, it may therefore regulate them. Many groups have sought aid from tax funds only to find that it carried political controls with it."

The major threat to the principle of separation of church and state and religious freedom in the area of use of tax-raised funds for religious purposes arises out of efforts to include church schools in any program of Federal aid to education. Inability to solve this problem has resulted in the tragic fact that for three-quarters of a century every attempt to obtain sorely needed Federal aid for public schools has failed.

In the States, too, there are many instances of tax-raised funds being used to support religious church schools and religious education. In a number of States, the constitutional prohibition has been circumvented by camouflaging a church school as a public school, even though the teachers are members of a particular faith who teach religion during regular school hours and wear clerical garb while they teach. These instances continue to cause a great deal of interreligious friction and bitterness in the communities in which they take place.

Compulsory Sunday laws

The third major area of infringement upon religious liberty lies in the enforcement by the penal codes of most States of the religious obligation to abstain from work or secular business on the Sabbath. Compulsory Sunday laws go back as far as the Roman Empire and were brought over to this country during the colonial period when church and state were united. Even today they are still popularly called blue laws. The original purpose of these statutes was to insure attendance at church services. Gradually the provision requiring church attendance was dropped but the prohibition against engaging in work, trade or amusement on that day was retained.

These laws have been justified on the ground that they are not religious but welfare laws whose purpose it is to insure 1 day rest in 7. If this be so, however, there is no reason why each person may not choose for himself his day of rest.

Enforcement of compulsory Sunday laws against those who observe a day other than Sunday as their holy day of rest is a particularly serious infringement upon religious freedom. By requiring a Jew, Seventh-day Adventist, Seventh-day Baptist or any other American who recognizes Saturday as his holy day of rest to abstain from engaging in his trade or business 2 days a week whereas his Sunday observing competitor is required to abstain only 1 day a week, the State imposes upon him a competitive disadvantage and thus penalizes him for adhering to his religious beliefs.

A number of States have recognized this and have enacted exemptions in favor of those whose religious convictions compel them to abstain from labor and business on a day other than Sunday. We believe that a State that fails to accord such exemption acts unfairly and infringes upon a right guaranteed by the first amendment.

We suggest that it is a mistake to believe that use of the State's police power to enforce Sabbath observants is either necessary or effective. A number of States, including Arizona, California, Oregon, Wisconsin, and Wyoming, have repealed their Sunday laws and there is no reason to believe that voluntary observance in those States is less than enforced observance in other States that still have Sunday laws.

In the 20th century, religious law should be observed voluntarily. We have outgrown the era when the church could look to the coercive arm of the secular government to insure adherence to sectarian tenets. At the very least, compulsory Sunday laws should take into account the religious convictions of those who observe a day other than Sunday as their sacred day of rest.

Zoning restrictions

The fourth major instance of current infringements upon religious liberty arises out of the present-day movement of population to the suburbs and the development of new communities away from the cities. With many Americans moving to established residential communities outside city limits and with the development of new residential communities, comes the necessity of providing new houses of worship and religious schools. In most towns, the community welcomes those houses of worship and religious schools. Occasionally, however, opposition is encountered to their erection. There have been increasing instances in which governing bodies of residential communities have made or amended zoning ordinances so as to bar houses of worship and religious schools.

There is no doubt that in many cases the erection of a communal building such as a church, synagogue, or religious school may impose minor inconveniences upon the surrounding residential neighborhoods. These inconveniences are seized upon as an excuse for barring the buildings. Nevertheless, we deem such exclusionary acts as infringements upon religious liberty. The minor inconveniences are very much exaggerated and, to the extent they exist, they are small enough a price to pay for the free exercise of religion.

Most State courts have taken the position that the purpose of zoning ordinances is to promote the health, safety, morals and general welfare of the community and that excluding a house of worship from a residential district does not, in any way, promote that purpose. They have therefore held unconstitutional such exclusionary ordinances.

In California, Wisconsin, and a few other States, however, a contrary position has been taken. We believe that these States are thus sanctioning infringements upon the rights guaranteed by the first amendment.

Interreligious adoptions

Ever since our States began to enact statues providing for the adoptions of children, the legislatures and the courts assumed that the test in deciding whether an adoption should be approved by the court would be the wishes of the parents and the best interests of the child. Recently, however, there has been increasing pressure to enact laws that would bar a couple of one faith from adopting a child born into another faith, even where the natural parents of the child approved of the adoption and the child's welfare would be promoted thereby. Recently, the Supreme Judicial Court of Massachusetts has interpreted the adoption law of that State to bar interreligious adoptions in practically every case. The courts and the public child welfare agencies of Massachusetts have followed this decision and pressure is mounting to achieve the same result in other States.

It is our position that a State statute or judicial decision that bars interreligious adoptions even where the natural parents consent thereto and the child's welfare would be furthered, constitutes a violation of the first amendment's guarantee of freedom of religion and the separation of church and state. It is our view that under American traditions and constitutional liberties, religion is a matter of election and not of status and therefore no child is born with a religion as far as a secular state is concerned. The religion of a child is that, and only that, which the parents choose for it; it may not be a religion imposed upon the child by the state.

We believe that it is the basic principle of our Constitution that the religious upbringing of a child is the right of the parents and is no concern of the state. Finally, we believe that the state may not constitutionally employ its adoption laws or any other secular agency to prevent or discourage a change in religion. Religious freedom includes freedom to change one's religion, and the mandate of the 1st and 14th amendments that neither Congress nor a State shall make a law respecting an establishment of religion means that a government agency may not establish the religion of a child through the use of its adoption procedures.

We believe the effect of such a ban upon interreligious adoption is religion by compulsion and is antagonistic to the great tradition of the American Constitution and of American religion which is based upon the principle of voluntariness in matters of conscience and belief.

THE REMEDY

We do not believe that the remedy for these infringements is to be found in congressional action. While the infringements are serious, the initial responsibility for their correction lies with the local communities and the State governments. In the event that these do not satisfactorily redress the grievances, the proper remedy is resort to judicial action.

CONCLUSION

While we have spelled out the major areas of infringement upon the rights guaranteed by the religious freedom and separation provision of the first amendment, we wish to emphasize our conviction that basically religious freedom and separation of church and state are secure in the United States. We believe that the American people are committed and will remain committed to the tradition of religious liberty set forth in the first amendment.

Hon. John Phillips of California—Hon. Ezra Taft Benson

EXTENSION OF REMARKS
OF
HON. LEROY JOHNSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 18, 1956

Mr. JOHNSON of California. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD I include two short articles published in the California Farmer, one of the best agricultural papers in California, about my colleague, JOHN PHILLIPS, and also an article in the same publication and in the same issue about Secretary of Agriculture Ezra Taft Benson.

JOHN PHILLIPS came to Congress at the same time I became a Member of the House. He is an able legislator and was especially versed in agricultural problems because he had been a member of the same committee in the California State Senate.

Just what Mr. PHILLIPS will do after he has left Congress no one knows, perhaps not even himself. But whatever it may be I am sure that he will be engaged in some useful work, perhaps writing.

I am a great admirer of Mr. Benson. He knows what he is doing and I predict that he will outlast all his detractors. He is dedicated to the job of developing a sensible and reasonable agricultural support program and I am positive that he will accomplish his purpose. Intelligence, courage and determination can conquer almost any obstacles and since he has all these attributes I feel certain that he will bring the present agricultural situation out of chaos.

The articles referred to follows:

JOHN PHILLIPS TO RETIRE

Representative JOHN PHILLIPS of the 29th district, representing Riverside and Imperial Counties, has decided not to run again. He retires after 24 years of public life.

We have always had great respect for JOHN PHILLIPS. A handsome, composed man with a good head on his shoulders. He has represented the farmer well and with understanding.

JOHN PHILLIPS writes a newsletter home, periodically, that is in our estimation some of the best writing coming out of Washington, and that includes all the syndicated columnists. Someone should induce JOHN to stay on in Washington as a columnist.

We were impressed with the way PHILLIPS announced his intention of withdrawing. He said that he did not intend to run again next year. That he had no picked candidate and did not intend to take part in the primary campaign of 1956.

Furthermore, he offered to sit down with anybody during the next 13 months who thought he might want to run for the job, and try to outline to him just what the job of being a Representative in the Congress of the United States entailed.

Also, JOHN is going to try in the remaining newsletters he sends home to define that job in some detail. We just hope the next person does as good a job as JOHN PHILLIPS has done.

THE JOB WHERE YOU CAN'T WIN

We see by the papers that a California public relations firm has been retained by the Republican Party to help humanize Secretary Benson. We suppose that all facets of the political diamond are being polished but it is painfully evident that no longer can a man stand on his record.

Our mail tells us that not all farmers in this State are happy with the record of Mr. Benson, but we also know the same would have been true if Davy Crockett had been Secretary of Agriculture during the term of this administration.

It is also evident that a man cannot go to Washington and do the job without mixing in a generous amount of politicking, but imagine the necessity of hiring a firm to make someone like you better.

We have met Benson and found him a charming personality. Evidently he is of the old school that thinks if you devote all your time to the job and do the best you are capable of, you have fulfilled your commitment. Sad to say, that is no longer the case in Washington. You have to waste a great deal of time in the social whirl and spend a great deal of time shaking hands, being seen with the right people, and placating the thin-skinned.

In our humble opinion, agriculture got into her present mess through a bipartisan vote-in of Socialist experimental legislation. The aim to stimulate production worked wonderfully well. The money stimulus combined with an unprecedented era of mechanization, fertilizer advancements, chemical miracles for control of pests and diseases and plant breeding, with the result that double jackpots were hit for years in succession.

Meantime the socialistic experiments had obliterated the true market place and practically repealed the law of supply and demand for some of our basic crops. This encouraged foreign competition. We were afraid of offending anyone in the world market, and agriculture lagged behind the rest of the economy with a depressing inventory of surplus goods. The socialistic tinkering threw out of gear the natural agricultural cycles. After offering the political candy of subsidies, politicians of both parties were afraid to withdraw the sweet bait for fear of losing votes.

People write us and blame Benson for their troubles. It's nice to have a whipping boy but in our estimation the Secretary is being accorded extraordinary powers when you blame your entire plight on him alone.

It will take the President, Secretary of Agriculture, Secretary of State, and Congress in concert to solve this farm problem or even to influence the economic status of the farmer to any marked degree. It is evident that both parties are a little bankrupt of ideas on how to meet the farm problem. Note that the Secretary has sent out an appeal to all citizens to submit ideas on the problem.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Printing and binding for Congress, when recommended to be done by the Committee on Printing of either House, shall be so recommended in a report containing an approximate estimate of the cost thereof, together with a statement from the Public Printer of estimated approximate cost of work previously ordered by Congress within the fiscal year (U. S. Code, title 44, sec. 145, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on Printing, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

DISTRIBUTION OF THE CONGRESSIONAL RECORD

To the Vice President and each Senator 100 copies; to the Secretary and Sergeant at Arms of the Senate, each, 25 copies; to the Secretary, for official use, not to exceed 35 copies; to the Sergeant at Arms, for use on the floor of the Senate, not to exceed 50 copies; to each Representative, Delegate, and Resident Commissioner in Congress, 68 copies; to the Clerk, Sergeant at Arms, and Doorkeeper of the House of Representatives, each, 25 copies; to the Clerk, for official use, not to exceed 50 copies; and to the Doorkeeper, for use on the floor of the House of Representatives, not to exceed 75 copies; to the Vice President and each Senator, Representative, Delegate, and Resident Commissioner in Congress there shall also be furnished (and shall not be transferable), 3 copies of the daily RECORD, of which 1 shall be delivered at his residence, 1 at his office, and 1 at the Capitol.

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. The money derived from such sales shall be paid into the Treasury and accounted for in his annual report to Congress, and no sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

PRINTING DOCUMENTS AND REPORTS

Documents and reports of committees with the evidence and papers submitted therewith, or any part thereof ordered printed by Congress, may be reprinted by the Public Printer on order of any Member of Congress or Delegate, on prepayment of the cost thereof (U. S. Code, title 44, sec. 162, p. 1940).

Problems of Agriculture

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, January 19, 1956

Mr. NEUBERGER. Mr. President, in the past 3 months I have had a tremendous increase in my mail from farmers. I have been very much impressed with these letters. These letters are constructive in their approach to the farm problem, Mr. President. I would say there is a complete absence of any scolding tone in them—a remarkable fact considering the grave economic position facing them, which many of them graphically describe. I do not mean they are not critical of the Eisenhower farm program. Many of them voice complete disillusionment with the program Mr. Benson has to administer. In nearly every letter, Mr. President, there is an indication that the American farmer is thinking his way through this problem. I believe that there is a wealth of suggestions offered by our men on the land from which can come a program to meet the present emergency, provide a long-range plan, and remove from the citizens of this country any fear that they will ever face a shortage of food and fiber. A splendid example of the kind of letter I am talking about was recently received from Gilbert Courtright, of Union County, Oreg. Mr. Courtright is a hard-working farmer who thinks constructively. The letter he addressed to me was also sent to the editor of the LaGrande Evening Observer, who reproduced it on his editorial page.

Mr. President, I ask unanimous consent to have printed in the RECORD the letter which Mr. Courtright sent to me.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

(By Gilbert Courtright)

If diversion of wheat, corn and cotton land to pasture should threaten an overproduction of beef, this Nation could abandon the age-old policy of bankrupting those who feed beef in order to reduce a surplus. This Nation could reduce a beef surplus, or a threatened surplus, by legislation converting the canner and cutter grades into dog food, cat food, fertilizer or fish food. These animals are so old or so sick that that grade should never have been used for human food.

Our Nation is wealthy enough that our people should have the best meats rather than the poorest.

We need a large national agricultural productive capacity in case of war.

During peacetime a part of that capacity should be directed to—

1. Increasing the quality of the Nation's food by fertilization and scientific feeding so that our children can have better physiques, finer minds, a high protein diet for adults to prevent a burden of fat and its load on the heart.

2. Direct some of the use of land in timbered areas, such as the northern Pacific, northern Idaho, Atlantic, and Gulf States, back into timber for the timber products and organics that our industries will surely need for our expanding population.

3. Another part of our agricultural capacity could be converted from corn and cotton acreage to pasture. These cultivated pastures could be used in place of the woods pastures in the hardwood areas. A very large part of the hardwood is being browsed by cattle. Succulent young trees have their heads bitten off, are killed or converted into brush. Areas protected from browsing have beautiful stands of trees that will be useful and profitable for industry in another generation.

4. A part of our peacetime wheatgrowing capacity could be converted to pasture which would attract livestock from the depleted western ranges. For instance, last summer (1955) there were thousands of head of sheep pasturing on sweetclover diverted from wheat in the Palouse country of eastern Washington.

5. We could divert more land to hay. We could abandon the lack of method, the lack of planning called "supply and demand," which could be more accurately called "waste and starvation." In our hay production, for instance, 2 years ago there was an emergency hay shortage in the Midwest. All the Nation's safety supply of hay was shipped to that area. This year the Pacific Northwest expects a long winter, there was serious erosion of the cattleman's resources for high-priced feed, erosion of meat from the cattle's bones, erosion of meat from the public's dinner table, and erosion of soil from the hills.

This is serious. It is unnecessary.

It is improvident.

It is not necessary for hay to rot in the stack some years and for cattle to go hungry other years. This is the kind of improvidence that has kept nations and soils poor as far as history goes.

A nation as wealthy as ours should be able to afford a year's supply of hay in dry storage to insure an adequate and continuing supply of fine meats, to insure that the soils of its range lands would not be eroded by too early grazing.

Loans could be made to producers for hay storage as loans are made for grain storage.

Support purchases of surpluses could be made the second year after production to encourage first-year direct sales.

Safety supplies could be used to prevent damage to the range.

All these diversion proposals would improve the Nation economy and make its food producing plant more efficient.

These proposals also benefit all the people by improving all the watersheds of the Nation. These improvements to the watersheds are important because watersheds provide water for cities so that people can have water for drinking, bathing, washing, for lawns, flowers, gardens and trees, for swimming, fishing, and fire protection.

Watersheds provide the surface and underground water that industry uses in such enormous quantities for processing materials like paper, steel, and foods.

Let us plan and control our agricultural production and economy as modern industrial associations plan and control their production and economy.

I realize that congressional legislation would be necessary providing for compulsory livestock inspection to channel animals cut off from human consumption to separate slaughtering plants for feed rather than food uses.

Eisenhower's Problems—An Appraisal of Ordeal Confronting Him on Dulles and Ridgway Disputes

EXTENSION OF REMARKS
OF
HON. LESTER HOLTZMAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 19, 1956

Mr. HOLTZMAN. Mr. Speaker, a very interesting article appeared in the New York Times today under the byline of that fine reporter, James Reston. I most respectfully urge the Members to read and digest it carefully.

The article follows:

EISENHOWER'S PROBLEMS—AN APPRAISAL OF ORDEAL CONFRONTING HIM ON DULLES AND RIDGWAY DISPUTES

(By James Reston)

WASHINGTON, January 18.—One of the misfortunes of the big Dulles-Ridgway magazine controversy is that a convalescent President Eisenhower is now left to deal in his news conference tomorrow with some of the most emotional issues of his entire administration.

Despite all that has been said and written about Secretary of State John Foster Dulles' interview in Life magazine, and Gen. Matthew B. Ridgway's article in the Saturday Evening Post, the fundamental questions have not yet been answered.

These questions have very little to do with Mr. Dulles' theories about the "art" of walking on the "brink" of war. They have to do with policy "decisions" of the most serious nature, with the fundamental relationships between a President and the Nation, between a President and his Secretary of State, between a President and the Joint Chiefs of Staff and between the United States and its Allies.

These questions are as follows:

Did the President "decide" on the tactical use of atomic bombs against Communist bases in Manchuria in the event that hostilities should break out after the truce talks in Korea?

Did Mr. Dulles recommend and the President concur in a similar decision to bomb the Chinese Communist staging bases in south China if the Peiping regime rejected a compromise settlement in Indochina and invaded that country?

If decisions were taken on these points, were they passed on to the Allies whose security would be affected by the outbreak of an atomic war?

Did General Ridgway, former Army Chief of Staff, dissent from the defense recommendations sent to Congress in January 1954, as he asserts in the Saturday Evening Post article, or was the President correct in saying, as he did in his 1954 state of the Union message, that the defense program was "unanimously recommended by the Joint Chiefs of Staff [which included General Ridgway]?"

QUESTIONS BOMBARD CAPITAL

The question is not whether the President and his advisers considered the possibility of having to bomb Manchuria and south China if the Korean and Indochina wars flared up. It is general knowledge, and has been for a long time, that such consideration was given to these and many other alternative policies.

The question is whether decisions were taken, as the Life magazine article says. This is the question that is being asked, not only or even mainly by reporters, but by the Governments and Ambassadors of all the major Allies.

This capital has been bombarded by questions from many of the leading foreign offices of the world to their ambassadors wanting to know whether the leader of the free world coalition actually decided, in certain circumstances, to wage an atomic war, without letting them know such a decision was taken.

It is only fair to say that this reporter has not been able to find a single allied Ambassador in Washington who knows of any such decision, or who believes any such decision was in fact taken.

Nevertheless, they have to face the facts. The Life article was not written from memory or on the basis of a casual conversation. It was written from a verbatim account of what Mr. Dulles said either to James Shepley, the author of the article, or Jack Beall, another Time-Life reporter, who was apparently in on the gathering of the information.

CRUEL COINCIDENCE NOTED

It is a cruel coincidence that the Dulles and Ridgway articles should have appeared just as President Eisenhower had scheduled his first Washington news conference since last August 4.

The President is confronted by a difficult dilemma. If he repudiates statements made on the basis of a tape recording of his own Secretary of State's remarks, he gives added ammunition to the Democrats, whose leading presidential candidate, Adlai E. Stevenson, has been calling on him to repudiate or dismiss Mr. Dulles.

If he does not clear up the decisions question, however, the most serious point of doubt will remain, both here and abroad, that maybe the President did decide on a course of limited atomic war under certain circumstances without informing the American people, the congressional leaders or the Allies.

Moreover, General Ridgway has either directly challenged the President's facts or his veracity on a question involving the defense of the Nation, and President Eisenhower is bound to be asked about this tomorrow in the most crowded and sensitive news conference in months.

Finally, there is the question of the President's health, which everybody concerned will have to be most careful to take into account.

These are great questions, involving the integrity of the administration, and its approach to the problem of atomic war, but they are also emotional issues that no physician would like to see thrown at a heart patient in a public forum.

Mr. Speaker, of course, if the answers to the questions propounded by Mr. Reston are in the affirmative, and were concealed from the Congress and our allies, a rather grave situation is presented.

On the other hand, if these decisions were not made, what considerations motivated the Secretary of State to make such statements in the first instance.

In either event, is this the way to support and strengthen a bipartisan foreign policy about which Mr. Dulles was so deeply concerned a short while ago?

Hon. Wesley A. D'Ewart

EXTENSION OF REMARKS
OF
HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 18, 1956

Mr. BERRY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a letter from Frank Ducheneaux, chairman of the Cheyenne River Sioux Tribal Council, Cheyenne Agency, South Dakota; an editorial from the Spokesman-Review, Spokane, Wash., under date of November 13, 1955; an editorial from the Miles City Daily Star, Miles City, Mont., under date of December 11, 1955; an article appearing in the Park County News, Livingston, Mont., under date of December 1, 1955; and a resolution adopted by the California Hydraulic Mining Association regarding the appointment of Wesley A. D'Ewart as Assistant Secretary of the Interior:

CHEYENNE RIVER
SIOUX TRIBAL COUNCIL,
Cheyenne Agency, S. Dak.,
November 25, 1955.

Hon. E. Y. BERRY,
Member of Congress,
Rapid City, S. Dak.

DEAR MR. BERRY: Recently there have come to my desk copies of resolutions and memorandums from the NCAI and from one of the Sioux Tribes in South Dakota protesting the appointment of Mr. Wesley A. D'Ewart as Assistant Secretary of the Interior.

This opposition to the appointment of Mr. D'Ewart is a little difficult to understand in view of his long record of fairness and justice in dealing with the Indian tribes. Certainly this tribe has no objection to his appointment. In fact, we have rather been complimenting ourselves on this particular appointment. Mr. D'Ewart has been helpful and cooperative in all our dealings with him and we see no reason why he should not continue to be equally helpful and cooperative in this new capacity, not only to us but to all Indian tribes.

Personally, I feel that much of this opposition comes from chronic objectors who would not be satisfied with any appointment that might be made and that it is hardly worthy of note.

At any rate, we are well satisfied with the appointment of Mr. D'Ewart and are looking forward to continued cooperation with him for the good of all concerned.

With best personal regards, I remain

Sincerely,

FRANK DUCHENEAUX,
Chairman.

[From the Spokesman-Review of November 13, 1955]

D'EWART IS AN ABLE AND QUALIFIED MAN

Former Congressman Wesley A. D'Ewart of Montana has been the subject of some ruthless and falsely founded abuse since he was nominated by President Eisenhower to be Assistant Secretary of the Interior.

Mr. D'Ewart was recommended by Secretary Douglas McKay because of the Montanan's intimate knowledge of western resources matters, his personal integrity and his keen sense of public responsibility.

Yet some of the same people who have been trying to force Mr. McKay out of the President's Cabinet on wild and belittling charges have now turned their guns on Mr. D'Ewart because his appointment will be up for Senate confirmation in January.

The head of the Senate committee which passes upon the nomination is JAMES E. MURRAY, of Montana, who was reelected last year over Mr. D'Ewart by a margin of less than 2,000 votes out of 227,000 cast. Democrat MURRAY is personally bitter toward Republican D'Ewart because of that race and has declared he will fight the appointment. His political influence in a Democratic-controlled Senate must not be discounted.

Yet it is time for the friends of an able and honest appointee and the friends of a sincere and honest administration to make clear to other Members of the Senate what kind of man Mr. D'Ewart is.

The attacks against him have come from a vocal minority who object to the fact that he introduced, by request of some constituents, a bill dealing with cattle-grazing privileges on public lands. The bill was never brought to a vote in Congress but the D'Ewart name was tagged to it, even though he helped to bury it in the Public Lands Committee back in 1953.

Mr. D'Ewart has a long record of conscientious service to the cause of western conservation and development, the fields in which he would help to administer Interior Department affairs. There has been no evidence whatever that he is anything but competent, honest and fair. He is the type of enlightened public servant who is continually needed in the Federal Government. He ought to have the backing of everyone except a handful of vindictive figures who seem determined to discredit administration policies and personnel.

[From the Miles City Daily Star of December 11, 1955]

IN DEFENSE OF WES D'EWART

Secretary of the Interior Douglas Mackay is sincere in his belief that Montana's Wesley D'Ewart is the right man for the post of Assistant Secretary of the Interior. His own reasons are explained in a letter to the recording secretary of the International Association of Machinists in Great Falls. The letter, in part, states as follows:

I am aware that some grossly unfair criticism of Mr. D'Ewart was stirred up after his appointment, but I feel that a calm review of the facts will disclose the partisan, political nature of that criticism. In this critical editorial comment, Mr. D'Ewart has been referred to primarily as the man who introduced the controversial uniform grazing bill in the 83d Congress.

As so often happens when bills are introduced by request by chairmen of committees, Mr. D'Ewart did not write it. He did not approve all of the bill's contents and did not expect it to be enacted without its being improved and corrected by amendment. He did exactly what chairmen of committees often do. He introduced, by request, for study, a proposal to provide a greater degree of uniformity in the management of our public lands. As chairman of the committee, Mr. D'Ewart held hearings on the bill for a period of over 2 weeks. He was complimented by all concerned for the fairness of his conduct and for his effort to give everyone who expressed a desire to do so a chance to testify. The hearings showed that there was much misunderstanding regarding the substance of the bill; that there were objectionable features in the language; and that it was not possible at that time to consider the problems of the Forest Service in conjunction with those of other principal land management agencies.

Having in mind the considerations brought forth in the testimony, Mr. D'Ewart did not press for action on this bill and it was discarded. It had, however, performed a useful purpose in that the discussion at the hearings formed the basis for a new bill dealing with the Forest Service alone.

To damn a man forever because of the nature of an initial draft bill, introduced by request, seems to me to be quite unreasonable. There is no doubt in my mind that this particular matter was distorted entirely out of proportion by reason of the fact that Mr. D'Ewart was involved in a political campaign in 1954.

The furor over the grazing bill should not obscure Mr. D'Ewart's positive and constructive contributions to conservation. For example, in the 83d Congress alone he introduced, and the Congress enacted nine bills to protect, enlarge, and improve the management of the national parks. Despite his advocacy of reduced spending in almost every Federal activity, Mr. D'Ewart testified, debated, and voted in favor of increased appropriations for the National Park Service and the Forest Service in every session of Congress during his term of office.

One of the most important conservation measures enacted into law in recent years was Public Law 167. This law corrects the widespread abuses of the mining laws, particularly in the national forests. While in Congress, Mr. D'Ewart introduced and held hearings on a bill intended to end these abuses of the mining laws. Although his bill was not enacted, the attention it brought and the information brought forth in its consideration was beneficial and led to the introduction of a bill similar in form and intent which became law in the 84th Congress. As Special Assistant to the Secretary of Agriculture, Mr. D'Ewart also contributed importantly to the enactment of this legislation.

Mr. D'Ewart is one of the best informed men in the Nation on Indian affairs. He was one of those who were instrumental in the development of the Navaho-Hopi rehabilitation program, and has contributed to the enactment of other progressive measures in this field.

During his term in office, Mr. D'Ewart sponsored a number of measures, which Congress enacted, to improve public management in the Department of the Interior. You may be familiar with the amendment to the Recreation Act, which permits the lease for a long term or the sale or donation of areas of the public domain having recreational value to nonprofit organizations, such as the Boy Scouts.

Mr. D'Ewart has always had a vital interest in reclamation. He was the first president of the Montana Reclamation Association and was one of the guiding hands in establishing Montana's water conservation program. I think this program is admitted to be one of the finest small water project programs in the country. While favoring other features of the upper Colorado project, Mr. D'Ewart, as a Congressman, registered his opposition to the Echo Park Dam.

I invite your particular attention to the quoted statement of Mr. Carl D. Shoemaker of the National Wildlife Federation, in which he told news reporters: "Secretary D'Ewart's forthright statements regarding the different areas discussed and Department policy were most encouraging to the representatives of the national conservation groups. The whole group left with a completely better understanding of the Department's viewpoint and policy than it ever had before."

And Mr. Shoemaker added: "I certainly feel most encouraged and very happy over the views expressed by Secretary D'Ewart, who long has been a champion of the National Park Service and wildlife interests."

When Mr. D'Ewart's whole record of public service is reviewed, the conclusion is inescapable that his appointment was in the interest of good government. I firmly believe that his vast knowledge of our land, water, and wildlife resources, his outstanding record in Congress, and his sympathetic understanding of the human values involved in administering the Indian, public lands, territories, fish and wildlife, and park affairs of the Department of the Interior now under his jurisdiction, eminently qualify Mr. D'Ewart to serve as Assistant Secretary for Public Land Management. I have no doubt that Members of the House and Senate, of both parties, who are personally acquainted with Mr. D'Ewart and his outstanding record, are agreed that he is eminently qualified to serve in the position to which the President has appointed him.

[From the Park County News, Livingston, Mont., of December 1, 1955]

McKay Lauds D'Ewart Record in Letter to Montana Union

Secretary of Interior Douglas McKay, in a letter to Edgar R. Linn, recording secretary of Great Falls Lodge, No. 1046, of the International Association of Machinists, on November 17 declared "When Mr. D'Ewart's whole record of public service is reviewed, the conclusion is inescapable that his appointment was in the interest of good government" and "he is eminently qualified." Full text of the letter follows:

"My Dear Mr. Linn: Your recent letter to the President expressing your disapproval of the appointment of Mr. Wesley A. D'Ewart for the post of Assistant Secretary—Public Land Management, Department of the Interior, has been referred to me for reply. I appreciate the opportunity it affords me to comment on the qualifications of Mr. D'Ewart for the post to which he was recently appointed by President Eisenhower.

"I am aware that some grossly unfair editorial criticism of Mr. D'Ewart was stirred up after his appointment, but I feel that a calm review of the facts will disclose the partisan, political nature of that criticism. In this critical editorial comment, Mr. D'Ewart has been referred to primarily as the man who introduced the controversial uniform grazing bill in the 83d Congress.

"As so often happens when bills are introduced by request by chairmen of committees, Mr. D'Ewart did not write it. He did not approve all of the bill's contents and did not expect it to be enacted without its being improved and corrected by amendment. He did exactly what chairmen of committees often do. He introduced, by request, for study, a proposal to provide a greater degree of uniformity in the management of our public lands. As chairman of the committee, Mr. D'Ewart held hearings on the bill for a period of over 2 weeks. He was complimented by all concerned for the fairness of his conduct and for his effort to give everyone who expressed a desire to do so a chance to testify. The hearings showed that there was much misunderstanding regarding the substance of the bill; that there were objectionable features in the language; and that it was not possible at that time to consider the problems of the Forest Service in conjunction with those of other principal land management agencies.

"Having in mind the considerations brought forth in the testimony, Mr. D'Ewart did not press for action on this bill, and it was discarded. It had, however, performed a useful purpose in that the discussion at the hearings formed the basis for a new bill dealing with the Forest Service alone. Inasmuch as the activities of the Forest Service are within the province of the Agriculture Committee, Mr. D'Ewart was not the sponsor of the new bill. Instead it was introduced by the House and Senate Agriculture Committee chairmen, and was known as the Hope-Aiken bill. Its enactment was supported by the Forest Service and by many conservation groups.

"To damn a man forever because of the nature of an initial draft bill, introduced by request, seems to me to be quite unreasonable. There is no doubt in my mind that this particular matter was distorted entirely out of proportion by reason of the fact that Mr. D'Ewart was involved in a political campaign in 1954.

"The furor over the grazing bill should not obscure Mr. D'Ewart's positive and constructive contributions to conservation. For example, in the 83d Congress alone he introduced, and the Congress enacted, 9 bills to protect, enlarge, and improve the management of the national parks. Despite his advocacy of reduced spending in almost every Federal activity, Mr. D'Ewart testified, debated, and voted in favor of increased appropriations for the National Park Service and the Forest Service in every session of Congress during his term of office. In 1954, when the Atomic Energy Act Amendments were about to be passed it was Mr. D'Ewart who rushed through a last-minute amendment to protect the national parks from uranium prospecting. It was a D'Ewart bill which, by authorizing the National Park Service to obtain by exchange some 10,000 acres of State-owned land inside the boundaries of Glacier National Park, will enable the National Park Service to preserve the integrity of the park. For this action he received the thanks of all the major wildlife and conservation groups, as well as the Department of the Interior itself.

"To consider still another aspect of conservation, Mr. D'Ewart has been a stalwart proponent of the wildlife refuge system. During the last session in which Mr. D'Ewart was a Member of Congress he introduced what many conservationists regard as an outstanding bill to facilitate the management of our wildlife refuges. The bill provided also for an increase in the number of refuges by establishing a new Division of Duck Stamp Fees, which would provide funds for administration of the areas. The bill he first introduced was the basis for legislation pending in the present Congress.

"One of the most important conservation measures enacted into law in recent years was Public Law 167. This law corrects the widespread abuses of the mining laws, particularly in the national forests. While in Congress, Mr. D'Ewart introduced and held hearings on a bill intended to end these abuses of the mining laws. Although his bill was not enacted, the attention it brought and the information brought forth in its consideration was beneficial and led to the introduction of a bill similar in form and intent which became law in the 84th Congress. As special assistant to the Secretary of Agriculture, Mr. D'Ewart also contributed importantly to the enactment of this legislation.

"While a Congressman, Mr. D'Ewart was a member of the National Forest Reservation Commission, which has the important duty of blocking out national forest holdings by purchase of private lands lying within or adjacent to them. He gave much time to this program and was instrumental in obtaining expanded appropriations for it.

"Mr. D'Ewart is one of the best informed men in the Nation on Indian affairs. He was one of those who were instrumental in the development of the Navaho-Hopi rehabilitation program, and has contributed to the enactment of other progressive measures in this field. While striving to safeguard the interests of those Indians desiring to remain on reservations, he has at the same time supported programs designed to provide increasing opportunities for those Indians who want to separate themselves from any special relationships with the Federal Government.

"During his term in office, Mr. D'Ewart sponsored a number of measures, which Congress enacted, to improve public land management in the Department of the Interior. You may be familiar with the amendment to the Recreation Act, which permits the lease

for a long term or the sale or donation of areas of the public domain having recreational value to nonprofit organizations, such as the Boy Scouts.

"The Absarokee Conservation Committee, of which Mr. D'Ewart was a principal organizer and long-time chairman, deserves to be mentioned. It was formed to provide a meeting place for Federal park, forest, and wildlife officers; their opposite members in the State government; and the sportsmen, rangers, and farmers of the upper Yellowstone Park area. Meeting 2 or 3 times yearly, this committee has managed to settle and solve amicably and constructively most of the conservation problems that have arisen in the northern Yellowstone Park area. I think it represents an outstanding group achievement.

"Mr. D'Ewart has always had a vital interest in reclamation. He was the first president of the Montana Reclamation Association and was one of the guiding hands in establishing Montana's water-conservation program. I think this program is admitted to be one of the finest small water-project programs in the country. While favoring other features of the upper Colorado project, Mr. D'Ewart, as a Congressman, registered his opposition to the Echo Park Dam.

"I know that Mr. D'Ewart's personal relationships with the entire Department of the Interior, both as a rancher and as a Congressman, have always been excellent. I understand that his own ranch is a model of good conservation practice. Before he ranched, he was a Forest Service ranger.

"In evaluating his appointment as Assistant Secretary of this Department, I would like you to consider an Associated Press dispatch which was filed from Washington recently after Assistant Secretary D'Ewart reviewed departmental resource conservation policies with 17 outsanding conservationists.

"A copy of that dispatch is enclosed, and I invite your particular attention to the quoted statement of Mr. Carl D. Shoemaker of the National Wildlife Federation, in which he told news reporters: 'Secretary D'Ewart's forthright statements regarding the different areas discussed and Department policy were most encouraging to the representatives of the national conservation group. The whole group left with a completely better understanding of the Department's viewpoint and policy than it ever had before.'

"And Mr. Shoemaker added: 'I certainly feel most encouraged and very happy over the views expressed by Secretary D'Ewart, who long has been a champion of the National Park Service and wildlife interests.'

"When Mr. D'Ewart's whole record of public service is reviewed, the conclusion is inescapable that his appointment was in the interest of good government. I firmly believe that his vast knowledge of our land, water, and wildlife resources, his outstanding record in Congress, and his sympathetic understanding of the human values involved in administering the Indian, public lands, Territories, fish and wildlife, and park affairs of the Department of the Interior now under his jurisdiction, eminently qualify Mr. D'Ewart to serve as Assistant Secretary for Public Land Management, I have no doubt that Members of the House and Senate, of both parties, who are personally acquainted with Mr. D'Ewart and his outstanding record, are agreed that he is eminently qualified to serve in the position to which the President has appointed him.

"May I again express my appreciation for this opportunity to acquaint you with some facts about Mr. D'Ewart which, unfortunately, have not received the wide public circulation I feel they deserve.

"Sincerely yours,

"DOUGLAS MCKAY,
"Secretary of the Interior."

"RESOLUTION OF THE CALIFORNIA HYDRAULIC MINING ASSOCIATION

"Whereas the Honorable Wesley A. D'Ewart is known to be an honest, capable, and loyal American; and

"Whereas the Honorable Wesley A. D'Ewart is known to be a capable administrator with long experience in the administration of public affairs; and

"Whereas the Honorable Wesley A. D'Ewart is known to have a great understanding of the public lands of the United States and a great interest therein; and

"Whereas the Honorable Dwight D. Eisenhower, President of the United States, is aware of these considerations and has appointed the Honorable Wesley A. D'Ewart to the position of trust as Assistant Secretary of the Interior for Land Management: Now, therefore, be it

"Resolved, That the California Hydraulic Mining Association agrees that the Honorable Wesley A. D'Ewart will be a competent man for the administration of the public lands of the United States; and further

"Resolved, That the California Hydraulic Mining Association favors the prompt confirmation of the Honorable Wesley A. D'Ewart as Assistant Secretary of the Interior for Land Management by the Members of the United States Senate.

"E. A. BAILEY,
"President.

"FLOYD T. WILMOTH,
"Secretary."

Passed by the unanimous vote of the members of the California Hydraulic Mining Association at the 229th regular monthly meeting of the association held at Grass Valley, Calif., on Sunday, October 30, 1955, and ordered to be distribtued to the members of the Committee on Interior and Insular Affairs of the United States Senate, other United States Senators, other mining associations, and the public press.

FLOYD T. WILMOTH,
Secretary.

Man Behind the President

EXTENSION OF REMARKS
OF
HON. LAURENCE CURTIS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 19, 1956

Mr. CURTIS of Massachusetts. Mr. Speaker, under leave to extend my remarks, I wish to insert an editorial from the Boston Post of January 14, 1956, regarding a proposal of a new method of selecting the Vice President of the United States. The proposal has been put forth by Mr. Irving Edinger, of Brighton, in the district which I represent. I am sure it will be of interest to Members. The editorial follows:

MAN BEHIND THE PRESIDENT

There are numerous yarns about the casual and often irresponsible ways that vice presidential candidates are chosen, but all too often it is a last minute choice—a poultice to soothe a wounded political ego, rather than a considered choice of a man who might at any instant become President of the United States.

Numerous plans are talked about for ending this shocking weakness in our electoral system, but any plan finally adopted will have to be by an amendment to the Constitution. A Boston man named Irving Edinger has one plan of this kind to have delegates at the convention nominate a slate of 3 or 4 vice presidential candidates for their party and have the office go to the man who gets the most votes in the slate of the party winning the Presidency.

This, of course, is only one of the numerous plans. At a time when the succession to the Presidency has become an important issue, the matter of revising the method of choosing a Vice President and determining when the President cannot carry on his duties, makes consideration of this vital subject important.

Even the most generally approved scheme to have the Supreme Court determine the President's fitness to continue in office does not solve the problem of choosing a man of high caliber for Vice President. That is a reformation long overdue.

The Second Hoover Commission Abandons Reform for Revolution

EXTENSION OF REMARKS
OF
HON. LESTER HOLTZMAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 19, 1956

Mr. HOLTZMAN. Mr. Speaker, much has been said about the Hoover Commission, but the following article evoked a storm of comments from the press and from Mr. Hoover himself. I recommend the article as required reading. It appears in the September 1955 issue of the Democratic Digest.

THE SECOND HOOVER COMMISSION ABANDONS REFORM FOR REVOLUTION

Surveying the first group of recommendations put forward by former President Hoover's new commission on overhauling the Federal Government, columnist Doris Fleeson commented: "The new Hoover Commission reports are the counter-revolution to the New Deal."

As one Hoover report after another was unveiled the truth of Miss Fleeson's comment became increasingly plain. The Commission has recommended doing away with the REA program as now constituted; virtually wiping out the present system of direct and insured loans to individuals and businesses; radically altering the parcel post system; and closing up the Army post exchanges.

But the most conclusive evidence of the Commission's desire to turn the clock back was contained in the final Hoover report, whose proposals for drastic increases in Federal power rates would undo most of the benefits of the great Federal power program of the past 20 years. Veteran Washington correspondents spotted in this Hoover report words almost identical to those used by Mr. Hoover in 1931, when he vetoed the forerunner of the act creating the Tennessee Valley Authority.

This led the Arkansas Gazette to comment that the 18 separate Hoover reports "indicated pretty clearly that Chairman Herbert Hoover hasn't changed his mind on any of the basic problems of Government since he left the Presidency a depression and a war ago."

The radical nature of the change proposed by the Hover Commission is beginning to seep into the public consciousness, and lines of opposition are rapidly being drawn. But columnist Fleeson has pointed up a danger "as the new fight shapes up:" the public may be confused by thinking of this

new Hoover Commission as merely a continuation of the first Hoover Commission established by President Truman in 1947. That commission was scrupulously bipartisan in nature, and confined its efforts to streamlining existing Government functions, instead of trying to decide which functions should be continued and which abolished.

But, as many commentators are beginning to point out, the new Hoover Commission, recommended by President Eisenhower and authorized by the Republican 83d Congress in 1953, is a horse of quite a different color. The St. Louis Post-Dispatch has pointed up one major difference: "The makeup of the first Hoover Commission was bipartisan. It consisted of 6 Republicans and 6 Democrats. The makeup of the second Hoover Commission is predominantly Republican. There are 5 Democrats and 7 Republicans."

This is no accident. The GOP Congress made its intent perfectly clear when it pointedly struck from the authorizing law a requirement that the new Commission be bipartisan.

But President Eisenhower must also bear a major responsibility, since it was his decision to fill his 4 posts on the Commission with 3 Republicans and only 1 Democrat, thus giving the GOP a 7 to 5 majority. Moreover, had the Republicans wished to continue the bipartisan tone of the first Commission, they might have followed Mr. Truman's lead and chosen, as Chairman of the new Commission, a prominent member of the opposition party—perhaps Mr. Truman himself. Instead, they placed Mr. Hoover at the head of the new Commission.

A second—and crucial—difference between this new Hoover Commission and its predecessor lies in the broadened scope of its authority. The first Commission confined its activities to an attempt to streamline existing Government functions. As Chairman Hoover then described it, "it is not our function to say whether (a given Federal program) should exist or not, but it is our function to see if we cannot make it work better."

The new Commission is under no such restrictions. On the contrary, its Republican sponsors deliberately wrote the authorizing law so as—in the words of one cosponsor, former Senator Ferguson, of Michigan—to "make certain" that the Commission would be empowered to ask whether "the Government should be performing this activity or service, and if so, to what extent." Senator Ferguson knew precisely what he was after. "This will give us an opportunity at last," he said, "to reverse the trend of the last 20 years * * *."

Chairman Hoover was equally aware of the opportunity his new mandate offered. "Last time," he told the National Press Club, "we had a limited authority * * *. This time we have some teeth."

Mr. Hoover lost little time in placing himself squarely and exclusively in the driver's seat of the new Commission. As the St. Louis Post-Dispatch put it, "As head of the first Commission, Mr. Hoover took scrupulous care to avoid political partisanship. As head of the second Commission, Mr. Hoover has been bitterly and continuously engaged in right-wing Republican politics."

This is a strong charge indeed, but it seems to be supported by the facts. For one thing, Mr. Hoover has compounded the partisan flavor of the Commission by flouting a specific requirement of the authorizing law and failing to appoint a vice chairman, who would presumably be a Democrat.

But a more important usurpation of power to himself was his appointment of all of the "task forces" which were to perform the studies for the Commission without consulting fellow Commission members.

This, in itself, might not have been objectionable had Mr. Hoover followed the procedure of the first Hoover Commission in seeking to fill the "task forces" with experts who, if they were not entirely objective, at least represented a cross section of public sentiment in any field.

This time, Mr. Hoover observed no such amenity. In case after case, he has "stacked" the task forces with men who have vested interests in a given point of view, and therefore cannot be considered detached experts. Not only that, many of the task forces are completely or overwhelmingly "stacked" with men who share Mr. Hoover's own philosophy, with little or no representation for persons of opposing views.

Mr. Hoover's most flagrant abuse of this appointment authority is his selection of the 26 persons making up the "task force" on water power and resource policy. No one of the 26 represents what might be called the "public power" point of view, and the group includes one of the key financiers behind the Dixon-Yates contract, as well as former Republican Leslie Miller of Wyoming, now the spearhead of an organized fight against the Federal reclamation program. When Democratic Commissioner Holifield tried to persuade the Commission that at least 2 of the 26 should be public-power advocates he was voted down, 7 to 5.

As the York (Pa.) Gazette commented, "Never before in peacetime history have so many titans of big business and their spokesmen been given official Government status as is the case with the 'task forces' of the second Hoover Commission."

Another task force dominated by big business spokesmen is the one dealing with the Government's lending activities. Of the 10 members of that task force, 7 are either directors or officers in private banks or insurance corporations, which naturally have an interest in seeing Government lending curtailed. The result, fully to be expected from such a group, was described by the New York Times: "If carried fully into effect, the Hoover group's proposals would virtually wipe out the whole scheme of direct and insured Government loans to individuals and companies which, since the days of the New Deal, has become a part of the political and economic fabric of the country."

As these task force members see it, "many in our society are not capable of being successful businessmen, successful farmers, or even successful homeowners." They neglect to say that many people who are quite capable of succeeding are frequently unable to get the necessary capital from the local bank, which is where the Government has frequently stepped in in the past. The banker-dominated task force believes that Government lending which rescues individuals and businesses which otherwise would go bankrupt "weakens the Nation's economic structure by preventing the failure or other elimination of weak links in the chain."

And then, in the tone of a banker turning down a loan applicant, the task force said, "The failures of such people may be personal misfortunes, but there seems little justification for assessing the taxpayers to cover their losses." What the task force neglected to say is that in nearly every Federal lending program, the repayment record is exceptionally good.

Although many consider that the inherent risks of our economy should be shared by all of our people, the Hoover Commission has other ideas. Quoting the following as a "sound business principle" which should be adopted by the Federal Government, the task force stated that Government credit should not be "given or lent to * * * any individual, association, or private corporation."

This statement of principle might be deserving of more respect if the Hoover Commission really meant that word, "any." But this does not seem to be the case. According to Democratic Commissioner Holifield, who objected vigorously to the Commission's lending recommendations, the subsidies decried in this report are those which "bring widespread benefits to the whole population." In contrast, he stated, the Commission had ignored "hundreds of millions of dollars obtained by large companies as interest-free loans through the device of accelerated tax amortization." Subsidies which help low and middle income groups, he added, "pale into insignificance when compared to the subsidies doled out to big manufacturers."

To this Commission, for instance, it isn't "sound business principle" for the Government to provide the money for loans to the Rural Electrification Cooperatives which have provided electricity to nearly 4.5 million rural consumers. But as to Government help for the shipping industry, which totals many times the out-of-pocket cost of the REA program, the Commission merely says, "We have no comment on these operations."

They do not object, either, to the $4.5 million in subsidies to the airlines since 1951. But it is not "sound business principle" to give $391 million to sustain the Farmers' Home Administration, which has lent money to more than two million small farmers after they had been turned down by private bankers. Nor is it "sound business principle," according to the Hoover Commission, for the Government to pay $4.5 million a year to cover the operating expenses of the Small Business Administration.

The Commission does not object to, and carefully refrains from mentioning, the fact that the publishers of the Nation pay less than 20 percent of the cost of handling their second-class mail. But it isn't "sound business principle" for the millions of parcel-post users to pay less than 100 percent of the cost of handling theirs. Commented the Washington Post and Times Herald: "Perhaps parcel-post rates should be increased to take account of rising costs, but parcel post should not be priced out of the market simply for the benefit of the Railway Express Agency."

If such recommendations could be written off as the creations of a fringe group in the Republican Party, they might not be making headlines. But in the judgment of Washington's press corps, the cannot be thus dismissed.

Many veteran correspondents agree with the analysis of Thomas L. Stokes, who said, "It is doubtful if the American people understand or properly assess the powerful influence that Herbert Hoover exerts on the Eisenhower administration."

Ever since he took office in 1953, many of President Eisenhower's actions and legislative proposals have paralleled the Hoover line, even though his public statements have usually been moderate. Both he and Hoover, for instance, have publicly excoriated public power as "creeping socialism." In the field of agriculture, the Eisenhower administration has cut loan funds and raised interest rates for low-income farmers in three successive budgets, even before the Hoover Commission got around to recommending such a course of action. And top Agriculture officials in the administration have echoed the philosophy of the Hoover lending task force that only a few are destined for success in business and farming and that the country is better off letting the weak fall by the wayside.

In mid-May, the President sent his "personal congratulations and best wishes" to Mr. Hoover and extended "the official gratitude of this Government for the great service he has been rendering through the medium of the Hoover Commission * * *"

So far, however, Mr. Eisenhower has carefully tried to avoid placing his stamp of approval directly on any specific recommendation of the Hoover Commission. As a matter of fact, now that protests against these proposals are pouring into Washintgon from every section of the country, the adminis-

tration is trying to detach itself from the Commission. Only recently Attorney General Brownell ruled that the Hoover Commisison is a part of the oCngress (now that the Congress is in Democratic (hands), not a part of the administration.

The battle over putting the Hoover recommendations into effect will begin when Congress reconvenes early in 1956. Perhaps the Arkansas Gazette will turn out to be prophetic in its comment that "Nothing in any election since 1928—not excluding that of 1952—suggests that any substantial number of the American people are willing to follow Herbert Hoover back into the ghost house of McKinleyism."

Prosperity for Whom?

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Thursday, January 19, 1956

Mr. SPARKMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a chart which appeared in the November issue of the Democratic Digest.

There being no objection, the chart was ordered to be printed in the RECORD, as follows:

WHO GETS THE GRAVY AND WHO GETS THE CRUMBS?—PROSPERITY FOR WHOM?

On September 9, Vice President NIXON told GOP State chairmen that GOP prosperity will be the top issue in 1956. GOP orators will probably follow President Eisenhower's lead in claiming that this GOP prosperity "is not any particular favor to rich and wealthy people and to great corporations."

The facts below show, however, that under the Republicans prosperity has been a particular favor to big business and its stockholders.

Time period	Big business	Others
2d 3 months 1955 versus 2d 3 months 1954.	Corporations' "income" (profits before taxes), up 26 percent	Average worker's income (average weekly wage), up only 7 percent.
1st 3 months 1955 versus 1st 3 months 1954.	Income (profits) of leading companies: Anaconda Copper, up 249 percent Pittsburgh Plate Glass, up 123 percent Aluminum Company of America, up 104 percent General Motors, up 64 percent United States Steel, up 62 percent Du Pont, up 27 percent Standard Oil, New Jersey, up 20 percent	Do.
2d 3 months 1955 versus 2d 3 months 1954.	Corporations' "take-home pay" (profits after taxes), up 26 percent	Average person's "take-home pay" (per capita disposable income), up only 3 percent.
Do.	Stockholders' income (dividend payments), up 9 percent	Farmers' income, down 8 percent.
Last 3 months 1954 versus last 3 months 1953.	Food processors' profits, up 17 percent	Farmer's share of housewife's food dollar, down 6 percent.
Do.	Large corporations' "take-home pay" (profits after taxes of corporations with assets over $100 million), up $330 million.	Small corporations' "take-home pay" (profits after taxes of corporations with assets under $250,000), up $5 million.[1]
April 1955 versus April 1954.	Business failures, large corporations (corporations with liabilities between $100,000 and $1 million), down 16 percent.	Business failures, small corporations (corporations with liabilities under $5,000), up 7 percent.

[1] This rise merely means that these smaller corporations are $5 million less in the red.

Carol Barrett Winner of Essay Contest on Bill of Rights

EXTENSION OF REMARKS
OF
HON. WILLIAM F. KNOWLAND
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Thursday, January 19, 1956

Mr. KNOWLAND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a press release relative to a California girl who was named winner of the National Association of Real Estate Board's essay contest on the Bill of Rights. She is Miss Carol Barrett, 17 years of age, of California. She was winner of a nationwide essay contest on "What the Bill of Rights Means to Me."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CALIFORNIA GIRL NAMED WINNER OF NAREB'S ESSAY CONTEST ON BILL OF RIGHTS

Miss Carol Barrett, attractive 17-year-old senior at Pius X High School, Hollydale, Calif., has been chosen as the winner of the nationwide essay contest on "What the Bill of Rights Means to Me" conducted by the National Association of Real Estate Boards.

For writing the best of an estimated 9,000 eassays by high-school students in 57 communities in 23 States, she will receive as her prize a 5-day expenses-paid trip to Washington, D. C., for herself and her mother, January 18–22, 1956.

Real estate boards in these communities conducted local competitions, and their winning entries were forwarded to NAREB for the national contest. The Downey (Calif.) Board of Realtors, of which Elmer Wilkerson was 1955 president, sponsored the competition won by Miss Barrett.

As one of the highlights of her trip to Washington, she will read her composition at the inaugural banquet of NAREB, January 18, in the Mayflower Hotel, at which time Clarence M. Turley, St. Louis, will officially be installed as president, succeeding Henry G. Waltemade, New York. This dinner is one of a series of meetings of NAREB groups now under way which has attracted 800 to Washington.

Second prize in the national contest, a $100 United States savings bond, was awarded to Miss Mary Lee Garrett, Edinburg, Tex., and third prize, a $50 bond, to Miss Carol Crow, Los Altos, Calif.

Final judges in the contest were Senator John W. Bricker (Ohio), Representative Bruce Alger (Texas), and United States District Judge Edward M. Curran, Washington, D. C. Preliminary judges of the 57 national entries were the following teachers from the Washington area: Fred H. Hilton, Jr., Capitol Pages' School; Joseph Mabbett, the Bullis School, Silver Spring, Md.; and the Reverend Stephen M. Connelly, DeMatha Catholic High School, Hyattsville, Md.

Carol Barrett, who lives with her mother, Mrs. Geraldine Barrett, at 4863 East 60th Street, Maywood, Calif., put her journalistic experience to good use in writing her essay on "What the Bill of Rights Means to Me" for her history and civics classes at Pius X High School. She was a writer for the paper at St. Agnes High School, Los Angeles, where she was enrolled her first 3 years of high school.

An honor student at St. Agnes, she was treasurer of her freshman class and vice president of her sophmore and and junior classes. She has maintained a B average throughout high school.

Her interest in journalism is reflected also in a feature article which she wrote for the Community Chest Times of Los Angeles in November 1954, and in her plans to enroll next September at UCLA, which the intention of majoring in journalism. She is especially desirous of writing sports.

Carol has been a student of music and dancing and collects records as a hobby.

Following is the text of Carol's essay which was judged the national winner:

"WHAT THE BILL OF RIGHTS MEANS TO ME

"Musing one night by the campfire as the crackling flames leaped high, I watched the curling plumes of smoke go up, and as they spiraled I seemed to see the faces of men who once at another time, long, long ago, possessed the courage, spirit, and foresight that made America for me. 'Twas here that I first reflected seriously upon the priceless heritage that is mine. Not satisfied with the constitutional guaranties, they demanded with clear vision a Bill of Rights. This was the beginning of the birth of democracy as we know it today.

"God-fearing men, they realized the moral code, and that code they translated into ten amendments known as the Bill of Rights. Each is a key, as it were, which will open for all time the door to the solution of each problem as it affects my personal life or the life of the Nation. The key to the four fundamental freedoms of every person opens the door of my church, unlocks the silence of my lips, and permits to enter into my life the news of the world about me. The key to my home seals it to unreasonable search and protects my person and those things I would hold private. The key to justice shuts out any possibility of arrest without trial by jury, confinement without the right to be bailed out, and of self-incrimination. The key to eminent domain guarantees me the security that my property will not be taken for the common good without compensation. The key to unlisted rights gives me the assurance that I can appeal until I have reached the citadel of justice. And finally the key to delegated powers makes me a citizen not only protected by my national Government but also by my State government.

"The Bill of Rights has been the citadel of the oppressed, the beacon of light of those

seeking refuge from tyranny, and the security of all free men. It means America to me.

"Therefore, we, the youth of America,
Must guard our land from all danger,
From those who would steal our birthright.
And keep democracy's campfire,
With freedom and liberty bright."

Tribute to Robert E. Lee by Senator Sparkman

EXTENSION OF REMARKS
OF

HON. JOHN J. SPARKMAN

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Thursday, January 19, 1956

Mr. SPARKMAN. Mr. President, today at the ceremony held in Statuary Hall I had the pleasure of delivering an address in tribute to Gen. Robert E. Lee. I ask unanimous consent that my remarks on that occasion be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SPEECH BY SENATOR JOHN SPARKMAN AT CEREMONIES HONORING ROBERT E. LEE, STATUTARY HALL, JANUARY 19, 1956

I am deeply honored to join you today in tribute to a great American.

To me the life of Robert E. Lee has always been an inspiration and a challenge. Our history holds no counterpart to the story of Lee. He was by his own appraisal, a failure. Some historians agree that his record was one of failure. If this be true he was the most magnificent failure of all time. For where will you find a life more sublime in its devotion to duty, more inspiring in its reverence of Almighty God, or so grand in its hour of defeat?

The star that guided the career of Robert E. Lee grows brighter with each passing year. So it is with all of the truly great. Today we see in retrospect many facets of Lee's lonely existence which were obscured by the prejudices and the mores of the early postwar years.

In my early schooldays Lee was almost a legendary figure. Some of you, perhaps, will recall that Historian Long declared: "Throughout his whole student life, he performed no act which his pious mother could not have fully approved;" or the words of an old teacher: "He was never behind time at his studies, never failed in a single recitation, was perfectly observant of the rules and regulations of the institution." We can all rejoice that such legendary acclaim has been dispelled. Lee's own letters reveal him as a warm, compassionate man with many of the frailities of mankind.

Still later, we have Lee presented as a man of mystery. His letters and his words, we are told, are couched in formality and carefully conceal his innermost desires or his true nature.

He was by his own admission like his daughter, "always wanting something"—but what? Again, we are given the picture of a lifelong conflict of conscience with the realities of his existence.

Lee deprecated war. He opposed secession, yet with all of the great ability he possessed sought to defend this right of the States. He owned slaves, yet he opposed slavery and freed those he owned long before the war. He was a soldier of the United States, a graduate of the West Point Academy, and a former superintendent of the Academy. Yet his sense of duty, or honor if you please, called him to the defense of his native Virginia. He was devoted to his home and to his family. Fate decreed that much of his life should be spent away from both.

These are serious contradictions. But to me they are not difficult to understand. Lee's life was a pattern of rigid discipline. His religion—he was an Episcopalian—was its dominating influence. Through every deed and word runs the theme of "Let mankind do what man can and must do—God will take care of the rest."

Lee was born April 19, 1807, in Stratford, Va. He was the son of "Light Horse Harry" Lee and Anne Hill Carter Lee. Light Horse Harry served with Washington in the Revolutionary War. Robert E. Lee's father died when Robert was 11 years old.

The Lees moved to Alexandria in 1811 to educate their children.

Unfortunately, very little is known about the childhood or the early education of Robert E. Lee. His first teacher was a Mr. Leary. He later attended the school of Benjamin Hallowell where his time was devoted chiefly to mathematics. He was an exemplary student.

Lee entered West Point when he was 18 years old. He was a good scholar. He graduated high in his class in 1829, and received an appointment in the Engineering Corps.

For some years he was stationed at Old Point Comfort. While there he married Miss Mary Custis, the great-granddaughter of Mrs. Washington. This took place in Arlington in June 1831. Through this marriage, Lee came into control of extensive property—farms, mansions, and a considerable number of slaves.

In the years before the Mexican War, Lee was stationed in various parts of the country, pursuing his profession as a military engineer. He was sent to Ohio to adjust the boundaries of that State with Michigan. Later he supervised the defenses of New York harbor. In St. Louis he worked to control the course of the Mississippi River.

In the Mexican War he began as captain under General Wood. He took part in the battle of Buena Vista. He participated in the siege of Vera Cruz. His promotion was rapid. He was made a major at Cerro Gorda, a lieutenant colonel at Contreras, and a colonel at Chapultepec. He was slightly wounded at Chapultepec.

There is evidence that he displayed great courage and resourcefulness throughout the war. For this he received high commendation from General Scott who also was a Virginian.

After the Mexican War Lee resumed his engineering work in various parts of the country. For some time he was engaged in construction of a fort at Baltimore.

In 1852, at the age of 45, he was made Superintendent of the West Point Academy. He accepted with regret because he feared he could not measure up to the expectations of the Secretary of War. It was his feeling that the job required "more skill and experience" than he possessed. Lee improved the discipline and the courses of study at West Point.

In 1855, Lee left West Point for a lieutenant colonelcy in one of the new cavalry regiments. His service with the cavalry was in the Western and Southwestern States while his family remained at Arlington.

Now the war clouds were gathering. Lee wrote that he hoped President Buchanan would "be able to extinguish fanaticism between North and South, cultivate love for the country and Union, and restore harmony between the different sections."

In October 1859, while on furlough at Arlington, Lee was ordered to arrest John Brown. He discharged his duty in a quiet and efficient manner, as witness his report: "Tuesday, about sunrise, with twelve marines under the command of Lieutenant Green, broke in the door of the engine house, secured the robbers, and released all of the (Southern) prisoners unhurt."

Brown was turned over to the civil authorities. "I am glad we did not have to kill him," Lee remarked afterward, "for I believe he is an honest, conscientious old man."

The year 1861 was the year of the great decision. Lee was 54. "As far as I can judge from the papers," he wrote, "we are between a state of anarchy and civil war. May God avert us from both . . . I must try and be patient and await the end for I can do nothing to hasten or retard it."

Lee had previously expressed his resentment of the North's aggression and "denial of equal rights of our citizens to the common territory of the Commonwealth" and his displeasure with the course of the "Cotton States" which he termed "selfish and dictatorial."

"While I wish to do what is right," he said, "I am unwilling to do what is wrong at the bidding of the South or the North."

Lee's account of the interview with Francis P. Blair in which he was offered and declined the command of the United States Army, is well known.

In this account he said: "I never intimated to anyone that I desired the command of the United States Army, nor did I ever have a conversation with but one gentleman, the Honorable Francis P. Blair, on the subject, which was at his invitation and, as I understood, at the instance of President Lincoln. After listening to his remarks, I declined the offer he made me to take command of the army that was to be brought into the field, stating as candidly and courteously as I could that though opposed to secession and deprecating war I could take no part in an invasion of the Southern States."

This interview occurred on April 18. Lee went immediately to tell General Scott of the proposition that had been made to him, and of his decision. Some historians are convinced that General Townsend's eyewitness account of the talk with General Scott is substantially incorrect, because it makes no mention of Lee's report on the proposition submitted by Blair. In the Townsend report, Lee is quoted as saying: "The property belonging to my children, all they possess, lies in Virginia. They will be ruined if they do not go with their State. I cannot raise my hand against my children."

Townsend said this interview took place on April 19. Lee gave the date as April 18.

Two days later Lee sent his letter of resignation to General Scott saying that "Save in the defense of my native State, I never desire again to draw my sword."

It is significant that Lee clung to the Union up to the hour of Virginia's decision to secede.

In January 1861, he wrote: "I can anticipate no greater calamity for the country than a dissolution of the Union. It would be an accumulation of all the evils we complain of, and I am willing to sacrifice everything but honor for its preservation. * * * Secession is nothing but revolution."

I think we have to consider that Lee had a profound regard for the sovereignty and rights of the States, as expressed by Jefferson and opposed by the Hamiltonian theory. Lee's father had served as Governor of Virginia. Two of his kinsmen, Richard and Francis Lee, signed the Declaration of Independence. A third, Thomas Lee, was President and Commander in Chief of Virginia. The Constitution and the rights reserved for the States were sacred to Lee. Lee felt that he was fighting, not for slavery, but for the preservation of all of the other constitutional powers of the States.

"I had no guide," he said, "nor had I any other object than the defense of those principles of American liberty upon which the constitutions of the several States were originally founded; and unless they are strictly observed, I fear there will be an end to Republican Government in this country. * * *"

Again he declares, "All that the South has ever desired was that the Union, as established by our forefathers, should be preserved, and that the Government as originally organized should be administered in purity and truth."

Then followed the four years of brilliant campaigns that proved him one of the greatest strategists of all time—four years of privation with an ill-clad and hungry army—a heart-breaking struggle ending at Appomattox. "A Caesar without his ambition; a Frederick without his tyranny; a Napoleon without his selfishness; and a Washington without his reward."

It is recorded that no general was more greatly beloved by his men.

In all the storm of criticism toward the close of the War, Lee steadfastly declined to "assume responsibilities or make decisions that were properly those of President Davis or other civil authorities."

If Lee was great in battle, he was grand in defeat. In all of his career, Lee had been resolute and forward-looking in every deed and decision. Now he called upon the people of the South to unite in the restoration of the country and the re-establishment of peace and harmony. For himself all he desired was "some little quiet home in the woods, where I can procure shelter and my daily bread, if permitted by the victor."

He considered himself a citizen of a united country, although his plea for amnesty was never formally granted. He turned a deaf ear to all offers by commercial enterprises for use of his name, declaring: "My name is not for sale."

In August 1865, he accepted the Presidency of Washington College—a school with 40 students and four professors. The college prospered during the 5 years of Lee's tenure. Lee seemed to relish this, saying:

"For my own part, I much enjoy the charms of civil life and find too late that I have wasted the best part of my existence."

Here ended the career of Robert E. Lee. He died on October 12, 1870. He was buried at Lexington in a chapel erected by his efforts.

Lee regarded his life as a failure. Shortly before his death he wrote:

"Life is indeed gliding away and I have nothing of good to show for mine that is past. I pray I may be spared to accomplish something for the benefit of mankind and the honor of God."

It is singular to note that Bradford, a distinguished historian, agrees that Lee's life will always be regarded as a record of failure. He says that success is the idol of the world and the world's idols have been successful.

From Lee's pen we have his assertion that "human virtue should be equal to human calamity." From his own life we have proof that this can be true.

Only recently William Faulkner observed that we are all failures to the extent that we can never achieve all we have hoped to achieve.

And on this subject of failure, let me quote from the great jurist, Learned Hand:

"By some happy fortuity man is a projector, a designer, a builder, a craftsman; it is among his most dependable joys to impose upon the flux that passes before him some mark of himself, aware though he always must be of the odds against him.

"His reward is not so much in the work as in its making; not so much in the prize as in the race. We may win when we lose, if we have done what we can; for by so doing we have made real at least some part of that finished product in whose fabrication we are most concerned—ourselves."

Robert E. Lee a failure. If so, let me say again that he was history's most magnificent failure.

When we think of the influence that he has had down through the years on the people of his own generation and on those who came after him, not only in Virginia, not only throughout the South, but all over this Nation, what more could one have done toward succeeding?

I mentioned above that the historian Bradford considered Lee a failure. Yet it is my understanding that even the study of Lee had a tremendous influence upon Bradford. I have been told that he started his work on the subject, "Lee, the Rebel"; that as he studied Lee's direction of the armed forces of the Confederacy he changed his title to "Lee, the Soldier"; that as he studied Lee's life and influence and his personal conduct following the end of the war he ended up with the title under which his book is published: "Lee, the American."

It is interesting to note the closing paragraph of Bradford's appendix to "Lee, the American."

"It is an advantage to have a subject like Lee that one cannot help loving. I say, cannot help. The language of some of his adorers tends at first to breed a feeling contrary to love. Persist and make your way through this and you will find a human being as lovable as any that ever lived. At least I have. I have loved him, and I may say that his influence upon my own life, though I came to him late, has been as deep and as inspiring as any I have ever known. If I convey but a little of that influence to others who will feel it as I have, I shall be more than satisfied."

Robert E. Lee will ever live in the hearts of Americans everywhere as a great American.

Anniversary of Ukrainian Independence

EXTENSION OF REMARKS
OF
HON. ALBERT W. CRETELLA
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, January 9, 1956

Mr. CRETELLA. Mr. Speaker, January 22 marks the 38th anniversary of the declaration of independence by the 40 million people of the Ukrainian National Republic.

Ukrainia is a traditionally democratic nation lying within the orbit of Soviet tyranny. The people of this tiny republic have always cherished freedom above all material treasure and have never ceased their long struggle for this liberty.

I point with pride to the fact that New Haven, Conn., located in the district which I represent, was the first city in the United States to recognize Ukrainian Independence Day. Again this year the blue and gold colors of Ukrainia will fly over our city hall. It is a fitting ceremony in these times which clearly demonstrates our protests to the international Communists who treacherously design the envelopment of the entire world.

The historic claim of Ukrainia to national freedom and independence cannot be ignored. Its place as a sovereign and equal partner in the mutual construction of the free world of tomorrow must be assured if the foundation of permanent peace among freedom-loving nations is to be impregnable.

The Christmas Season Has a Deep Meaning for Seamen

EXTENSION OF REMARKS
OF
HON. LESTER HOLTZMAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 19, 1956

Mr. HOLTZMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I am including herewith some material believed to be of general interest concerning the celebration of Christmas, as contained in a unique publication issued by the Dalzell Towing Co., Inc. of New York, and edited by the well-known explorer and editor-writer, Wendell Phillips Dodge.

With more than 3,000 major house and employees' organs being put out by American industrial and business firms, some 100 million and more circulation has already been obtained, and these little publications are contributing much toward improving employer-employee conditions throughout the United States. Therefore, when along comes such a fine example as this Christmas issue referred to, beautifully and effectively illustrated in a uniqueness that literally breathes the Christmas spirit, it seems to me that many more people should have the benefit of reading at least a part of its contents, more especially that which has to do with Christmas.

These extracts from the Dalzell line Christmas issue follow:

THE CHRISTMAS SEASON HAS A DEEP MEANING FOR SEAMEN

Aside from the general idea of the origin of Christmas as being in commemoration of the birth of Jesus of Nazareth, with the Christ mass in celebration, the idea of Christmas as practiced was borrowed from those whom we choose to call pagans, as indeed, have most of our theological ceremonies, rituals, and ideas. Many ages before the time of Jesus Christ, among all the ancient peoples of the earth—in the Far East as well as in the Near East and the Middle East—were ceremonies at this season of the year similar in kind to our own, which had reference to a certain occurrence in the events of time. For it is then that the sun itself returns from its journey southward to the north again, and this coming of the sun was understood to be the birth of the sun. With it comes a spiritual, a mental, a moral growth and uplifting. There is a springtime not only in the lower kingdoms, among plants and animals, but among men. There is an incursion of energy which, if we could take advantage of, would enable us to do much more than we now do. But, through the ages man has forgotten the fact of the recurrence of this real Christmas time—the season, not only of the physical renewal of the earth and all beings, but also a return of the inner life, and of impulse of a spiritual kind.

Between Christmas day and the day called Easter—which again has its own significance—the life of the earth is young. Then, too, the inner life of man has its re-

juvenescence and its growth; ideas then taken hold of and carried into expression have tenfold the power which they would have at another time. Christmas is a season of birth and growth; it is the season of the rebirth of the spiritual nature.

Sailors, more especially "before the mast" in sailing-ship days, when there was less static, shall we say, than results from modern ships of metal, making a more perfect conduct of the electricity from the elements at sea, long were conscious every moment of the recurrent waves of activity at this season of the year. Whether they fully understood it or not, they were more actively affected by the cosmic influences which again were ever so more noticeable under sail, and at this season of the year. They more easily, perhaps, than men of today, steered rhythmically on the course charted in the cosmos for all beings of every kind to follow the law of action and reaction, to proceed through the coming back of that which was before, plus whatever had been incurred in the meantime. There is no cessation of this law—an eternality of progress, which is not restricted to any particular form and which is within the means and reach of every individual in every part of the universe. It is to get into rhythm.

"There is a tide in the affairs of men which, taken at the flood, leads on to fortune": So, whenever there is a spiritual idea in the heart or in the mind, then is the beginning of the rising tide for that individual; then is the time for him to take advantage of the cycle—to make every possible effort in the direction of his purpose, to chart his course and sail on.

Yes, there are also tides in nature for races and civilizations. History has clearly plotted them for us. As the sun moves northward and then south again, it is in that time of rising tide that we must acquire stamina—the power of concentrated effort—which will hold us through the receding tide and give us a better standing when the tide again rises.

And so, Christmas tidings.

ORIGIN OF THE CHRISTMAS TREE

Near the cave in which was born the Saviour of the world grew three trees—a pine, an olive, and a palm. On that holy eve when the guiding star of Bethlehem appeared in the heavens, that star announced to the long-suffering world the birth of Him who brought to mankind the glad tidings of a blissful hope, all nature rejoiced and is said to have carried to the feet of the infant God her best and holiest gifts.

Among others the olive tree that grew at the entrance of the cave of Bethlehem brought forth its golden fruits; the palm offered to the Babe its green and shadowy vault as a protection against heat and storm; alone the pine had nought to offer. The poor tree stood in dismay and sorrow, vainly trying to think what it could present as a gift to the child Christ. Its branches were painfully drooping down, and the intense agony of its grief finally forced from its bark and branches a flood of hot transparent tears, whose large resinous and gummy drops fell thick and fast around it. A silent star, twinkling in the blue canopy of heaven, perceived these tears; and forthwith, confabulating with her companions—lo, a miracle took place. Hosts of shooting stars fell down, like unto a great rain shower, on the pine until they twinkled and shone from every needle, from top to bottom. Then, trembling with joyful emotion, the pine proudly raised her drooping branches and appeared for the first time before the eyes of a wondering world, in most dazzling brightness. From that time, the legend tells us, men adopted the habit of ornamenting the pine tree on Christmas eve with numberless lighted candles.

A ST. BRANDON YARN OF CHRISTMAS

While they were sailing it came Christmas day and the monks in the coracle said their matins and sang special thanks for the birth of their Savior. Shortly before noon they came upon an iceberg, a small iceberg upon which a man was reclining. They sailed close to the berg and hailed him, asking who he was and what he was doing there.

"I," said the man "am Judas, Judas Iscariot."

The good monks recoiled in horror. Had they miscalculated their bearings? Were they on the road to perdition instead of sailing for the islands of the Blest?

"What do you here?" demanded St. Brandon.

"It is Christmas," said Judas, "and for 1 hour I am free of the tormenting fires. Just 1 hour." He sighed. "When I died, by mine own hand, I was cast into the flames, which was my just fate. But on the first Christmas an angel came to me and said that for 1 hour I might be free to go and to cool my body. I asked from whence came this mercy. He recalled to me that once in Joppa, a leper had appealed for help in his misery, and I, Judas, had thrown him my cloak to cover his sores from the sun. For this, the angel said to me, I was to be given 1 hour's respite from torment each year, each Christmas, the day of Him whom I had betrayed."

The holy men in the coracle fell to their knees and bowed their heads in prayer, and when they looked up Judas was gone, his hour had passed and he already had been returned to his torments.

CHRISTMAS AT SEA

(By Robert Louis Stevenson)

The sheets were frozen hard, and they cut the naked hand;
The decks were like a slide, where a seaman scarce could stand,
The wind was a nor'-wester, blowing squally off the sea;
And the cliffs and spouting breakers were the only things a-lee.

They heard the surf a-roaring before the break of day;
But 'twas only with the peep of light we saw how ill we lay.
We tumbled every hand on deck instanter, with a shout,
And we gave her the maintops'l, and stood by to go about.

All day we tack'd and tack'd between the South Head and the North;
All day we haul'd the frozen sheets, and got no further forth;
All day was cold as charity, in bitter paid and dread,
For very life and nature we tac'd from head to head.

We gave the South a wider berth, for there the tide-race roar'd.
But every tack we made we brought the North Head close aboard;
So's we say the cliffs and houses, and the breakers running high,
An the coastguard in his garden, with his glass against his eye.

The frost was on the village roofs as white as ocean foam;
The good red fires were burning bright in every longshore home;
The windows sparkled clear, and the chimneys volleyed out;
And I vow we sniffed the victuals as the vessels went about.

The bells upon the church were rung with a right jovial cheer;
For it's just that I should tell you how (of all days in the year)
This day of our adversity was blessed Christmas morn,
And the house above the coastguard's was the house where I was born.

O well I saw the pleasant room, the pleasant faces there,
My mother's silver spectacles, my father's silver hair;
And well I saw the firelight, like a flight of homely elves
Go dancing round the china-plates that stand upon the shelves!

And well I knew the talk they had, the talk that was of me,
Of the shadow on the household and the son that went to sea;
And O the wicked fool I seem'd, in every kind of way,
To be here and hauling frozen ropes on blessed Christmas Day.

They lit the high sea-light, and the dark began to fall.
"All hands to loose topgallant sails," I heard the captain call.
"By the Lord, she'll never stand it," our first mate Jackson cried.
"It's the one way or the other, Mr. Jackson," he replied.

She staggered to her bearings, but the sails were new and good,
And the ship smelt up to windward just as though she understood.
As the winter's day was ending, in the entry of the night,
We clear'd the weary headland, and pass'd below the light.

And they heaved a might breath, every soul on board but me,
As they saw her nose again pointing handsome out to sea;
But all that I could think of, in the darkness and the cold,
Was just that I was leaving home and my folks were growing old.

Letter From Homer Laughlin China Co. and Resolution of United States Potters Association

---

EXTENSION OF REMARKS
OF
HON. GEORGE W. MALONE
OF NEVADA
IN THE SENATE OF THE UNITED STATES
Thursday, January 19, 1956

Mr. MALONE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter to me from Mr. J. M. Wells, president of the Homer Laughlin China Co., the makers of Homer Laughlin China, together with a resolution adopted by the United States Potters Association, furnished me by W. A. Betz, executive secretary.

The resolution urges a return to the Constitution in the regulation of foreign trade and our national economy under article 1, section 8.

There being no objection, the letter and resolution were ordered to be printed in the RECORD, as follows:

THE HOMER LAUGHLIN CHINA CO.,
Newell, W. Va., December 30, 1955.

Hon. GEORGE W. MALONE,
Senate Office Building,
Washington, D. C.

DEAR GEORGE: In compliance with your request of December 28, I am delighted to enclose herewith a copy of the resolution which was passed by our United States Potters Association.

I have been assured by the president of the International Brotherhood of Operative Potters, which is the pottery workers' union,

that at the next meeting of their executive board, they will approve the same resolution.

Very truly yours,

THE HOMER LAUGHLIN CHINA CO.,
J. M. WELLS.

RESOLUTION

Whereas the promotion of world trade should be on the basis of fair and reasonable competition and must be done within the principle long maintained, that foreign products of underpaid foreign labor shall not be admitted to the country on terms which endanger the living standards of the American workingmen or the American farmer, or threaten serious injury to a domestic industry; and

Whereas article I, section 8 of the Constitution of the United States provides that the Congress shall have the power to pay and collect duties, imposts, and excises (tariffs or import fees) and to regulate foreign commerce; and

Whereas the Congress transferred the constitutional responsibility to regulate foreign trade to the executive branch through the 1934 Trade Agreements Act as extended from time to time: Therefore be it

Resolved, That the United States Congress is hereby urged to resume its constitutional responsibility of regulating foreign commerce and the national economy through the adjustment of duties, imposts and excises, through its agent, the Tariff Commission, and to repeal the 1934 Trade Agreements Act which transferred such responsibility to the President.

THE UNITED STATES
POTTERS ASSOCIATION,
W. A. BETZ, *Executive Secretary*.

Capitalizing on the Resource of America's Elderly Folks

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, January 19, 1956

Mr. WILEY. Mr. President, on many occasions I have spoken on the floor of the Senate on the subject of utilizing to the fullest the great resource available to our country in the persons of America's elderly citizens.

Very shortly, the Senate Finance Committee will be commencing hearings on improving our old-age and survivors insurance system. A great many improvements are necessary and will, I feel sure, be enacted by the Congress this year.

Capitalizing on our old folks involves more, however, than merely increasing pensions. It means having a comprehensive program in the fields of jobs, housing, health, hobbies, education, and so forth. That is why I have introduced my bill, S. 2279, for a system of Federal grants to the States to help develop such programs.

Of late, a great many Americans have devoted real thought to expanding the horizons of our older citizens.

Many Americans, for example, have recognized that one of the most well intentioned but harmful features in present-day American society is compulsory retirement at the age of 65.

Such mandatory retirement makes no distinction whatsoever between physiological and psychological age on the one hand and mere chronological age on the other. It draws no distinction between a man of 65 who is ready, willing, and eager to work 5, 10, or more years, and one who, for a variety of physical and mental reasons, should withdraw, to a large extent, from full-time employment.

One of the best illustrations I know was in my office this morning. He is a former Ambassador of the United States to a foreign country He is well over the age of 65. The day the President suffered the attack which affected his heart there was a young man seated opposite me in Milwaukee—a very young man—who said, "I think the President will get over this attack. I had such an attack when I was in my fifties, and another when I was in my sixties." I asked, "How old are you now?" He said, "85." That was Mr. Monahan, a wealthy man who is busy in the affairs of business in the city of Milwaukee. Fortunately he has his own business, but if he were to come under any of the retirement acts we would not have before us the example set by this man, who, at 85, is young, and and physically and mentally able to carry on in a fine way.

I cannot stress this point too strongly, because through our knowledge of medical science, and our grasp of the subject of how to live, longevity has been increased by a number of years. The result is that those who have contributed, up to the age of 65, to the tax income of this country, and to its betterment, find themselves out of jobs. They are willing and able to work. It seems to me that it is only commonsense not to foolishly throw away this great asset.

We are told that America is short of manpower in every field. That is why we are asking for allies in the world struggle. If we use our common sense, we will employ some of the best manpower we have in the best possible way to strengthen the Republic.

I send to the desk a most thoughtful and stimulating address on this theme, delivered by Mr. J. R. Cominsky, publisher of the Saturday Review, before the University of Rochester last October 14, and I ask unanimous consent that its text, which I believe will make an important contribution to our thinking on this subject, be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ARE WE MAKING THE MOST OF OUR HUMAN RESOURCES?

With a full consciousness of the nature of this gathering it seemed fitting that I choose the announced subject: Are We Making the Most of Our Human Resources? Before a group of men and women dedicated to making as effective as possible the functioning of the human mechanism and to the prolonging of such functioning as long as possible, it would seem fair for you to ask the rest of us: "Now that we are giving our all to our job what is the rest of our society doing to capitalize to the utmost the important headstart we have given the human race?"

And that question poses an interesting problem—or set of problems—too multitudinous, too varied, and too complex to handle in a short talk.

In the few public talks I have given within the past 5 years I have tried to deal with some aspect of education that goes beyond the time spent within the ivy-covered buildings and the immediate problems of the curriculum. I have given voice to some torments of my own, such as: Are the powerful and expanding mass media poisoning the fruits of all our educational and cultural processes? Are we stopping education with the college diploma to turn people into a world changing so fast and so drastically that, except in the most general terms, these people are helpless within a decade to cope with our most pressing problems?

And tonight I want to raise even more troublesome questions as to whether, in the light of some of the current contradictions of life, we are not behind schedule in adjusting to changes that the field of medicine has brought about.

The interrelationship of all human endeavor could not be exemplified better than to point out that while exciting news is flowing from the laboratories of the medical scientists and practitioners another kind of news is flowing from industrial and labor fronts to take the bloom off some great achievements of your fellows in medicine. To state it bluntly: Of what use is a lengthened life span if it is accompanied by a greatly shortened working span? This, of course, is no fault of yours, and the point I am making is not for your benefit except as it may concern you as members of the human family with a deep feeling for everything that affects the health and happiness of all.

It is not your fault that there has been in recent years an almost hysterical absorption with security—security at almost any price, it has seemed to me. And all the pension plans and retirement arrangements aren't worth the price we are paying for them if it means one able-bodied person, qualified in every other way, self-respecting and eager to work, cannot obtain employment after he passes the age of 40, or possibly a slightly higher limit. The life-span figure, large or small, becomes academic in the light of such a development, and all of us had better face up to it. I am not talking through my hat on this score because a good part of my time is now taken up with the problem of placing people past 40 because they lack only one requirement for many jobs—they cannot be fitted into the retirement or pension plan. It would please me no end to be authoritatively and factually contradicted on this point.

It would seem humane for insurance companies to restudy the present group life insurance plans which force business firms to pay higher premiums if they hire workers in their forties. It would seem equally humane for the various states to restudy their unemployment insurance and disability compensation laws which deter employers from hiring older people. It is a recognized fact that older workers take longer to recuperate and tend to raise the disability compensation rates paid by their employers in some States. If the employer were not penalized for this fact of life, he might take another view of the employee over forty. It would also be humane for our leading and most responsible labor unions to study this problem in relation to the pressures which are now being put on employers for social benefits.

All the above flows from the fact that our retirement and pension plans are figured on the basis of chronological and not physiological factors. And now that so many lives are being saved on the operating table, the gain is being more than canceled out by the number of lives we are losing on the actuarial table. You understand what great differences in physical and mental power there can be in people of the same age. Yet this factor is somewhat obscured in our social planning.

The drastic shortening of man's working span brings with it a problem that should

concern every boy and girl going to college, and the parents. The trial and error period, which in the past allowed a person to try his hand at a few jobs in the hope of finding the one he liked best and could do best, is now something that, in retrospect, went out with the model T Ford. Today a person's talents must be channeled immediately into the area in which he can be most effective, or he is sunk. That's the dilemma, and we may as well be realistic about it.

As physicians, you know the importance of proper adjustment to his vocation in man's physical and mental wellbeing, and I think you might be interested in a little homework which I did in preparation for my talk tonight. I wrote to 38 colleges and universities, large and small, private and State, coed, men's and women's, in every section of the United States, to find out what is the picture at the moment in the vocational guidance area. The replies were interesting, illuminating, varied, factual, philosophical and all a credit to those in charge of this phase of work in our institutions of higher education. They showed an awareness of a real problem, and an honest effort to deal with it. Some were more resourceful and practical than others. The personnel and apparatus for dealing with this great and pressing problem ran all the way from the University of California (with ten professional counselors, a manager, who is also a counselor, a psychologist, a psychometrist, an occupational information specialist, a consulting psychiatrist, and five clerical workers) and Columbia, with access to the guidance laboratory of Teachers College, to one of the largest state universities in the South, and in the country, which reported: "We hardly have what could be called a program of vocational guidance."

I'd like to give you a few highlights from the reports that were of more than passing interest to me, and to credit the institutions in each case:

Under the direction of Miss Edith Stedman who, for 24 years, was engaged in vocational guidance work at Radcliffe, there was developed what were called "skills courses" to enable the liberal arts graduates to develop marketable job techniques. The most enduring of these has been the summer secretarial course. If only the sweet young girl graduate would realize how important is the secretarial rung in the ladder of success, Miss Stedman's great wisdom would be readily apparent.

At the University of Michigan an interesting concept of vocational guidance is described by James H. Robertson, assistant dean, as follows:

"As you know, 'vocational guidance' is a many-faceted term. In its broadest sense, we like to think that clarification or discovery of educational and vocational goals is a very desirable end product of the total experience of the first 2 years in college. Approximately 75 percent of our freshmen enter with reasonably definite notions about their vocational or professional future. Frequently, these notions rest on shaky foundations, for during the freshman and sophomore years when students are expected to range widely in natural sciences, social sciences, languages, and the humanities, over 50 percent of our students change their views regarding their goals. The causes for such changes are, I think, the first-hand experience students have had in their courses, in talks with instructors and faculty counselors and with other students. New professional and vocational possibilities have opened up to these young students and, more important, they have had a chance to discover their own capabilities, interests, and weaknesses—factors which may not have been given sufficient weight in arriving at their first announced objectives."

Two effective operations at Hamilton College were described by Dean Winton Tolles, as follows:

"Alumni vocational conferences four times a year. At these meetings a team of three alumni discuss some business or profession from various angles. When banking is discussed, for example, a small-town banker, a large-city banker, and a specialist in investments might make up the team. Talks are followed by a discussion and personal interviews are conducted the next day. We feel this to be a strong part of our program.

"An alumni job advisory service which is organized on a geographical basis. In theory any student can consult a designated alumnus in his home area and be referred to a man in the locality capable of discussing a a certain business or profession."

At the University of Virginia, Mr. Howard Bryant, director of the office of student aid and placement, tells of another interesting development:

"We have just developed a systematic plan for cataloging business and industrial publications and making these available to students. We also utilize the services of leading business and industrial representatives to counsel students and to discuss occupational opportunities with them. Selected films in these fields are shown to various groups of students and numerous group meetings are held for the purpose of vocational guidance."

The whole concept of vocational guidance is so well stated in a publication of Harvard College that I should like to quote it:

"What career a student pursues, how he prepared for it, how effectively he uses his resources to make the most of his potentialities within the career which he has chosen, is rightly the concern of all who work with him. The student's career problem is not an isolated one; it is clearly related to his intellectual and academic training and achievement and to his overall adjustment and degree of emotional maturity. It is doubtful that one office can fully penetrate all the complexities surrounding the student's vocational problem without the benefit of the substantial advice of those who are frequently in contact with students on other matters which impinge upon the total problem. In the broader sense, placement is a problem for the entire faculty, and for all who are engaged in advising the Harvard student."

The machinery for vocational guidance in United States colleges and universities is pretty much the same. It varies only in size and quality with the resources and enrollment of the institutions. The best possible job is being done under a given set of conditions. But is it enough? And hasn't the time come for raising our sights on a truly major problem?

Important recognition of the gravity and the magnitude of this problem was shown by President Eisenhower while he was head of Columbia University. There for 5 years the members of the Conservation of Human Resources staff have been devoting themselves to the task of contributing to basic knowledge about how our human resources determine the shape of our economics and society. Work has been singled out as the key institution for intensive study. Not only do men devote many years to preparing for work and the actual performance of the work, but work largely determines how they live and the satisfactions that they derive from life.

The Conservation of Human Resources is a cooperative undertaking involving Columbia University, the business community, foundations, trade unions, and the Federal Government. Columbia has provided the professional staff; industry, the financial support; and the Federal Government a rich fund of statistical and other materials. The Department of the Army and the Veterans' Administration have made particularly significant contributions to the project by furnishing large bodies of basic data and case materials. The Ford Foundation has made a one-time grant for the support of the project. Thirteen leading corporations have been contributing to the annual budget.

It was equally heartening to me to note that only this week in Washington the annual fall sessions of the National Academy of Economics and Political Science took for a general subject "Human Resources and National Security" and such authorities as Brig. Gen. Donald Armstrong, president of the National Academy of Economics and Political Science; Edward A. Fitzpatrick, president emeritus of Mount Mary College; Eli Ginzberg, director of Conservation of Human Resources, the Graduate School of Business, Columbia University; Robert D. Calkins, president, The Brookings Institution; Howard A. Meyerhoff, executive director of the Scientific Manpower Commission; Eugene M. Kulischer, demographer-consultant with the Library of Congress, all led the discussion.

All this is highly encouraging, certainly a step in the right direction, and all at a very high level. But to get back to the college campus, let us reexamine what is happening in the important vocational guidance area, viz:

1. You have the college machinery for this purpose which follows a natural pattern already described.

2. You have the great business and industrial organizations telling their story and recruiting—and doing it well.

3. You have the parental guidance which often becomes something of a handicap because it is too restricted by personal values and emotions to be of much help.

What's missing?

With psychosomatic medicine so concerned at the moment about relieving human tension, you are probably best qualified to ask whether our vocational and aptitude tests, and our counsellors and psychologists have yet caught up with some of the fundamental decisions that young people will have to make if they are to lead successful, effective and happy lives. For nobody understands better than you that a key factor in man's relation to his environment is the vocation or profession which he pursues. May I state a few questions that you might ask:

1. Would the graduate be better—or worse—off by joining a small growing company with good potential but not yet financially able to offer life security than by joining one of America's titans? This, of course, can only be answered in terms of the talents, character and personality of the person involved and in the light of his mental attitude toward a difficult and hazardous challenge.

2. Would the undergraduate be better off in a less glamorous field—the movies, the theater, concert and opera, radio and TV, publishing and advertising are the glamorous fields, of course. What looks like dull prosaic businesses are limited only by the imagination of men—and may be uranium mines if the graduate is interested in uranium.

3. Would the graduate be better off to start in a comparatively menial job in an area he is excited about rather than to take a better paying job at a higher level with something than down deep in his heart bores him? This is another highly personal decision.

I am more interested in stating problems and asking questions than in solving or answering them. But if you want to pin me down as to two recommendations I'll try to oblige.

My first recommendation would be that there should be an organized effort to pres-

ent to young people the opportunities for a happy and highly lucrative career in small business. This will take a lot more scouting and effort by the undergraduates; the jobs will not be offered on a platter. I doubt whether a company which may have such an opening owns a platter.

My second recommendation is that we get better organized to explain in geographical terms where the bigger opportunities for many vocations and professions exist in the United States. We are now telling the undergraduate what he might do successfully but are we telling him where he might do it even more successfully How many colleges can counsel on that point? This is a vast and growing country full of new and exciting opportunities. Having traveled this country extensively, I had this thought when I was in the Northwest this past summer on a business trip. To carry out this idea I urge strongly that vocational counselors be given more opportunity for extensive travel and personal observation. The expenditure for such travel would pay rich dividends.

To sum up:

1. We should reexamine the growing policy of a shorter average working span at a time of a lengthening average life span.

2. Vocational guidance must be more effective with a shorter trial and error period as a result of a shorter average working span.

3. Let's not overlook the big chances in small business.

4. Let's look beyond established areas in employment for new and expanding sections in the United States that hold the equivalent of uranium in jobs for prospectors of another type—the kind of prospectors that have made America strong and great.

As that part of our citizenry concerned every minute of your lives with our human resources, you would seem to be the logical group to ask questions and make demands on the rest of us lest your dedication to a noble work be less effective than it has the right to be.

Do Americans Really Want Freer Trade?

EXTENSION OF REMARKS

OF

HON. GEORGE W. MALONE

OF NEVADA

IN THE SENATE OF THE UNITED STATES

Thursday, January 19, 1956

Mr. MALONE. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD a statement entitled "Do Americans Really Want Freer Trade?" prepared by Col. Willard F. Rockwell, a steel executive of Pittsburgh, Pa.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

DO AMERICANS REALLY WANT FREER TRADE?—LOUISVILLE, KY.—WHAS–TV SIXTH KENTUCKY WORLD TRADE CONFERENCE, NOVEMBER 13, 1955

(By Willard F. Rockwell)

The answer to the question, "Do Americans Really Want Freer Trade?" will depend on how clearly Americans understand the issues involved and the ultimate effect on their personal and national welfare if there is a drastic change. They certainly will oppose lower tariffs if they believe the following statements:

1. Lower tariffs will cause many Americans to lose their jobs.

2. American investments in commerce and industry will shrink in value.

3. This shrinkage of values will hurt every American because it will cause losses in commercial and industrial securities now held by pension and life-insurance institutions, charitable and educational funds, banks and investment trusts.

4. Every American commercial and industrial activity which is wiped out or weakened by lower tariffs will reduce the vast productive capacity which has made us the greatest power on earth in both peacetime and wartime.

5. Even the threat of lower tariffs will make it more difficult to raise the capital required to build factories and other facilities, and our people's savings will consequently either remain idle or be invested abroad.

6. We shall be defying the advice of George Washington, Thomas Jefferson, and Alexander Hamilton, each of whom advocated protective tariffs as the only means of building industry in the colonies, where, in their time, 85 percent of the workers obtained their living from agricultural pursuits and depended almost entirely on foreign countries to provide our country with the tools of peace and the machines and munitions required to defend our country. In less than two centuries, our constitutional guaranties and the protective tariff enabled us to own over 40 percent of the industrial capacity of this earth though our population and land area are each less than 7 percent of the earth's total.

7. If foreign cartels ever dominate our sources of supply of any manufactured goods, they will continuously raise prices until American manufacturers attempt to compete—then they will lower prices until they discourage that American competition. Our American newspaper publishers now have an example in the newsprint field.

In the last 5 years, the effect of tariff reduction has been emphatically indicated by two sadly misdirected experiments. Disregarding the advice of his own tariff commission, the President reduced tariffs on Swiss watch movements in 1949 and on bicycles. It took only 5 years to prove that these tariff reductions threw thousands of American workers out of jobs, brought American factories face-to-face with bankruptcy, and, after the Secretary of Defense had testified that this country's industry must maintain a corps of expert watchmakers to protect its defense needs, the tariffs were raised—but irreparable damage had been done to all the American interests just mentioned. Furthermore, the countries which had temporarily increased their exports to this country claimed they were damaged by our raising tariffs to protect our own vital interests, and that, if we did not reverse the action and again reduce these tariffs, we must reduce tariffs on other American products to compensate them, though they cannot show that we owed them anything in the first place. When our State Department complained recently to the Swiss Federation of Watchmakers that a million watch movements are being smuggled into the United States annually, we were told that smuggling cannot, or will not, be stopped until our tariffs are radically reduced.

Now, let us see what the British have to say about the benefits of American investment and the introduction of American methods in the British Isles. The District Bank Review, published in Manchester, England, in September 1955, states that many American firms have established manufacturing plants in England and find their costs are "from one-third to one-half below those of the parent United States companies." It also says that "dividend remissions to the United States by such foreign branches have been relatively small, and their future growth may be more than matched by expanding exports," which, obviously, will be at the expense of United States factories' employment and general welfare. It also states that, in contrast to 1938, when 70 percent of certain engineering and chemical lines were imported from the United States, the United Kingdom is now nearly self-sufficient—(thanks to gifts and loans by our Government of funds derived from American taxpayers.)

Manufactured products imported from abroad take jobs away from American workers and wipe out savings, simultaneously reducing the earning power of competing American plants. As the Review states, both the invested capital and earnings of American-owned subsidiaries in the British Isles stay in the United Kingdom, where they provide for expansion to enable greater future raids on American workers and investors. Can United States industry grow if its foreign subsidiaries' profits are frozen so they must be invested abroad?

When a dollar is spent by an American for a product made wholly in the United States, more than 80 cents of that dollar finds it way into the pockets of American workers through wages and salaries paid directly to American workers and indirectly for every raw material, metal casting, semi-finished or finished product, and every service such as electric power, water, gas, legal and other professional services, and to 10 million local, State, and Federal employees. Dollars spent for products made entirely in a foreign country provide no wages for American workers or profits to investors in American industry. Out of every dollar received by an American manufacturer for his finished product, at least 25 cents eventually finds it way back to the local, State, or Federal tax collecting agencies, who, in turn, spend 80 percent of it to support government functions such as local policing, national defense, and 10 million civilian and military personnel employed and paid by local, State, and Federal governments. Dollars spent for foreign products imported duty free pay not a single penny to support your local, State, and Federal Governments—so when you buy foreign goods, you add to the already burdensome taxes on American workers and such industries as survive tariff reductions.

The largest ball bearing manufacturer in the world outside of the United States has headquarters in Sweden. Its investments in buildings and machinery, identical to plants in the United States, require one-third less investment, and new machinery can be written off against profits in 1 year. Its workers receive less than one-fourth of the $2.50 per hour wage of American ball bearing workers. It has plants in the United States, so it has the benefit of all American management know-how.

During World War II, our United States Government engaged in "preclusive" buying, under which we attempted to buy so much of the Swedish ball bearing output that we could preempt shipments to enemy countries. Obviously, if reduced tariffs permit European manufacturers to wipe out our ball bearing industry with its specialized machinery and expert workers, it would be impossible for us in wartime to import enough bearings to construct military airplanes and other essential war machines.

American newspapers bought newsprint under free-trade competition until over 75 percent of the newsprint came from other countries. Now they learn that prices are to be advanced $10 per ton, and they are begging Congress to encourage American production to bring back the free-enterprise competition to offset cartel action.

An ardent advocate of lower tariffs before the recent congressional hearings inquiring into the effect of lowering tariffs, was quoted as follows: "The American workman can turn out 2 to 10 times as much production as his European counterpart." This

statement received the widest publicity, although it is an infamous half-truth. If the American athlete could run twice as fast or jump 10 times as high as his European counterpart, we might believe that the American worker can turn out 2 to 10 times as much as his European counterpart. Our American worker can only turn out 2 to 10 times as much work as his European counterpart if he is provided with 2 to 10 times as much horsepower and 2 to 10 times as much investment in power-driven machinery and other production-increasing facilities which are not available to his European counterpart.

When the European worker is given the same kind of machines and facilities, he can produce just as much as the American worker, and he works longer hours at lower pay. Since the end of the war, our Government has furnished billions of dollars to European countries, and, in many cases, gave them the most modern factories of American design, equipped with the most modern American machinery, with the result that they are producing as much, or more, than their American counterparts.

The most vociferous advoacte of lower tariffs has been Mr. Clarence Randall, of the President's Commission. He would have us believe that all Americans will benefit by lower tariffs, but being unable to deny the disastrous consequences of cutting tariffs on watches and bicycles, he made this remarkable statement: "We can't help someone without hurting somebody." It is doubtful if many of our citizens believe that American workers and investors should be hurt to help any foreign "body." Remember that no country in the history of the world ever had either the wealth or the will to spread $40 billion among its allies and former enemies after a war in which the United States gained nothing tangible, and lost the lives and the blood of millions of its citizens and $600 billion of its wealth.

Although Mr. Randall claimed to be a tariff expert, he recently emphatically denied that European countries subsidized exports. He said that subsidizing exports to the United States was illegal because we have a law which forbids dumping of foreign goods at below their actual cost. He must know by now that foreign dumping has always existed. For his enlightment, I have a have a Spanish bulletin issued in Madrid in October, 1955, which states that water meters and melons produced in Spain have been added to the list of products which receive export bonuses for exports made to the dollar zone, which, of course, includes the United States. Subsidies granted by European governments range from special favorable rates on currency exchange and rebates on taxes, to cutrate credit insurance and special guaranties and rewards for obtaining United States dollars. You will be told that these dollars are used to buy goods manufactured in the United States, but you will find that many of them are spent in countries which will not accept European currencies, because they are manipulated by the issuing government.

The free governments of Western Europe were aided in their World War II survival and subsequent rapid recovery by the military and financial aid rendered to them by the United States. If the United States is weakened financially or industrially, we cannot extend similar aid in the future. If Europeans want free trade, they could practice it among themselves. There are 280 million people in Western Europe, and they can form a United States of Europe: cut down their trade barriers, currency restrictions, and national jealousies so that they may obtain the two great industrial benefits which have made the United States the most powerful ever known. These are: mass production and mass buying power, neither of which can exist without the other. If we, in the United States had trade barriers and restrictions between our States, the millions of automobiles made in Michigan could not be made and freely shipped into other States which set up trade restrictions. If the European type of artificial trade barriers prevented the agricultural South and the Midwest from freely selling their products into the industrial Central and Northeastern States, we would have the same self-imposed handicaps which prevent Western European nations, with their much larger aggregate population, from meeting our low mass production costs and other national benefits that are derived from our way of life.

Congressional committees were told there are no trade barriers between the Netherlands and Belgium since 1952, although wages are 25 percent higher in Belgium. Here are quotations from the Belgian Trade Review of October 1955 describing the action taken when Belgian producers faced a crisis in late 1952:

"Representatives of private industry in Belgium and the Netherlands, in cooperation with their governments, held many conferences to determine reasons for the crisis and to find mutually acceptable solutions. In the majority of cases an agreement eventually was reached to lessen Netherlands competition in the Belgian market. As a rule the Netherlands industries affected voluntarily limited their sales in Belgium for the time being."

Please observe that American manufacturers are forbidden by law to either discuss or agree to restrict either domestic or foreign competition.

Does any American believe that we would have the highest living standard of any country in the world, if we had always depended on foreign countries for our essential manufacturing needs? If we had done so, we would probably now be split up into colonies ruled from Europe, and Europe would be dominated by the dictator in the strongest industrial country.

Tariff protection is absolutely essential to our freedom.

GTA Radio Roundups

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Thursday, January 19, 1956

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two GTA Daily Roundups issued by the Farmers Union Grain Terminal Association of St. Paul, Minn.

There being no objection, the statements were ordered to be printed in the RECORD, as follows:

MONDAY, JANUARY 16, 1956.

What seems like ages ago, but was just last Monday, President Eisenhower gave his farm program to Congress. Last Saturday, ex-President Truman answered him, and told the Nation why he thought the program was no good, "wouldn't help farmers," he said, in effect.

As a Democrat, Harry Truman took out after the Eisenhower administration's farm record with relish. The always outspoken Missourian was never in better form, judging from the cheers and applause that he got from the Democratic-Farmer Labor rally in St. Paul. The cheers and whistles and applause went out over the Nation on TV screens and radios. What President Truman did was to fire the first big cannon in what promises to be a big artillery duel in the 1956 presidential campaign. The question is, "Who sold the farmers down the river, and who will bring them back again?"

Some of the Trumanisms that got the biggest applause were these: "The mess in agriculture is clearly attributable to the Eisenhower administration. The blame lies nowhere else. The Eisenhower administration has been following a deliberate policy of driving farm prices down. As they keep right on lowering prices, production keeps right on increasing, and surpluses get bigger and bigger."

"The administration officials love International Harvester and General Motors, but are rather cool to the old-fashioned dirt farmer." Mr. Truman then proposed four ways the administration could help farmers, if they really wanted to. They are, 1: Consult with some real dirt farmers instead of with bankers and processors and farm-extension specialists and big-business men. 2: Tackle all out the job of reducing surpluses. 3: Improve the diet of underprivileged people at home. 4: Restore price supports at 90 percent of parity.

In Washington, it was Vice President NIXON'S lot to answer ex-President Truman. He said the ex-President's "memory seems to be playing tricks on him when he tries to put the blame for low farm prices on the Eisenhower-Benson farm program."

Now, let's look at some facts. Farm prices were at their high point in January 1951. When Truman left office in January 1953, they were at 94 percent of parity, after a 15-percent drop. Then the Eisenhower-Benson team took over. Farm prices started skidding again, fell 16½ percent more, down to an average of less than 80 percent of parity. There you are as of today. But, farmers aren't so concerned as to who's to blame. What they want to know is, who is going to do something to stop falling farm prices, and when.

Right now, the burden falls on the party in power, the Eisenhower-Benson team. That's what has the Republican Senators and Representatives worrying, they are trying to take over and call the signals. They started with the farm program. Will it work soon enough? Time will tell, when farmers keep that date in 1956. That'll be the answer.

In the meantime, organize and build and market your grain, GTA, the co-op way.

TUESDAY, JANUARY 17, 1956.

What makes politicians run scared, as they are doing now? Or, run confident, as the Republicans ran to defeat in 1948? Politicians are like rabbits and scare easily. So, sometimes, it is just a shadow that frightens them, or again, it may be the real thing. Right now, it is the way a small minority of the people are feeling that has the politicians running scared. The farmers, and the way they vote, has them scared.

Farmers make up only 13 percent of our population, but the way the elections go in many cities and towns, with Republican and Democratic votes canceling each other out, gives farmers in many States a precarious balance of power. They tipped the balance to the Democrats in 1948, and then jumped back on the Republican bandwagon in 1952, were somewhat undecided in 1954, and now they're waiting to see which wagon they get aboard in 1956. That's the big reason farm news makes headlines these days. It is an election year. Farm prices are made in Washington.

Right now, they are back to the prewar 1940 levels—and farmers, an awful lot of them, are awful close to that disaster level that Secretary Benson talked about in a St. Valentine's Day speech in St. Paul in 1953. Who is to blame? Politicians blame each

other. Farmers like that, but expect more than buck-passing and blaming. They want steps taken to straighten out the farm mess in Washington. How will farmers vote? We know they have a date in 1956, but how they will vote, November will tell. It will be on the record politicians make in Washington. But, here is what the poll-takers and opinion-finders say is happening:

Currently, Republicans in Minnesota are happy over the findings of a recent Minneapolis Tribune poll. It said that 77 percent of Minnesotans approve President Eisenhower's performance in office so far. It's not so high on the farms—only 60 percent of the farmers approve, but still a good showing for Ike. Secretary of Agriculture Benson, and GOP farm policy are a different story. In another Minnesota poll, 73 percent of Minnesota farmers said they don't like the way Benson is handling things. One-half the farmers said they'd be better off with a change of administration in Washington—that means, better off under the Democrats than under the Republicans.

In a nationwide Gallup poll, farmers showed up 3 to 1 against administration farm policies. Just recently, the Gallup poll-takers asked a cross-section of all voters whether they would register as of today in the Republican or Democratic column; 59 percent said Democratic; 41 percent said Republican.

So, climb the poll you like, Republican or Democrat, you can find encouragement in somebody's fingering of the public pulse. But, the big question of 1956—how farmers will vote this year—hasn't been answered. Farmers won't tell. Maybe some haven't made up their minds. Chances are they're waiting to see what the present Congress will do. And, the President, too—who blows hot and cold, but mostly cold, on farm prices.

The Senate Agricultural Committee begins hearings today. The general manager of Farmers Union Grain Terminal Association, M. W. Thatcher, leaves for Washington tomorrow. He'll testify Friday afternoon, and he'll have printed copies of the 200-page GTA Family Farm Survey, just off the press in final book form, to lay before the Senators. It is the final word on what the cost-price squeeze already has done to family agriculture. What farmers want is legislation to stop the big squeeze, if it takes a law. If one party doesn't do the job, farmers are prepared to give the other party a chance. That's their "date in '56."

But, farmers aren't just wasting time waiting. They're organizing, and building cooperation with bushels. They're marketing their grain, GTA, the co-op way.

Simon E. Sobeloff

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Thursday, January 19, 1956

Mr. BEALL. Mr. President, it is well known, I believe, that I have been one of the strongest backers of President Eisenhower's nomination of Mr. Simon E. Sobeloff for a seat on the United States Circuit Court of Appeals for the Fourth Circuit.

Unfortunately, there was opposition to the nomination when it was first presented last year, and it became necessary for the President to send us his selection again during this session.

My own high regard for Mr. Sobeloff has been expressed so frequently that it needs no repetition. It is, therefore, a pleasure to be able to present similar opinions from newspapers which have long kept their keen, journalistic eyes on the day-by-day public life of Mr. Sobeloff. One of the editorials was published in the January 14, 1956, edition of the Baltimore Evening Sun, and the other in the Baltimore Sun of January 19, 1956. I ask unanimous consent to have these editorials printed in the Appendix of the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Baltimore Sun of January 14, 1956]

THE SOBELOFF NOMINATION

Mr. Simon E. Sobeloff was originally nominated last year for a seat on the United States Circuit Court of Appeals for the Fourth Circuit. When Congress adjourned on August 2, the nomination was still in the files of the Senate Judiciary Committee, which has done nothing about it.

Now the President has resubmitted the nomination. The nomination ought to be considered by the committee promptly, and it should be promptly reported to the Senate, where we are sure it will receive confirmation. There can be no excuse for a repetition of the dilatory procedure followed last year, when the committee held up action while individual Senators made what they called "investigations." The "investigators" were southerners who wished to punish Mr. Sobeloff for having argued the desegregation cases before the Supreme Court on behalf of the Government. Their tactics recall, in a disquieting way, the procedure which so long delayed the nomination of Justice Harlan to the Supreme Court. That procedure was a disgrace to the Senate and should not be repeated now.

Mr. Sobeloff made an excellent record as Solicitor General. He had previously served as chief judge of the Maryland Court of Appeals. His qualifications for the post are numerous and impressive. As President Eisenhower himself said last July, Congress has a right to make a thorough investigation of a nominee's record. It does not have the right to hold up all action merely to satisfy the personal animosity of a few Senators.

[From the Baltimore Sun of January 19, 1956]

WHY DELAY LONGER MR. SOBELOFF'S CONFIRMATION?

Once more President Eisenhower has sent the name of Simon E. Sobeloff to the Senate for confirmation as United States Circuit Judge for the Fourth Circuit Court of Appeals. At present Mr. Sobeloff is, of course, Solicitor General of the United States, a post which he has filled with remarkable wisdom and success.

When the President submitted Mr. Sobeloff's name at the previous session opposition immediately developed, led by the two Senators from South Carolina, THURMOND and JOHNSTON. Ostensibly they objected because of a feeling that the new judge should come from their State, which lies within the fourth circuit. But no secret was made of the fact that underlying opposition existed because Mr. Sobeloff had so successfully argued the antisegregation cases before the Supreme Court.

The important thing for more open-minded Senators to remember is that Mr. Sobeloff is a brilliant lawyer, with the widest possible experience and a reputation for wholehearted devotion to the public welfare. His first experience was as clerk for Judge Morris A. Soper (whose retirement makes the vacancy he is selected to fill) and in many ways he has patterned his career after that of his first patron. No lawyer could have had a finer mentor. It is true that he has had comparatively brief experience on the bench, but that experience was as chief judge of the Maryland Court of Appeals, one of the most respected judicial bodies in the country. His associates on that court have testified to his quick grasp of its procedures and his wholly judicial bearing. And as for the charge that he displayed bias in the antisegregation cases, the event proved that the members of the Supreme Court accepted his arguments unanimously. What greater proof of legal acumen could be presented?

Underlying all these considerations is this one: The fourth circuit needs its full complement of judges. To postpone any longer the confirmation of Judge Soper's successor is to put an unjust burden on that distinguished jurist and upon his colleagues on the bench.

Hunger Versus Overproduction

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, January 19, 1956

Mr. NEUBERGER. Mr. President, the question of surplus is one that is receiving much attention as the farm problem is debated. Considered a liability by administration leaders, surplus, in the thinking of an able Oregon country editor, could be an asset. Gwen T. Coffin, editor and publisher of the Wallowa County Chieftain, of Enterprise, Oreg., discussed the subject in his December 15, 1955, edition under the title "Hunger Versus Overproduction."

Mr. President, I ask unanimous consent to have printed in the RECORD the editorial of Mr. Coffin.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HUNGER VERSUS OVERPRODUCTION

Efforts to find some way to establish the farm income at a satisfactory level are stirring up a multitude of plans and vast amount of controversy. Some people may have misgivings about the need and desirability of farm price supports and subsidies, but the politicians are almost unanimous in backing some sort of Government assistance. So anyone who has opinions in favor of letting the farmer fight out his problems on an open market without Government regulation or control might as well forget about them.

The individual farmer, who has no control over total production or prices, is in no position to run a successful business without help from the Government, however much he might like to be independent. He might accomplish the same thing the Government does for him by voluntary associations, but this is extremely unlikely.

But most of the plans for assisting the farmer, including the so-called "soil bank" plan sponsored by the Republican administration, accept as a basic principle that there is an oversupply of farm commodities and production must be curtailed. The "soil bank" plan (which would sound less attractive if called a "Plan for paying farmers not

to produce crops") calls for payments to farmers who will agree to take marginal lands out of crop production and allow them to lie idle. The "bank" idea comes in from the theory that these retired lands would be held in reserve to increase in fertility and to be used when future population needs might require an increase in production.

But few students of the world's population figures and the food needs of some billion people will agree that the first order of business should be to cut down on the amount of food produced. Hundreds of millions of people are not getting anywhere near enough to eat, and a lot of these hungry people are here in our own country, as any welfare administrator can readily testify. To pay out money as a bribe to induce farmers to produce less seems almost criminal in the light of the hunger from which a large part of the world is suffering.

There are many people who believe that billions of dollars spent to produce bigger armies and more guns will do more to make the world safe and happy than billions spent for food and other forms of economic assistance, but they may be wrong. It might be that a few billions would do more to promote friendship for the United States and peace in the world if they were spent to supply millions of people living in misery with food, clothing, and homes instead of guns, airfields, and tanks. The hunger which breeds communism will not be satisfied by armies or armaments.

The basic premise for any farm plan in this country which makes sense is the need to get more foodstuffs to people who don't have enough to eat. This means that production should not be curtailed until the hungry are fed. It also means that most of the hungry people of the world will have to get food cheaper than they can get it now. The farmer who grows this food cannot, under present circumstances, raise it and sell it at a price which the hungry can pay. Nor can he carry the whole load of supporting the people who cannot afford to pay what it costs him to raise his products. Therefore, what goes to the hungry of the world, for free or at below-cost rates, will have to be paid for in whole or in part by everybody.

This means coming around to a two-price plan, the price for the domestic market, where presumably people can afford to pay enough to keep the farmer in business, and another for foreign markets, where people will take our surplus only at prices below our production costs. Or it means coming around to a plan which will allow farm products to go on the open market for whatever they will bring with the Government making up the difference between these market prices and the farmers' costs. This plan would promote the widest possible use of farm commodities when coupled with a program for out-and-out grants to people who cannot afford to pay anything. It is essentially the so-called Brannan plan, a much maligned proposal, but one of the most sensible and humane which has been proposed to date.

The United States and U. N.

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Thursday, January 19, 1956

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "United States Gets Better Results When It Bypasses U. N.," written by Edward B. Simmons, and published in the Standard-Times of New Bedford, Mass.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TEN YEARS OF THE U. N.—SOVIET'S GREATEST HOAX—UNITED STATES GETS BETTER RESULTS WHEN IT BYPASSES U. N.

(By Edward B. Simmons)

Surest evidence that the United Nations cannot maintain the peace or protect against Communist aggression has been the foreign policy of the United States since the U. N. was founded.

In every instance in which a foreign relations crisis was of such urgency and importance that failure could not be contemplated, or risked, the United States has acted independently or in concert with other nations, outside of the U. N.

This has been the pattern from aid to Greece and Turkey in 1946–47, only a year after the founding of the U. N., to the United States guaranty of money and protection for Egypt and Israel in August of 1955. Acting outside the U. N. has, generally, brought success; negotiations and action taken through the U. N. have meant failure.

A notable example was the war in Korea, in which the United States made a brilliant contribution to permanent peace by acting alone and ordering United States troops to oppose a Communist aggression. Thereafter, under U. N. auspices, the cause of peace found failure in a stalemated war and an uneasy, already violated, armistice.

PUBLIC SHARES UNITED STATES ATTITUDE

The reluctance in official United States quarters to rely on the U. N. to safeguard the Nation's interests now is shared by the public. When the Truman doctrine for aiding Greece and Turkey was announced, there were many protests against bypassing the U. N. Today, the administration's independent policy for meeting issues like the Communist uprising in Guatemala and rearming of Western Germany has full public support. A decision to act through the U. N. in these matters would have raised misgivings.

The U. N. Charter, to be sure, provides for solving problems by "regional agencies or arrangements, or other peaceful means * * * " provided "they are consistent with the purposes and principles of the United Nations."

However, the emphasis placed on the historical balance of power system—as in the rearming of Western Germany—and on alliances is indication that colective security under the U. N. has failed. Clearly the U. N. has been by-passed far more than ever was contemplated.

A U. N. summary of debate in the ninth General Assembly of 1954 took notice of this condition:

"The trend to go outside the United Nations in negotiating questions of world concern was deplored by a number of delegates as diminution of the rightful role of the organization. Another group of speakers maintained that since such meetings as the Geneva Conference (on Indochina) were countenanced by the charter, they did not affront the U. N.

"Generally, there was a consensus that the position of the organization must not be weakened. Some believed it should be fortified. Nearly all speakers used the question of so-called bypassing as a springboard from which to plunge into a search for the underlying causes, or what were deemed to be the weaknesses of the U. N."

The wishful thinking of the Assembly debate apparently did not lead to any answer. Bypassing of the U. N. has continued at even greater pace.

The extent to which the United States, a co-founder and the underwriter of the U. N., has skipped the organization's facilities in searching for free-world security is evident in these agreements:

For the West, the North Atlantic Treaty Organization of 14 nations, and the more recent Western European Union of 7 nations.

For the South, the Organization of American States of 20 nations.

For the East, the Southeast Asia Treaty Organization of eight nations.

Acting independently, the United States last year signed military assistance pacts with nations like Honduras and Nicaragua, which happen to be the two border states of Guatemala, and a mutual assistance pact with the Nationalist China Government on Formosa. All were taken without consulting the U. N.

Earlier, besides its unilateral steps in regard to Greece, Turkey, and Korea, the United States broke the Soviet blockade of Berlin by the famous airlift and promulgated the gigantic Marshal plan for speeding free world economic recovery.

SITUATION EMBARRASSING

However, the United States Government has continued to pay lip-service praise to the virtues of acting through the U. N. a hypocrisy that has more than once led to embarrassment.

Guatemala was an example.

On June 18, 1954, U. N. Ambassador Henry Cabot Lodge, Jr., little realizing what the next day would bring, rebuked the Soviet U. N. delegation for vetoing a request from Thailand for a U. N. inspection team.

"I hope," said Lodge, "that I will never live to see the day when a small country comes to the U. N. and asks for protection against war and is simply greeted with the question: 'What's the hurry?' "

On June 19, revolution broke out in Guatemala, and that country's U. N. delegate demanded urgent Security Council action. The United States, loath to have the Soviet Union participate in a situation in which the Communist regime of Guatemala was being overthrown, was forced to reverse itself.

Ambassador Lodge declared the matter was no concern of the U. N., that Guatemala was not entitled to request U. N. intervention and that the Organization of American States was the proper arena for the dispute.

HARD ON U. N. PRESTIGE

It may have been the proper course for the United States, but it did not enhance the prestige of the U. N.

When the United States has acted under U. N. auspices, as in Iran, freedom for Morocco, liberation of United States airmen imprisoned by Communist China, and in unification for Korea, the results have been unfortunate.

As a result of the dilatory attitude of the U. N. of Arab problems, with which the United States was associated, American prestige has zoomed downward among the 70 mililon Arabs.

"Ten years ago, an American flag on a car was like a letter of recommendation from the Prophet," one veteran United States observer has stated. "Today it is likely to be a good target." (What the Arabs Think, by W. L. Polk.)

The late Dr. Stephen B. L. Penrose, for many years president of the American University in Beirut, Lebanon, which has 3,000 students from 26 Arab States, said in the fall of 1954, "By a peculiar and unfortunate turn of circumstances, the situation is such that the Arabs in general now think of Russia as the exponent of liberalism, democracy and freedom, whereas the United States, in their minds, is all too frequently considered to stand for colonialism, imperialism and reaction." (Quoted in Guideposts to the Future, by Gen. William H. Wilbur.)

In 1952, the American president of Cairo University stated that "American prestige in the Arab world has gone from 100 to 0 in the past 10 years."

PRESTIGE LOST IN KOREA

The prestige and affection Americans built up in Korea by defending the free half of that country with their lives and helping it economically is rapidly being dissipated.

Because United States troops have been assigned to protect the U. N.'s Neutral Nations Supervisory Commission, a Communist-dominated unit that has incurred the enmity of South Koreans.

The U. N. was completely ineffectual in gaining release of United States airmen captured by Communist Chinese during the Korean war. The General Assembly voted December 10, 1954, for "continuous and unremitting" efforts to bring about the release of the 11 airmen and 475 other Americans of the U. N. Command. Secretary General Dag Hammarskjold traveled to Peiping. Nothing was accomplished in 8 months.

Only direct United States talks with Communist Chinese representatives at Geneva in July 1955 secured the airmen's release.

It is little wonder that the older the U. N. grows, the more widespread is United States devotion to regional pacts and independent action in the interests of their and the rest of the free world's security.

Surely, it scarcely is a credit to the U. N.'s role that the American Secretary of State, John Foster Dulles, has traveled more than 250,000 miles in search of peace when the organization charged with maintaining it is within 200 miles of Washington.

The Family Farm

EXTENSION OF REMARKS
OF
HON. JOHN STENNIS
OF MISSISSIPPI
IN THE SENATE OF THE UNITED STATES
Thursday, January 19, 1956

Mr. STENNIS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Big Business Must Not Replace Family Farms," which appeared in the Tupelo Journal, of Tupelo, Miss., on November 10, 1955.

I am greatly concerned about our overall agriculture situation, and particularly as it relates to small- and family-size farm units. I do not believe that certain Department of Agriculture officials understand the true value of our small- and medium-sized farmers and the important contribution they make to our economy and our American way of life. If a few owners continue to acquire all of our land in blocks of thousands of acres, then, in time, our great middle group of people will be driven from the land and there will be none left to be shared by our increasing population. When those of our great middle group no longer have a chance to own land and property from which they can make a living, then their independence and their freedom will be lost and our form of government will begin to deteriorate. I strongly feel that the Department of Agriculture should give special attention to developing a program which would enable these farm famiiles to increase their standards of living and hold on to their land.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BIG BUSINESS MUST NOT REPLACE FAMILY FARM

We had to look twice the other day to believe the dateline on a news item we saw.

The story concerned an address made by a high agricultural official.

This is what he said:

"Farming is no longer a way of life. It is big business. The Nation's small farms are doomed."

That, we said to ourselves, sounds like a Russian official telling Soviet peasants they must give up their independence and join a collective.

But the story wasn't from Moscow. It was from Jackson, Miss.

And the man who expressed the opinion that farming is no longer a way of life was not an official of some Socialist state but the Deputy Administrator of the Federal Extension Service.

It may be reasonably assumed, therefore, that the policy of our current national administration is resignation to the fact that agriculture must be turen over to big business—another way of saying that the Nation's family farms must pass from the scene.

And if this is the correct interpretation to put upon the remarks of Deputy Federal Extension Administrator P. V. Kepner in his address before Mississippi agricultural leaders in Jackson, then we are headed into an even more serious farm situation than has yet appeared evident.

For if it has become the official policy of the United States Government to consider family farms not worth the effort to preserve, then America is destined to lose one of her most valuable assets.

It is easy to sit in Washington and get the idea that turning farming over to big business is the solution to all our problems.

But we should remember that for 25 years Russia and other Communist countries have been trying to convince themselves that agriculture should be considered as big business rather than as a way of life.

And thus far the Reds have got nothing for their trouble but a shortage of practically everything as day laborers simply fail to match the productivity of farmers tilling their own land.

Theoretically, we know, big business is supposed to be efficient.

But many big corporations are very inefficient.

The only reason they can get by is that when one inefficient factory loses money another efficient factory in the same corporation will make a good profit and balance out the loss.

America's family farms, by contrast, are giving the public more and more each year for its dollar.

Completely aside from so-called efficiency, however, should be America's realization that the American way of life is not so much getting the maximum production out of men as it is building maximum character into them.

And if any mode of living has ever been discovered which matches the family farm as a character developer, we have not heard of it.

It is true that agriculture is changing and that 1 farmer can now handle more acres and more animals than he could 20 years ago.

But this is no excuse for turning agriculture over to big business and replacing the family farm with a large commercial enterprise which knows nothing of the neighborliness and the devotion to the soil that have been typical of Americas' farm families through the years.

As Mr. Kepner commented, "Large farms may provide the solution to our present farm problems."

But a national policy of substituting big business in agriculture for family type farms will create new problems that are far more permanent and more difficult to solve than the temporary surpluses that now bother us.

If, therefore, America wants to remain different from the aging nations of Europe—stronger and sounder upon its foundations—we will make every possible effort to preserve the family farm.

And we will preserve it not just because of whatever degrees of efficiency it may possess but because it still is, as it has been for 100 years, a way of life that develops traits of character that are at the heart of America's greatness and cannot be disposed of without serious and irreplaceable loss to our Nation.

The Proposed Soil Bank

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, January 19, 1956

Mr. NEUBERGER. Mr. President, editorial pages have been centering attention on various aspects of the farm problem since the President presented his program to Congress on January 9, 1956. The "soil-bank" proposal is the subject most widely discussed. Mr. President, not because I agree with all its conclusions, but because it does show a general spirit of open-mindedness, an editorial from the Portland Oregonian of January 12, 1956, should be of wide interest. I ask unanimous consent that it be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SOIL BANK NO SURE SUCCESS—WOULD SHRINK WHEAT FARMS

Most significant factor in the Eisenhower two-part soil-bank proposal, so far as the Pacific Northwest is concerned, is that wheat growers are called upon to be the chief depositors.

Already the wheat farmers of America have diverted to other crops some 25 million acres, through acreage allotments under the price-support program. President Eisenhower wants them voluntarily to put aside 12 million additional acres for 3 or 4 years until market-depressing surpluses are reduced to normal. Since wheat is the major agricultural crop of this region, the proposal is of special interest here.

This proposed set-aside is part of the acreage reserve division of Mr. Eisenhower's soil bank plan. It is a sort of crash program—a deferred-production plan, he called it—to get rid of a large part of the surplus of wheat which is choking granaries and laid-up ships. By sharply reducing production, the President hopes commodities now owned by the Government can be used to supply some of the market needs, bringing carryovers down to normal levels in about 3 or 4 years.

Other than wheat, cotton is the only commodity singled out by the President for inclusion in the acreage reserve. Cotton planters would be expected to deposit 3 million acres in this part of the soil bank. Whether corn and rice should be included was left up to Congress.

Does this mean that wheat growers would have to carry the greater part of the financial burden entailed in bringing American agriculture back into balance? The answer

is "No." They would be compensated by the Government, in cash or in kind, for the crops they might have grown on the soil-bank acres. Presumably they would be no better, or no worse off than if they had harvested wheat from the land, since the Government payments would be proportionate and at an incentive level.

In the long run, the wheat farmer would stand to gain from the plan in rising market prices as the surplus was reduced.

They would not be permitted to crop or graze the soil bank acres—and this is good news to livestock men who have worried about the effects of a soil bank on their industry—but they would retain their historic acreage allotments.

The second part of the Eisenhower soil bank is called the conservation reserve and is a more permanent program. The President proposed that some 25 million acres of land most needing conservation measures be diverted through this plan from crops to forage, trees and water storage. Throughout the country, in greater or lesser degree, he said, land is cultivated which sound conservation would have reserved to forage and trees. This results in wastage of soil and water resources and in production of commodities now in surplus.

Any farmer would be eligible to participate in this program, regardless of the crop he produces or the area where his farm is located. The Government would pay a fair share of the cost of establishing the conservation use, sufficiently high to encourage participation, plus annual payments for a period of years depending on the time needed to establish the use.

Land put into the conservation reserve would be in addition to any land placed in the acreage reserve and would represent a reduction in cultivated cropland. The farmer would agree to carry out sound soil and water conservation on the land and to refrain from cropping or grazing it for a specified period.

If Congress acts in time, some $350 million will be invested in the conservation reserve during 1956. This would be in addition to the $250 million already provided under the present agricultural conservation program.

The news columns have told briefly of some of Mr. Eisenhower's other suggestions to better the farmer's lot. Notable are his proposals that dollars and cents limits be placed on price support loans to encourage efficient family-size farms but eliminate immoderately sized payments to huge corporation farms, and that sale of surplus to Iron Curtain countries be permitted. But the soil bank is the principal "new" approach to the farm problem.

The question arises: Will it work? If the soil bank is adopted by Congress—and some form of it almost certainly will be, so strongly is it supported by farm organizations and Congressmen of both parties—only time will tell whether it will be a major factor in a farm problem solution. Past experience does not fill one with confidence.

The New Deal sought to solve a similar problem by paying farmers to take land out of production. Only World War II absorbed the surpluses. But cash was put into the pockets of the farmers and this the soil bank would do, too—but not soon enough, politicians already are crying, to influence the November elections.

Diversion of many millions of acres from wheat and cotton to other crops has not solved the surplus problem, either, in more recent years. The cotton crop, said President Eisenhower, was calculated at 10 million bales this year; instead, 15 million bales were harvested. Wheat production in 1955 was 100 million bushels above demand despite the big reduction in acreage.

By pouring on more fertilizer and otherwise taking advantage of improved technology, more abundant crops can be grown on fewer acres. The wheat yield per acre in the United States jumped from 18.1 to 19.9 bushels between 1954 and 1955. President Eisenhower recommended to Congress that quantity allotments, rather than acreage allotments, be set for cotton and that Congress consider similar action for other crops under marketing quotas. If wheat allotments were in bushels, rather than acreage, lower yielding, but higher quality grain might be produced and the surplus problem lessened.

A soil bank would present difficulties in administration. There would be haggling over what was a fair price to pay individual farmers for not growing crops. And who would see that livestock did not stray on to soil bank land to eat the grass that must not be grazed?

Perhaps the soil bank is the best plan that can be produced at this time. But it should not be thought of as a cure-all. Other means must be pursued to help bring a healthy balance back to agriculture. One hopes Congress, in a desire to give farm income a preelection shot in the arm, will not couple it with some scheme, such as a return to high, rigid supports, which could only do damage in the long run.

Encroachment by the Federal Government on Rights of the States—News Articles and Editorials

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Thursday, January 19, 1956

Mr. THURMOND. Mr. President, recently many articles and editorials have been published regarding the encroachment of the Federal Government on the rights of the States. I ask unanimous consent that many of these be printed in the Appendix of the RECORD.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

[From the Greenville News of January 17, 1956]

FEDERALS TRY TO RUN LOCAL COURTS?

It is becoming more and more apparent, as Ray Tucker points out in his column on this page, that the Federal Government, mainly through the Department of Justice, is bent upon more and more interference in what heretofore have been regarded as strictly local affairs.

County and State courts and law-enforcement agencies are going to be kept under much closer Federal surveillance. The slightest complaint that someone has been denied the right to register or vote probably will result in an investigation. Outright harassment in some instances probably will occur.

The United States Supreme Court recently has shown a predilection for reviewing State and county criminal cases, especially those arising in the South, where there may have been no Negroes on the trial jury or eligible for being drawn for service or when the defendant charges brutal treatment at the hands of law-enforcement officers.

This Federal concern for basic rights is not all bad, of course. An accused person, or one who feels his federally guaranteed rights have been tampered with, should have recourse to the courts of last resort. Only in that way can justice be preserved.

But the cause of justice will be dealt a disservice and real freedom endangered if the Federal courts and the Department of Justice intend to try to run local law enforcement and second guess every trial.

As a case in point, the FBI, under orders from the Attorney General, is investigating the jury system in Cobb County, Ga. Such an investigation may be in order, especially as it relates to the possibility that Negroes may be deliberately kept off the jury lists. But the case which has provided the excuse for the investigation hardly warrants such concern.

In this case, the Supreme Court ordered a third trial of a Negro convicted of a heinous crime. While working on a road gang after conviction on two charges of assault with intent to commit robbery, the defendant entered a nearby home and raped a mother in the presence of her baby. Twice he was tried and sentenced to be electrocuted.

In the first trial, the county court appointed counsel to defend him. In the second trial the defense lawyer was furnished by the NAACP.

The main point on which the court ordered the new trial was not the absence of Negroes from the jury panel. The court merely touched on that. The retrial was ordered because the trial court did not appoint counsel for the defendant until after he had been indicted. It is our understanding that it is the usual court practice to appoint counsel only after a defendant is arraigned (which cannot be until after he is indicted) and tells the court he is unable to furnish himself with a lawyer.

At any rate, the court's mention of the jury matter apparently prompted the investigation which has incensed Georgians and is causing concern in Congress.

It could be that Georgia's refusal to obey the antisegregation decision of the Supreme Court has a lot to do with the State's being put on the spot in this matter.

[From the Greenville News of January 17, 1956]

HIGH COURT SEIZES LOCAL JURISDICTION

(By Ray Tucker)

WASHINGTON, January 16.—The Supreme Court's unprecedented seizure of jurisdiction over the judicial and prosecuting processes in several county and State cases has alarmed and evoked bitter denunciation from Southern Members of Congress. They suspect that the tribunal is preparing the way to try to enforce its edict against segregation in public schools and parks.

Attorney General Herbert Brownell, Jr., has mobilized his agency in the maneuver, including J. Edgar Hoover's Federal Bureau of Investigation. Under Brownell's orders, FBI agents are investigating the method of selecting jurors in Cobb County, Ga. Brownell acted after the Supreme Court had reversed the death sentence conviction of a Negro, partly because no colored people served on the grand jury panel or the trial jury.

Four Georgia Members, all of whom have served as county prosecuting attorneys, denounce both actions as unwarranted interference on the flimsiest grounds. They charge that the grounds amount to an attempt to appease the National Association for the Advancement of Colored People, which complains that the administration makes no effort to carry out the 20-month-old antisegregation decision.

NEW CONCERN OF COURT

In less publicized cases, the Supreme Court has shown new concern over the judicial conduct and procedure of county and State policemen and judges. It is extending the

Federal arm into faraway and questionable fields, in the opinion of many legislators, lawyers, and jurists.

In a 9-year-old case, Chief Justice Earl Warren's Court ordered the retrial of Stephen J. Herman. Herman was convicted in 1946 on 30 counts of burglary, larceny, forgery, and false pretense in Pennsylvania, and given a 10-year sentence.

On the ground that Herman had been beaten up by police and not informed of his right to counsel, the Supreme Court ordered a court hearing of Herman's allegations. He will be released, if he can convince the county court at this late date of the truth of his charges.

In a Seattle case, the Supreme Court upheld a Federal circuit court of appeals order for a hearing of another defendant's charges of police brutality in order to obtain a murder confession.

Both defendants sought Federal relief after they had vainly exhausted all remedies in State courts. In delivering his opinion in the Herman matter, Justice Hugo Black announced that the Supreme Court would follow the same procedure in all complaints of this kind.

ASSUMPTION IN THE PAST

In the past, acting on the assumption that county and State officials were closer to and more familiar with the facts, the high tribunal has generally refused to intervene in these cases.

In view of the 9-year lapse in the Herman affair, for instance, it may be impossible to round up witnesses and police involved in his arrest and trial, especially as he was indicted on 30 counts for 4 different crimes.

But this detailed checkup and policing of local courts by the Federal Government, with the use of FBI agents, may have far-reaching effects, in the opinion of many Congressmen, judges, lawyers, and editors in sensitive areas.

It may be the weapon which the administration will employ against counties and States now engaged in seeking methods to invalidate the Supreme Court's desegregation fiat. It also promises to plunge the judiciary, Federal, State, and local, deep into political controversies on a national scale.

[From the Columbia Record of January 13, 1956]

FEDERAL AID MEANS FEDERAL TAXES

COLUMBIA, S. C.—Gov. George Bell Timmerman, Jr.'s second annual message strongly condemns the idea of Federal aid for the public schools.

"The propaganda for Federal aid," he said, "is based upon a big political hoax, the claim of an acute shortage of school buildings."

"The claim is simply untrue," he declared. "More school buildings have been constructed in America within the last decade than during any other comparable period. The real need is to meet the normal increase in school enrollment, a need which can be met by the several States without resort to the Central Government. In South Carolina," the Governor pointed out, "the State and school districts are meeting their construction needs.

"The effect of Federal aid would be to shift the major responsibility for levying taxes for school purposes from the State legislature to the Central Government," the Governor pointed out. "Federal aid is sugar-coated Federal taxation.

"It is a fanciful dream to think that the Federal Government could assume this tremendous expenditure without additional heavy taxation. * * * It is inconceivable that the Federal Government would cut vast expenditures for national defense, foreign aid, and public welfare assistance—and public debt service which it cannot cut—in order to give money to South Carolina for school purposes.

"The folly of Federal taxation for State services is demonstrated in the field of highway user taxes—taxes levied in the name of better roads. In reality, much goes to support other Federal programs. That is the reason additional heavy Federal taxation has been proposed for the pending Federal highway construction program.

"Propaganda for so-called Federal aid to education ignores these factors."

[From the Columbia Record of January 13, 1956]

STUKES ELEVATED TO CHIEF JUSTICESHIP

The elevation of Associate Justice Taylor H. Stukes of Manning to the chief justiceship of the South Carolina supreme court will meet with wide acclaim.

Justice Stukes, who succeeds Chief Justice Gordon Baker, now resigning, has been a member of the court since February 29, 1940.

He has demonstrated on the bench both a deep knowledge of the law and a capacity for logical thinking as well as the judicial attitude that South Carolina expects of its judges and justices.

Graduated in the law, cum laude, from George Washington University, Justice Stukes served in both the House and Senate of the General Assembly of South Carolina, being named as speaker pro tempore of the house and president pro tempore of the senate during his service which encompassed two eras of financial crisis for the State. He was a member of the house when the State was embarking on the program of indirect taxation in order to relieve the burden on real property and a member of the senate when the depression produced the State's worst financial crisis. His counsel was of importance in solving both crises.

He was still serving in the senate when in 1940 he was named associate justice to fill out the unexpired term of M. L. Bonham, elevated to the chief justiceship.

As chief justice, Mr. Stukes can be counted upon to lead the court in adhering to the constitution as written. For he is a conservative in the proper meaning of the word.

[From the New York Times of January 19, 1956]

IN THE NATION—DOUGLAS ON CONSTRUING THE CONSTITUTION

(By Arthur Krock)

WASHINGTON, January 18.—The latest of the protean activities of William O. Douglas, only one of which—though the most important and concentrated—is his service as Associate Justice of the Supreme Court, is a study of constitutional interpretations by the judges of India. This part of his new book, "We the Judges" (Doubleday & Co.), published tomorrow, is of special interest to lawyers and students of law. But the chief interest and significance of the book are supplied by Justice Douglas' comment on the processes and principles by which the Constitution should be construed by the Supreme Court.

Justice Douglas has sometimes dissented from Bill of Rights interpretations on which a majority of his brethren have united. Therefore his outline of what should be the thinking of the Supreme Court when it resolves constitutional issues must be viewed as personal. But it exactly describes the Court's reasoning in the vital matter of segregation by race in the public schools. And it has produced other rulings for which the losing lawyers—and often court dissenters—have denied any authority in the national charter or the statutes. In these instances the Supreme Court has been charged with "legislating," or "amending the Constitution," to carry out the personal predilections of the judges.

PRINCIPLE OF DECISION

Such charges are in effect that the Supreme Court has violated the following principle of decision which Douglas lays down in his chapter, The Judiciary:

"From age to age, the problem of constitutional adjudication is the same. It is to keep the power of government unrestrained by the social or economic theories that one set of judges may import into the Constitution."

This passage, standing alone, is vulnerable to the standard criticism that has been made of the Supreme Court when the majority of its members were the appointees of succeeding Presidents of the same political party and began overturning long-standing rulings made by their predecessors. It has been the stock attack on the Court throughout its history, most recently on the so-called Roosevelt Court whose appointments began in 1937. And Douglas has been one of the chief targets.

A TWO-WAY STATEMENT

The justice proceeds to anticipate and challenge that charge by continuing the passage as follows:

"[The problem] is to keep one age unfettered by the fears or limited vision of another. * * * A fundamental tenet of faith that has evolved from our long experience as a Nation * * * is this: If the social and economic problems of State and Nation can be kept under political management of the people, there is likely to be long-run stability."

But immediately thereafter Douglas gives new life to the charge, particularly as made against "the Roosevelt Court" of which he was an important component, by adding: "It is when a judiciary with life tenure seeks to write its own social and economic creed into the charter that instability is created." This illustrates the difficulty of the task the author set for himself in laying down general guides to decision. For the sum of these passages is that he advocates a judicial end-product which he decries as a judicial principle.

TO FIT EACH GENERATION

This inconsistency, however, does not long detain Douglas in arguing for the proposition that overruling standing constitutional interpretations is periodically necessary if the Nation is to meet and master the sudden storms of an era.

"A judge" he writes "looking at a constitutional decision may have compulsions to revere past history and accept what once was written. But he remembers above all else that it is the Constitution which he swore to support and defend, not the gloss which his predecessors may have put on it. So he comes to formulate his own views * * * [instead of subjecting his thinking] to men long dead and unaware of the problems of the age in which he lives. * * *"

"Stare decisis (standing by prior judicial rules and principles) in constitutional law must give way before the dynamic components of history. Then the cycle starts again. Today's new decision becomes a coveted anchorage for new vested interests. The former proponents of change acquire an acute conservatism. It takes * * * a new generation to catch the broader vision which may require the undoing of the work of their predecessors. That is the way it must be if the Constitution is to remain a living, vital force in the affairs of each generation."

Or, in other words, the Constitution is, and must be, what the current Supreme Court majority says it is, and vary with changing times. Inevitably it follows that justices will continue to "write their own social and economic creeds into the charter."

[From the Columbia State of January 17, 1956]

THE TIMES RELENTS?

The New York Times editorially took a dim view of the result of the Virginia school election, seeing in it victory for the integrationists rather than for the segregationists. This was in line with the general attitude of the Times on the school problem.

Arthur Krock of the Times Washington bureau has written an article which is much more realistic and which takes notice of the southern viewpoint. Mr. Krock's article, which can be considered as further evidence that the dawn may be breaking, is reprinted on this page today. Two of Mr. Krock's pertinent paragraphs read as follows:

"The Federal Constitution was drafted and ratified on the general understanding that it reserved to the States the full possession of their 'local rights.'

"For many years it was established, judicially and legislatively, in the United States, that one of these 'full possessions' was the pattern of public-school education financed by the State taxpayers. When the Supreme Court, in 1954, banned public-school segregation on a simple sociological argument, disregarding all historical and legal complexities, it reversed longstanding precedents by which the school systems of a number of States had been deeply entrenched."

For the New York Times, Mr. Krock has said a lot.

[From the Columbia State of January 17, 1956]

COURT OPINION "SOCIOLOGICAL"—VIRGINIA'S PROTEST LOOMS LARGE BY EVERY STANDARD

(By Arthur Krock, in the New York Tmes)

WASHINGTON, January 11.—When Virginia in 1788 ratified the Constitution of the United States on assurances from James Madison, 'father" of the national charter, and Edmund Randolph, that the Central Government would "take no more sovereignty from the States" than was necessary to "protect and defend it," the prestige of Virginia was effective in routing the opposition in a sufficient number of other States to put the Constitution in force. Up to then ratification was a matter of grave doubt. And the margin in the Virginia convention itself was only 10 votes because there, though Jefferson, Washington, and Marshall supported Madison and Randolph, those who did not accept the latter's statement were led by Patrick Henry, George Mason, and Richard Henry Lee.

Virginia is no longer the leader of the national political thought in the twentieth century. But its prestige remains very great in the South, where exists the principal problem created by the Supreme Court's public school desegregation order. And the moderate Gray plan by which Virginians have sought to preserve their public school system, and still not require white or colored citizens either to send their children to mixed schools or find some other way to have them educated if they can, will impress States that have turned to outright defiance of the Supreme Court's decison.

The court may hold that the Virginia plan is evasion; Virginia may resort to another and another; for, as its political leader, Senator HARRY F. BYRD, said, "We are in for a long-drawn-out struggle, and may have to shift strategy from time to time." But citizens who would preserve the Federal system, including compulsory arbitration by the Supreme Court of all major disputes between the central government and the States, will best serve their objective by taking into account the background of the overwhelming vote of Virginia this week for the first of a series of orderly public referenda to solve the desegregation problem on a community-by-community basis.

LEGAL PRECEDENTS OVERTURNED

The Federal Constitution was drafted and ratified on the general understanding that it reserved to the States the full possession of their "local rights."

For many years it was established, judicially and legislatively in the United States, that one of these "full possessions" was the pattern of public school education financed by the State taxpayers. When the Supreme Court, in 1954, banned public school segregation on a simple sociological argument, disregarding all historical and legal complexities, it reversed long-standing precedents by which the school systems of a number of States had been deeply entrenched.

"In a very real sense," commented Kelly and Harbison in "The American Constitution" (W. W. Norton & Co., 1955), Chief Justice Warren's opinion for a unanimous court "amounted to a piece of judicial legislation." Those who hold this to be the right and duty of the Supreme Court, when, in its view, changing domestic conditions and international considerations call for the exercise of judicial supremacy over the other Federal branches and the States, applauded this particular exercise as "statesmanship." But the late John W. Davis, who was at least as good a constitutional lawyer as any member of the present court, argued that the tribunal has no such powers.

A STATEWIDE SENTIMENT

In southern Virginia, where the problem evoked by the desegregation decision is an acute condition and not a consequence of cruel prejudice, the vote Monday for the new approach was overwhelming. But in the Shenandoah Valley and southwest Virginia, where Negroes are in a small minority, there was also a large affirmative vote for the plan in response to its endorsement as a flexible method of integration by BYRD and former Governors Darden and Battle. Even in the Virginia suburbs of Washington, where the Washington Post and Times Herald attacked the plan incessantly, the margin against it was much smaller than the opposition expected.

Thus by every democratic measurement of public opinion a great majority of one of the most law-abiding States of the Union, notable also for enlightened interracial conditions and for the equitable administration of justice, was registered against inflexible legal integration in the public schools. Those who in advance of the vote assailed the Gray plan as "defiance of the Constitution," on the very concrete point stated by Charles Evans Hughes that "the Constitution is what the judges say it is," are now arrayed against a large majority of the citizens of the State that brought about the Philadelphia convention in which that Constitution was drafted under the leadership of Virginians, and for many years was construed by the Supreme Court and Congress to legalize color segregation in the public schools.

If desegregation is to be accomplished without great social and political disturbance, or the decay of the public school system in the South, Virginia's effort to do that will contribute importantly to the result.

[From the Columbia State of January 17, 1956]

THE VIRGINIA DECISION—NORTHERN LECTURES HURT—COMPULSION CALLED ISSUE

(By Raymond Moley)

It is not going to help reasonable men in their quest for a reasonable solution of the problem of school segregation for northern voices like that of the New York Times to direct emotional lectures toward the Southern States. The Times editorially said that the recent Virginia plebiscite on the subject "represents an emotional and almost desperate reaction against the clearly defined shape of things to come."

There are many millions of us who are unwilling to accept from the Times or any other single authority a definition of "the clearly defined shape of things to come" on this or on any other subject.

It is, moreover, interesting to note that among those millions unwilling to permit the editor and publisher of the Times to enjoy a monopoly of enlightment are the distinguished Arthur Krock, for many years head of the Times' Washington Bureau, and John N. Popham, the Times' regional correspondent from the South. It is interesting to note that the more remote the Times people are from the problem, the more certain they are that they have the only possible solution.

The State of Virginia, certainly not less enlightened than some of its northern fellow Commonwealths, is recognizing that the problem posed by the Supreme Court in its historical opinion in 1954 requires a policy of cautious preparation for circumstances that it hopes will not be confronted, but that are quite possible. Specifically, the voters of the State by an overwhelming vote have said that they may have to abolish their public school system rather than submit to compulsory integration. The vote authorized the calling of a constitutional convention which will consider the amendment of the present constitution of the State to permit State funds to be appropriated for private schools.

We in the North should understand that the issue is no longer the simple question whether white and Negro children shall attend the same schools. The issue is compulsion, either for or against segregation.

In a very reasonable speech last May, a young North Carolinian, A. Reed Sarratt, Jr., editorial writer for the Winston-Salem Journal, stated the problem this way:

"The Supreme Court has said that laws requiring segregated schools violate the 14th amendment. The Court has not said that enforced mixing of the races in the schools must be substituted for enforced segregation. * * * The Court has not replaced one compulsion with another. * * * It is my belief that North Carolina could remove all legal compulsion for segregation in the schools without causing much change in the present racial composition of the student bodies of the schools. But the social patterns which have governed relations between the races should not be expected to change. If there is any change it will be slow."

This view, expressed by Sarratt, was endorsed by responsible public officials and educators in his State. It may not be the final answer, but it points to a factor which has fundamental roots in human nature. Americans don't like prohibitions. They don't like to be told that they must do or not do things. Perhaps with a removal of compulsions, coupled with a recognition of the differences among school districts which must be left to the districts themselves for adjustment, we shall arrive at a working arrangement acceptable to all but those who would arbitrarily impose upon the future their own concept of morality and justice.

The Late James McLaughlin

SPEECH

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 19, 1956

Mrs. ROGERS of Massachusetts. Mr. Speaker, in the constant flow of life, the mystery of death, which we must all experience, always seems just a little beyond our comprehension. Particularly is this emphasized when the experience of death comes to one very close to us, when it comes to a friend, a dear relative, a mother, father, or someone very dear.

It is with a very sad heart and with a great effort to understand that I take this moment to bring to the attention of the Congress the passing of a very great friend, Mr. James McLaughlin, of Woburn, Mass., a longtime friend of my husband's, the Honorable John Jacob Rogers, who was a Member of Congress for many years, and an equally loyal and devoted friend of mine through all my years of public service. It is difficult for me to comprehend the great work of representing my Fifth District of Massachusetts in the Congress without his devoted friendship, wise counsel, and constant help.

Mr. James McLaughlin possessed an eminently respected character. He was loved by all, regardless of their station in life. He was a friend who could be depended upon for help wherever and whenever help was necessary. He was interested in the welfare of and improvement of his city. He was devoted to doing good for the Commonwealth of Massachusetts. He was a strong and loyal American patriot.

The death of Mr. McLaughlin was due to overwork. An excellent newspaper reporter, during his newspaper days, he covered many famous events and wrote many famous stories for the press. For many years he wrote a feature article for the Boston Globe and was a correspondent for the Associated Press. During the latter years of his life he entered the Government service in the Department of Social Security, and the work he did there in helping so many of his fellowmen will always be remembered. Always he had time to do just something more for somebody. Never sparing his strength, he worked long hours in his job and for his friends.

Mr. McLaughlin was blessed in life with a very fine and wonderfully respected family. He is survived by his attractive and charming wife, Christine, 4 daughters and 1 son, a sister and 9 grandchildren. It is a wonderful family who, like their father, are friendly and generous and unselfish.

Although death came to James McLaughlin suddenly, I know he was prepared to receive it, for he lived a fine, Godly, Christian life, and knew so well that in spite of all of its beauty, life on earth is just a temporary sojourn.

Included here in my remarks, I am submitting a report of the life of James McLaughlin from the Woburn Times, a fine daily newspaper, on the staff of which he once served. It is a fine description of the life of James McLaughlin, who devoted his life to his community, his country, and his friends:

JAMES MCLAUGHLIN FUNERAL RITES TO TAKE PLACE FRIDAY

The funeral of James A. McLaughlin, veteran newspaper reporter and public informational executive, will be held from his late home, 35 Sturgis Street, Friday at 8:15 a. m. Solemn High Mass of Requiem will be celebrated at St. Charles Church at 9 o'clock followed by burial at Calvary Cemetery, Woburn.

The sudden death of Mr. McLaughlin was received with a shock of grief in the city where he was known as an active, virile, and resourceful member of the fourth estate with his finger on the pulse of current events at all times. While returning from his office in Waltham, where he was regional director of the Social Security Administration in the area which extends from Newton to Framingham, he was stricken behind the wheel of his car on Lexington Street, this city. A truck driver was in the act of giving the McLaughlin car a push with his machine and he noted that the operation was faulty but snow on the rear window of the car cut off the truckman's vision.

William Murphy, cab operator for the Woburn Cab Co., who was approaching noted the strange happenings and he signalled to the truck driver to stop, as the McLaughlin car came into the side of the road. He saw the driver slumped over the wheel but still breathing. Murphy sent a message over the taxicab radio to the desk in Woburn Square and Joseph Kelleher operator of the company, called the police. Sgt. Edward E. Reil and Officer Edward J. McColgan rushed to the scene in the ambulance and the victim was pronounced dead shortly after his arrival at the hospital. Rev. James J. Cullinan of St. Charles Church administered the last rites.

The fascinating and productive career of Jim McLaughlin as a newspaperman dates back to 1912 when he was an office boy on the old Woburn News. He did not possess a formal education but by self-appliance and an inherent ability in the newsgathering field, he held very important assignments in news coverage and informational center administration. He was a reporter's reporter always quite willing to discuss angles of the developments of a story with reporters from rival newspapers and he was considered outstanding in his thoroughness of investigation, mentally locating the backbone of a story and his ability in literary formation in presenting his version to the reading public.

His range of coverage ranged from famous murder cases which he covered for the Boston metropolitan dailies to concerning Boston City Hall for the Boston Post during one of the several news-developing administrations of Mayor James M. Curley. He was considered among the staff of Boston newspapers as one of the best and in cases where sordidness and sadness smeared with a breath of scandal to the detriment of an innocent family, he was not considered a good reporter, as his human inclinations and his appreciation of the happiness and humanity of his fellowman inspired to play it down in such instances. He had incidently dedicated his life and talents to the uplift of his neighbor and his neighbor was everybody. The revealing testimony of those who worked with him or under his direction bespeak the kindness and consideration of the man and a person in trouble would not employ a better defender than Jim McLaughlin who went to the lengths to extend a helping hand and to convince those in whose hands the ultimate decision in a case rested. His acts were many and without compensation, or any desire for reward. He was a family man, deeply concerned about the trappings and proper development of his children mentally and physically. He was methodical in the execution of his duties and he was well informed in whatever field his talents brought him.

Mr. McLaughlin was born in Woburn, March 29, 1892, the son of the late Dennis J. McLaughlin and Mary Healy McLaughlin. He attended the grammar schools and left to assist his family. While attached to the Woburn News as an office boy, he took courses in Burdett College. From office boy he was promoted to sports reporter and his youthful masterpieces were his version of the prize fights then conducted in Lyceum Hall. From the Woburn News he went to the Woburn Daily Times, where he covered City Hall, politics, obituaries and general news events. He entered the Woburn Daily Times in 1913 and left for a time to become a member of the Boston Post city staff, during which time he covered Boston City Hall, court stories and famous accidents.

The reporter had a fling at politics and was elected alderman in ward 1, and in 1918 he was elected city clerk at which time he returned to the Woburn Daily Times as the news reporter. He became local correspondent for the Boston Post and then became district man for the Boston Globe which position he has held for thirty years. In addition to general coverage of his district, Mr. McLaughlin wrote feature articles for the Globe. He was also local correspondent for the Associated Press and covered elections in this district for the wire service for the past 32 years. He also covered stories for the old Lowell Courier Citizen and later the Lowell Sun and his coverage also appeared on the Boston Record and Boston American, Hearst newspapers. Mr. McLaughlin was dean of local newspapermen not only in longevity of service but in the variety and scope of his news-gathering activities. In the city government, he was also a member of the board of assessors from 1927 to 1931.

In 1934, Mr. McLaughlin entered the Government service in informational or public relations work. His first assignment was the Home Owners' Loan Corporation, where his work was noteworthy for the many local hardship cases he handled for Woburnites because of his desire to serve. He then went on to the Federal Housing Administration and then to Reconstruction Finance Corporation. For the past 6 years, Mr. McLaughlin was regional director for the Social Security Administration in the Waltham district.

The deceased is survived by his wife, Christine (McDonald) McLaughlin, four daughters, Mrs. Lillian Hooban of West Roxbury, Mrs. Rachel Palmer of Woburn, Mrs. Christine Drew formerly of Atlanta, Ga., now of Reading, Mass., Janet McLaughlin, of Woods Hole, Mass., and one son, James A. McLaughlin, Jr., a student at St. Michael's College in Winooski, Vt., a sister, Maude McLaughlin of Woburn, and nine grandchildren.

Providing Hospitalization and Care for the Mentally Ill of Alaska

SPEECH
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 18, 1956

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 6376) to provide for the hospitalization and care of the mentally ill of Alaska, and for other purposes.

Mr. MILLER of Nebraska. Mr. Chairman, I yield myself such time as I may need.

Mr. Chairman, the bill before us is an administrative measure. The bill is a great improvement over any measure we have had heretofore for the mentally ill. This House and the committee in the past several years have considered bills for the mentally ill of Alaska. I do wish to point out, however, that the requirements set up, the standards set up, by the American Psychiatric Association, adopted in the measure, are very high standards. I hope that the Territory or the new State can follow them. When they do the expense will be great. I wish all States in the Union were in a po-

sition to adopt such standards and to follow them. Even though they are not followed in toto, I think we should make the effort to have as high standards as possible.

I do want to call my colleagues' attention to several provisions of the bill. There is a provision in section 371 of title II that provides $6 million for the care of the mentally ill. The money is given to the Territory, $1 million the first year and then tapers off to $200,000 in 1966. After 1966 it is proposed that the Territory assume all the costs of the mentally ill. The gentleman from New York [Mr. O'BRIEN] has said he would oppose any further grants to the Territory. The taxpayer gets off right easy for the care as of now. It costs between $6 and $7 a day for the care of the mentally ill at the Morningside Hospital in Portland, Oreg. I predict the costs under this bill may reach $25 a day. Alaska after the 10-year period or after the hospital is constructed must bear that cost. I hope that is crystal clear.

It has been costing the Government through the Interior Department an average of about $800,000 a year to care for an average of 345 mentally ill that are generally taken care of at the Morningside Hospital in Portland.

I visited the hospital and was amazed at the splendid care the patients were receiving. I am not familiar with the economic arrangements or the money that may have been made by the Morningside Hospital. I do know it has cost an average of about $181 a month for a psychiatric patient. I do not know where in this country we could go and get care at the rate of $181 a month. It costs an average of about $24 a day in most psychiatric hospitals in the United States, so there is quite a wide spread between $181 a month and $24 a day.

I expect to support the bill. I do have an amendment or two I should like to suggest. One of the amendments to the bill, which gives the Territory 1 million acres of land, was my amendment. We increased it from 500,000 to a million acres. I think it might be well to spell it out a little more clearly, as the gentleman from Mississippi [Mr. COLMER], of the Committee on Rules, said this morning, that the funds might well be earmarked for the use of the Territory in running the mental institution. I believe such an amendment will be offered to the bill, and it will receive my support.

The other point I wish to call to your attention is section 372, which provides an outright grant of $6 million. That would be $12,500,000 in 10 years, but the grant is $6 million. The construction grant is $6.5 million.

I call your attention to the word "construction." We spell it out in the report as meaning not only the construction but the initial equipment of buildings, including medical transportation facilities, the architects' and engineering fees, and the cost of the land to be acquired by the Territory. In other words, the Territory has no financial responsibility—not a thin dime of their own in this building—I do not think that right.

It is a princile with me that we should not give an outright grant without requiring some responsibility on the part of the people of Alaska. In other words, in the Hill-Burton bill we provide for a matching of funds. Alaska has shared very generously in the hospital-construction bill and the Hill-Burton provisions of the bill, and I think it is right.

I am going to vote for the bill, whether my amendment is adopted or not, but I am going to offer an amendment which would require the Territory to match funds that are made available by the United States Treasury. We follow that in our Federal aid, with our highway program, and with the Hill-Burton bill. If we are going to give them a complete hospital without any effort on their part, no responsibility at all, I think the principle is wrong. If we are going to do that for this Territory we ought to do it for the other Territories and we ought to do it for the other States in the Union. With that in mind, I expect to offer at the proper time such an amendment. In other words, let us have it on the principle of matching that has prevailed in this country and throughout the Territories for many years.

As I said at the beginning, I think this is a good bill. It is not a perfect bill. It can be improved. Whether the two amendments I hope will be offered are adopted or not, I expect to support the bill.

I want to compliment the gentleman from New York [Mr. O'BRIEN] on his splendid handling of the bill, and also the committtee that went to Alaska to investigate closely, on the job, the mental health problem in Alaska. The problems of Alaska are such that they must look to Congress for help. Perhaps some day when they become a State they can assume all obligations. They can if we give them not less than 50 percent of their 375 million acres of land. It was my intention that by increasing from 500,000 to 1 million acres of land granted the Territory that they could use the proceeds of the land to run the hospital and for other expenses of government. Some day they should control their lands. In my opinion there is a great future for Alaska. Great untold resources that might make it one of the rich States. I trust they use their resources wisely.

Did Betsy Ross Make the First Stars and Stripes?

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Thursday, January 19, 1956

Mr. MARTIN of Pennsylvania. Mr. President, there has always been a great deal of discussion as to whether Besty Ross made the first Stars and Stripes.

The Sons of the American Revolution of Pennsylvania appointed a very distinguished committee to study this subject. The committee was headed by the noted patriot and former judge, Eugene C. Bonniwell, of Philadelphia.

The committee has made a most interesting report, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

REPORT OF COMMITTEE TO DETERMINE WHETHER BETSY ROSS MADE THE FIRST STARS AND STRIPES

The committee to determine whether Betsy Ross made the first Stars and Stripes begs leave to present its report.

There exists no official record that Betsy Ross made the first Stars and Stripes. Nor does any official record exist showing that she did not or that any other person was the first to make it.

The principal evidence that she was the first is her own statement and the affidavits of her daughters, nieces, nephews, and grandchildren that they heard her story from her own lips.

Her statement was that about 1 month before the Declaration of Independence she was visited at her upholstery shop on Arch Street in Philadelphia by George Washington, Robert Morris, and George Ross, whom she regarded as a committee of the Continental Congress, and that Washington asked her to make a flag according to a design shown her; that at her suggestion the design was slightly altered and that shortly thereafter a new colored design was sent her, from which she made a flag.

Although this story was doubtless repeated to many others, in addition to her relatives, there is no evidence that it was denied by any of her contemporaries. Nor is there any evidence that any of her contemporaries doubted the honesty and truthfulness of this Quaker lady or her daughters or the other relatives who signed the affidavits.

Before discussing the arguments that deserve some consideration, it might be well to merely mention the statements that have been published without the slightest evidence to support them. They are: That the tradition was invented by somebody in recent years; that it was exploited for somebody's benefit; that Betsy was an unprincipled person who sought to make capital out of the story; that no one took the pains to contradict it; that the story is of the legendary type; that if Betsy made a flag in an Arch Street house, it was made after a design that had been conceived and woven somewhere else and her contribution was no more than her labor in sewing on some stars.

The chief reason that makes historians hesitate to accept the story is the absence of any official record of the event, either in the minutes of the Continental Congress or in any official document.

However, it is not to be expected that, while the Colonies were still under British rule and the British flag, the Congress would have taken official action on, or spread upon its minutes, a motion to have a national flag. In fact, one of the published arguments purporting to prove the falsity of Betsy Ross's statement is that the tradition practically charges Washington and the rest of the committee with seeking to establish and set up a national ensign before we had even declared ourselves a free people with an independent government and without any delegated authority to do so.

It is well known that Robert Morris was chairman of a secret committee on military supplies, although there is no record of this in the Journal of Congress. If it was in this capacity that he visited Betsy Ross, it is unthinkable that his action would have been made a matter of record.

Washington's desire to have the colors ready even before the Declaration of Independence is shown in his letter to General Putnam, dated Philadelphia, May 28, 1776,

desiring him to speak to the several Colonies "to hurry them to get their colors done."

As a matter of fact, the only official notation concerning the stars and stripes is a brief paragraph, tucked among many others in the Journal of Congress for June 14, 1777, that the resolution to have it made the national flag was adopted. There is no official record in the Journal of Congress or elsewhere of when such a resolution was introduced, or who introduced it—whether a member of a committee, or what brought it about, or whether there was a preliminary discussion or any debate on the motion. Even the official proclamation of its adoption was not made until 3 months later.

It has been suggested that, as June 14, 1777 was a time of rushed preparations to meet General Howe's expected attack on Philadelphia, Congress passed many measures that day and that the note on the flag resolution may have been the hasty passage of a long-delayed measure, in order to give official sanction to the colors for ships, or the hasty recording of a resolution passed some time previously.

It should be remembered that the Grand Union or Cambridge flag was never authorized by Congress nor mentioned in its Journal.

As proof that the army had no Stars and Stripes in December 1776, it is stated that it was not used in the battles at Trenton and Princeton. Yet Peale, who commanded a company at these and other battles and who was known to have been particular in matters of historical record, painted the Stars and Stripes in his picture of Washington at Princeton, which was begun in the year of that victory. Similarly Trumbell, Washington's aide-de-camp at the start of the war, who fought in several battles and who was known for his fidelity to historical details, made three paintings soon after the war, which showed the Stars and Stripes in all.

There is no evidence that Washington or any of his contemporaries found fault with these paintings.

Fow, however, thinks he has demolished this pictorial evidence by stating that West painting of William Penn's Treaty with the Indians and Leutze in his painting of Washington Crossing the Delaware used their imagination without consulting historical and geographic details.

Another of Fow's supposedly clinching arguments is that Elizabeth Montgomery made an incorrect claim concerning the armed brig Nancy.

It is known, of course, that various other flags were borne during the war.

It could not be expected that historians of the period, or Washington's biographers would include an account that was not supported by official records.

The absence of official records, however, does not prove that the events did not occur.

Despite the loss of the Pine Creek Declaration of Independence, drawn up on July 4, 1776 under the Tladaughton Elm on the banks of Pine Creek in present Lycoming County, Pa., there is no doubt that it existed.

Although the frontiersmen, who on May 16, 1775 assembled at Hannastown, Westmoreland County, Pa., apparently kept no minutes, it is known that they passed a declaration, which was dispatched to the provincial capital, Philadelphia.

Notwithstanding that the minutes of a midnight meeting, held in May 1775 by representatives of Mecklenburg County, N. C., are said to have been destroyed by a fire in 1800, there is a well-established tradition in that region that they passed a resolution that the people of that county were free and independent of the British Crown.

According to Wigmore on Evidence, declarations about family history is a recognized exception to the hearsay rule and the general inquiry should be: Was the circumstances named in the statement such a marked item in the ordinary family history and as interesting to the family in common that statements about them in the family would be likely to be based on fairly accurate knowledge and sincerely uttered?

The above is the indisputable law in the United States, and in a court of law the affidavits by the family of Betsy Ross would be admitted as actual and primary evidence.

In view of this and of the absence of any proofs to the contrary, until negatived by substantial proofs, it may be stated that Betsy Ross did make the first Stars and Stripes.

Respectfully submitted.

National-Defense Paradox

EXTENSION OF REMARKS
OF
HON. LEVERETT SALTONSTALL
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES

Thursday, January 19, 1956

Mr. SALTONSTALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "National Defense Paradox," published in Machine Tool Progress for December 22, 1955. This publication is issued by the National Machine Tool Builders' Association, which represents an industry most important to our defense, and also a large industry in Massachusetts.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NATIONAL DEFENSE PARADOX

Government policy with respect to machine tools is a peculiar paradox in our national defense program.

Machine tools are essential to the manufacture of every type of weapon and device required for national defense—in any kind or quantity, great or small.

The experience of three wars—World War I, World War II, and Korea—demonstrated that the peacetime size of the American machine tool industry was inadequate to meet, and meet quickly, the defense needs of a national emergency. In each case the buildup of our war potential hinged upon the buildup of machine tool production to the level required.

In view of the seriousness of this situation, following Korea there was authorized, by Executive order, the formation of an Advisory Committee on Production Equipment under the chairmanship of Mr. Harold S. Vance. In its January 1953 report to the Director of Defense Mobilization, the Committee stated:

"In the mobilization that followed the communistic aggression in Korea, shortages of machine tools and other production equipment proved to be serious obstacles to rapid buildup of equipped forces-in-being. The outbreak of a new war probably will not allow this country the necessary period of time in which to expand its production equipment industries. A real degree of national security requires the establishment, prior to a theoretical M-day, of a substantial measure of industrial capacity to produce the munitions and implements of war."

Pursuant to this conclusion, the Committee recommended that the Government should continue consistently to purchase machine tools for national defense production with particular emphasis upon so-called long-lead-time machines; that is, those which are large or complex, and which require for their engineering and building a period of many months, and which are absolutely essential to certain types of military preparedness programs.

The Committee's recommendations were founded upon the premise that:

1. We must have actually built and in existence, certain key machine tools vital to the meeting of a national emergency; and,

2. It is imperative to the defense of the country that the American machine tool industry be maintained at a level commensurate with its strategic importance as a major arm of defense production.

The original idea of the Committee was that Government should spend between $500 million and $800 million a year for the acquisition of machine tools which the Committee considered essential to maintain our defense potential.

In its January 1953 report the Advisory Committee on Production Equipment stated:

"The first thing to consider in the matter of cost is the fact that end items are more seriously affected by obsolescence than are the facilities that produce them. When an inventory of 5,000 tanks becomes totally obsolete it means a loss of at least $1 billion, but the cost of keeping the tank-plant facilities up to date would be a small fraction of that amount. Another consideration is the fact that the original cost of facilities is small compared to the cost of producing the end items on a large scale. There is, therefore, a tremendous opportunity for economy which should be exploited in our mobilization effort."

And on page 8 of the report:

"The economy aspect of this policy is striking. As an example, it is estimated that about $500 million expended for long-lead-time items of production equipment in the Air Force production acceleration insurance program would increase the mobilization capability for the production of aircraft by about $18 billion during the first 2 years alone, if the production equipment is actually acquired prior to the mobilization period. This increased production capability would substantially reduce the 'mobilization reserves' that would otherwise have to be accumulated. The savings in required outlay of funds prior to a mobilization is in the ratio of 36 to 1."

Now for the paradox.

Although everybody in Government agrees with the recommendations of the Committee, what actually happened was this:

The Committee suggested an initial appropriation of $500 million for the fiscal year 1954. Congress appropriated $250 million. Because of delays in committing this sum, Congress reduced the appropriation to $100 million for the fiscal year 1955. Subsequently Congress appropriated a second sum of $100 million for the fiscal year 1956.

The first $100 million was portioned out to the three armed services, but purchasing was cut short by an economy move in the Defense Department after only a negligible volume of orders had been placed. The second $100 million, presumably for long-lead-time machine tools as above described, has never been activated.

The net result thus far has been that although the Committee recommended, on behalf of national security, the purchase of machine tools for defense purposes at a rate of $500 million to $800 million a year, purchases resulting from congressional appropriations on behalf of Committee objectives have amounted literally thus far to only about $29 million.

In the meantime the Defense Departments have continued to purchase machine tools for current production in accordance with their normal procurement procedure. Such

purchases, however, have been far below the levels contemplated by the Committee, and have been for the purpose of meeting current requirements rather than for the purpose of building up the defense potential against a possible future emergency.

The Nation's machine tool builders are not concerned about this situation from the standpoint of the industry's survival. What causes profound concern in the machine tool industry is that in spite of actual recent experience in World War II and the Korean war, in spite of the adoption of the policy recommended by the Vance Committee in January 1953, so little has been accomplished in the succeeding 3 years. The industry fears that in the event of war there will be a repetition of the same difficulties, the same problems, the same desperate need for the immediate production of complicated weapons, and the same restrictions that hampered output in the last two emergencies

The fact is that every machine tool builded should have in his files today instructions as to what he should do in case of war. He should have pool orders ready for activation so that he can go directly into production for defense. Procedures should be established so that he would not be subjected to interruptions, confusion, drafting of skilled men, inability to get materials, and all of the other troubles that beset him in previous wars.

And this is only part of the story.

According to the original recommendations of the Committee, agreed to by the Government, Government-owned machine tools useful for defense production were to be retained by the Government as a national defense reserve. But today the Government is under constant pressure to lease some of these machines to producers of civilian goods. They would then be subjected to wear and tear which would make them less effective for defense production; and, what is still more important, in case of emergency, where would they be? Scattered throughout the vast metalworking industry in the United States they could not be collected and reinstalled in time to meet a crisis.

Although purchasing of machine tools by defense authorities for current needs is continuing, Government buying is inherently complex and this discourages machine tool builders from bidding on Government orders.

Foreign governments realize the value of having their own machine-tool industries and therefore discourage the importation of American-built machine tools into foreign countries. In the meantime, the much lower wage rates paid overseas have enabled the foreign builders to increase substantially their sales in the United States. These conditions tend to reduce the capacity of the American machine-tool industry.

To understand the full implications of this situation it is necessary to go back to the close of World War II, when under the Marshall plan our country was busy activating a European aid program. A part of this program consisted of American help in reactivating the machine-tool industries of Western Germany, France, England, Italy, and other European countries.

United States policy is still to the effect that when there is a machine tool to be bought with United States taxpayers' money for aid to Europe, it should, wherever possible, be bought from a European builder instead of from an American builder.

Meanwhile European nations built up a series of tariffs, embargoes, special taxes, licenses, import restrictions, currency regulations, etc., which made it extremely difficult for a European machine-tool user to buy an American-built machine, even though he preferred it to any built in his own country and was perfectly willing to pay the higher American price.

With respect to machine-tool imports into the United States, our tariff has been reduced to 15 percent; which is utterly insufficient to offset the wage differential between Europe and the United States. For example, the United States machine-tool industry pays an average of about $2.20 per hour to its labor force, while the average rates paid by the industry's major competitors in Germany and England are only 70 cents and 90 cents respectively. It is estimated that the same machine can be built in Epurope at about 36 percent to 50 percent lower cost than in the United States, while tariff protection is only 15 percent.

An immediate problem with respect to this whole picture has arisen in connection with the Buy American Act, under which an Executive order originally required that the Defense Department, in purchasing a machine tool, should buy one of American make unless the price differential amounted to more than 25 percent in favor of a foreign machine. But under a new Executive order the price differential has now been cut from 25 percent to 6 percent. In view of the wage differential between foreign countries and the United States above described, it is obvious that foreign machine tool builders can quote prices more than 6 percent below those of American machine tool builders.

To sum up:

Government should carry out the program of securing now the key long-lead-time machine tools that will be essential in an emergency.

Government should constantly screen its reserve of machine tools to remove those which have no future value in defense.

Government should establish complete procedures to enable the industry to expand immediately if war breaks out.

Government should persuade other nations to lower their barriers against machine tools, as the United States tariff on foreign tools has been lowered.

Government should not buy foreign machine tools unless they are of a type not built in this country, as service and repair parts for foreign machines will not be readily procurable in the event of war.

All this raises a basic question:

Where do we want machine tool capacity developed?

In Europe, where it might be over-run by a conquering army within a matter of hours—

Or here at home, where we so urgently need it if war should come?

National defense policy would appear to demand a careful review of all these questions.

Providing Hospitalization and Care for the Mentally Ill of Alaska

SPEECH

OF

HON. A. L. MILLER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 18, 1956

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 6376) to provide for the hospitalization and care of the mentally ill of Alaska and for other purposes.

Mr. MILLER of Nebraska. Mr. Chairman, I will not belabor the Committee with a long explanation of the amendment; it speaks for itself. It requires that the Territory have some responsibility. As it is under the proposed bill they have not a thin dime invested in the new hospital.

The principle in the United States is to require States to match Federal funds. We do it under the Hill-Burton Act, and the Federal matching for roads; and I feel that the principle should be included in this bill. I am also convinced that the present cost of six or seven dollars a day care at Morningside Hospital—may well be twenty-five to thirty dollars a day in the new hospital. The standards set up in this bill, if followed, will cost a great deal. The Alaska people may not thank this Congress when they assume the much greater financial burden which will occur under this bill.

Edward Bacon Wilber

EXTENSION OF REMARKS

OF

HON. FRANK T. BOW

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 19, 1956

Mr. BOW. Mr. Speaker, I am certain many Members feel, as I do, a deep sense of loss in the passing of Edward Bacon Wilber, Deputy Assistant Secretary of State for Administration and budget officer of the State Department.

Many of us knew Ed personally. All of us admired him for his integrity, ability, and patience. We trusted his discretion and tact. I am confident that this feeling was shared by members of both parties. It was the feeling all of us have for a truly outstanding public servant.

Edward Bacon Wilber was born in Fairport, N. Y., and graduated from Union College in 1925. He was a widely respected management consultant before he joined the Government in 1941. In addition to his work in the Department of State, he served the Bureau of the Budget for 7 years and was a consultant to the Hoover Commission.

In 1951, to show its appreciation for Mr. Wilber's unswerving devotion to our country and his outstanding accomplishments for good government, the other body adopted a resolution directing that he should "receive a salary commensurate with the service he renders to the Government as an outstanding employee of the Department of State."

Those of us whose duties required inspection trips abroad have had the pleasure of traveling with Mr. Wilber on various occasions. We profited by his extensive knowledge of State Department operations abroad, his ability to analyze the difficult problems encountered in such work, and his sincerity and energy in everything that he undertook.

I know that many Members join me in sincere condolences to Mrs. Wilber and the children, Edward, Jr., Paul and Marcia Jeanne. While there is little that we can do to ease the burden of their grief, I hope it may help them to know of the high regard in which Edward Bacon Wilber was held by all who know him in his Government career.

Frustrated Democrats—Suddenly There Are No Issues

EXTENSION OF REMARKS
OF
HON. HUGH SCOTT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 19, 1956

Mr. SCOTT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Philadelphia Evening Bulletin of January 13, 1956:

FRUSTRATED DEMOCRATS—SUDDENLY THERE ARE NO ISSUES

(By Joseph and Stewart Alsop)

WASHINGTON.—The Democrats are beginning to feel rather like the butt of the classic old swimming-hole joke.

While they have been happily disporting themselves in the water, shouting merrily to each other about the fine prospects for 1956, the Republican administration has stealthily made off with all their clothes.

The administration, in short, has done a downright brilliant job of aborting every major Democratic issue. Consider a typical sampling:

Farm issue: This was to be, of course, the Democrats' biggest single issue for 1956. Until very recently, the Democrats dream of the future was clear. They would pass a farm bill restoring fixed 90 percent of parity, and giving the farmers all sorts of other goodies, like special soil banks payments for keeping their land out of production. The President would veto this bill, and the Republican goose would thus be cooked to a turn.

It may work out that way. The farm issue is certainly still the most dangerous the administration faces. But the administration has taken over the soil bank idea, and other ideas first advanced by the Democrats. Senator HUBERT HUMPHREY, principal Democratic farm policy idea man, complains loudly that "They're stealing my babies."

Moreover, the administration is playing its trump card on the farm issue—President Eisenhower. Secretary of Agriculture Ezra Benson is political poison in the farm areas. But the President himself is still immensely popular with the farmers.

The administration plan now is to have the President move front and center on the farm issue, selling the administration program, and above all persuading the farmers that the Democrats' fixed support program will pile up higher surpluses and depress prices still further. A nationwide Presidential telecast devoted entirely to the farm issue is being seriously considered. And there are signs of doubtfulness already among several Democrats about the vote-getting potentialities of high-fixed parity.

Taxes: The administration has the Democrats nicely boxed in on the tax issue. The President has sternly said that a balanced budget and debt reduction must come before any tax relief. The Democrats strongly suspect a plot. They suspect that, along about June, there will be a jubilant announcement from the Treasury, that due to brilliant economic management, a surplus, perhaps as high as $4 billion, is in sight for the 1957 budget. Therefore, the voters will be pleased to hear a balanced budget, debt reduction, and a nice dollop of tax reduction too, will all be possible.

The suspicion that this is what the administration is up to amounts to a firm conviction among many shrewd Democrats. But what are they to do? If they try to beat the gun with tax reduction now, they will be accused of fiscal irresponsibility and unbalancing the budget. As a practical matter, moreover, any considerable tax reduction for the little fellow could only be compensated for if the oil-depletion-tax allowance loophole were closed. It is enough to point out that the Democratic leaders of both Houses come from Texas.

Education: Here again, the Democrats thought they had a winning issue for 1956, and in the House they have ready a big school-construction bill. But here again the administration is ready to box them in with its $1,250,000,000 school program. On this issue, moreover, the Democrats are in a peculiarly frustrating position, since one of their number, ADAM CLAYTON POWELL, of New York, is prepared to introduce an antisegregation amendment which would almost certainly kill the bill.

And so it goes. The road-construction and social-security issues have been largely aborted in the same way. Democrats like Senators WALTER GEORGE and RICHARD RUSSELL are angry about the foreign-aid budget, but the Democrats certainly cannot win the election by cutting the living daylights out of the foreign-aid program. On other issues, like natural gas, the Democrats are bitterly divided among themselves.

It is impossible, of course, to predict what issues time and the course of events will produce. Let the Communist bloc make an aggressive move—an attack on the Chinese offshore islands, for example—and the now dormant defense and foreign policy issues will dominate this election year. But for the moment, by the simple expedient of adopting large hunks of the Democratic program, the administration has reduced the Democrats to shouting, "me too, but more so."

Cyprus and Macedonia

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 19, 1956

Mr. BOW. Mr. Speaker, last February 2 I introduced in the Appendix of the RECORD a petition by the Macedonian Political Organization with regard to conditions in that section of Greece known as Macedonia. This organization is composed of American citizens of Macedonian descent, and I included their petition in the RECORD in recognition of the constitutional principle that all citizens are free to petition the Congress.

At the time I made it clear I was not taking part in any ethnical or political argument nor endorsing the substance of the petition. I did say that I hoped misunderstandings such as those surrounding Cyprus and Macedonia might be settled amicably.

Unfortunately, I believe, the petition was misunderstood and its insertion in the RECORD was the subject of rather sharp criticism in the Greek press both in this country and abroad.

Under unanimous consent, in the same spirit with which the original petition was introduced, I now include in the RECORD the comments of Mr. John Tozis as expressed in a letter addressed to me. Mr. Tozis takes issue with the Macedonian Political Organization. His letter follows:

NEW YORK, N. Y., *January 16, 1956.*

Hon. FRANK T. BOW,
House of Representatives,
Washington, D. C.

DEAR SIR: The statement entitled "Cyprus and Macedonia," which was drawn by the Macedonian Political Organization and inserted in the CONGRESSIONAL RECORD of February 1955 raises certain questions. That we should strive to deal with international matters in the spirit of justice and democracy is a duty and an obligation. But the performance of such a task requires also careful scrutiny, considering the confusion that exists nowadays not only in the presentation of facts, but even in the terminology itself. Without the latter prerequisite, we are bound to face risks in our effort to serve freedom and democracy. That is the reason behind this short explanation pertaining to Macedonia and the so-called Macedonians.

By way of introduction, it would be necessary to point out that in this country we follow the jus soli principle, which means that anyone born in America is automatically an American, regardless of his racial or national background. In the rest of the world, and particularly in Europe, the principle in force is jus sanguine, that is, regardless of birthplace, a person's status is determined by the race or nationality he belongs to. Therefore, when we speak of Macedonia and Macedonians, we are not speaking of a distinct country or nationality, but merely of a geographical term; that the people who live in it are simply members of some distinct racial or national group. The same applies to Cyprus, where the predominant element is Greek, that is, of people who by descent, language, religion, customs, and culture are Greeks, like the rest of the people of Greece.

Speaking of Macedonia, we must bear in mind that, like Sparta, Athens, Thebes, Cyprus, etc., it was part of the Greek world in antiquity. And, in fact, it was in Macedonia that the idea of uniting the Greek city-states into one single Greek nation was born and carried out by Alexander the Great, who applied the term Greek to his entire army, regardless of their respective areas. It is clear then that those who appear today as Macedonians and who are not Greek are simply remnants of foreign peoples who at one time or another held Macedonia until she was liberated and returned to Greece in 1912–1913.

Your petitioners admit that they are of Bulgarian extraction and that the Bulgarian history covers a period of 15 centuries only (see Macedonian Tribune, September 30, 1955, p. 1.). Be that as it may, one thing is beyond the slightest doubt, namely, that the Macedonians themselves preceded the Bulgarians by at least another 15 centuries. It follows, therefore, that the Bulgarians have nothing in common with the ancient Greek population of Macedonia. The predominant position held by the Greeks in Macedonia throughout the ages had never been seriously damaged by the arrival and the settlement of the Slavs in the northern parts of the Balkan Peninsula (see Charles Eliot, Turkey in Europe, 1908, pp. 273, 332).

Yet, in trying to justify their fantastic claims, your petitioners insist that since the time of Alexander the Great "many a change took place all over the world" and that "the ethnical physiognomy of Macedonia changed also." They fail, however, to specify that if any such changes actually took place, it was confined to the northern sections which are now parts of Yugoslavia and Bulgaria. In their tabulation of the population of all three sections of Macedonia, your petitioners gladly recognize the following ethnical groups: Bulgarians, Turks, Greeks, Albanians, Arumanians, and others. It is significant to note that in referring to any one of them they never use the term Mace-

donia, reserving simply this "holy right" for their own element only.

While, moreover, your petitioners do not hesitate to invoke the principle of change when it serves their ulterior purposes, they automatically choose to keep silent on the ethnological changes that took place recently in Greek Macedonia through the voluntary exchange of minorities between Turkey and Greece, on one hand, and Greece and Bulgaria, on the other.

As a result of this exchange which took place in the 1920's in accordance with the Treaty of Neuilly and under the auspices of the old League of Nations (in point of fact, the three successive chairmen of the Settlement Committee were prominent Americans, to wit, Henry Morgenthau, Sr., Charles P. Howland, and Charles B. Eddy), Greece, of all Balkan States, has today the smallest foreign minorities. Out of a total population of 1,750,000 in Greek Macedonia itself, only 77,000, or 5 percent, constitutes a Slav-speaking minority. What's more, the overwhelming majority even of this tiny minority, being bilingual, regards itself as Greek, and, for this very reason, willingly pledged allegiance to Greece and refused steadfastly to be exchanged, having incurred for all this the Bulgarian curse of being "Grecomani."

Several special committees, consisting of representatives of various nationalities, have been sent recently into Macedonia by the United Nations itself. The findings of all of them openly implicated the Communist regimes of Albania, Yugoslavia, and Bulgaria for their underhanded efforts to subvert Greece. In the facts established and published by these committees there is not one shred of evidence that can be construed as supporting even remotely the insinuations put forward by your petitioners.

The Greek nation, on its part, will never forget one significant fact, namely, that the most decisive factors in that brilliant Greek victory over the international Communist conspiracy was the initiative and action taken by our own Government, first, in helping the Greek people hold its own, and, secondly, in guaranteeing the territorial integrity of Greece.

Americans of genuine Macedonian descent have every confidence in the innate American sense of justice and fair play. It is hoped, therefore, that you, sir, will be good enough to give this communication the same publicity so as to put the record straight.

Respectfully yours,

JOHN TOZIS,
Honorary Member,
Pan-Macedonian Hellenic Association.

The Majority Don't Count

EXTENSION OF REMARKS
OF

HON. RICHARD BOLLING

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, January 9, 1956

Mr. BOLLING. Mr. Speaker, the following article by Gus Tyler, political director of the International Ladies Garment Workers Union, AFL–CIO, appeared in the New Republic of August 22, 1955. It details the shocking facts of the unrepresentative nature of many of our State legislatures:

THE MAJORITY DON'T COUNT

(By Gus Tyler)

In 1936, a Mr. John Keogh—citizen and taxpayer—rose in an Illinois courtroom to make a point. He pulled a gun, killed the opposing lawyer, and took a shot at the judge. All this he did most impersonally, just "to awaken the people."

Mr. Keogh's unprovoked bit of manslaughter was intended to dramatize the fact that the people of Chicago (Cook County) in the year 1936 were denied a republican form of government and that the Illinois Legislature was an illegal body. In 1901, Cook County had 38.1 percent of the total population of the State and was, therefore, allotted 37.3 percent of the seats in the State senate. A quarter of a century later, Cook County had about half the people of Illinois in its confines, but its representation in the senate was still limited to 37.3 percent.

For a quarter of a century, the officials and people of Chicago and Cook County—faced with an ever-growing population, and a limited voice in the State legislature—searched for a solution of their problem: A Constitutional Convention in 1920; a statewide referendum in 1922; a withholding of county taxes in 1925; talk of Chicago's secession from Illinois in 1926. No result.

In 1931 John Keogh made his first try at righting things by refusing to pay Federal income taxes on the grounds that the Federal Government was neglecting its duty in failing to guarantee a republican form of government in Illinois. The circuit court was not impressed with this argument, and the United States Supreme Court wouldn't entertain a review. Undaunted, Keogh, in a foreclosure case in 1936, argued that the legislature was illegally constituted. The judge refused to hear the plea. It was at this point that Keogh, declaring that "something drastic has to be done to awaken the people," opened fire in the court.

But this shot was not heard round the world. Twenty years later, in the country as a whole, the problem of underrepresentation of cities in State legislatures is greater than it was in 1936.

In 1937, 1 year after Keogh tried to dramatize the problem with a gun, another comrade, armed with statistics, entered the battle. Henry Stoner analyzed each of the 95 State legislatures in America (two for each State except unicameral Nebraska). He was trying to prove that a minority of the population could elect a majority of the State legislature in virtually every State. Stoner listed the legislative districts of a chamber by the population in each district. He then took the smallest districts and totaled them until a majority of the chamber was reached. He then found out what percentage of the total population was represented by this majority of the smallest districts. This was no easy undertaking, as anybody who has ever tried to do this knows. But Stoner was hopeful, as Keogh had been hopeful, that this total study of every State legislature in America would shock the Nation into action.

In the box which follows, Stoner's findings are given. To my knowledge, this is the first time they have appeared in print. The percentage figure alongside the legislative body indicates the percentage of the total population whose representatives constitute a majority of the legislative body. Thus, if, in front of Rhode Island, senate, appears the figure 8.86, that means that the members of the State senate of Rhode Island representing 8.86 percent of the people in that State could compose a majority of the senate.

The figure in parentheses indicates a similar notation for the other house of the State legislature:

MINORITY RULE IN THE STATES

8.67, Connecticut, House (44.9).
8.86, Rhode Island, Senate (22.3).
12.5, California, Senate (47.6).
15.4, New Jersey, Senate (46.7).
18.1, Maryland, Senate (33.6).
18.2, United States, Senate (43.4).
18.6, Nevada, House (26.6).
21.5, Idaho, Senate (37.2).
21.7, Delaware, Senate (32.9).
23.2, Montana, Senate (49.5).
23.5, Florida, House (26.1).
26.5, Kansas, House (37.6).
28.5, Georgia, Senate (31.8).
28.8, Michigan, House (34.1).
28.9, Arizona, Senate (45.3).
29.4, Missouri, House (35.4).
30.6, South Carolina, Senate (45.4.)
31.5, Oregon, Senate (39.5)
31.8, Ohio, House (46.2).
32.3, Kentucky, House (39.7).
33.2, Alabama, Senate (35.8).
33.7, Iowa, House (35.3).
33.9, North Carolina, House (49.4).
34.4, Oklahoma, Senate (39.7).
34.6, Wyoming, Senate (39.2).
35.1, Tennessee, House (41.4).
35.4, New Mexico, Senate (41.9).
35.4, Illinois, Senate (35.4).
35.5, Mississippi, House (39.8).
35.5, Vermont, House (47.3).
35.6, West Virginia, Senate (44.0).
37.7, Indiana, House (42.8).
38.0, Texas, Senate (41.7).
38.5, Minnesota, House (42.3).
38.8, Louisiana, Senate (41.2).
38.8, Pennsylvania, Senate (44.4).
39.9, North Dakota, Senate (44.1).
40.3, Arkansas, House (46.1).
40.3, South Dakota, House (42.3).
40.6, Virginia, House (44.0).
40.8, Old Nebraska, House (43.8).
40.9, Wisconsin, House (44.1).
41.8, Utah, House (42.6).
42.3, Washington, House (45.6).
42.5, Colorado, Senate (42.7).
42.9, Maine, Senate (48.6).
43.9, New York, Senate (51.9).
46.8, Nebraska, Unicameral.
48.0, Massachusetts, Senate (48.5).
50.2, New Hampshire, House (50.6).

If the above table were written out in plain sentences, it would begin: In the State of Connecticut, a majority of the House is composed of delegates from districts representing only 8.67 percent of the people; in the other house, the majority represents 44.9 percent of the population. In California, the senate majority speaks for only 12.5 percent of the people; in the other house, a majority speaks for 47.6 percent. In New Jersey, the senate majority speaks for 15.4 percent of the people, etc.

To check on the trend in the State legislatures since 1937, I repeated Stoner's calculations for the upper house in a number of States where the figures were readily available. Here's what I found:

State:	*1937*	*1955*
Connecticut	44.6	36.1
Florida	26.1	17.7
Idaho	21.5	19.1
Kentucky	39.7	49.0
Montana	23.2	18.9
Nevada	26.6	12.4
New Jersey	15.4	17.1
New Mexico	35.4	17.0
New York	43.9	40.9
South Carolina	30.6	26.6
West Virginia	35.6	47.0

The above is only a spot check; these States were selected only because figures were readily available. But the spot check indicates the trend; no improvement since 1937 and considerable evidence that matters have gone from bad to worse.

Even as Stoner was making his 1937 study, urban dwellers were beginning to bypass their State governments and turn to Washington. They had no alternative. The cities could not handle their problems because they were limited creatures of the States with painfully restricted taxing powers. The States were not handling the mounting city problems because their legislatures, through manipulated apportionment and districting, were dominated by the rural areas. In despair, the urban dwellers, constituting about 60 percent of the Nation's

population, turned to Washington, where the legislature is also weighted in favor of the rural areas, but not as unfairly as in the States. As a result, the people of the United States have found that "the interests of urban areas are often more effectively represented in the national legislature than in their own State legislatures."

This last quotation comes from the findings of the Commission on Intergovernmental Relations, appointed by President Eisenhower in 1953, to explore the proper allocation of functions and responsibilities among the various levels of American government. After 2 years of study—recorded in 15 volumes—this Commission has concluded:

"In the early history of our country, State legislatures were the most powerful and influential instruments of government in the Nation. It was to them that the average citizen looked primarily for initiative and wisdom in the formulation of public policy on domestic issues. In power and influence they are no longer as dominant as they were—primarily because they have not found effective solutions to problems that become more chronic and more difficult to cope with in a rapidly changing economy."

In blunt words, the States have fallen from their once high estate because they just aren't doing the job. The State legislatures are so composed that they do not accurately reflect the will of the people. And the people, of necessity, have turned more and more to the Federal power for relief.

This significant finding is made more significant by its sponsorship. The Commission was set up in 1953 as a sort of accomplice after the fact. During the 1952 campaign, the Republican Party charged heavily that too much power rested in Washington and not enough power resided in the State capitols. Immediately upon election, Ike promised to restore power to the sovereign States. This Commission, a majority of whose members were appointed by the President of the United States, was to compile the data and formulate the method for restoring a proper balance between State and Federal Government.

The Commission got off to a poor start when it was found that Dr. Clarence Manion, who was to serve as chairman, virtually disqualified himself by voicing fixed conclusions about matters he was supposed to study impartially. Manion was dropped and Meyer Kestnbaum, a businessman of liberal persuasion, was named. The 30-member Commission ranges in viewpoint from Allan Shivers and Oveta Culp Hobby to Hubert Humphrey and Wayne Morse. The work of the Commission is described by the London Economist as "the first official reassessment of the American Federal system since its foundation in 1787."

The net of this historic study is: it would be healthy for the Federal system if the States played a greater part in our domestic policy making, but, can the States be trusted to do so?

The Kestnbaum report revolves around an axial "if." The big "if" is the ability of the States—as presently governed under their antiquated constitutions, their malapportioned legislatures—to find "effective solutions * * * in a rapidly changing society." If the States cannot cope with these problems of change, then, the Commission insists, the sovereign State is likely to become more unsovereign with each passing year:

"If States do not give cities their rightful allocation of seats in the legislature, the tendecy will be toward direct Federal-municipal dealings. These began in earnest in the early days of the depression. There is only one way to avoid this in the future. It is for the States to take an interest in urban problems, in metropolitan government, in city needs. If they do not do this, the cities will find a path to Washington as they did before, and this time it may be permanent, with the ultimate result that there may be a new government arrangement that will break down the constitutional pattern which has worked so well up to now."

But, the very first step toward making the State government a more effective instrument for handling urban problems is to make the State legislature more representative of its total population. Right now, says the Kestnbaum report, "in a majority of States, city dwellers outnumber the citizens of rural areas. Yet in most States the rural voters are overwhelmingly in control of one legislative house, and overweighted if not dominant in the other."

Over the years, this imbalance has grown more and more discriminatory against the cities. As cities have grown more rapidly than rural areas, these systems of apportionment have tended to create an increasing imbalance in legislative representation in favor of rural areas."

The nature of the problem is clearly defined by the report, but the enormities of urban underrepresentation are not described.

The Kestnbaum thesis is that the road to Washington is paved with the failure of the State to handle urban problems. Since the core weakness of the State is the unrepresentative character of the legislature, it appears that the inevitable trend is toward greater power in Washington.

The ancient recourse of the States—an appeal to the Supreme Court to curtail Federal intervention, especially in matters of economic and civil rights—is no longer realistically available to them. The Kestnbaum report holds that the constitutional line between State and Federal jurisdiction in the areas of traditional dispute no longer exists—if it ever did. If in a matter of economic policy the State and Federal Governments finds themselves in dispute, the ultimate decision rarely lies in the courts any more. Today, these are questions mainly for legislative judgment, and the criteria are chiefly political, economic, and administrative, rather than legal.

In our current concept of what the report calls "cooperative federalism" the basic idea is how to use the Federal system to meet the needs of the people. The final criterion is the public welfare. The report suggests that the lowest and most local level of Government get the first crack at doing the job:

"Leave to private initiative all the functions that citizens can perform privately; use the level of Government closest to the community for all public functions it can handle; utilize cooperative intergovernmental arrangements where appropriate to attain economical performance and popular approval; reserve national action for residual participation where State and local governments are not fully adequate, and for the continuing responsibilities that only the national government can undertake."

In this one long-sentence summary of its philosophy, the Kestnbaum report is issuing a polite but unmistakable warning to the States.

Whether the Kestnbaum report can stir the States in 1955 anymore than Keogh's gunfire did in 1936 or Stoner's tables did in 1937 is highly doubtful. The commission's report does not read like a trumpet call to action. In academic style, it merely notes the waning power of our sovereign States, voices its hope that the Federal system shall not disappear, and warns the States in a loud aside that unless they become more representative of their citizenry, they will continue to be bypassed in favor of Washington.

The Kestnbaum report is misdirected; the letter of transmittal is addressed to the President of the United States. It should be addressed to the legislatures of the 48 States.

Addresses of Newell Ellison and H. Brian Holland at the George Washington Law Association Dinner Honoring the Court of Claims Upon Its 100th Anniversary

EXTENSION OF REMARKS
OF
HON. BROOKS HAYS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 18, 1956

Mr. HAYS of Arkansas. Mr. Speaker, on October 27, 1955, the George Washington Law Association honored our beloved former colleague, Hon. Marvin Jones, Chief Judge of the Court of Claims, and the associate judges, Hon. Benjamin H. Littleton, Hon. Samuel Estill Whitaker, Hon. J. Warren Madden, and Hon. Don Nelson Laramore, at a dinner in the city of Washington, in celebration of the 100th anniversary of this distinguished court. The occasion was honored by the presence of the Chief Justice and Mrs. Warren and many other outstanding members of the Judiciary and the legal profession. The Chief Justice and Chief Judge Jones made appropriate responses to personal tributes, and commented upon the significance of the Court of Claims. The two principal addresses were by Mr. Newell Ellison, of the firm of Covington & Burling, member of the George Washington University Board, and by Assistant Attorney General H. Brian Holland. These addresses reflected scholarship and research of the highest order, and under leave to extend my remarks I include their comments in order that students of important legal questions dealt with by the Court of Claims may have the benefit of these remarkable studies. Copies of Mr. Ellison's address with footnotes may be obtained from the George Washington University Law School. The addresses are as follows:

THE UNITED STATES COURT OF CLAIMS: KEEPER OF THE NATION'S CONSCIENCE FOR 100 YEARS

(By Newell W. Ellison)

The 100th anniversary of the United States Court of Claims has deep significance not only for those who are dedicated to the law but to the public at large. Such a centennial is an invitation to reflect upon the court's origin, to recall what needs gave it birth and with what purposes it was endowed, to review its accomplishments and to project its future.

This is one centennial celebration, however, that calls for no eulogy. The court today is a vigorous body, and in its quiet and efficient way it is doing a greater volume of judicial business than at any time in its history. In a real sense, therefore, its first 100 years are only a beginning, and a continuation of its high service can be expected.

Nor is the writer prepared to spend time telling the members of the court that they can do no wrong, and in this forbearance certainly 50 percent of the lawyers will join, depending on the outcome of their last case before the court.

This anniversary calls principally for an assessment of the position which the court has made for itself in our Government. Mere age should not evoke tribute—whether in an individual or in an instrument of Government—because accomplishment and fulfill-

ment of assigned tasks are the true marks of greatness.

THE NEED FOR AND EARLY HISTORY OF THE COURT OF CLAIMS

The Court of Claims was a long time coming. Perhaps the most startling fact about its establishemnt is that it—or a similar court—was not founded many years before 1855. At that time the creation of the court was aptly characterized as "a practical negative upon that vicious maxim, 'the sovereign can do no wrong.'" The surprising thing, however, is how the notion that the "sovereign can do no wrong" ever gained acceptance in this country, or survived as long as it did. The very idea would seem anathema to a people who had declared their independence in 1776 and taken up arms against George III. Certainly it should have been rejected as one of the few principles of the common law that was alien to our temperament and way of life.

To compound this paradox, the English themselves in their own pragmatic way had, by the end of the 18th century, had enough of the antics of their King and had begun to make him accountable in the courts. When the creation of the Court of Claims was being debated in Congress, a European diplomat told a story about George III who, apparently believing he could do no wrong, asked a judge, "Why do I lose so many lawsuits in your court?" The judge is reported to have replied, "Because Your Majesty is so often wrong." Throughout the debates in Congress one of the most persuasive arguments in favor of the court was that many other civilized nations had established methods by which a citizen's claim against his government could be adjudicated. This Nation was not, therefore, among the first to make the Government accountable in the courts, and when it finally did so, almost the only great power failing in this duty was Russia.

This is not to suggest that there was no one in this country before 1855 who saw the desirability of making the Government accountable in the courts. John Quincy Adams, John Randolph, Henry Clay, Stephen Douglas, and Abraham Lincoln were among those in the Congress who saw the need for this court long before 1855. For example, John Quincy Adams concluded from his long experience in the Federal Government that when it came to private claims a deliberative assembly is the worst of all tribunals for the administration of justice. But until 1855 even such men as these were unable to overcome the hard core of opposition that clung to the notion that the Government should not be subject to suit. The explanation of this phenomenon must be left to the political scientists. However, it should be noted that the earliest settlers were proud of the way they had freed themselves of the King and were convinced that if the King could do no wrong, then certainly their own new democracy was similarly infallible. It took a generation or so before this intense pride burned out, and the fact that over the years more and more people became claimants against the Government played no little part in extinguishing it.

The mere establishment of the court in 1855 did not, however, do away completely with the deep-seated notion that the Government can do no wrong, or at least should not be accountable for any wrongs that it might do. The very survival of the court was in doubt for some years. Until 1863 its judgments were not final. Each one required congressional review and a specific appropriation to make it effective. This serious deficiency was cured during the administration of President Lincoln, who said in his annual message to Congress that: "[W]hile the court has proved to be an effective and valuable means of investigation, it in great degree fails to effect the object of its creation, for want of power to make its judgments final * * *." "It is as much the duty of the Government to render prompt justice against itself, in favor of citizens, as it is to administer the same between private individuals." However, several more years were to pass before this legislation was finally accorded the meaning Congress originally intended. And almost 90 years were to pass before the Congress got around to recognizing that the court was a full-blooded, constitutional court, without qualifications or limitations. Even though it thus took almost another century to bring the court to its present stature, the year 1855 is most significant because the creation of the court demonstrated that the United States had come of age. The American people had become sufficiently confident of their ability to survive as a government of freemen that they no longer feared inroads on its sovereignty, and were prepared to make it accountable in the courts.

If "the cornerstone of a temple of justice is no higher than the lowest stone in its foundation," then it is not surprising that Lincoln was among those who played a significant part in the creation of the court of claims, and in starting it on the road to its present position of dignity and responsibility.

THE PURPOSES AND OBJECTIVES OF THE COURT: KEEPER OF THE NATION'S CONSCIENCE

Perhaps the clearest statement of the court's purposes and objectives was made by a distinguished member of the bar just 100 years ago this month. The words of Mr. Charles O'Connor, of New York, are so prophetic of the course that this court has actually followed that they are well worth quoting. In an early appearance before the court he said:

"Here equity, morality, honor, and good conscience must be practically applied to the determination of claims, and the actual authority of these principles over governmental action ascertained, declared, and illustrated in permanent and abiding forms. As step by step, in successive decisions, you shall have ascertained the duties of government toward the citizen, fixed their precise limits upon sound principles, and armed the claimant with means of securing their enforcement, a code will grow up giving effect to many rights not heretofore practically acknowledged.

O'Connor declared that the court should establish a standard for governmental morality, and urged the court never to forget that it was "the keeper of the Nation's conscience."

This is not to suggest that the high mission so eloquently articulated by O'Connor was entrusted to this court alone. All of our Federal courts share in this task. But since this court's jurisdiction involves only the Federal Government, it may be said that it is specially charged with seeing to it that the United States does justice to its citizens.

The real reason that this centennial is being observed is that the court of claims has met the challenge laid down 100 years ago. In discharging its responsibility of holding the Government accountable to its citizens, it has indeed served with distinction as the keeper of the Nation's conscience.

The court has on many occasions rendered substantial money judgments for taxpayers. It has passed upon a number of knotty constitutional questions. It has considered bizarre and spectacular claims arising out of piracy and insurrection. It has meticulously analyzed involved patent claims. The Indian claims which it has considered are legion in number, and some of its judgments legendary in amount. All of these matters are highly significant not only to the claimants who have petitioned the court but to the members of its bar as well.

But the unique and permanent contribution of the court to our Government and our political life is found in the stream of less-noticed decisions rendered over the past hundred years which in various ways have made Government officials accountable to the citizens with whom they deal. Each decision has been as a brick in the substantial structure of justice and fair play which has not only protected the citizen from arbitrary action, but perhaps more important has inspired a high standard of conduct for Government officials high and low. In no other country does the citizen receive fairer treatment from the officers of his government, and one of the principal factors in the development of this high sense of responsibility on the part of Government officials has been the existence of this court and the discipline of its decisions.

Before turning to the court's contribution to the substantive law, a word should be said about its highly effective procedure, particularly the Commissioner system. The manner in which these unusually able men find the all-important facts has been of major assistance in the court's administration of justice. The system has been widely copied and only recently was specially commended by the Hoover Commission in its Report on Legal Services and Procedure.

SOME MAJOR CONTRIBUTIONS OF THE COURT

This is not the occasion for a detailed analysis of the court's decisions, but it is appropriate to note a few of the important areas in which it has established or enhanced the principle of accountability of the Government to its citizens. Three salient areas are Government contracts, employee compensation and tenure, and the taking of private property for public use. From its inception cases involving these questions have been constantly before the court. In these fields the court is in every sense an expert judicial body. It is no less expert in other fields, but in these fields the cumulative effect of its decisions has been to mold a code of Government conduct worthy of the highest hopes of the court's founders.

GOVERNMENT CONTRACTS

While the court's influence in the field of Government contracts has been making itself felt for a hundred years, a notable example has so recently occurred as to be fresh in the minds of all. It is the controversy sparked by the Moorman and Wunderlich cases. It provides an instructive example both of the court's philosophy and of its stature in the Government.

The problem involved was the power of the Government to bar a private contractor from obtaining judicial review of contract disputes. One branch of the controversy goes to the scope of judicial review of administrative determination of facts under contracts which provide that the contracting officer's decision is to be final as to all facts. The other concerns judicial review of action taken under contracts which provide that the contracting officer's decision is to be final as to all disputes of law as well as fact.

Beginning as early as 1866, the court had consistently held that a contract of the latter type did not bar judicial review of questions of law. Almost as early in its history, the court held that it was not barred from reviewing administrative findings of fact to the extent they involved fraud, gross mistake or failure to exercise an honest judgment. These two interpretations were adhered to by the court, and followed by other tribunals, and until the late 1930's they represented the law of the land on Government contracts.

The court's view of contracts which barred judicial review entirely was that it served the best interests of neither the Government nor the contractor to shift to private citizens the entire risk of arbitrary administration of contracts by representatives of the Government. The Supreme Court, on

the other hand, never quite accepted this view. It reversed one decision in 1939 in a per curiam order, but the Court of Claims continued to adhere to its previously announced views. Some 10 years later in the Moorman case, however, the Supreme Court rejected the position so long held by the Court of Claims and did so in language that could not be ignored.

Most of you are familiar with the Wunderlich decision in 1951. In that case the Supreme Court repudiated the standard which had been long established in the Court of Claims for review of administrative findings of facts under Government contracts. This court had reversed a determination by a Government official because it disregarded the practices of the trade, proper accounting methods, and known facts as to actual cost. But the Supreme Court held that the only basis for review of the contracing officer's determination was actual fraud, which it defined as an intention to be dishonest. The Wunderlich decision thus constituted a deep inroad into the protection which this court for many years had accorded private contractors against arbitrary Government action. The depth of that inroad was measured by one of the dissenting Justices of the Supreme Court, who said,

"Law has reached its finest moments when it has freed man from the unlimited discretion of some ruler, some civil or military official, some bureaucrat. Where discretion is absolute, man has always suffered.

"The rule we announce makes government oppressive. The rule the Court of Claims espouses gives a citizen justice even against his government."

Fortunately, however, the decisions of the Supreme Court in Moorman and Wunderlich were not to be the final word. Rather, the Court of Claims, long-held views as to what the Nation's conscience demanded of its officials prevailed. Congress outlawed contracts which barred review of questions of law, and provided for judicial review of questions of fact in accordance with substantially the same standards as the Court of Claims had followed for years. The adoption by the Congress of this court's views is a remarkable tribute to the court, and is a measure of the esteem in which it is held today by its contemporaries in the Government.

Perhaps, what has been said gives a one-sided version of the place of the court in our Government. It does do more than render judgments in favor of claimants. All too often it refuses. And it does protect the Government against baseless and exorbitant claims. But it is much more noteworthy that this Nation has an institution of government that assures justice to its citizens since over the centuries governments, in their strength, have been able to take care of themselves.

RIGHTS OF GOVERNMENT EMPLOYEES

Turning now to the second general area in which the court's influence has been particularly felt, it is hardly necessary to note that the rights of employees of the Federal Government have always been a major concern of the court. On occasion, far-reaching questions of constitutional law have been before it. Two such cases are the Myers and Humphreys cases involving aspects of the President's power of removal. Another is the more recent Lovett case, in which the court passed on the constitutional issue raised and was affirmed by the Supreme Court on the ground that the statute in question was a bill of attainder.

In the main, however, the court's influence in this area cannot be charted by landmark cases. Its peculiar contribution has been to provide a forum in which employees can secure relief against arbitrary official action. In a real sense the court has provided for these many years the grievance machinery for the entire Federal Government wherever statutory rights are abridged. Army officers, stenographers, shipyard welders, Philippine scouts all have reason to regard the court as their final protection against what they regard as discrimination or oppression at the hands of Uncle Sam. The court's numerous decisions in the field have left their lasting impression on the administration of civil service laws and regulations.

The recent decisions in the Knotts and Crocker cases exemplify the role of the court in fashioning the proper relationship between the Government and its employees. Neither case involved a great constitutional issue nor a particularly complex legal question. Both, however, required a deep understanding of Government and of human frailties, and both called for an exercise of wisdom and courage on the part of the court to recognize that personnel systems, completely sound in theory, had broken down and had impinged upon the individual rights of a single employee. Under these decisions an employee is entitled not merely to the judgment of his superior, but rather to the honest judgment of that official. The court's willingness to take such action as this has made it an important force in the development of a competent and loyal body of civil servants.

TAKING OF PROPERTY WITHOUT COMPENSATION

It is difficult—in this year 1955—to realize that, before the establishment of the Court of Claims, there was no real substance to the right guaranteed to the private citizen by the Constitution against taking by the United States of his property without compensation. Before 1855, if an individual was paid at all for property converted to public use by the United States, it was purely an act of grace by the Congress.

Over the past few decades there have been marked developments in the doctrine of the Federal law of taking. Here, to, as in other areas, the advance in the law has taken the form of a progressive enlargement of the Government's duty to account to the private citizen for administrative acts which interfere with his property interests. No small part in the development in the law of taking can be credited to enlightened decisions of this court, such as the Causby case, where it was held that flights of military aircraft at low levels over plaintiff's farm constituted taking of a temporary easement in the airspace requiring compensation under the Constitution; and the Silk cases which recognized that a Government regulation could effect a taking even though the property involved was not actually appropriated.

CONCLUSION

There can be seen a common strain running through all of these decisions of the court. In each of them the court has held the Government and its officials to a strict code of conduct in their relations with the citizenry. Technicalities are brushed aside. The rights of the individual are never sacrificed to the demands of expediency. There is indeed a striking resemblance between the jurisdiction of this court and the jurisdiction of the Equity Court before it became merged with the courts of common law. Its origin and the maner in which it has discharged its responsibilities are very much in the high tradition of the Court of Equity.

Though the court's record as "keeper of the Nation's conscience" is to be found in its decided cases, it must be remembered that it has exercised an influence far beyond its recorded decisions. Its main impact upon political life of this Nation has been the salutary effect that its decisions have had upon the everyday conduct of the Government. In these days when Government is big and growing bigger, it is essential that at the bar of justice the Government never becomes more powerful than its most lowly citizen. This is the ideal toward the attainment of which the Court of Claims has made such an important and vital contribution. This court is founded on the proposition that the Government may be wrong—a proposition which today unfortunately is rejected by governments ruling almost half the world.

The role of the court in the long process of making the State responsible for the just claims of its citizens has been as important as any development in our law in the last century. With the growth of the great centralized governments of the 20th century, the need for the court is far greater today than it was at the time of its establishment in the simpler days of 1855.

Perhaps the single most important requirement in our complex society today is that there be adequate protection of the rights of the individual against the increasing demands and power of government. It has been said that an essential difference between democracy and totalitarianism is that democracy has shown a keener insight into the importance and dignity of the individual. The act by which this court was created 100 years ago, and the manner in which the judges of the court have exercised their unique jurisdiction, are inspiring and encouraging instances of that insight. Together they have created an institution of justice that performs the high function assigned the court on its official seal "For the Republic and for Its Citizens."

It can well be said to the court on its 100th birthday: "How well in thee appears the constant service of the antique world."

ADDRESS BY HON. H. BRIAN HOLLAND, ASSISTANT ATTORNEY GENERAL, TAX DIVISION

This is a most unique occasion in that it is the only occasion, so far as I am aware, when a representative of the Department of Justice has found it possible to concur, without reservation, in everything said by non-Government counsel before the Court of Claims. Perhaps I should simply stipulate my concurrence, sit down, and await the opinion and judgment of the Court. However, one of our most distinguished judges has expressed the view that an indifferent, or even a downright bad, oral argument is better than none at all. So I pray the Court's indulgence for the few minutes that have been allotted to me.

Mr. Ellison has spoken of the circumstances which led to the enactment of the legislation creating "a court for the investigation of claims against the United States." It is interesting to note that in 1854, even as now, there were those who tended to blame all their troubles on the shortsightedness and prejudice of the so-called bureaucrat. In the debates on the bill to create what was then visualized as a board of commissioners to investigate claims against the Government, Senator Cass illustrated the crying need for some such tribunal by relating this anecdote:

"Toward the close of the year 1813 [he said], the army on the northwestern frontier was almost destitute of provisions, the roads were impassable, and we did not know what could be done. Among other things proposed to remove the pressure upon us, a seine was directed to be purchased and sent up to Lake Huron, to catch whitefish. The quartermaster purchased a seine, and the whitefish were caught abundantly, which was a matter of vast importance to the soldiers. The account was sent on; and what do you think was the decision on it by the accounting officer? It was that whitefish did not run in the month of November, and, therefore, that the United States had been cheated. The good officer had lived all his life upon the Potomac, and had heard of shad, which run only in April and May, and he thought that no fish could run in November."

Whether this was the turning point in the debate I do not know. Nor do I know whether the Court in its earlier days ever considered adopting the whitefish as its emblem just as my home State of Massachusetts has given recognition to the importance of the codfish in its own history.

Although the dominant objective of those who sponsored the creation of this new court in 1855 was to take care of citizens who had just claims against the United States, there were those who were also greatly concerned with protecting the Government against fraudulent claims. The congressional committees which passed upon claims did not, of course, purport to be judicial tribunals, and there was no provision for the appearance of counsel to present the Government's side of the case. With the change over to a judicial form of procedure, it was obviously necessary to provide for representation of the Government's interests in litigation before the court. It may surprise you to learn that at the outset the Government was not represented by the Department of Justice. The reason for this is very simple: The Court of Claims was created in 1855, but the Department of Justice did not come into existence until 1870. There was, of course, an Attorney General, who had one assistant. But in those days the Attorney General had little to do with litigation, except in the Supreme Court. So the act creating the Court of Claims provided for a Solicitor of the court, who was to be appointed by the President with the advice and consent of the Senate, and was to be the lawyer for the Government. It was not until 1868, 2 years before the establishment of the Department of Justice, that the duty of appearing for the Government in the Court of Claims was given to the Attorney General. At that time the idea of centralizing control of all the Government's legal business in one department, headed by the Attorney General, was under active consideration; and the transfer of the functions of the Solicitor of the Court of Claims to the Attorney General seems to have been regarded as an entering wedge. Initially it was proposed that there should be a Bureau of the Solicitor of the Court of Claims in the Attorney Generals' office, and that the Solicitor should be appointed by the court itself. Ultimately, however, the position of Solicitor was abolished and the Attorney General was given an additional assistant to help him carry out his new responsibilities. It is interesting to note that in the court's first report to Congress, and again in the debates on the 1868 statute, great stress was laid upon the importance and difficulty of the duties of those who represented the Government before the court, it being emphasized that in the Court of Claims the Government is opposed by the most eminent counsel in the United States—a situation which I am sure you will agree was not peculiar to the 19th century. Perhaps this had something to do with the later adoption by Congress of the requirement that the Attorney General's assistants be learned in the law, a requirement which was perhaps implied, though not expressly stated, with respect to the Solicitor of the Court of Claims, and as to the observance of which I hesitate to testify.

In speaking of the vital part which the court has played in the development of the legal relationships between the Government and its citizens, Mr. Ellison has most appropriately emphasized the point of view of the citizen as litigant, the functon of the court as "keeper of the Nation's conscience," and its influence in promoting and maintaining high standards of conduct for those who carry on the daily activities of Government. As one who is privileged tonight to speak for the Government itself, I should like to direct your attention for a moment to a related, though slightly different, aspect of the court's work. I refer to the invaluable contribution it has made, and continues to make, to the orderly administration of the Government's business through its promotion of uniformity in the interpretation and application of the laws under which that business is conducted.

Although in certain areas of the law the Federal district courts have concurrent jurisdiction with the Court of Claims to hear and determine claims for money judgments against the United States, the concurrent jurisdiction of the district courts is, with only few exceptions, limited to claims not exceeding $10,000 in amount. While the primary purpose of that limitation was apparently to safeguard the Government's interests by requiring that the larger claims be brought in a court upon which the Attorney General could keep close watch, the result has been that the more important issues affecting such matters as Government contracts, the rights of Government employees, and the payment of just compensation for the taking of private property by the Government, have been adjudicated by the Court of Claims, subject to review only by the Supreme Court. This system, whereby the Court of Claims is practically the final arbiter of disputes falling within its jurisdiction, produces a consistent and authoritative body of law in fields in which certainty and finality are of the utmost desirability, to citizen and Government alike. Government departments must know how to fashion their programs and how to operate under them within the limits of congressional appropriations. Persons dealing with the Government must understand the scope of the authority of the Government's representatives and the proper interpretation of Government contracts and regulations. As a court with predominant, if not exclusive, jurisdiction over such matters, the Court of Claims has been in a position, through the application of uniform principles to the decision of individual cases, not only to mete out justice to the citizen but to furnish reliable—if not always welcome—guides to the formulation of administrative policies, the administrative disposition of claims, and the carrying on of the complex business of Government generally. It seems unlikely that comparable results could have been achieved had unlimited jurisdiction over claims against the United States been conferred on the district courts, with appellate jurisdiction vested in 11 courts of appeals, and with only the most limited opportunity for review by the Supreme Court.

Through its daily contact with cases involving virtually all of the executive departments and agencies, the Court of Claims has acquired detailed knowledge of their organization and methods of operation, as well as of the statutes and regulations under which they function. Its decisions have provided the basis for many of the rules which govern their activities. Thus it is well equipped to appraise the varied issues which come before it in their proper perspective and to exercise—as it has done in the past and continues to do—a constructive influence in the field of Government administration.

This does not mean that those who are on the Government's side of the counsel table will always agree with the court's views on particular issues. After all, we conceive it to be our duty to act as advocates for our client to the best of our ability, and like most advocates we are sometimes stubborn in our beliefs. In 1868, when, as I mentioned earlier, there was under consideration the proposal to do away with the office of Solicitor of the Court of Claims, there was some suggestion of criticism of either the Solicitor or the court, or both. Speaking for the defense, Senator Hendricks made this observation:

"I have heard complaints of the Court of Claims, but mainly by persons who have lost their cases there. That is the principal complaint that I have heard, and I have not paid much attention to it, for it is not often that a man, having a claim before that court, would be entirely satisfied if the decision should be against him, although every other person might be satisfied that the decision was proper."

It is only human nature to complain when one loses, and in this respect at least Government counsel are as human as their brethren in private practice.

Undoubtedly one of the most vicious defects in the system as it existed prior to the founding of the Court of Claims was the interminable delay which was so often involved in the disposition of private claims through the legislative process. Although Congress set aside 2 days out of each week for the consideration of private bills, the report of Presiding Judge Gilchrist on the activities of the Court of Claims for its first year tells us that some of the cases then before the court had been pending in Congress for periods ranging from 5 to 80 years. It is no wonder that the confidence of the people in the effectiveness of their right to petition for redress of grievances had degenerated almost to the vanishing point.

During its first term, the court rendered decisions in 125 cases, in 100 of which it wrote what Judge Gilchrist described as "elaborate opinions in questions of law." This was a pretty good start, when one considers that the court was plowing new ground, that there were only three judges, and that in accordance with the genial custom of the day the court sometimes heard arguments in a single case for as long as 2 or 3 weeks, and not at all infrequently for as long as 3 or 4 days. It set a precedent of speedy justice, to which the court has adhered despite the increased volume and complexity of its work.

The growth of our country and the expansion of Government activities have placed great burdens on all the Federal Courts, and as a result some of them have accumulated heavy backlogs of cases. The Court of Claims is singular in that despite the increase in its burdens it has kept as current as the availability of Government counsel would permit. We in the Department recognize that whatever delays occur in this court are largely the result of our not having enough lawyers to try cases as rapidly as the court can take them. Happily, this situation is in the way of being remedied because of the recent action of Congress giving us a special appropriation which has enabled the Department to assign to Court of Claims work by far the largest number of lawyers in the court's history. The Attorney General has directed us to concentrate our efforts on speeding up the disposition of Court of Claims cases, and plans to that end have been formulated and are being put into effect. Although it is obviously too early for me to be able to report the results of this program, I am quite confident that progress is already being made and that the results will become apparent before very long.

I hope that in this way those of us who have the privilege and responsibility of representing the United States before this court may contribute more effectively to the carrying on of the tradition of efficiency and fairness which the court has built up during the past hundred years. That this tradition will be maintained and strengthened I have no question.

New History of the Democratic Party—The Democratic Party Is Born

EXTENSION OF REMARKS

OF

HON. JOHN LESINSKI, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 19, 1956

Mr. LESINSKI. Mr. Speaker, the Democratic Digest, official publication of the Democratic National Committee has

serialized the New History of the Democratic Party. Under leave to extend my remarks in the Appendix of the RECORD, I include the first of three installments:

[From the Democratic Digest of December 1955]

THE DEMOCRATIC PARTY IS BORN—AMERICA DRAWS ITS FIRST POLITICAL BATTLE LINE

"The year was 1948. Harry S. Truman, whistlestopping across the country in the presidential campaign of that year, had been asked to state the fundamental creed of the Democratic Party. In plain words, he replied:

"The Democratic Party is the people's party. It is dedicated to serving all the people and not just the special interests of the few. The record of the Democratic Party is blazed across the face of the Nation in a story of a better, healthier, happier life for the common people of America."

The year was 1824. Thomas Jefferson was asked how his new political party differed from its opponents. "Men by their constitutions," he replied, "are naturally divided into two parties; those who fear and distrust the people, and wish to draw all powers from them into the hands of the higher classes; and those who identify themselves with the people, have confidence in them, cherish and consider them as the most honest and safe, although not the most sure depository of the public interests. In every country these two parties exist and in every one where they are free to think, speak, and write, they will declare themselves * * * call them whatever you will. * * * The appellation of aristocrats and democrats * * * expresses the essence of them both."

Between these two statements passed nearly a century and a half of American history. In that time the American people settled a continent, built cities, fought wars and became the greatest democracy in the history of the world. Through all these years there has been a Democratic Party, and its guiding principle from Jefferson to Truman has been the same. The story of the Democratic Party is the story of how the ideal of government for the common man has been carried through 150 years, to grow and expand with the American Nation.

This belief in the people has shaped democratic thinking in every field of government. It has meant that government should do what it can to insure the richest, fullest possible life to all the people. It has led to the belief that every citizen should have the chance to take some part in politics. It has commanded the preservation of certain personal liberties, without which man's dignity would be lost. And it has based its foreign policy on a sincere concern for the people of every other nation in the world. Much of the story of the Democratic Party is the story of how these goals were fought for, won, lost, and fought for again in the never-ending conflict with those with little trust in the people.

Perhaps the most eloquent testimony of the wisdom and vitality of the principles of the Democratic Party is the fact that it is the oldest political party in the world. It is difficult to fix an exact birthday for the Democratic Party—the most usual date given is May 23, 1792, the date of a letter from Jefferson to Washington giving a name to the party then headed by Washington. But the event primarily responsible for breathing life into the party was the fight for the Bill of Rights. These rights, which insure freedom of religion, speech, and press, and guarantee fair trials to the accused, had been left out of the original draft of the Constitution. The delegates to the Constitutional Convention, mostly plantation ownrs and merchants, had been so concerned with building a government able to keep the peace and protect property rights, that they failed to provide these necessary safeguards. Thomas Jefferson was not at the Convention; but when he saw of the omission, he moved into action. In letters to friends and followers throughout the country, the author of the Declaration of Independence declared:

"A Bill of Rights is what the people are entitled to against every government on earth, and what no just government should refuse * * *."

Despite opposition, Jefferson rallied enough support to make acceptance of the Bill of Rights a condition of the Constitution's approval. The organization he built up in this fight became the core of Jefferson's new party; and the principle of individual liberty became a guiding star in the Democratic constellation.

Thomas Jefferson, founder of the Democratic Party, was the leading Democrat of his day. Despite his aristocratic upbringing, he shunned powdered wigs and finery, and greeted callers in an old brown coat and breeches. An optimist, he believed in the inevitable improvement of the world and its people. A religious man, he carried his faith into his politics. "I have sworn upon the altar of God," he said, "eternal hostility against every form of tyranny over the mind of man." A respecter of property rights, he nevertheless believed that in any conflict between property and men the rights of men came first.

But, most strongly of all, Jefferson believed in the inherent worth of the common man. "Every man, and every body of men on earth," he wrote, "possess the right of self-government." He was certain that, given the facts, the people would use that right correctly, So, to educate the people, Jefferson called for the founding of schools, newspaper, and libraries. Especially in the frontier States, his followers reshaped the laws to give every man a vote.

Jefferson's party first sought office in opposition to the governing class of the time, the Federalists. The Federalists had done much to bring the new American Nation to life. They had been the driving force behind the Constitution, and, under George Washington, had started the operations of the new Federal Government. But the Federalists' view of government was naturally limited by their own aristocratic backgrounds, and by the administrations of monarchs among the then-great nations of Europe. As their leader, Alexander Hamilton, put it, "Our real disease is democracy." "All communities," Hamilton believed, "divide themselves into the few and the many, the first are rich and the well-born, the other the mass of the people. The people are turbulent and changing; they seldom judge or determine right." Hamilton believed that support of the rich was necessary, and that the Government could not last unless the wealthy people of the country could make money under it. To assure this, the Federalists passed a tariff law, founded a national bank, and made other moves to benefit the creditors, merchants, and propertied interests.

Thus, the issue of government for the many versus government for the few was drawn before the United States was 10 years old. Jefferson's party took up the challenge laid down by the Federalists. It was no easy job. The riot and bloodshed of the French Revolution had momentarily discredited the idea of democracy, and the Federalist press interpreted every criticism of the Government as a foreign revolutionary plot. As historian Wilfred Binkley has said, "The Federalists succeeded, to their own satisfaction, in making the terms 'Federalist' and 'patriot' synonymous." But this did not check the Jeffersonians. Through their own newspapers and speeches, they aimed a running fire of criticism at the Federalist Government. Small farmers, workers and frontiersmen were urged to use their votes to give themselves a voice in the Government.

By 1798, a vigorous party had grown up. Because the word "democrat" was then in disrepute, Jefferson's party took the name "Republican," to show its determination to keep the Nation a republic. As the strength of the party increased, the Federalists took alarm. Exploiting fear of foreign infiltration, they passed an alien law, which eased deportation of political objectionables, and a sedition law, which made possible the punishment of anyone who dared criticize the Government. But the laws backfired. They smacked too much of kingly tyranny, against which a revolutionary war had just been fought. The State legislatures of Virginia and Kentucky denounced them as unconstitutional and called on other States to join in resisting them. Following their example, the common people in other States rose in protest and, in 1800, voted in Thomas Jefferson as the first Democratic President of the United States.

If the Democrats have been the party of strong Presidents, Jefferson was the first. In 1803, he negotiated the Louisiana Purchase, bringing into the Nation the most productive river valley in the world. In 1804, he sent Lewis and Clark to blaze a trail through what was to become the Great Northwest. Less daring Presidents might have hesitated before taking these steps, thus holding up development of the Western States. But Jefferson's vision stretched across a continent and through a hundred years of history. Foreseeing the rich returns the Mississippi Valley would someday repay, he proceeded to use the power of the Presidency to its fullest to double America's size.

In 1808, when Jefferson retired to his home in Monticello, he left the Government in the hands of his two trusted lieutenants, James Madison and James Monroe. Madison had been a general in the fight to ratify the Constitution. His faith in the American form of government had been intensified by a lifetime spent studying every other government history had known. Drawing on his vast knowledge, Madison taught the Nation the benefits of government through political parties, and the danger of allowing one group to gain control of the Government. The party behind Madison, made up as it was of Southern planters, city workers, small farmers and frontiersmen, was as diverse for a Nation its size as is the Democratic Party today. Some thought it hypocritical that conflicting groups should unite to support the same candidate and program. To them, Madison said:

"In the extended Republic of the United States and among the great variety of interests, parties, and sects which it embraces, a coalition of a majority of the whole society could seldom take place on any other principles than those of justice and the general good."

Madison was elected President twice. His first administration was harassed by war with England, but his second was peaceful and prosperous. The small Nation beside the eastern seaboard was growing strong, and it was building the Cumberland Road and the Erie Canal to clear its way westward. The frontier, pushing its way across the Appalachian Forests toward the Mississippi, acted as a generator of democracy. There were no extremes or wealth or social classes on the frontier. Men were measured by what they could do with their hands. Because everyday life was dangerous every man was needed, and a spirit of cooperation developed between towns and families. Such people were naturally drawn to Jeffersonian democracy, and their votes helped keep it in office from 1800 to 1824.

James Monroe was President for the last 8 of these years. He was the last of the cocked hats—leaders of the Revolution—to be President. During his administration, the

principles underlying Democratic Party foreign policy were first put into action. Relations with other countries were as important in Monroe's day as they are now, but for a different reason. The United States was a new Nation, fighting for respectability among the world's powers. It could have cut itself off from the world and dealt with other countries only when threatened. But a party and a Nation that believed, with Jefferson, that man's worth and his right to self-government were universal, could not close its eyes to world events. So when Europe cast eyes on the new states of South America, President Monroe gave notice that America would protect its neighbors from foreign interference. Designs on the independence of these countries, Monroe said, would be interpreted as designs on America itself. In a sense, this was America's first security pact. It was a daring gamble for a young Nation, but it worked. And ever since, the principles of the Monroe Doctrine have been the root and core of American foreign policy. Despite times when the Democratic Party has followed the national trend toward isolationism, it has always come back to the fundamental principle that the safety and rights of the common people cannot long be protected if protection stops at the shores of our oceans.

A New History of the Democratic Party—Old Hickory Comes to Washington

EXTENSION OF REMARKS
OF
HON. JOHN E. MOSS, JR.
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 5, 1956

Mr. MOSS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following from the Democratic Digest of January 1956:

[From the Democratic Digest of January 1956]

OLD HICKORY COMES TO WASHINGTON—PEOPLE VERSUS PRIVILEGE

During Jefferson's and Madison's terms, the Federalist Party was withering away. In Monroe's years, it died. In 1820, Monroe was reelected without opposition. Everyone in public life proclaimed himself a Jeffersonian as the Nation embarked on its political "Era of Good Feeling."

But the truce did not last long. Broad as it was, the Democratic Party could not embrace every region and every interest group in the Nation. Party unity became increasingly strained until, in 1824, it burst. Four different candidates ran for President of the United States.

Amid this confusion, the Democratic Party temporarily lost sight of its Jeffersonian principles. The men of wealth and privilege, in whose hands Hamilton had unsuccessfully tried to place the reins of Government, were quick to seize upon the Democratic split. During the administration of John Quincy Adams, they regained influence in Government. Rallying, as Jefferson had feared, behind the Bank of the United States, they seized control of the Nation's credit and used this to try to get control of the Nation.

The time was ripe for a new champion of the common people, and in Andrew Jackson the Democratic Party had a man to meet the occasion. A true son of the frontier, Jackson had lived in the backwoods, fought Indians and beaten the British in the War of 1812. He was tall and rawboned, and his soldiers had nicknamed him "Old Hickory," after the toughest thing they could think of. Stern and upright, Jackson possessed an intense patriotism, a razorsharp sense of honor, and a burning dedication to the common man.

Entering politics, Jackson and his followers fashioned many of the tools of political democracy. The national convention, the party platform, and the election campaign, were their inventions, and through them, men from all walks of life were given an opportunity to take part in politics. In the election of 1828, three times as many people voted as in any election up to that time, and Jackson was elected President.

Fortified by his victory, Jackson went after the Bank of the United States. As the official depository of the Nation's funds, the Bank had become a vast monopoly, controlling all banking transactions and credit in the country. It kept newspapers and Congressmen on its payrolls, and they ruthlessly attacked anyone who interfered with the bank's activities. Near the end of Jackson's first term, Congress extended the bank's charter. But Jackson vetoed the bill, and withdrew all Government deposits from the bank. In a veto message which reasserted basic democratic principles, Jackson said:

"Every man is equally entitled to protection by law; but, when the laws undertake to add to those natural and just advantages artificial distinctions, to grant titles, gratuities, and exclusive privileges, to make the rich richer and the powerful more potent, the humble members of society—the farmers, mechanics and laborers—who have neither the time nor the means to secure like favors to themselves, have a right to complain of the injustice of their government."

Jackson's words and actions caught the imagination of common people throughout the country. Southern yeomen and small planters, pioneer farmers in the Northwest, German and Irish immigrants, plain country folk of New England and New York—all rallied to the Democratic Party. City workers, forming their first unions for the improvement of working conditions, saw in Democratic principles a sympathy for their own aspirations. These were the people behind Jacksonian democracy. Their votes reelected him President. With Jackson as their leader, they so impressed their spirit upon American life that history marks Jackson's terms as the era of "the rise of the common man."

In 1836, Jackson returned to his beloved home, the Hermitage, in Tennessee. His successor in the White House was Martin Van Buren, former Secretary of State, who had become Jackson's most trusted adviser. Van Buren, a skillful politician, was one of the earliest leaders of the political organizations of the large northern cities. But he did not inspire the other elements of the Democratic Party as Jackson had. Van Buren's attempts to extend Jacksonian democracy were thwarted by a financial panic which hit the country in 1837. In the resulting depression, the common people suffered most. Van Buren, in his bid for a second term, became the first President to be punished at the polls because of a depression during his administration.

The party that ousted Van Buren from office called itself the "Whigs," after a British party of the same name. As historian Roger Butterfield says, "the Whigs * * * took their political technique from the Democrats themselves, improving it as they went along. The Whigs were the new party of business and property, but they carefully suppressed—in public, at least—the old Federalist prejudice against 'the people.' Since Jackson had won his battles by appealing to the common man, the Whigs announced they were common men, too, and their campaign, posters showed them with their shirtsleeves rolled up, hammering at a forge or following a plow." Behind a military hero, William Henry Harrison, the Whigs scored a sweeping victory in the election of 1840. The era of Jacksonian Democracy was ended, but it was to remain as a model for Democratic leaders of the future.

The story of the Democratic Party from 1840 to the Civil War is closely bound up with the breakup of the Union. Although Jackson had declared "Our union—it must be preserved," forces were at work in both North and South to destroy it. Slavery was an issue beyond the reach of politics. The Northern abolitionist and the Southern planter had between them none of the common ground necessary to political compromise. As their anger at each other rose in pitch, their political parties were swept up in the bitterness that led to secession and war. Abolitionist Democrats, unable to gain control of their party, helped form the Free Soil Party, which tried to keep slavery out of the new western lands. In 1848 they called Van Buren out of retirement to run for President on the Free Soil ticket. Northern Democrats gave him strong support. Thus Democrats were early leaders in the anti-slavery fight, even though the party itself was split over the great issue.

Despite growing sectional divisions, the Democratic Party accomplished three important goals in these years: the acquisition of the remainder of the West, the expansion of trade, and the suppression of racial and religious intolerance in the Know-Nothing movement.

Much of the credit for the western expansion goes to James K. Polk, a Democratic President of the 1840's. Polk believed that it was the Nation's manifest destiny to bring all the land to the Pacific under the American flag—by negotiation if possible, but by war if need be. By settlement with Britain, he won title to the Pacific Northwest. Texas entered the Union peacefully, but a war with Mexico was necessary to gain the California country. Thus, in 4 years, Polk had added half a million square miles of some of the richest and most spectacular country on the continent, finishing the task that had begun with Jefferson's Louisiana Purchase.

It was in Polk's administration also that the Democrats passed the Walker tariff. The Democratic Party has always favored moderating tariff charges on imports from abroad, both to aid the consumer and to improve relations with countries whose economies depend on what we buy from them. The Walker tariff did both. So sound was it economically that it remained unchanged until the Civil War.

History credits the Democratic Party with lowering the tariff and gaining the West. But almost forgotten is the strong stand the party took against the Know-Nothing movement. The Know-Nothings were organized to end the immigration from Europe which, even in the 1850's, had reached 600,000 a year. Since most of the immigrants were of the Catholic faith, the ugly mark of religious bigotry stained Know-Nothing beliefs. Members of the organization burned churches and beat up immigrants on the streets. When questioned about their activities they replied, "I know nothing."

By 1856, the Know-Nothing Party had elected seven governors, and was threatening to make a party of intolerance a major political force in America. But the Democratic National Convention unanimously adopted this resolution:

"Resolved, that a political crusade in the 19th century, and in the United States of America, against Catholics and foreign born, is neither justified by the past history or the future prospects of the country, nor in unison with the spirit of toleration and enlightened freedom which particularly distinguishes the American system of popular government."

This united Democratic opposition broke the back of the Know-Nothing movement.

In the spirit of Jefferson and the Bill of Rights, the Democratic Party had spoken up for the rights of minorities. More than this, the defeat of the Know-Nothings showed the common people of Europe that America welcomed them to a new life. Our Western lands would have been of little use without people to fill them. The democratic sympathy for the immigrant quickened the movement that sent strong men westward to build a Nation.

Towering over all other events of the period was the widening gulf between North and South. Some Democrats, led by the "Little Giant" Stephen A. Douglas, strove to compromise the differences. In his famed doctrine of squatter sovereignty, Douglas proposed that the people of each new State decide for themselves whether to allow slavery. But it was too late for compromise. By 1860, the Democratic Party had split again, the northern wing supporting Douglas for President, the southern behind John T. Breckenridge. The result was a victory for the newly formed Republican Party, led by Abraham Lincoln.

A New History of the Democratic Party—William Jennings Bryan Rededicates the Party

---

EXTENSION OF REMARKS
OF

HON. W. J. BRYAN DORN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 19, 1956

Mr. DORN of South Carolina. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following from the Democratic Digest of February 1956:

[From the Democratic Digest of February 1956]

NEW LIFE IN DEFEAT—WILLIAM JENNINGS BRYAN REDEDICATES THE PARTY

From 1860 onward, the newly-born Republican party was to provide the main opposition for the Democrats. When first formed, the Republicans were a party of free soil and idealism, attracting many believers in Jefferson's principles. Lincoln himself was a devoted Jeffersonian. It was he who said that "the principles of Jefferson are the definitions and axioms of a free society."

But with Lincoln's assassination, the founders of the Republican party were rudely shoved aside. The new leaders, called Radical Republicans were men with blood in their eyes. Disregarding Lincoln's plea for "malice toward none," they set up a military dictatorship in the South and almost impeached a President who would not go along with their wishes. By their Reconstruction Acts and Force bills, they held up progress in the South for many years.

The Democrats tried to fight these actions, but they were seriously weakened. Republican leaders had disfranchised the Democratic South, and had massed behind their postwar candidate, Gen. Ulysses S. Grant, the voting strength of the Grand Army of the Republic. When Democrats criticized reconstruction measures, their opponents accused them of being rebels and traitors, unfit to govern the country. By waving the "bloody shirt" of the war, historian Charles Beard says, "the Republicans managed * * * to make party loyalty equivalent to national patriotism and voting the opposition ticket identical with sedition."

It was after the Civil War that American big business made its historic alliance with the Republican Party. The need for production and credit during the war had forced the Government into measures which greatly profited industrialists and financiers of the North. After the war, the bankers, railroad magnates and the other industrial giants agreed with the party in power to exchange campaign contributions for beneficial legislation. At first, the people did not mind this. They admired the men who were forging an industrial America, and were dazzled by their show of wealth. They even got the idea that the tremendous amounts of money being amassed at the top would trickle down to improve their own living standards. Events were soon to prove this theory wrong.

Grant's administration provided the perfect setting for business domination of the Government. Grant himself admired and liked to associate with the millionaires and manipulators of the day—Jay Cooke, Jay Gould, and Jim Fiske, the speculators whose names have survived as symbols of financial piracy. Although personally honest, Grant, as he later admitted, let crooked friends take advantage of his trust. As a result, not only was Grant's administration run openly and notoriously for the benefit of big business, but corruption flourished on a wide scale. The Vice President, members of the Cabinet and chairmen of congressional committees took bribes and graft. They made money on Government contracts and tax frauds. As historian Allen Nevins says, "The Grant era stands unique in the comprehensiveness of its rascality."

This stealing did not stop with money, but extended to national elections. In 1876, the Democrats nominated for President, Samuel J. Tilden, the brilliant reform Governor of New York. He had broken the Tweed Ring in New York City, and was pledged to break the ring of thieves around Grant. With the people aroused to Republican corruption, Tilden's integrity was a welcome change. He appeared to have won the election, 4,300,590 votes to 4,026,298, and 196 electoral votes to 173. But through bribery and forgery, the Republicans changed the totals in three Southern States, where Federal troops still were stationed under the Reconstruction Acts. A Republican Electoral Commission ratified the changes. It was the only stolen election in American Presidential history. More impulsive Democrats were ready to don their war uniforms and take the White House by force, but the calm hand of Samuel Tilden restrained them. Putting his respect for orderly government above both party and personal advantage, Tilden acquiesced in the decision of the Electoral Commission and retired to private life.

By 1884, the Republicans had been in power for 24 years. The "bloody shirt" of the "rebellion" was being waved more and more feebly, and people were becoming tired of men who looked upon Government service simply as a road to personal profit. So they elected to the White House another Democratic reformer from New York, Grover Cleveland. A big, gruff man whose honesty was unshakable, Cleveland devoted his two terms to raising the moral standard of Government. His motto was: "A public office is a public trust." Where Presidents before him had allowed raids on the Treasury for private pensions and pork-barrel appropriations, Cleveland used the Presidential veto to prevent them. He relaxed the demands of patronage and put more workers under the civil-service system. Officials who had a stake in the old system, including some Democrats, resented Cleveland's reforms. But the voters agreed with his nominator, Daniel Dougherty, when he said of Cleveland: "We love him for the enemies he has made."

But honest and devoted as he was, Cleveland did not fully sense the needs of the common people. In fact, a large segment of the Democratic Party had fallen under the influence of the big industrialists and their retainers. There followed a period of years in which, from the standpoint of party program, the average voter could not tell one major party from the other.

The Democratic Party needed a transfusion of new leadership and spirit. And in the agrarian movements of the Middle West, this was found. Between 1870 and 1895, the Nation witnessed a series of depressions, the historic price of unrestrained industrial development. True, the small-business man of the East had suffered. Twenty-three thousand small firms had failed in one 3-year period alone. True, the workingman was putting in 12 to 14 hours a day, and his attempts to organize unions were being frustrated by unsympathetic legislatures and courts. But the farmers were destitute. Crop prices had fallen 40 to 50 percent under the impact of Republican high tariff laws. Farms were mortgaged to Eastern bankers to the sum of a billion dollars. The cost of selling farm produce was steadily rising as the trusts and railroad monopolies levied their annual tribute upon the plain people of America.

So, organizing for political action, the men of the Midwest brought new blood and spirit into the Democratic Party. Their wants, by our standards, were not radical: they desired a graduated income tax, regulation of railroad rates, popular election of Senators, and relaxation of the gold standard, which held them in perpetual debt to the financiers of the East. But their opponents called these measures "the dreams and fantasies of Karl Marx," and cried to the voters to "stop this Communist march on private property."

Out of the Midwest came these agrarian reformers, and into the Democratic Convention of 1896. Their leader was William Jennings Bryan, of Nebraska, and the speech he made at that convention stands as perhaps the greatest in American political history. Picture Bryan, with his enormous head, strong, flashing eyes, and vibrant voice, 20,000 delegates and spectators hanging on his words:

"When you come before us and tell us that we are about to disturb your business interests, we reply that you have disturbed our business interests by your course. We say to you that you have made the definition of a businessman too limited in its application. The man who is employed for wages is as much a businessman as his employer. The farmer who goes forth in the morning and toils all day, and by the application of brain and muscle to the natural resources of this country creates wealth, is as much a businessman as the man who goes upon the board of trade and bets upon the price of grain. The miners who go a thousand feet into the earth to bring forth from their hiding places the precious metals to be poured in the channels of trade are as much businessmen as the few financial magnates who in a back room corner the money of the world. We come to speak for this broader class of businessmen. * * * We have petitioned, and our petitions have been scorned. We have entreated and our entreaties have been disregarded. We have begged, and they have mocked when our calamity came. We beg no longer; we entreat no more; we petition no more. We defy them. * * * Having behind us the producing masses of this country and the world, supported by the commercial interests, the laboring interests and the toilers everywhere, we will answer their demand for a gold standard by saying to them: You shall not press down upon the brow of labor this crown of thorns. You shall not crucify mankind upon a cross of gold."

Jefferson or Jackson would have felt at ease delivering this speech.

In Bryan, the Democratic Party had found its voice. With a great shout, the convention nominated him for President, and he went forth to wage one of the most exciting campaigns in American history. Bryan was the first modern Presidential candidate. He traveled 18,000 miles and addressed more than 5 million people—a remarkable feat for the days before radio and television.

Alarmed by Bryan's strength, the Republicans got busy. Their leader, Mark Hana, shook down insurance companies, railroads, and trusts for an estimated $16 million, the biggest campaign fund yet collected. Fourteen hundred speakers were sent out to answer Bryan. Contracts were made contingent on his defeat. Workers were told that if Bryan won on Tuesday, they need not show up for work on Wednesday. The pressure paid off: Bryan lost the election. But in so doing, he rededicated the Democratic Party to the common people.

Women and the Press

EXTENSION OF REMARKS
OF

HON. HAROLD O. LOVRE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 19, 1956

Mr. LOVRE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a paper prepared for delivery by Rose Berry, wife of my colleague, Representative E. Y. BERRY, in observance of National Printing Week:

WOMEN AND THE PRESS

It would be impossible to do full credit in the compass of one paper to the history, efforts and accomplishments of women who have made their way into the fourth estate, in the face of opposition and prejudice.

Ishbel Ross in her Ladies of the Press said, "By slow degrees the newspaperwoman has moved out of the false framework of legend and prejudice that has surrounded her for the last 50 years, although there is no denying that she is still a negligible factor in the newspaper office and is there only because of her own insistence, not because anyone wanter her. She has her own compensations, however. Invariably she likes her work beyond all telling. Adventure, excitement, romance, danger, praise and blame, glamour and drudgery keep her spinning self-forgetfully day after day in the dizzy world inhabited by ladies of the press."

The word usually used to describe a career in journalism is "glamorous." Glamour, says the dictionary, is mainly "a delusion wrought by magic spells." However, there was a time, distorted by nostalgia, when editorial rooms housed a hard-drinking, brawling bunch of rascals. But they are a breed that has vanished from all but memory and perhaps some movies. Newspaper men and women have traded in that type of glamour for respectable wages and an appreciable measure of security.

Newspapermen and women, these days, are clear-eyed. The prejudice against women on newspaper staffs has faded unevenly but nonetheless surely. Editors used to keep all but a rare few of the staff women in resentful captivity behind the frosted panels of the society and women's page departments. Today you will find women on ordinary assignments with men, on rewrite—even covering politics. Where there used to be about 1 woman to every 20 men on newspaper staffs, the proportion today is nearer 1 in 5.

One might ask "What makes a superior woman journalist?" Certainly one could reply that you would have to know what makes a good woman journalist—love of her work, initiative, enterprise, judgment, resourcefulness, a logical and orderly mind, poise, persistence, honesty, intellectual integrity, a sense of humor, idealism. Then—a superior woman journalist would have all these qualities, plus a compelling passion to learn the truth.

George C. Biggers, one of the Nation's outstanding publishers, has suggested that all children go through a phase of asking, "Why?" "Why is there paper around the crayon?" "Why does the dog sniff everything?" "Why do you have to have money for things?" Most children get over it. But some only change the questions. They go right on asking "Why?" It is one of the few childhood signs that there may be a future newspaperwoman in the family.

The various specialties of the business—reporting, rewriting, copy reading, editing—require different qualifications, but one characteristics all of the better ones share is an acute and driving discomfort in the presence of any question that needs an answer.

We might well ask why have women so capably invaded the profession of journalism; why do they continue to increase in numbers, and why do they remain? Perhaps it has something to do with that mystic pulsebeat of the paper that gets into the bloodstream. Perhaps it is something that happens when the presses start to roll. The women sitting at their desks can feel it, and with it comes a deep satisfaction. It tells them that the work they have just finished is on its way to entertain, and inform, and protect their fellow citizens.

It is impossible for us to know how many young women there are in America who would prefer, above everything else on earth, to get a chance on a newspaper. Probably the number runs into the thousands.

Elizabeth Timothy might be called the first woman newspaper publisher in this country. She published the South Carolina Gazette in 1739. The wife of Andrew Bradford published the American Weekly Mercury in Philadelphia for about 4 years after his death in 1742. Other pioneer publishers were: Cathrine Zenger, the New York Weekly Journal, 1746–48; Ann Franklin, the Newport Mercury, 1762–63; and Clementine Rind, the Virginia Gazette, 1773–74.

Dinah Nuthead conducted a press at Annapolis as early as 1696, but she did not issue a newspaper.

All these women mentioned above were printers' widows. Printers' wives often assisted their husbands.

It is interesting to note that reporters did not become necessary to newspaper staffs until the penny papers had placed an emphasis on local news.

For many years women had set type in printing offices, especially in the smaller towns, but the first woman editor of an important daily paper was Miss Cornelia Walter, who edited the Boston Transcript 1842–47. Margaret Fuller brought a greater reputation, however, to the New York Tribune during her editorial service on that paper 1844–46.

In Washington the picturesque Mrs. Anne Royal conducted her weekly journalistic efforts under the name the Huntress. For 25 years she was a colorful figure in our Nation's Capital. Her papers might be described as forerunners of the modern "gossip column." She was once convicted as a common scold and sentenced to be ducked according to the penalty prescribed by an old law, but the sentence was suspended. Mrs. Royal can be accredited with giving President John Quincy Adams one of his greatest adventures. No woman of the day was more widely known, more greatly feared or cordially hated, and more persistently persecuted than this elderly woman at the peak of her career. It may be said she revolutionized the press of her day. She was a pioneer in modern journalism, introducing the interview and the liberal, more intimate, personal method of handling news. Her methods may have annoyed and irritated the brilliant male stars in the newspaper firmament of the Nation's Capital city, but she waked them from their age-bound somnambulism and aroused them to realization that their sleepy mortality statistics, prosy editorials were not filling the requirements of the reading public at the time when a four-cornered election had thrown John Quincy Adams into the presidency through the House of Representatives. Those were the days when each political leader raged and ranted at his adversaries through the so-called pamphleteers and when the favorite words on every tongue were "tyranny! anarchy! treason!" and on every hand could be heard the whisperings of abolition, of slavery and secession.

Anne Royal decided that she had wasted enough time in polite appeals at the front door of the White House and that strategy would be required—so she set herself to watch the habits of President John Quincy Adams. She discovered his fondness for an early morning swim in the waters of the Potomac, half a mile from the Executive Mansion. So the active old lady gathered up her crinoline, her ink horn, quill pen, and roll of copy paper and sallied forth soon after dawn one July morning determined to end the matter once and for all.

The morning was balmy and the water delightful. Mr. Adams had relinquished his dressing gown and slippers at the Potomac's edge, as was his custom, and was having a fine swim all unconscious that Nemesis was on his trail—or rather—was on his clothes. A hail from the clump of trees from which he had made his plunge into the water disclosed to his horrified gaze the figure of Anne Royal calmly seated on his clothes, with the tools of her journalistic trade ready for use. He knew her and, knowing her, realized his doom. He swam toward shore until his feet rested on bottom and he was chin-deep. Being a modest man who swam before the fashion of bathing suits, he could come no farther. He heard the command "Come here" and the President's bewildered reply was "What do you want?"

"I'm Anne Royal," snapped editor and reporter. "Ive been trying to see you to get an interview out of you for months on the State-bank question. I have hammered at the White House and they wouldn't let me in, so I watched your activities, and this morning I stalked you from the White House down here. I'm sitting on your clothes and you don't get them until I get the interview. Will you give it to me or do you want to stay in there the rest of your life?"

There was no compromise in the heart of Anne Royal, even to the pleas of President Adams that he would most certainly give the interview, if she would vanish long enough for him to clothe himself. But her reply was "No."

In all probability reporter Royal's comments ran something like this: "You are President of the United States and there are a good many millions of people who want to know and ought to know your opinion on this bank question. I'm going to get it. If you try to get out and get your clothes I'll scream. You don't get out ahead of that interview."

Adams was a statesman and a diplomat, and he knew when discretion was the better part of valor, so he stood up to his chin in the placid Potomac River—minus clothing—and submitted to the rapid battery of questions until he had given the first "interview" probably ever given by a President of the United States. His questioner, a pioneer woman journalist, wrung from him what

none of the papers of either New York or Philadelphia had been able to get, the administration's ideas regarding the long and bitterly fought bank question.

It goes without saying that Anne Royal's resourcefulness and energy were always at their height when in search of news. She fought all her life for the entire separation of church and state, for the exposure and punishment of corrupt officials, for sound money, the establishment of public schools everywhere free of religious restrictions, justice to the Indians, liberal immigration laws, Sunday mail transportation, internal improvements, territorial expansion, just tariff laws, the abolition of flogging in the Navy, States' rights regarding slavery and free speech.

On July 2, 1854, she issued her last number of the Huntress, shut down her desk, and died within a few days, dropping like an old wheel horse in the harness. Her last editorial is worthy of note, for with all the power of language she possessed she analyzed the Kansas-Nebraska bill, wrote a strong message on the tariff and concluded with these words:

"Our third prayer is that the union of these States may be eternal."

Authorities on the history of journalism seem to agree that the year 1872 marked the end of an era. Horace Greeley died November 29 of that year. Perhaps even more significant than the passing of this great editor from the scene was the declaration which Greeley made in the Tribune shortly before his death. He wrote, "Henceforth it shall be my endeavor to make this a thoroughly independent journal."

Independence from party bonds had been making great advance. Greeley's declaration may be taken as marking the end of a long period dominated by great party newspapers. Women and journalism were becoming emancipated—hand in hand.

Late in the 19th century the reporter came into his own. He was key man in the new journalism. The growing importance of the reporter can be shown by the increased use of the byline, common in the Sunday papers of that day. Most of the famous editors of the time had risen from the ranks of reporters.

Women flocked into newspaper work during the late eighties. It has been estimated that in 1886, 500 women worked regularly on the editorial side of American newspapers, and 2 years later it was reported that there were 200 on New York papers alone.

Local women's press clubs were organized, and in 1885, a Womens' International Press Association, with Mrs. E. I. Nicholson, of the New Orleans Picayune, as president, was launched.

About 40 American correspondents covered the activities of the American Expeditionary Force in 1918—World War I. The only woman to get a properly accredited pass from the War Department was Peggy Hull of the National Editorial Association, who covered the American expedition to Siberia.

It is apparent that during and since World War II more women have moved into the editorial chairs of the Nation. They have invaded every type of newspaper and every field in a newspaper, editorially speaking. No news job, no matter how sacred to the domain of man, himself, is without its distaff members.

On metropolitan dailies and county weeklies, the women are turning our copy. They are working as country correspondents. They are taking jobs in the police press rooms and sitting around copy desks; they are shooting pictures of fires and pictures of society damsels. They are working practically every variety of beat, as "leg men" and rewriters and feature writers.

The trend toward more women in the fourth estate became a necessity during World War II and grew day by day. Some might call it a virtual revolution in the newspaper world—the kind of revolution that could only come about because of the gigantic, bitter fight in which most of America's young, able-bodied newsmen were helping preserve the freedom of the press they once wrote about by battling for it.

The law in most of the States was changed to provide that a newspaper did not lose its legality if it should suspend publication for a year during the war period. This, it was felt was necessary to preserve the life of the smaller newspaper, especially the weekly where help in the mechanical department was almost impossible to obtain.

Although, our State of South Dakota followed suit in the passage of such a suspension law, very few weekly newspapers permitted rust to gather on the wheels of their presses and linotypes. Instead, the women took over the editorial and mechanical functions of the newspaper office and shop.

More frequently it was the wife of the publisher now in uniform who carried on the work of her serviceman husband, in giving the people of those communities the news of local happenings.

Most of the wife publishers startled not only their husbands but their readers, by keeping a close contact with the men and women in service from their communities and reporting their whereabouts and activities to their readers. It proved to be a subscription builder. They impressed not only their serviceman husband but the State press associations as well, with the kind of a job that women could not do in the editorial department, composing rooms, and even in operating the presses.

Out of more than 200 large and small newspapers in the State of South Dakota, only 3 suspended publication during the war years.

In our own case, we lost all our help to the service. My husband and I were compelled to do everything necessary to keep a weekly paper in circulation. I was forced to learn the local and society news, keep up the subscription list which was no small task in view of the fact our paper went free to all armed service personnel from our county. In addition, I learned to run the linotype and set much of the type that went into our 8-page, 7-column paper each week.

While this was just one of the work-a-day jobs that many women did to help keep up the effort on the home front, it of course, could not compare with the glamourous journalistic work done by such women as Margureate Higgins. One of the 1951 Pulitzer prize awards in journalism went to her. From her desk at the New York Herald Tribune "Maggie" Higgins has become known to the newspaper reading public and through her dispatches from Europe and more recently from Korea. Her reports from the Korean front, where she was the only woman correspondent, appeared in book form in April 1951 under the title War in Korea. She began as a cub reporter on the staff of the Vallejo (Calif.) Times-Herald. The battle passages of her war story are written straight and hard. "She does not spare the blood but neither does she spread it on indiscriminately," Marquis Childs commented in a review of her War in Korea.

In the war theater she proved alarmingly brave, extraordinarily durable, and pretty even in her fighting clothes. She constantly demonstrated her resourcefulness. One bystander said of her "Maggie wears mud like other women wear make-up."

In our Nation's Capital the ladies never have been allowed to join the National Press Club. There are two women's press organizations—one of these is the Women's National Press Club. (The other is named the American Newspaper Women's Club.)

The Women's National Press Club was established in 1919. Its active membership is limited to writers, and they must have had not less than 2 years' experience in newspaper work to be eligible, even though as members they may be magazine writers or Government press agents.

Once a year, in the spring, the Women's Press Club holds a "stunt night"—the female counterpart of the famous Gridiron dinner. Elaborate preparations are made, the program is prepared and acted by club members. The President, the First Lady and high Government officials are honored guests at this occasion.

During the active political season in Washington, the club has regular weekly luncheons to which outstanding persons are invited to speak off the record and submit to questioning.

Perhaps it is surprising to some to suddenly discover that the distaff side of the fourth estate is doing a remarkable job of upholding the traditional quality of the press of this Nation.

It is possible that the secret of the success of women in journalism is due to "journalism" itself. These women journalists are American women who have lived our way of life and have had the unexcelled advantages of a free press to guide them in their present efforts.

Planning the U. N.: Russia Seizes on Yearning for Peace

EXTENSION OF REMARKS

OF

HON. GEORGE W. MALONE

OF NEVADA

IN THE SENATE OF THE UNITED STATES

Thursday, January 19, 1956

Mr. MALONE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the first of a series of seven articles on the United Nations.

This article is entitled "Planning the U. N.: Russia Seizes on Yearning for Peace," and was written by Edward B. Simmons, and published in the New Bedford (Mass.) Standard-Times.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New Bedford (Mass.) Standard-Times of January 9, 1956]

PLANNING THE U. N.: RUSSIA SEIZES ON YEARNING FOR PEACE

(By Edward B. Simmons)

On June 26, 1945, the day the United Nations Charter was signed at San Francisco, President Truman addressed the representatives of the 50 sponsoring nations.

Still somewhat bewildered by the tremendous role of President to which he had become sudden heir, Mr. Truman extended a congratulatory handshake to an official of the American delegation as he made his way to the rostrum.

The acknowledgement was deserved. No one person had been more influential and assiduous in the framing of this "supreme chance to establish a worldwide rule of reason," as Mr. Truman described the U. N. Charter that momentous day, than the man the President greeted, Alger Hiss.

Across the continent another significant event was taking place. The most experienced and best-known member of the administration in Washington, Secretary of the Interior Harold Ickes, was denouncing before a New York audience, "efforts to thwart the peace by fomenting fear and hate of that great nation, Russia."

INCIDENTS POINT TO FATE

These two incidents received little notice in June 1945, with the world absorbed by a yearning for peace, and have claimed little attention since. However, in them may be the clue as to why the United Nations has reached its 10th birthday, with waning prestige, ever more bypassed by the major powers and with a proved inability to resolve its most formidable problems.

What auspices for an organization dedicated to peace could have been worse? As Secretary Ickes made clear, the Government of the Nation most instrumental in founding the U. N., the United States, viewed Russia as a peace-loving state. To represent its interests, the United States chose a man later convicted, in effect, of being a Russian spy.

A review of the U. N.'s background reveals a startling paradox. While Premier Stalin of the Soviet Union ostensibly played "hard to get," his agents and dupes eagerly got in on the proposition from the start.

Although a stalwart American, the late Secretary of State Cordell Hull is credited with being "the father of the United Nations." Leftwingers and subversives in the Federal Government went for the idea like bees to a honeycomb.

In 1954, after it investigated disloyalty among United States citizens on the U. N. payroll, the Senate Internal Security Subcommittee reported, "Some of these persons exposed in our Government investigation played key roles in the actual establishment of the U. N. itself as well as the establishment of the U. N.'s specialized agencies."

First steps toward a postwar peace organization were taken by Secretary Hull in December 1939, when he established a small policy planning group in the State Department. This was expanded to become the President's Advisory Committee on Postwar Planning, with representatives from many Government departments. The group functioned up to the Dumbarton Oaks Conference of August-September 1944, at which formal groundwork for the U. N. was instituted with the Russian delegation pretending disinterest and raising many "objections."

Membership on the President's advisory group was tantamount to being in on basic blueprinting of the U. N. Although many patriotic laymen were included at one time or another, actual work was performed mostly by the Government representatives, and a more doubtful group never was assembled in Washington.

The important Board of Economic Warfare was represented by William T. Stone.

BEW was responsible for "developing and coordinating policies, plans and programs designed to protect and strengthen the international economic relations of the United States."

RESIGNED UNDER INVESTIGATION

Stone was to resign from the Government while being investigated by the Civil Service Loyalty Review Board.

From the Treasury Department came the late Harry Dexter White, later identified as a Soviet agent by the FBI; V. Frank Coe, dismissed as a security risk in 1952, and Harold Glasser, who was to take refuge behind the fifth amendment after he was accused of being a Soviet agent.

White House representatives on the President's advisory panel were the late David K. Niles and Lauchlin Currie. Currie, who has remained out of the United States for some years, has been accused under oath of being a Communist and collaborator with the Soviet.

The State Department's contingent contained Hiss, as special assistant on Far Eastern matters; Laurence Duggan, specialist for the American Republics, who later fell or jumped to his death during the Hiss trial, and Mrs. Esther C. Brunauer, seated as an "expert" on Far East matters and later dismissed as a security risk.

APPLEBY OUT OF GOVERNMENT

The Department of Commerce's representative was Paul H. Appleby, then Undersecretary. A Henry Wallace appointee, Appleby later was to be Hiss' candidate for Assistant Secretary General of the U. N. No longer with the Government, Appleby is adviser to the National Committee for an Effective Congress, a leftwing ADA-type organization.

Contributing to the pro-Communist leanings of the President's advisory group was the Institute of Pacific Relations. The IPR was "considered by the American Communist Party and by Soviet officials as an instrument of Communist policy, propaganda and military intelligence," the Senate Judiciary Committee reported in 1952.

During early planning for the U. N., the IPR sponsored "conferences" on postwar organization, making sure that members of the advisory group attended. Among those who did so were the group's executive director, Leo Pasvolsky of the State Department.

In January 1945, just before the San Francisco Charter Conference, IPR sponsored a conference for delegates from 60 nations, described by the IPR's own bulletin as a "fitting prelude" to San Francisco because "it covered very many of the problems which will be there for decision."

HISS ACTIVE WITH U. N.

Alger Hiss, the record shows, requested that copies of the IPR's report be made available to each delegation at San Francisco.

No one had a closer or longer connection with the formation of the United Nations than Hiss. In 1944, he became acting director of the State Department's Office of Special Political Affairs, which had "policy jurisdiction of all international organizations." In this post, Hiss personally drafted messages on U. N. matters for President Roosevelt's signature.

Hiss came into the height of his official powers at the vital Dumbarton Oaks Conference, the first formal parley on forming the U. N. Dr. Edna R. Fluegel, who compiled the State Department's own history, Postwar Foreign Policy Preparation, and was an assistant to Hiss at San Francisco, has described his role.

"Right before Dumbarton Oaks, when he first came, he immediately took a very active part," she told the Senate Judiciary Subcommittee. "He was in charge of all of the arangements. He was secretary to several of the top planning committees and attended Dumbarton Oaks in that capacity. I suppose you would describe his job as pretty much the job of a secretary general plus personal adviser to the delegates."

In that capacity, she said, "everything in the entire State Department of the highest classification" was available to him.

It is difficult to see how a Communist agent could get closer than this to U. N. planning, but Hiss did.

TOP AID AT YALTA

Hiss went to the Yalta conference as "top assistant on postwar organization," testified Dr. Fluegel, who as State Department historian had access to all records before Hiss was exposed. He participated "in all planning meetings" for Yalta, she said.

The Yalta conference was made necessary, the historian said, because of "failure to settle certain questions" concerning the U. N. at Dumbarton Oaks. The main issue, she disclosed, was a Soviet demand for General Assembly votes for Byelorussia and the Ukraine, Soviet states that even today do not have their own missions to the U. N.

The State Department was absolutely opposed to this, she said, maintaining the demand was comparable to the United States asking votes for Texas and other States.

With Hiss as specialist on international organization at Yalta, it is not surprising the Soviet won its demand.

"He operated in a sense as Mr. Stettinius' assistant with respect to the American delegation," said Dr. Fluegel.

"It should be remembered that Dr. Hiss exercises Svengali-like influence over the mental processes of Stettinius," wrote J. Anthony Panuch, Deputy Assistant Secretary of State in Charge of Security, in a 1946 report to the then Secretary of State Byrnes.

Stettinius wrote that Hiss performed brilliantly at Yalta. Stettinius was Secretary of State during the Dumbarton Oaks, Yalta, and San Francisco conferences. Hiss attended all three, always as top specialist on the new peace agency.

Hiss had every reason to regard the U. N. as his special "baby."

[From the New Bedford (Mass.) Standard-Times of January 10, 1956]

CONSPIRACY TAKES SHAPE: HISS-SOVIET CHARTER VOTED

(By Edward B. Simmons)

The United Nations Charter, the rule-book under which the organization seeks world peace, was not conceived at the San Francisco Conference of June 1945, as is popularly imagined.

The charter framework had been put together at Dumbarton Oaks and at Yalta, in the preceding 9 months, where the Soviet Union and the United States played the leading roles. The administration in Washington, negotiating on a basis of Russia being a peace-loving state, had Alger Hiss as its specialist on U. N. matters at both conferences.

Handed a framework at San Francisco, the delegates from 50 sponsoring nations filled in niches and added provisions. They argued, but mostly to save face while they swallowed the joint recommendations of the two giants of the conference.

TWO PRINCIPAL CONDITIONS

It was the understanding at San Francisco that there were two indispensable conditions for U. N. success: One, essential solidarity of the great powers, France, Britain, Nationalist China, Soviet Russia, and the United States; and two, that their armed forces must necessarily bear the predominent burden * * * of any enforcement action.

So wrote Dr. Grayson Kirk, now president of Columbia University, who was chief executive officer of the San Francisco commission that determined the duties and powers of the Security Council, the very heart of the U. N. Dr. Kirk's account was written just after the Conference closed. It is, therefore, authoritative and free of the pro and con U. N. propaganda of subsequent years.

Both of these basic assumptions, solidarity among the great powers and sharing of the military burden, have proved to be false. The two underlying cornerstones of the U. N. have crumbled.

MAJOR POWERS SOUGHT VETO

Dr. Kirk has described how the major powers held out for the "Yalta formula," now known as the veto, in the Security Council.

"Open as it is, on theoretical democratic grounds, to serious objection," he wrote in his 1945 summary, "this Council voting arrangement rests upon two basic assumptions to which the sponsoring powers attached great importance.

"The first was that in any enforcement action the permanent members of the council would be those whose forces must necessarily bear the predominant burden. In consequence it would be unrealistic to expect those Council members to allow their own forces to be committed to an action which they, or any one of them, opposed.

"The other argument was that the organization must depend for its strength upon the essential solidarity of the great powers.

"If this solidarity fails, then the security arrangements will as surely fail. Therefore, all measures which will further and which will rest upon such a presumption of solidarity are of such a vital necessity that they override all other considerations."

Dr. Kirk was not offering his opinion. He was summarizing the thoughts and reasoning of the men of good will at San Francisco, duped, it can now be seen, into accepting the "solidarity" and "sharing" propaganda of Dumbarton Oaks and Yalta.

For there has been no solidarity. Seventy-seven vetoes, mostly by the Soviet Union to be sure, many split votes and absentions emphasize the lack of "solidarity" on the Security Council.

Assumption as to sharing military duties has been proved even more false. In Korea, Britain supplied a regiment. France a battalion. The U. S. S. R. gave no forces to the U. N. cause, but helped the enemy. Nationalist China was not permitted to supply any military help.

Besides major weaknesses, of an unwritten character, the charter has fatal shortcomings in its recorded provisions.

CHARTER PROVISIONS COLLAPSE

When the cornerstones collapsed, almost every important provision of the charter collapsed, too. For example, as to membership and expulsion, the charter states:

"Membership in the United Nations is open to all peace-loving states * * * and will be effected by a decision of the General Assembly.

"A member * * * against which preventive or enforcement action has been taken may be suspended from the rights and privileges of membership in the General Assembly.

"A member * * * which has persistently violated the principles contained in the present charter may be expelled by the General Assembly."

These seemingly powerful provisions for maintaining unity and order have one fatal weakness. After each provision is the clause:

"Upon the recommendation of the Security Council."

Thus, all 3 provisions are at the mercy of the veto. It is no wonder, then, 14 genuinely peace-loving states waited years before getting into the U. N. by a "deal" that virtually doubled the Communist membership. Nor is it surprising that no state, however flagrant its violation, has been expelled or suspended.

The charter states flatly:

"All members shall give the United Nations every assistance in any action it takes * * * and shall refrain from giving assistance to any state against which the U. N. is taking preventive or enforcement action."

This provision has been openly violated. No punitive action could be taken, however, because the noble-sounding words are merely a statement of principle. The charter provides no method of enforcing it.

The basic outline for the charter inherited from Dumbarton Oaks and Yalta did not mention the word "justice"; the final draft at San Francisco does not define it.

Nowhere in the charter is "aggression" defined. This omission, it has been agreed, is serious, but a U. N. commission has been unable to agree on a definition in 9 years of study and discussion.

"I believe it is a mistake to claim the document (the charter) is so perfect it will insure absolutely against war," said the late Senator Taft in July 1945, when the world was at the peak of the sharing and solidarity delusion.

"If too much is now claimed for the charter, and then it begins to develop faults or fails in some of its purposes, there may be such a reaction by an oversold populace as to reverse the whole direction of our policy.

"I do not think most people of this country realize how much the veto changes the whole nature of the United Nations."

Senator Taft's prophecy, then unpopular, was amazingly accurate.

The people have been oversold on a document that drew all its strength from a great power unity that does not exist. The veto, or Yalta formula, has changed the U. N. far more than its most zealous supporters imagined.

The U. N. has survived more than 10 years on faith, not on its constitution, for that was carefully planned by communism to fail in the crisis.

The People Take the Lead

EXTENSION OF REMARKS
OF

HON. ARTHUR G. KLEIN

OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 19, 1956

Mr. KLEIN. Mr. Speaker, the American Jewish Committee is one of the oldest, most reputable, and most effective organizations in the United States in the important field of the maintenance of civil rights and the advancement of understanding and cooperation among Americans of all faiths, races, and origins.

We all recognize that there are still many gaps, many distressing areas and developments, in this field which can only give comfort to the enemies of the United States. Nevertheless, there is and has been progress, and it is important that we know of that progress and be stimulated and encouraged in our efforts to further it.

Recently the committee issued a report called The People Take the Lead, showing the record of progress in civil rights in the last 7 years. For an awareness of our progress in this field, I deem it desirable to have this text published in the CONGRESSIONAL RECORD.

THE PEOPLE TAKE THE LEAD

Each year since the President's Committee on Civil Rights issued its historic report in October 1947, The People Take the Lead has recorded nationwide progress toward equal opportunity for all. The cumulative record is impressive indeed.

When the President's Committee conducted its investigations, four States had fair employment laws. Today FEP statutes in 15 States cover more than one-third of our population. In 1947 racial segregation in schools was the unbroken rule throughout the South and in the District of Columbia. Today over 134,000 Negro children in 8 Southern States and the Nation's Capital are enrolled in previously all-white public schools, while more than 2,000 Negro students attend integrated college and professional classes.

Since the report of the President's Committee, 3 States have adopted laws barring discrimination in higher education; 5 States have provided administrative enforcement of public accommodations laws; and over a score of court decisions have sounded the end of segregation in restaurants, theaters, parks, swimming pools, golf courses, and other public places.

In earlier editions, this reported listed the first Negro officeholder in the South, the first Negro staff doctor in a hospital, the first Negro appointed to a city department. As late as last year, one section was devoted to expanding opportunities in amateur sports—golf, fencing, hockey, tennis, track, and so on. Today such firsts are no longer news; a comprehensive tally, even if possible, would more than fill this booklet.

These advances have not always come easily. Sometimes, as with the epochal public school desegregation ruling of the United States Supreme Court, they have occasioned vehement opposition on the part of certain groups trying desperately to turn back the clock. But despite these setbacks, Americans may well take pride in the Nation's forward march toward equal justice and opportunity.

ARMED SERVICES

Administrative measures

Washington, July 1948: President's Executive Order No. 9981 forbids discrimination in military service; creates Committee on Equality of Treatment and Opportunity in the Armed Services.

U. S. A., 1949–50: Governors' Proclamations in Michigan, Minnesota and Washington end segregation in National Guard.

Washington, 1950–55: Army drops quotas for Negro enlistments; Selective Service drops questions on race for draft registrants; Air Force, Army, Marines and Navy report segregation entirely eliminated. Defense Department reports number of Negro officers and enlisted men has more than doubled in 6 years.

Washington, April 1954: Army promises end to segregation at West Point.

Washington, October 1954: Veterans Administration announces end of segregation in all VA hospitals.

Legislation

United States of America, 1947–49: California, Connecticut, Illinois, Massachusetts, New Jersey, New York, Pennsylvania, and Wisconsin forbid discrimination in the National Guard.

CITIZENSHIP

Administrative measures

Mobile, Ala., November 1948: Federal officers invoke rarely used civil rights statutes, arrest sheriff and deputy for inflicting physical punishment on Negro prisoners.

New Orleans, La., December 1949: Two policemen are dismissed for depriving two Negro youths of their civil rights.

Legislation

U. S. A., 1949–51: South Carolina and Texas adopt antilynch laws.

U. S. A., 1949–53: Alabama, Florida, Georgia, North Carolina, South Carolina, and Virginia forbid wearing of masks and burning of crosses.

U. S. A., 1950–53: South Carolina and Tennessee abolish poll tax; Alabama reduces cumulative tax from 24 years to 2 years.

U. S. A., 1951–55: Legislatures in Colorado, Montana, North Dakota, and Oregon repeal ban on intermarriage between whites and Negroes, Mongolians, or Chinese.

Philadelphia, Pa., January 1952: New city charter prohibits discrimination in use of city property.

U. S. A., spring 1953: Florida and North Carolina regulate sale of explosives to prevent hate bombings.

Sacramento, Calif., April 1953: Legislature repeals restrictions on property rights of orientals.

Washington, August 1953: Congress repeals Federal prohibition against sale of liquor and firearms to Indians.

United States of America, 1953–55: Arizona, California, Montana, Nebraska, and New Mexico end ban on liquor sales to Indians.

Lincoln, Nebr., March 1955: Legislature adopts law removing racial references in register of voters.

Court action

Washington, January 1948: United States Supreme Court (*Oyama* v. *California*) in-

validates California alien land law which raises presumption of fraudulent ownership of agricultural land by persons ineligible for citizenship.

Washington, June 1948: United States Supreme Court (*Takahashi* v. *Game Commission*) invalidates California law prohibiting issuance of fishing licenses to persons ineligible for citizenship.

Santa Fe, N. Mex., August 1948: Federal District Court removes last restriction on the right of American Indians to vote.

Columbia, S. C., November 1948: Federal district court enjoins State Democratic Party from barring Negro voters from primaries or from participation in party affairs.

Washington, March 1949: United States Supreme Court (*Schnell* v. *Davis*) upholds Federal district court decision that Alabama's Boswell amendment, which set up stringent educational requirements for voting, is unconstitutional.

Atlanta, Ga., July 1949: State supreme court rules that counties with substantial Negro populations must add Negroes to grand jury and petty jury lists.

Montgomery, Ala., September 1949: Federal grand jury, with two Negro jurymen, indicts one policeman and three former officers on charges of violating civil rights.

United States of America, 1949–52: Supreme Courts of California and Oregon declare State alien land laws, barring sale or lease of land to Japanese aliens, unconstitutional.

Birmingham, Ala., May 1951: United States Court of Appeals upholds sentencing of Georgia sheriff and deputy to 12 months' imprisonment and $1,000 fine for delivering seven Negroes to a masked mob.

Richmond, Va., October 1952: United States Court of Appeals upholds kidnapping convictions against seven North Carolina klansmen.

Madison, Wis., January 1953: State supreme court rules that a State-administered life insurance fund may not reject Negro applicants on ground that they are substandard risks.

Mobile, Ala., April 1953: White jury frees Negro youth charged with rap of white woman.

Washington, May 1953: United States Supreme Court (*Avery* v. *Georgia*) sets aside death sentence of Georgia Negro because jury was chosen on racial basis.

Washington, May 1953: United States Supreme Court (*Terry* v. *Adams*) outlaws "jaybird" primary in Texas as device to prevent Negroes from voting.

Washington, May 1954: United States Supreme Court (*Hernandez* v. *Texas*) rules that systematic exclusion of Mexican-Americans from juries in Texas is unconstitutional.

Sioux City, Iowa, October 1954: Municipal court declares State law prohibiting liquor sales to Indians is unconstitutional.

Jackson, Tenn., May 1955: Madison County criminal court seats first all-Negro jury in State.

Oklahoma City, Okla., July 1955: United States Court of Appeals rules that designation of Negro candidates by race on State election ballots is unconstitutional.

Voluntary action

United States of America, 1949–51: Democratic State primaries opened to Negroes in Arkansas, Georgia, Louisiana, and Texas.

Chicago, Ill., November 1951: Independent Voters League of Illinois gives Negro best legislator award.

EDUCATION

Administrative measures

Washington, July 1948: Report of President's Committee on Higher Education condemns segregation and discrimination in colleges and profesisonal schools.

Albany, N. Y., November 1949: Commissioner of Education orders rezoning of school districts to eliminate segregation by gerrymandering.

Nashville, Tenn., September 1950: Attorney General, in first voluntary compliance with United States Supreme Court decisions in college cases, rules that the State university must admit Negro graduate students.

Tucson, Ariz., September 1951: All school districts except Phoenix abandon segregation in public schools. Phoenix follows in 1953.

Washington, November 1951: President pocket vetoes bill requiring racial segregation in military post schools and other Federal property.

Paducah, Ky., June 1953: City College admits first Negro students.

Oak Ridge, Tenn., December 1953: Town council asks Government to end school segregation in community run by United States Government.

Louisville, Ky., January 1954: City-supported general hospital accepts first Negro student nurses.

Washington, February 1954: Secretary of Defense orders end to segregated military post schools by 1955.

St. Louis, Mo., June 1954: Board of education plans complete desegregation of public schools by September 1955.

Charleston, W. Va., June 1954: Board of education opens nine State colleges to qualified Negro students.

Pasadena, Calif., June 1954: Board of education agrees to abolish method of assigning pupils criticized as "disguised segregation."

Washington, June 1954: Board of education adopts 2-year program to end school segregation in Capital.

Baltimore, Md., June 1954: School board votes unanimously to end segregation in city's public schools.

Albany, N. Y., September 1954: State education department admits Indian children to regular schools, ending century of segregated reservation schools.

Montgomery County, Md., June 1955: County announces plans to begin admitting white and Negro students to the same elementary schools, high schools and junior colleges.

Oklahoma City, Okla., June 1955: Board of regents for higher education orders desegregation of white and Negro students at all State-supported colleges; more than 65 communities, including all the large cities in the State, plan desegregation for September 1955.

San Antonio, Tex., June 1955: President of San Antonio College anounces that its two junior colleges are no longer segregated schools.

Trenton, N. J., June 1955: Commissioner of education rules Englewood must rezone school districts to permit all children, regardless of race, to attend schools nearest their homes.

Nashville, Tenn., June 1955: State board of education approves program of gradual desegregation in State colleges.

Frankfort, Ky., June 1955: State assistant attorney general rules that 51-year-old school segregation law has been invalidated by United States Supreme Court; several cities desegregate public schools.

Texas, summer 1955: School boards desegregate public schools in Alice, Brownwood, Carrigo Spring, Corpus Christi, Eagle Mountain, El Paso, Friona, Harlingen, Kerrville, Kingsville, Mission, San Angelo, San Antonio, and Weslaco.

Annapolis, Md., summer of 1955: State board of education votes to abolish segregation in five State teachers colleges; Attorney General rules that United States Supreme Court's desegregation decision nullifies State laws requiring segregation.

Arkansas, summer 1955: Biggers-Reyno, Charleston, Fayetteville, and Hoxie school districts desegregate; North Little Rock plans gradual desegregation to begin in high schools in 1957.

Austin, Tex., July 1955: Board of regents votes to abolish segregation at Texas University.

Legislation

Trenton, N. J., 1947–49: New constitution ends segregation in New Jersey's public schools; omnibus civil rights law extends jurisdiction of the division against discrimination to all nonsectarian educational institutions.

Albany, N. Y., 1948–51: Legislature adopts first State law outlawing racial and religious discrimination in colleges and universities (March 1948); later extends coverage to business and trade schools (March 1951).

Indianapolis, Ind., March 1949: Legislature adopts progressive elimination of segregation in public schools.

Springfield, Ill., July 1949: Legislature bars State funds to school districts discriminating against pupils because of race or creed.

Madison, Wis., July 1949: Legislature forbids exclusion of children aged 4 to 20 from any public school on account of religion, nationality or color, and prohibits segregation in public schools.

Boston, Mass., August 1949: Legislature adopts fair education law.

Louisville, Ky., July 1950: Legislature amends 46-year-old State law requiring racial segregation of students; Louisville colleges anounce registration of Negroes for fall term.

Phoenix, Ariz., March 1951: Legislature repeals education law requiring segregation, permitting individual school boards to establish unsegregated public elementary schools.

Salem, Ore., April 1951: Legislature outlaws discrimination in vocational, profesional and trade schools licensed by State.

Albany, N. Y., April 1953: Legislature bars institutions of higher learning from accepting gifts or endowments conditioned on teaching racial superiority.

Sante Fe., N. Mex., March 1955: Legislature repeals law requiring racial segregation in public schools.

Court action

United States of America, 1948: Suits to equate salaries of Negro and white teachers are successful in Atlanta, Ga.; Oklahoma City, Okla., and Surrey, Va.

Washington, January 1948: United States Supreme Court (*Sipuel* v. *Board of Regents*) decides unanimously that Negro students cannot be excluded from state university which offers educational opportunities unavailable at Negro school.

Austin, Tex., June 1948: Federal district court rules that public schools of Texas may not segregate children of Mexican descent.

United States of America, 1948–52: Courts order Universities of Arkansas, Delaware, Kentucky, Louisiana, Maryland, Missouri, North Carolina, Oklahoma, Tennessee, Texas, and Virginia to admit Negro students.

Washington, June 1950: United States Supreme Court (*McLaurin* v. *Oklahoma; Sweatt* v. *Painter*) rules that forcing a Negro to sit apart from his classmates at a State university or to attend a school lacking the educational opportunities of the State university is unconstitutional.

Fort Worth, Tex., June 1950: Federal district court rules that each school district must provide equal schooling for Negroes and whites; bars transporting Negro students to other districts.

Arlington, Va., September 1950: Federal district court orders school board to provide equal facilities for Negroes and whites.

Jefferson City, Mo., November 1950: State supreme court rules that white public schools must admit Negro students to courses not available in Negro schools.

Phoenix, Ariz., March 1951: Federal district court rules that segregation of Mexican American children is unconstitutional.

Tarboro, N. C., August 1951: Federal district court orders Washington County officials to equalize white and Negro school facilities and appropriations.

Phoenix, Ariz., February 1953: State superior court invalidates 1951 statute which permitted local school boards to segregate.

Shreveport, La., May 1954: Federal district court rules that State-operated Southwestern Louisiana Institute must admit Negro students.

Washington, 1954–55: United States Supreme Court (school segregation cases) rules compulsory segregation in public schools is unconstitutional; finalizes lower court decision admitting Negro students to State-supported schools (May 1954). Following further arguments on implementation, Court orders school segregation ended with deliberate speed and rules that moves toward integration must be carried out in a systematic and effective manner, within a reasonable time.

Birmingham, Ala., July 1955: Federal district court rules that University of Alabama must admit qualified Negro students.

Columbia, S. C., July 1955: Federal district court orders Summerton school district trustees to end segregation in public schools with all deliberate speed.

Richmond, Va., July 1955: Federal district court orders Prince Edward County to end segregation in its public schools with all deliberate speed.

El Paso, Tex., July 1955: Federal district court voids all sections of State constitution and other State statutes sanctioning racial segregation in schools; orders Texas Western College to admit Negro student.

New Orleans, La., August 1955: United States court of appeals upholds ruling prohibiting Louisiana State University from barring qualified Negro students.

Greensboro, N. C., September 1955: Federal district court rules that University of North Carolina must admit Negro students.

Austin, Tex., October 1955: State supreme court rules that State funds can be used for desegregated schools.

Washington, October 1955: United States Supreme Court orders University of Alabama to admit Negro students.

Voluntary action

Annapolis, Md., May 1949: United States Naval Academy graduates first Negro midshipman.

Lexington, Ky., May 1949: Catholic Committee of the South urges all Catholic institutions of higher learning to admit Negro students without discrimination.

Washington, November 1949: Poll of 15,000 southern college teachers by Southern Conference Educational Fund reveals 70 percent favor integration in professional and graduate schools.

Chicago, Ill., November 1949: Over 100 university presidents, deans, and admissions officers from 24 States, at Conference of American Council on Education, urge elimination of college admission quotas based on race, religion, or national origin.

Easton, Pa., January 1950: Lafayette College refuses $140,000 bequest restricted to non-Jewish and non-Catholic students.

Birmingham, Ala., October 1951: Southern Episcopal Synod urges admission of Negro students to theological schools at Lexington, Ky., and Sewanee, Tenn.

Chapel Hill, N. C., October 1951: Students' protest wins right of five Negro students at University of North Carolina to sit with white students at athletic events.

Washington, 1952: New Roman Catholic high school and several Episcopal elementary schools announce nonsegregation policy.

Sewanee, Tenn., June 1952: Faculty of Cumberland Forest Music Festival and eight leading religious instructors cancel teaching and concert contracts in protest against University of the South's refusal to admit Negro divinity students; following year, university admits Negroes to school of theology.

Denver, Colo., December 1952: Colorado-Wyoming Association of Collegiate Registrars and Admission Officers votes to delete references to race and religion from applications.

Gadsden, Ala., June 1953: Cumberland Presbyterian Church admits Negro students to theological seminary.

Boston, Mass., December 1953: Department of Education announces that all of the State's 1,131 private schools have eliminated discriminatory questions on admission applications.

New York, N. Y., December 1953: Nationwide survey by Anti-Defamation League discloses that 450 colleges, universities, and junior colleges have removed questions concerning color, nationality, and religion from application blanks.

U. S. A., spring 1954: Catholic archbishops forbid segregation in Nashville, Tenn., and San Antonio, Tex., archdioceses.

Richmond, Va., May 1954: Bishop rules Catholic high schools will admit Negro students.

Ames, Iowa, August 1954: National Student Association, representing students at 250 colleges, calls for swiftest possible integration of the races at all educational levels in all parts of the country.

Nashville, Tenn., August 1954: Fisk University is first Negro college invited to join Rhodes scholarship competition.

Baltimore, Md., November 1954: Society of Friends inaugurates gradual integration in its nursery-through-high private school.

Oklahoma City, Okla., April 1955: State voters approve constitutional amendment paving way for desegregated schools.

Tiffin, Ohio, September 1955: United Student Christian Council takes steps to include more Negro colleges and universities in student Christian movement.

Norfolk, Va., September 1955: Norfolk Catholic High School opens enrollment to Negro students.

Dallas, Tex., September 1955: Jesuit High School admits Negro students.

Nashville, Tenn., October 1955: Southern Education Reporting Service announces that 134,000 Negro children previously in all-Negro schools are now enrolled in desegregated public schools in 8 States and the District of Columbia. Over 2,000 Negro students attend previously all-white colleges and universities.

EMPLOYMENT

Administrative measures

Washington, July 1948: President's Executive Order No. 9980 orders Federal agencies to ban discrimination in employment; creates Fair Employment Board in Civil Service Commission to investigate complaints and establish procedures for compliance.

Philadelphia, Pa., March 1949: Unemployment compensation board rules employee may refuse to work on Sabbath without sacrificing unemployment compensation.

New Haven, Conn., January 1950: Connecticut Interracial Commission conducts first public hearing under a State FEP law and finds complainant was denied employment because of race.

U. S. A., 1950–51: State commissions against discrimination in Massachusetts and New York issue cease and desist orders against employment agencies discriminating in job placements.

U. S. A., 1951: State employment services in California and Illinois announce they will refuse to accept discriminatory job orders and will delete all racial and religious data from records.

Sacramento, Calif., July 1951: Attorney general rules that California Employment Stabilization Commission has many powers of a State FEP commission.

Salenm, Oreg., August 1951: State labor commissioner orders Brotherhood of Railway Carmen to cease racial discrimination against applicants.

St. Louis, Mo., October 1951: State employment service merges Negro and white offices.

Washington, 1951–54: President Truman creates Committee on Government Contract Compliance (December 1951) to enforce prohibition against discrimination in employment by firms contracting or subcontracting Government orders. President Eisenhower creates new Government Contract Committee with Vice President as Chairman (August 1953); Committee tightens nondiscrimination regulations (April 1954).

Raleigh, N. C., September 1952: Governor eliminates Negro-white salary differentials for staff of mental hospital in Goldsboro.

Washington, October 1953: District's Board of Commissioners orders inclusion of anti-bias clause in future contracts. District telephone company drops color bars.

New York, N. Y., October 1953: State commission against discrimination successfully negotiates to modify employment policy of Pennsylvania Railroad. Company hires first Negro brakeman and opens other jobs to qualified Negroes.

Louisville, Ky., March 1954: Segregation eliminated in city's fire department.

Boston, Mass., May 1954: State commission against discrimination announces Pullman Co. of Chicago agreement to end 90-year ban on Negro Pullman conductors.

Sacramento, Calif., September 1954: Attorney general rules that Negro firemen in Los Angeles may not be segregated.

Washington, September 1954: District Commissioners order desegregation of Negro firemen.

Salem, Oreg., September 1954: Special assistant attorney general rules that, under State's FEP law, boards of education may not require teaching applicants to submit photographs.

Silver City, N. Mex., December 1954: State fair employment practices commission orders Kennecott Copper Corp. to cease segregating employees in company-owned housing, washrooms, and on payroll lines.

Washington, January 1955: President's Committee on Government Contracts refuses to permit Bureau of Indian Affairs to negotiate a contract with Mississippi omitting standard nondiscrimination clause.

Atlanta, Ga., January 1955: Southern Regional Council reports 143 cities in 13 Southern States now employ 618 Negro policemen, 92 plainclothesmen, and 112 policewomen.

Washington, January 1955: President creates Committee on Government Employment Policy, replacing Civil Service Commission's Fair Employment Board and making heads of Government departments responsible for preventing job discrimination in their agencies.

Seattle, Wash., January 1955: State FEP Commission announces Northern Pacific Railway agreement to comply with Washington's antidiscrimination law.

Washington, January 1955: Capital Transit Co. drops ban on Negro bus and trolley operators after conferences with President's Committee on Government Contracts.

Red Bank, N. J., March 1955: State Highway Authority orders nondiscrimination clause added to all future construction contracts for Garden State Parkway.

New York, N. Y., April 1955: State commission against discrimination approves consent decree in which brewery local of the AFL Teamsters Union agrees to admit Negro applicants and to end practices deemed discriminatory by the commission.

New York, N. Y., June 1955: State commission against discrimination announces agreement by local of International Alliance of Theatrical Stage Employees, AFL, to admit Negro stagehands to full membership.

Los Angeles, Calif., July 1955: City civil service commission requires all applicants for municipal employment to swear that they will willingly work with or for any associates regardless of race, color or creed.

New York, N. Y., July 1955: State celebrates 10th anniversary of first State FEP law.

Washington, September 1955: President's Committee on Government Contracts inaugurates plan to eliminate employment discrimination in the transportation industry.

Legislation

United States of America, 1948–51: Ordinances in Richmond, Calif.; Sioux City, Iowa, and Cincinnati, Ohio, bar discrimination in public employment or in work under city contracts.

United States of America, 1948–55: City ordinances bar discrimination in public and private employment in Chicago, Ill.; East Chicago and Gary, Ind.; Ecorse, Hamtramck, Pontiac and River Rouge, Mich.; Duluth, Minneapolis and St. Paul, Minn.; Campbell, Cleveland, Girard, Hubbard, Lorain, Lowellville, Niles, Steubenville, Struthers, Toledo, Warren and Youngstown, Ohio; Braddock, Clairton, Duquesne, Erie, Farrell, Johnstown, Monessen, Philadelphia, Pittsburgh and Sharon, Pa.; and Milwaukee, Wis. Cities with FEP ordinances now total 36.

United States of America, 1949: New Mexico, Oregon, Rhode Island, and Washington adopt enforceable FEP laws, bringing total to eight.

Albany, N. Y., May 1949: Legislature prohibits questions concerning birthplace on applications for State civil service.

Sacramento, Calif., June 1949: Revised civil-service law prohibits discrimination against State employees on grounds of religion, political belief, marital status, race, color, sex, or blindness.

Los Angeles, Calif., January 1951: Ordinance forbids discrimination in hiring of building-construction workers on urban redevelopment projects.

Sacramento, Calif., November 1952: State constitutional amendment eliminates last prohibitions against employment of Chinese on public works.

Juneau, Alaska, March 1953: Alaska adopts fully enforceable FEP law.

Topeka, Kans., March 1953: Legislature adopts FEP law patterned after Wisconsin's educational plan. (Four States now have nonenforceable FEP laws.)

Des Moines, Iowa, April 1953: Legislature sets up commission to investigate racial and religious prejudice in State.

United States of America, 1955: Michigan, Minnesota, and Pennsylvania adopt fully enforceable FEP laws, bringing total to 11.

Phoenix, Ariz., March 1955: Legislature bars discrimination in public employment and in firms holding public contracts.

Denver, Colo., April 1955: Legislature extends State FEP law to include private employers engaged in any work financed in part or in whole by money raised by taxation.

Hartford, Conn., June 1955: Legislature extends FEP law to include discriminatory job advertising.

Court action

Washington, November 1949: United States Supreme Court (*Graham* v. *Brotherhood*) sustains injunction against Brotherhood of Locomotive Firemen and Engineers, barring discrimination against Negro railroad employees.

Birmingham, Ala., May 1950: Federal district court finds Gulf, Mobile & Ohio Railroad and Brotherhood of Locomotive Firemen and Engineers guilty of discrimination and awards damages based on wages plaintiffs would have earned on jobs denied them.

New Haven, Conn., October 1950; Superior court sustains interracial commission's order under FEP law.

Charlotte, N. C., January 1951: United States court of appeals reverses lower-court decision which permitted railroads to restrict hiring of Negroes as firemen.

Washington, June 1952: United States Supreme Court (*Brotherhood* v. *Howard*) rules that a railway brotherhood may not use its power as a bargaining representative under the Railway Labor Act to effect racial discrimination against Negroes, regardless of how they are classified.

Hartford, Conn., 1952–54: State courts sustain civil rights commission's order against International Brotherhood of Electrical Workers (1952). Superior court fines Hartford local of IBEW $2,000 for refusing to drop discriminatory membership policy, plus $500 per week until compliance. Union abandons 5-year defiance of State FEP law; admits two Negro apprentices (April 1954).

United States of America, spring 1954: Supreme Courts of Michigan and Ohio rule workers may refuse to work on their Sabbath without sacrificing unemployment compensation.

New York, N. Y., April 1954: State court of appeals upholds authority of State commission against discrimination to direct an employment agency to cease inquiries, direct or indirect, as to race, creed, color, or national origin of applicants for employment.

Milwaukee, Wis., August 1954: Circuit court upholds cease and desist order of State industrial commission under so-called educational FEP law.

Daytona Beach, Fla., August 1955: State district court orders electrical union to admit Negro applicant.

Houston, Tex., September 1955: State district court approves agreement by Shell Oil Refinery and Shell Chemical Co. not to restrict workers to certain jobs on the basis of race or color.

Voluntary action

United States of America, 1948–54: Many big league teams admit Negro baseball players, following successful employment of Jackie Robinson by Brooklyn Dodgers in 1947. Pacific Coast League hires first Negro umpire (December 1953).

United States of America, December 1948: Ten railroad unions agree to eliminate discriminatory clauses from their national constitutions, or to make them inoperative in States with FEP laws.

New York, N. Y., April 1950: New York Telephone Co. announces that discriminatory advertisements by employment agencies will not be accepted for classified telephone directories throughout State.

New York, N. Y., June 1950: Journal of American Medical Association announces that designations of race and creed will be dropped from all situations wanted advertisements.

New York, N. Y., July 1951: New York Telephone Co., RCA Communications, American Cable & Radio Corp., and Western Union Telegraph Co. form voluntary committee to cooperate with State commission against discrimination in eliminating discrimination in the communications industry.

New York, N. Y., October 1951: Metropolitan Opera Co., signs first Negro ballet dancer.

Chicago, Ill., October 1951: Personnel manager of Carson, Pirie, Scott & Co., declares integrated hiring policy successful.

New York, N. Y., October 1952: International Geneva Association, a society of chefs, headwaiters, and managers serving fashionable hotels and restaurants, lifts ban on Negro members.

Los Angeles, Calif., January 1953: Negro and white locals of musicians union merge.

Indianapolis, Ind., July 1953: Railway hires first Negro trolley drivers.

New York, N. Y., October 1954: Marian Anderson is first Negro singer engaged by Metropolitan Opera Co.

Dade County, Fla., October 1954: Local of Bricklayers, Masons, and Plasterers International Union admits Negro members.

New York, N. Y., March 1955: United, American, and Trans-World airlines hire Negro reservation clerks.

Chicago, Ill., March 1955: Armour & Co. assures United Packinghouse Workers Union that qualified Negro workers will be employed in white-collar positions.

Baltimore, Md., June 1955: Baltimore local of National Federation of Postal Clerks votes to admit Negro applicants.

Peoria, Ill., August 1955: American Federation of Teachers votes to void charter of any local union which continues to segregate members after June 1956.

HOUSING

Administrative measures

Washington, December 1949: Federal Housing Administration and Veterans' Administration refuse to insure loans on new housing covered by recorded restrictive covenants.

Charlotte, N. C., January 1950: Public Housing Administration rejects bid for Federal aid in construction of segregated housing project; city council reverses segregation policy.

Washington, November 1950: Public Housing Administration declares low-rent housing programs must reflect equitable provisions for eligible families of all races determined on the approximate volume and urgency of their respective needs.

United States of America, 1950–55: City housing authorities in Los Angeles County, San Bernardino, and San Francisco, Calif.; Washington, D. C.; Wilmington, Del.; Chicago, Ill.; Baraga, Mich.; St. Paul, Minn.; Omaha, Nebr.; Newark, N. J.; Buffalo and Schenectady, N. Y.; Toledo, Ohio; Allegheny County and Pittsburgh, Pa.; and Pasco, Wash., eliminate segregation in city housing projects.

New York, N. Y., April 1951: State commissioner of housing rules that, for the purposes of the housing law, segregation is discrimination.

Washington, May 1951: Housing and Home Finance Agency says needs of displaced minority-group families and availability of substitute housing will be scrutinized carefully before approval is given to local urban redevelopment plans.

New York, N. Y., June 1951: Federal Housing Administrator announces that all projects to which FHA obtains title will be administered on a nonsegregated basis.

Chicago, Ill., August 1953: Housing authority admits Negro tenants to previously all-white public housing project.

San Francisco, Calif., January 1954: Housing authority includes nonsegregation clause in contract for operation of four temporary housing projects.

Washington, October 1954: Federal Housing Administrator says Government will refuse Federal aid to cities which default on their obligations to minority citizens.

Albany, N. Y., October 1955: Governor appoints new housing advisory council to aid State commission against discrimination in administering laws barring bias in publicly assisted housing.

Legislation

United States of America, 1949–52: Connecticut, Massachusetts, New Jersey, New York, Pennsylvania, and Wisconsin forbid discrimination and segregation in public housing.

United States of America, 1949–52: Los Angeles and San Francisco, Calif., and Cincinnati, Ohio, bar discrimination and segregation in urban redevelopment.

United States of America, 1949–52: Ordinances in San Francisco, Calif., Hartford, Conn.; Boston, Mass.; New York, N. Y.; Cleveland and Toledo, Ohio; Philadelphia, Pa., and Providence, R. I., bar discrimination and segregation in public housing.

United States of America, 1949–53: Legislatures in Connecticut, New Jersey, New York, and Pennsylvania forbid racial and religious discrimination in publicly assisted housing.

New York, N. Y., March 1951: Ordinance bars discrimination in publicly assisted housing.

Madison, Wis., June 1951: Legislature repeals State law recognizing validity of racial restrictive covenants.

St. Paul, Minn., April 1953: Legislature prohibits race restrictions in real estate contracts.

Denver, Colo., September 1953: City council bars approval and recording of subdivisions containing racial restrictive covenants.

New York, N. Y., July 1954: Ordinance makes it illegal for owners of multiple dwellings, erected with loans or guarantees from public agencies, to discriminate against tenants because of race, creed, color or national origin.

Albany, N. Y., April 1955: Legislature outlaws discrimination in virtually all housing to be built with Government insurance.

Albany, N. Y., April 1955: Legislature extends jurisdiction of State commission against discrimination to publicly assisted housing.

Trenton, N. J., July 1955: Legislature bars discrimination in granting of mortgage loans.

Court action

Washington, May 1948: United States Supreme Court (*Shelley* v. *Kraemer; Hurd* v. *Hodges*) rules that courts cannot enforce racial restrictive covenants. Five years later (July 1953), Court rules that courts may not award damages for breach of racial restrictive covenant (*Barrows* v. *Jackson*).

Birmingham, Ala., December 1950: United States Court of Appeals holds that city racial zoning law is unconstitutional.

Chicago, Ill., June 1953: State circuit court bars condemnation of land owned by Negro, thwarting attempt to drive his family from neighborhood by turning property into a public park.

United States of America, July 1953: Federal district courts in Evansville, Ind.; and Toledo, Ohio, enjoin local housing authorities from segregating Negro tenants in public-housing projects.

San Francisco, Calif., 1953–54: State court of appeal upholds earlier superior court ruling that San Francisco Housing Authority must abandon neighborhood pattern of resident selection and admit applicants without discrimination (August 1953), United States Supreme Court rejects appeal (May 1954).

Denver, Colo., October 1953: State district court rules that housing authority may operate integrated housing on property once covered by restrictive covenant.

Akron, Ohio, April 1955: State board of tax appeals rules that the advent of Negro residents into a white neighborhood does not necessarily reduce property values.

Voluntary action

Chicago, Ill., January 1948: Chicago Improvement Association negotiates agreement under which white owners agree not to enforce existing restrictive covenants.

Miami, Fla., November 1950: National Association of Real Estate Boards votes to change code which held it was unethical for a realtor to introduce new races into a neighborhood.

Buffalo, N. Y., October 1952: Builder of Philadelphia's first nonsegregated private rental housing tells National Association of Housing Officials venture is outstanding success.

Philadelphia, Pa., April 1954: Commission on human relations reports that 88 percent of the city's Negro families and 22 percent of white families live in blocks with some racial integration.

Trevose, Pa., November 1954: Cooperative interracial development of one-family homes opens in Bucks County.

San Francisco, Calif., December 1954: Study by University of California reports west coast white neighborhoods are accepting the arrival of nonwhite residents without incident.

New York, N. Y., May 1955: Fund for the Republic appropriates $100,000 for study of minority groups' housing problems.

Teaneck, N. J., July 1955: White citizens unite to integrate Negro newcomers and to prevent panic selling in neighborhood.

Bayside, N. Y., July 1955: Appeal by Bayside Council of Churches and Synagogues helps locate suitable housing for 16 Negro Army officers assigned to Fort Totten, Queens.

PROFESSIONAL, BUSINESS, RELIGIOUS, AND FRATERNAL SOCIETIES

Voluntary action

Chicago, Ill., 1948–54: The American Nurses' Association votes to give direct membership to Negro nurses refused district membership; 2 years later, National Association of Colored Graduate Nurses votes to disband. By 1954, 53 State and territorial associations—all except Georgia—include Negro nurses in membership.

U. S. A., 1949–55: Negroes are admitted to membership in State medical associations of Alabama, Florida, Georgia, Missouri, Tennessee and Virginia; medical societies of Pulaski County, Ark., Fulton County, Jackson County, and St. Louis, Mo., Charleston County, S. C., Bexar and Harris Counties, Tex., northern Virginia, Roanoke, Va., and Washington, D. C.; American Pediatric Society; American Board of Surgery; St. Louis Dental Society; bar associations of Cincinnati, Galveston, Los Angeles, Louisville, St. Louis, and Washington, D. C.; Arkansas Education Association; Arlington Education Association; Albany Junior Chamber of Commerce; North Carolina Academy of Science, Carolina Academy of Science, and California Rotary.

U. S. A., 1949–55: Southern Presbyterian Church votes to absorb colored presbyteries in white synods; Washington Cathedral selects Negro canon; South Carolina diocese of Protestant Episcopal Church welcomes Negro congregation to diocesan convention; bishop of Raleigh declares segregation in Catholic churches of the diocese will not be tolerated; Disciples of Christ in Portland (Oreg.) admit Negro churches to full membership; Episcopal Diocese of New Jersey bars church segregation; Bruton Parish Church (Williamsburg, Va.) admits Negroes; Bradenton-Palmetto (Fla.) Ministerial Association admits Negro pastors to full membership; Presbyterian Synod of Florida calls for end to racial barriers in church membership, church-supported colleges and adult and youth conferences; Texas-Louisiana Presbyterian Synod admits Negro members; archbishop suspends Catholic mission (New Orleans) for rejecting services of Negro priest; Austin Baptist Association (Tex.) admits Negro members; white and Negro ministerial associations in Asheville (N.C.) merge; Tennessee Methodist Conference endorses Supreme Court ruling on desegregation.

U. S. A., 1948–55: Following example set by Amherst, steps are taken to eliminate discrimination in Greek-letter societies at: Allegheny College, American University, Colgate, College of the City of New York, Columbia, Cornell, Dartmouth, Lake Forest College, Massachusetts Institute of Technology, Middlebury, Northwestern, New York University, Ohio Wesleyan, Pennsylvania State, Rutgers, San Francisco State College, State University of New York, Syracuse, Wayne, Wesleyan, and Universities of California, Chicago, Colorado, Connecticut, Kansas City, Massachusetts, Michigan, Minnesota, Vermont, and Washington. National Committee on Fraternities in Education is organized to fight bias. Action by fraternities to prevent universities from ordering elimination of discriminatory charter clauses is dimissed by United States Supreme Court.

Washington, October 1950: American Prison Association votes not to meet in cities where hotels practice racial discrimination.

Lexington, Ky., September 1952: Fisk and Howard Universities are first Negro colleges to obtain chapters of Phi Beta Kappa.

Washington, September 1952: American Psychological Association votes unanimously to hold no future meetings in cities imposing racial segregation.

U. S. A., 1955: Exchange Clubs of St. Paul, Minn.; Mount Vernon, Norwich, Peekskill, and Port Chester, N. Y., drop racial bars to membership.

Washington, February 1955: National Press Club elects first Negro member.

PUBLIC ACCOMMODATION

Administrative measures

Louisville, Ky., May 1948: Public library admits Negroes to all departments on same basis as whites.

Washington, 1949–50: Department of Interior prohibits discrimination and segregation in any activity or facility conducted in parks and public swimming pools of the Nation's Capital.

Miami, Fla., June 1951: City erases color line in its library.

Washington, November 1951: Interstate Commerce Commission bars racial discrimination in sale of tickets on Washington-Mount Vernon excursion boat.

Houston, Tex., December 1951: City authorities bar segregated restrooms and eating facilities in new airport terminal buildings.

Boston, Mass., 1952–53: State Commission Against Discrimination awards damages to complainants denied accommodations at motor court, and service in cafe, because of race.

Chicago, Ill., May 1952: Illinois Commerce Commission bans racial segregation by Illinois Central Railroad.

St. Paul, Minn., July 1953: Governor orders discriminatory resort literature removed from State Tourist Bureau offices.

New York, N. Y., July 1953: State commission against discrimination orders summer resort to discontinue club membership procedures used as subterfuge for religious discrimination and to eliminate brochure references to "selected clientele."

Salem, Oreg., January 1954: Attorney general rules that, under new civil-rights law, restaurants may not segregate patrons.

Dallas, Tex., June 1954: Park department ends segregation on municipal golf courses.

Washington, October 1954: Justice Department asks Interstate Commerce Commission to ban segregation on interstate railroads.

New York, N. Y., December 1954: State commission against discrimination rules swimming pool operating as a private club is still a public accommodation and must admit customers without racial discrimination.

Washington, December 1954: Board of commissioners announces it will enforce 85-year-old antidiscrimination laws in all places of public accommodation, ending 75-year lapse in enforcement.

Washington, January 1955: Police commissioner orders Metropolitan Police Boys Clubs to stop using Government facilities on a segregated basis.

Detroit, Mich., February 1955: Police department and State liquor-control commission strengthen enforcement of law barring discrimination in public accommodations.

Washington, February 1955: Interstate Commerce Commission rules Greyhound Corp. guilty of unlawful discrimination in forcing Negro patron to take rear bus seat in Texas.

New York, N. Y., February 1955: State commission against discrimination announces drive to bar out-of-State resort brochures containing discriminatory racial or religious references.

Columbus, Ohio, June 1955: Ohio Turnpike Commission announces it will not publicize any place along the turnpike practicing racial discrimination.

Legislation

U. S. A., 1948–54: Connecticut, Massachusetts, New Jersey, New York, and Rhode Island extend jurisdiction of State commissions against discrimination to public accommodation statutes; Oregon prohibits discrimination in places of public accommodation; Washington strengthens antidiscrimination law.

Miami Beach and Surfside, Fla., 1949–51: Ordinances bar advertising which discriminates against any religion.

St. Thomas, V. I., October 1950: Legislative assembly passes law providing equal rights in places of public accommodation, resort or amusement.

Annapolis, Md., February 1951: Legislature repeals mandatory racial segregation in public transportation.

Kansas City, Mo., June 1951: Ordinance forbids segregation at municipal air terminal, municipal auditorium, and starlight theater.

Madison, Wis., July 1951: Legislature prohibits discriminatory advertising.

Albuquerque, N. Mex., March 1952: Ordinance bans racial discrimination in public accommodations.

Knoxville, Tenn., January 1954: Ordinance bans segregation at privately owned restaurant at municipal airport.

Richmond, Va., March 1954: Legislature bans religious discrimination in advertising.

Houston, Tex., June 1954: Ordinance bans segregation on municipal golf courses.

Helena, Mont., Sante Fe, N. Mex., 1955: Legislatures ban racial and religious discrimination in public accommodations.

Miami, Fla., June 1955: Legislature bans religious discrimination in advertising.

Springfield, Ill., July 1955: Legislature bars tax exemption for any hospital found guilty of discriminating against patients because of race, color, or creed.

Court action

Washington, February 1948: United States Supreme Court (*Bob-Lo Excursion Co.* v. *Michigan*) decides unanimously that Michigan law forbidding discrimination in places of public accommodation applies to excursion boat operating between Michigan and Canada.

Baltimore, Md., July 1948: Federal district court orders Baltimore to open its three public golf courses to Negroes, though permitting restriction of Negroes to certain days of the week. Three years later (July 1951), park board votes to end segregation in city's municipal courses.

United States of America, 1948–54: Courts in Minneapolis, Minn.; Kansas City, St. Louis, and Webster Groves, Mo.; Trenton, N. J.; Oxford, Ohio; Philadelphia, Pa.; and Houston, Tex.; rule that public swimming pools and bathing beaches may not discriminate against Negroes.

Washington, January 1949: Federal district court sustains right of Civil Aeronautics Administrator to prohibit discrimination and segregation at Washington National Airport, although airport is in Virginia, which has a compulsory segregation law.

Louisville, Ky., May 1950: Federal district court awards $1,500 damages to Negro ejected from bus on interstate trip.

Washington, June 1950: United States Supreme Court (*Henderson* v. *U. S.*) outlaws segregation in dining cars on interstate railroads.

Richmond, Va., January 1951: United States court of appeals holds that segregation on interstate railroad violates United States Constitution.

New York, N. Y., April 1951: Federal district court allows damages to plaintiff forced to move to segregated railway car traveling interstate.

Charleston, W. Va., June 1951: Federal district court rules county airport dining room must serve all, regardless of race.

Orlando, Fla., June 1952: Federal district court holds Negroes may not be refused admission to municipal auditorium if Negro auditorium has inferior facilities and entertainment.

Kingston, N. Y., December 1952: Jury awards substantial damages to Negro patrons refused resort accommodations after their reservations were confirmed.

Washington, June 1953: United States Supreme Court (*District of Columbia* v. *Thompson*) upholds 1873 statute prohibiting public eating places from refusing service because of race or color; voids long-standing segregation tradition of Capital restaurants.

Philadelphia, Pa., June 1953: Federal district court awards $600 in damages to four Negro patrons arrested when they refused to be segregated in an Oxford, Pa., theater.

Philadelphia, Pa., September 1954: Court of common pleas fines pool management $100 for failing to obey injunction against racial discrimination. Supreme court affirms action (January 1955).

Mineola, N. Y., October 1954: State district court fines barber $100 for refusing to cut hair of Negro child.

Los Angeles, Calif., October 1954: Municipal court awards Negro mother $350 in damages from hospital which segregated her on the basis of race.

New York, N. Y., June 1955: State supreme court upholds ruling of State commission against discrimination ordering swimming pool to admit Negro patrons (see administrative measures above).

Norfolk, Va., July 1955: Federal district court rules racial segregation in State parks is unconstitutional whether operated by State or private lessee.

Richmond, Va., July 1955: United States court of appeals declares segregation on interstate buses is unconstitutional.

Washington, September 1955: Municipal court invokes 1869 statute to bar discrimination in public bowling alleys.

Washington, November 1955: United States Supreme Court (*Mayor* v. *Dawson*; *Holmes* v. *Atlanta*) affirms lower court ruling barring segregation in public beaches and bathhouses; reverses lower court ruling permitting segregation on public golf courses.

Voluntary action

Washington, 1948–54: National Committee on Segregation in the Nation's Capital issues report condemning discrimination in Washington, D. C. (December 1948); Actors' Equity bans Washington bookings because theater rejects Negro patrons (May 1948); National Theater drop segregation and reopens for legitimate stage productions (November 1951); last dime-store chain operating segregated lunch counters drops ban against Negro patrons (September 1952); motion-picture theaters drop color line (October 1953).

New Orleans, La., October 1949: Archbishop cancels annual holy hour services in city stadium because park commission insists on segregation of participants.

New York, N. Y., April 1950: New York Travel Agents Committee resolves not to recommend discriminatory resorts.

Washington, April 1951: Daughters of the American Revolution drops 12-year ban on Negro performers in Constitution Hall.

Cincinnati, Ohio, May 1951: Dining room concession at Municipal Airport ends discrimination against Negroes.

New York, N. Y., May 1951: Unions representing more than 70,000 restaurant employees, and management associations comprising more than 1,500 restaurants, pledge equal treatment of patrons regardless of race; Committee on Civil Rights in East Manhattan, Inc., finds (June 1952) discrimination against Negro patrons in East Side restaurants has decreased from 42 percent to 16 percent in 2 years.

Atlanta, Ga., June 1951: National Association for the Advancement of Colored People holds first nonsegregated meeting since reconstruction days in Municipal Auditorium.

U. S. A., 1952–53: Legitimate theatres in Baltimore, Md., and St. Louis, Mo. end segregation.

Miami, Fla., January 1952: First nonsegregated audience since Civil War gathers to hear Marian Anderson.

Norfolk, Va., June 1952: Norfolk Ministers Association cancels annual January preaching mission until racial segregation of audiences is eliminated.

Washington, November 1953: Southern Railway System, faced with lawsuit, orders patrons seated in order of their entrance into dining cars.

Washington, January 1954: Columbia hospital announces complete racial integration of patients.

Houston, Tex., June 1954: Protestant Episcopal Church, protesting segregation, cancels plans for 1955 convention in Houston.

Danville, Va., June 1954: Democratic committee breaks century-old precedent with unsegregated Jefferson-Jackson dinner.

Portland, Maine, August 1954: Medical association changes site of State medical convention to protest discrimination by resort originally chosen.

Detroit, Mich., October 1954: Michigan Tourist Council bars discriminatory advertising in 1955 regional guide books of Michigan Tourist Association.

Chicago, Ill., November 1954: National Association of Attorneys General switches convention site from Phoenix, Ariz., to Sulphur Springs, W. Va., to avoid possible racial restrictions.

Philadelphia, Pa., March 1955: Two roller skating rinks agree to eliminate use of club membership as device to bar patrons on the basis of race.

Lake Junaluska, N. C., June 1955: Three hundred and seventy-five students from 90 southern colleges, attending Methodist conference, call for end to racial discrimination and resolve to shun local pools barring Negro students.

Orlando, Fla., July 1955: Episcopal bishop announces racial integration is working smoothly at Episcopal summer camp for children.

Haverhill, Mass., October 1955: State Baptist convention cancels reservations at hotel barring Negro educator.

MISCELLANEOUS

Administrative measures

Trenton, N. J., September 1952: State banking and insurance commissioner orders auto-insurance companies to remove questions on race from applications and to stop charging Negroes higher rates.

Chicago, Ill., March 1953: Illinois Commission on Human Relations reports that 13 States no longer require designations of race or color on drivers' license applications.

New York, N. Y., April 1955: Police department initiates special police-training course in intergroup relations.

Legislation

New York, N. Y., June 1952: City ordinance bars public funds to any child-care institutions discriminating against youngsters because of race, creed, or ancestry.

United States of America, spring 1953: Legislatures in Iowa and Washington bar cemeteries from refusing burial because of race or color.

Sacramento, Calif., April 1955: Legislature bars racial discrimination in automobile insurance.

Court action

Sacramento, Calif., October 1948: State supreme court invalidates law barring interracial marriages.

Voluntary action

Washington, May 1950: CIO orders local unions to disregard State segregation laws and operate all CIO facilities without discrimination.

Chicago, Ill., November 1950: Red Cross votes to eliminate racial data on blood donations.

New Haven, Conn., December 1952: Yale Divinity School undertakes 2-year survey of racial and cultural references in Protestant Church literature.

Tuskegee, Ala., December 1952: Tuskegee Institute reports 1952 is first year free of lynching in United States since records were begun in 1882.

St. Louis, Mo., March 1955: The St. Louis Globe-Democrat decides not to label persons by race in news columns unless the information is pertinent.

Chicago, Ill., July 1955: City's major radio and television stations adopt program to guard against inflammatory statements in reporting on race tensions.

The Position of the Jews in America Today

EXTENSION OF REMARKS
OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 18, 1956

Mr. MULTER. Mr. Speaker, I am pleased to commend to the attention of our colleagues a very interesting discussion of the Position of the Jews in America Today, which appeared in the November 29, 1955, issue of Look.

At the time of its publication the Congress Weekly in an editorial observed that the article by Mr. William Attwood, Look's national-affairs editor, followed a nationwide survey during which Mr. Attwood visited dozens of cities and interviewed scores of Jewish spokesmen in every section of the country, seeking answers to questions about Jews, their distinguishing traits, how they live, what they think, what Gentile Americans think about them, and so forth.

The editorial in the Congress Weekly continues with these comments:

Curiously, just 100 years ago, another American periodical published an evaluation of the American Jew. The Easton (Pa.) Express, marking its 100th anniversary, reproduced the front page of its first issue, dated November 5, 1855, and there we find the following account under the heading Our Jewish Population, extracted from a late number of the San Francisco Sun:

"The American Jew is only less proud of his country than his religion. To say that he is a mere dweller upon the soil because it affords him the means of support is to libel the most noble traits of his character.

"His respect for our laws is shown in the fact that he seldom violates them. His wealth has gone toward building our cities. He cultivates the arts and goes heart and soul with our active citizenry in every useful enterprise. He quarrels but little; heads a mob—never. You will find him in the courts of justice, on the bench, at the bar, in the jury box, but seldom ever arraigned for a heinous criminal offense. This is the American Jew. Let his good qualities be imitated—his bad ones should be forgotten."

This is a flattering picture, indeed, and perhaps a bit overdrawn. But Look's present report on American Jews today tallies in its main conclusions with what was written about the much smaller Jewish population in America a century ago.

The Look article follows:

THE POSITION OF THE JEWS IN AMERICA TODAY

(By William Attwood)

You are a Jew in America. Correction: You are an American who happens to be Jewish. (The distinction is important, as we'll see). You are probably native-born and your ancestors came here from Europe, maybe a generation ago, maybe 3 to 5 or more. Perhaps you talk with a southern drawl or a midwestern twang—or your accent may be pure Brooklynese. The chances are you don't even speak Yiddish. You are a businessman, a doctor, a lawyer, an engineer, possibly a farmer. Almost certainly, you are doing better and living better than your father or grandfather. The American success story is your story too.

You are 1 of 5,500,000 Americans. The only difference between you and 160 million other Americans is—you are a Jew. This means that you worship God in your own kind of church. It also means other things that you can't always define. For example, you feel that you belong here in America—up to a point. That point may be the gates of the local country club, the portals of a medical school, or some real-estate broker's office.

As an American, you are comfortable and secure. As a Jew, you are nagged by worrisome questions about yourself and your fellow Jews and your position in a world dominated by Gentiles.

Some of your best friends may be Gentiles (which is unlikely), but you never really know what they are thinking. I am one of those Gentiles. I had some questions of my own about Jews, and I have been searching for the answers these past 2 months—from Boston to California and from Chicago to Mississippi. Starting on the next page are the questions and the answers I came back with. The answers may not all be 100 percent correct. But they are the best that an inquisitive Gentile reported could pry out of his fellow Americans.

What is a Jew?

The American Council for Judaism asserts that the only thing Jews have in common is their religion. There's much more to it than that. Many Jews never go to a temple—yet they remain Jewish, either in their hearts or in the eyes of their community.

You can't stop being a Jew the way you can stop being a Methodist or a Catholic. I know of one who tried: He changed his name, severed his family ties, joined a Christian church, married a Gentile and moved to a small New England town. He was blond and blue-eyed; he passed for 5 years. Then one day, the local rabbi asked him for a contribution to build a new synagogue. And the ex-Jew was delighted. "It felt good," he wrote his brother, "to know that I still belonged."

Jewishness is a complex of religion, of culture, of memories, of habits; it includes certain food and certain jokes. It's a feeling of kinship with other Jews. It's a way of life.

I have heard Jews described as a social phenomenon. Homeless, often persecuted, they had no business surviving for more than 3,000 years. Yet they did, and perhaps one reason is that all Jews belong to one big family, now 11 million strong. They may not like all their distant cousins, but they're proud of them when they succeed, hurt when they fail—and feel obligated to help them when they're in trouble.

But to answer my first question—the best definition I could improvise is this: A Jew is a member of a historical community held together by common memories, religious tradition and external pressure.

WHEN DID THE FIRST JEWS COME TO AMERICA?

The first 23 landed in New Amsterdam in 1654. They have been coming ever since. There were 2,500 Jews in the United States when George Washington took the oath as first President; there were 15,000 in 1840, 250,000 in 1880, nearly 4 million in 1925. Jews have fought in all of America's wars, shared in all of America's good times, and the bad. Jewish peddlers opened up the frontier with the earliest pioneers; their descendants are merchants in dozens of Western towns.

The big influx began in 1880, during the pogroms in Czarist Russia. In the next 40 years, the proportion of Jews in America went up from .6 to 3.3 percent. The newcomers engulfed New York's lower East Side, sweated and toiled in the needle trades, saved their hard-earned dollars, sent their children to college and rose faster in the economic scale than any other contemporary immigrant group.

The Jews were unique in another way: They were the only immigrants not identified with a nation or a geographical area. In America, they found a Nation they could call home—a Nation that granted them more civil rights than any country in the Western World. Today, with a Nation called Israel ready to welcome them, some 5,000 Jews are still coming to the United States every year.

Crowded shiploads of immigrants landed regularly in New York between 1880 and 1914. Among them were hundreds of thousands of Russian and East European Jews fleeing persecution. They learned the language of America, found a security they had never known. Second- and third-generation Jews came out of the melting pot thoroughly Americanized. Some began to lose their sense of identification with Judaism itself. The Nazi German humiliation and the slaughter of about 6 million Jews under Hitler brought about a renaissance and reaffirmation of Judaism in the United States: America was not just a place for Jews to live. It was home, and Judaism was an integral, but not an overriding, part of their American way of life.

Many Jews have fought and died in America's wars from the Revolution to Korea. Moses Levy battled the English at Trenton; Israel Moses was a Union officer in the Civil War (both the South and North had Jewish troops); Sgt. Ben Kaufman won Congressional Medal of Honor in 1918, is excommander of Jewish War Veterans. Lt. Ray Zussman was a Medal of Honor hero in World War II.

Where do American Jews live and what do they do?

For many centuries and in many countries, the Jews were an urban people because they had to be; they weren't permitted to own land. As immigrants, the great majority landed in New York and stayed there. Today, nearly one-half of American Jews still live in New York City—1,100,000 in Brooklyn alone—and more than three-fourths are concentrated in 16 large cities. (An increasing number are drifting out to the suburbs.) Yet you can find flourishing Jewish congregations in every State in the Union, and their members holding a variety of jobs. How many Gentiles are aware that almost 100,000 American Jews live on farms?

If you want to generalize, you can say that the typical American Jew is engaged in some form of trade. His father may well have been a garment worker, and his son will either go into business or enter a profession; the Jewish boy who, a few years ago, could conceive only of becoming a doctor, dentist, or lawyer is now as likely to be thinking in terms of a career in architecture, engineering, or civil service.

American Jews have a larger proportion of business, professional and white-collar workers than do either American Protestants or American Catholics. They also have superior earning power: It has been estimated that they number 3.5 percent of the popula-

tion but receive 10 percent of the total personal income; of America's 9,000 millionaires, about 20 percent are Jewish.

Communications and the creative arts have always attracted Jews; like the Irish, they have a gift for words, for fantasy, for storytelling. They make good lawyers (perhaps they inherited their skill from the legalistic hairsplitting of the Talmudic scholars), but they are only moderately active in politics; at the moment, only 2 Senators, 1 governor, and 11 Congressmen are Jews.

You do not find many Jews in old established corporations like certain banks and insurance companies, or in public utilities, railroads and the automotive industry. The reasons are plain: Jews are inclined to go where opportunity beckons, where discrimination is at a minimum and where they can either run their own business or at least avoid being at the mercy of a Gentile employer.

I realize there are exceptions. There are exceptions to just about any statement you make about Jews.

How are Jews different from other Americans?

Every American Jew, at one time or another, has felt the sting of anti-Semitism. The chances are that somebody, somewhere, has called him a "dirty Jew," a "kike" or a "sheeny." Or he has been made to feel unwanted, excluded. For him, the word "restricted" has a special connotation. This leaves a mark. It has also given him a sense of kinship with other Jews. Together, they wince when Rosenbergs are convicted and rejoice when Einsteins are honored.

I think this is the big thing that distinguishes Jews from most of their fellow citizens. But there are other traits too. The Catholic magazine America listed four: temperance, industry, family solidarity and a zeal for education.

You can find corroborating statistics. Surveys have shown that the crime, divorce, delinquency and alcoholism rates among Jews are lower than the national average. They have a smaller proportion of prison inmates and a larger proportion of college graduates.

Oddly enough, some of these middle-class virtues are just what antagonize Gentiles. "What I don't like about Jews," said an old gentleman at the bar of an exclusive New York club, "is that they don't get drunk like other people."

Businessmen resent a competitor who works when they go fishing. Students scorn the campus grind. Yet these traits exist; without them, Jews might not have survived centuries of discrimination and persecution. They have had to work harder, study harder, use their wits, and stick together, just to hold their own in a traditionally hostile world.

I would add generosity and a wry sense of humor to America's list of Jewish characteristics. Jews love to tell jokes on themselves—and Jews give to charity as no other ethnic group does. For some, philanthropy takes the place of religion, but all accept the obligation to give: Every year, some 5 million United States Jews contribute some $200 million to Jewish causes alone.

What Jews do, they do intensely; they are anything but lackadaisical. I like one answer I got to this particular question: "Jews are just like everybody else—only more so."

Can a United States Jew support the State of Israel and still be a good American?

This is one I can answer without any equivocation: There is no divided loyalty on the part of American Jews.

Don't underestimate the affinity that nearly all Jews feel for Israel. Remember the Crusades. Palestine is Judiaism's holy land too. And for the first time in history, a flag bearing the Star of David is waving over their spiritual home.

But don't underestimate the patriotism of Jews either. Old Glory is still the flag to which they give allegiance, and Jews have proved their patriotism every time America has gone to war. They provided 4.5 percent of the manpower in two World Wars while comprising less than 3.5 percent of the population. They have an impressive combat record.

I'd say that the existence of Israel has made them even better Americans. Jews everywhere take pride in Israel's achievements, and it has given them more self-respect to know that Jews, too, can be good fighters and farmers. And a man with self-respect is a better citizen.

There's this to add: The leaders of certain Jewish organizations have been so carried away by their enthusiasm for Israel that they raise a hullabaloo each time American foreign policy seems to conflict with that of Israel. Fortunately, I found many responsible leaders concerned about this; among the rank-and-file Jews I talked with, most of them readily made the distinction between financial aid to a struggling, pioneer nation and blind support of the policies of what is, after all, a foreign power.

A word about the Jews who call themselves Zionists. Many Gentiles think of Zionists as hyphenated Americans. They are simply Jews who favored the establishment of a national homeland. Now that Israel is a reality, the Zionists have become zealous fund raisers. But they aren't emigrating; they're checkbook Zionists. The proof is that only 2,000 Americans have settled in Israel since it became a nation. That's 0.04 percent of the Jews in the United States.

The other 99.96 percent have no intention of leaving a country that, to an increasing number, is not only their own but their native land.

Is there a Jewish vote?

There is still some bloc voting by ethnic groups in all big cities. In New York, both parties look for candidates with Irish, Italian, and Jewish names. And no candidate can afford to offend the sensibilities of any group: You praise Israel, you eat pizza and you wear a green tie on St. Patrick's Day. But only in New York, Chicago, and Los Angeles and only on certain issues—Israel, civil rights, FEPC—is there any identifiable Jewish vote.

It's true that Jews tend to be Democrats rather than Republicans. Most of them live in big cities, and urban areas are traditionally Democratic. Also, they are inclined to be liberal rather than conservative. There's a reason for this that transcends politics and economics. Anti-Semitism has usually flourished under authoritarian regims and withered in a vigorous democracy. Demagogues like Senator JOSEPH MCCARTHY alarm Jews; they dread an atmosphere of unreason. They opposed him because their built-in radar detected danger signals.

Are there sharp divisions within the Jewish community?

A generation ago, the answer would have been an emphatic "Yes." Zionists were at odds with anti-Zionists. There were a Jewish proletariat and a Jewish aristocracy. Jews of German extraction who had come to America in the 19th century looked down on the recent immigrants from eastern Europe. I know of an old Jewish lady who still calls the latter kikes. Rivalry between the Orthodox, Conservative and Reform branches of Judaism was intense, and they differed sharply in ritual and worship.

Today, the lines are blurring. American Jewry is becoming more homogeneous. The Jewish working class has all but vanished, having ascended into the middle-income bracket. Zionism is no longer a burning issue, and the only group still shadowboxing against Israel is the vocal but numerically insignificant American Council for Judaism. The immigrants are losing their accents, rising in the social and economic scale and gaining acceptance in the clubs and organizations that once were preserves of the "Germans." (B'nai B'rith, the Jewish fraternal order, has had presidents of East European origin since 1938.) Hitler helped to end the feuds between Jews by showing them that the anti-Semites make no distinctions; the American melting pot did the rest.

The trend is evident in the synagogues too. Orthodoxy is becoming more supple, adapting old customs to contemporary American life. (How many Jews do you know who won't drive a car on the Sabbath?) Reform temples are adding more ritual to their services. There is more mobility among the three branches, and unity too: All cooperate in providing chaplains for the Armed Forces and in agreeing to a common service acceptable to all Jewish soldiers.

The only intramural controversy you hear about these days is between two groups of intellectuals—the parochials and the integrators; that is, between those who feel that Judaism should become a kind of American subculture and those who think Jews should be nothing but Americans who attend a different church. This is an argument that will probably go on for a long time.

Why are there so many Jewish organizations?

The current American Jewish Yearbook lists more than 300 national Jewish groups. Some are subdivisions of others; some are semidefunct. The fact remains, that's a lot of organizations for 5,500,000 people.

There are several reasons. Jews are highly individualistic—they form splinter groups when they disagree. They are joiners. (A survey in Elmira, N. Y., showed that half the gentiles but only 1 out of 15 Jews belonged to no organizations at all.) And because they are often excluded, they must set up parallel fraternities, garden clubs, and lodges of their own.

Finally, organizations tend to survive long after they have outlived their usefulness. Groups formed to shelter and aid the swarms of pre-World War I immigrants live on, even though immigration has all but dried up. Yiddish societies are dwindling away.

For all their myriad associations, American Jews are not well organized—except for philanthropy. There is duplication of certain activities by the big political-cultural groups like the American Jewish Committee and the American Jewish Congress because of old jealousies and a difference in outlook. In smaller towns, there is widespread indifference to most Jewish organizations except the local synagogue and perhaps B'nai B'rith.

But why should American Jews have a tight, hierarchial organization? It would set them apart from other American if they did. I asked almost every Jew I met for the names of the five top leaders of United States Jewry. Their answers differed widely; in fact, there was general agreement about only one man—Senator HERBERT H. LEHMAN of New York.

In a real crisis—say, an upsurge of anti-Semitism—to whom would Jews turn? They told me they would turn to American leaders they could trust—to men like Eisenhower, Stevenson, Truman, or Warren—as well as to their own organizations. For today's American Jew is an American at heart as never before.

Is there much intermarriage between Jews and Gentiles?

Not much. Less than 10 percent of American Jews marry outside their faith. (The Catholic figure is 30 percent—sanctioned by the church.) In three-fourths of the cases, the bride is Gentile and the groom Jewish. These brides account for most of the 2,000 annual conversions to Judaism (which conversions are not actively encouraged by

rabbis.) Their children, more often than not, are raised as Jews.

A mixed marriage is no longer the cause for lamentation among Jewish relatives, but it is usually deplored. I know of cases where such marriages were boycotted by parents on both sides.

Jews continue to marry within their faith for many reasons: religion, custom, compatibility. But the main one is that their social contacts are too frequently limited to other Jews. Boy meets girl where boy finds girl.

What makes Jews so clanish?

There's the story of the veterans' post that had 160 members, 6 of them Jewish. They held a meeting to elect a post commander, and there were two candidates—Johnson and Ginsburg. When the votes were counted, Johnson had 154, Ginsburg six. "Those Jews," chuckled a member. "They always stick together, don't they?"

Jews do tend to be clannish, partly because they are frequently excluded from gentile society and partly because they are more comfortable with other Jews. Catholics and Protestants have their own professional associations; Jews follow suit. Gentile clubs inquire into your religion, so Jews build their own clubs. Fearful of intruding where they might feel unwanted, they withdraw into a social ghetto. Many prefer it this way. "With a gentile," said one, "I find that I'm on my best behavior. I feel edgy. It's a strain." Jews are seldom awed by other Jews. ("So he's got a fancy Cadillac? He's still a schlemiel.")

A recent survey by a Cornell sociologist showed that, in a typical small city, fewer than 10 percent of the Jews were part of a mixed social clique. Some said they hesitated to invite non-Jewish acquaintances to their homes for fear of being rebuffed. And in the preponderantly Jewish neighborhoods in and around New York, I found that social contact with gentiles was practically nonexistent.

The Jewish community centers sprouting up all over the country (350 at the latest count) fulfill a necessary and important function, but they also help perpetuate clannishness. Example: I found one community where an attempt was made to form a Jewish Boy Scout troop. Fortunately, the attempt was unsuccessful, and the kids in the mixed troop can go on being Scouts, period.

Why do Jews tend to be clannish? I asked a rabbi if he would instinctively seek out other Jews at a large social gathering. "No," he replied. "First, I'd see if there were any other clergymen in the room. But if there weren't any, I guess I'd seek out the Jews. You look for people with whom you have something in common."

Is there much anti-Semitism in the United States today?

Overt anti-Semitism is hard to find. American Jews today have a better-than-even chance of living full, productive lives without being frustrated by discrimination. The United States remains a land of opportunity for all of its citizens.

There is still a handful of hate sheets issued by a scraggly gang of professional anti-Semites. There is still a residue of economic discrimination. Last year a survey of Chicago employment agencies revealed that 27 percent of 9,000 job orders specifically barred Jews. Some medical schools still have Jewish quotas and very few admit Jews to their faculties; the same is true of some private schools and colleges. Among real-estate brokers in certain areas, there is a tacit agreement not to sell to Jews.

But it's safe to say that the last big barrier standing between Jews and other Americans is a social one. This doesn't make it trivial. The social barrier is more important in many communities than most gentiles suspect. For the power structure of any small city is usually centered in the number-one country club—and rare indeed is the prestige club that admits Jews. A business or professional man who does not have access to its golf links, its bar, and its locker room suffers a very real economic handicap. What big corporation will promote a Jew to be its branch manager or sales representative in a community where he can't mingle freely with the top people?

Most young Americans feel that the big corporations now offer the best opportunities for security and advancement. Because of invisible barriers, some young Americans would be forced to disagree.

Geographically, the incidence of discrimination varies from place to place. For example, prejudice and its byproducts are strong in such cities as Detroit, Minneapolis, and Los Angeles. On the other hand, San Francisco, where Jews were among the earliest settlers, has a good record; the same is true of Cincinnati, Washington, D. C., and most of the South.

To sum up: Antisemitism is most prevalent in cities with a large Jewish population that did not grow up with the community and that has little social contact with gentiles. It manifests itself socially, but has some economic repercussions. Antisemitism also is a symptom of subsurface prejudice that disturbs and worries many Jews; for so long as prejudice still smolders, they will be nagged by the fear that it may one day flare up into something bigger and uglier than the snobbish name game now practised in America's best clubs.

What makes people antisemitic?

It's an old sickness, with a long history. For centuries, the Jews were misfits and therefore outcasts in a clerical Christian society. They were regarded by ignorant people, recalling Judas Iscariot, as the Christ killers. Segregated, living apart in their ghettos, the Jews seemed strange and mysterious. Legends about them were invented. And whatever people do not understand, they often fear and hate. Ignorance plus fear creates prejudice.

A survey was conducted not long ago in a Michigan county with a population of 30,000, of whom 13 were Jews. Nearly 40 percent of the gentiles had never met a Jew; yet 3 out of 4 said Jews must not get too much power, and 2 out of 5 were in favor of sending them back to Palestine.

What do prejudiced gentiles say about Jews? I've heard them accuse Jews of being pushy, bad-mannered, mercenary, ostentatious, crooked in money matters, not like us. Seemingly oblivious that Jews comprise only 3.5 percent of the population, some fear Jews will take over their clubs, their housing developments, even their Government.

Many have Jewish friends whom they exempt from their prejudice with the cruel, patronizing (but sincerely intended) remark, "some of my best friends are Jews." But they seldom try to reconcile the imaginary sterotype to which they object with the real Jews they know and like.

The stereotype and its consequences persist because gentiles often fail to stand up to the occasional anti-Semite in their midst; they let him promote the pattern of prejudice. Call it inertia. The stereotype also persists because some Jews, for reasons I have mentioned, tend to be overaggressive. But the main reason, I think, is that Jews, whatever they do, are so frequently identified as Jews. A few weeks ago, in a Midwestern restaurant, I was sitting next to a table of raucous, loudmouthed people. My dinner companion made some remark about those noisy slobs. He didn't say noisy Protestants. But if they had been Jews, I know darn well what he would have said.

Is anti-Semitism declining in America?

Definitely. It reached its peak in the thirties. A worldwide depression, followed by an upsurge of fascism in Europe, encouraged the crackpots of America. Father Charles Coughlin, the bundists, and a pack of petty demagogues thought they were riding the wave of the future.

But they disappeared, perhaps forever, when the United States went to war. Anti-Semitism became un-American; Hitler made it disreputable. I can remember when cracks about the Jews were almost taken for granted. Many gentiles assumed that you, too, were anti-Semitic. Now you seldom hear words like "kike" (which Otto H. Kahn once defined as "a Jewish gentleman who has just left the room.") The anti-Jewish remarks you hear today are somewhat apologetic, somewhat furtive.

Greater Jewish participation in civic affairs and community activities has helped to dispel the miasma of prejudice; so have the educational efforts of organizations like the Anti-Defamation League, the American Jewish Committee, and the National Conference of Christians and Jews.

Discrimination in employment is on the way out. It doesn't pay. (A survey by Elmo Roper showed that discrimination cost United States industry, some $30 billion a year.) The shortage of qualified engineers has made it easier for Jews to enter this once-restricted field. Medical schools are dropping the quota system—and we may get more Dr. Jonas Salks. On the campuses, more and more fraternities and sororities accept Jewish students, even though the majority still do not.

There are statistics aplenty to show that anti-Semitism is no longer the major problem it once was for American Jews. It's become more of an irritant than a problem. Yet many Jews fear that the seeds of anti-Semitism are still present and that a national crisis—such as a severe depression—could make them sprout again. As one said to me, "We Jews have a bigger stake in continued prosperity than most Americans. * * *"

How do Jews react to gentile prejudice?

I was surprised to discover that a great many Jews believe that if you scratch a gentile, you find an anti-Semite. They make exceptions, of course (so and so is a decent "goy"). But the persistence of this illusion is a symptom of insecurity. A great many are hypersensitive in their relations with gentiles. They seem to have a special exposed nerve that registers every tremor of prejudice like a seismograph. Let a gentile use an idiomatic phrase like "He jewed me down," and every Jew within earshot will mark him as a bigot.

Some Jews are even inclined to blame their own failures on their Jewishness. A rabbi told me the story of the Jew with a terrible stammer who complained that he was refused a job because "they d-d-don't take Jews." What was the job? "Radio announcer."

Confronted by real or imagined anti-semitism, some Jews wince, some become broodingly anti-gentile, some shrug it off, some turn against their fellow Jews and try to "escape." I asked a prominent psychiatrist how many of his Jewish patients were sick because they were Jews. "None," he replied. "But if they are sick to begin with, Jewishness is always a contributing factor."

Only a few still try to escape. Those who change their names do so chiefly because it's a convenience in an Anglo-Saxon environment. Jews don't criticize a man who changes his name from Abramowitz to Abrams, but they resent a Cohen who becomes a Corwin—he might be a quitter.

By and large, American Jews are becoming more assertive about their faith. Parents who once advised their kids to ignore anti-Semitic jibes ("It's part of being a Jew") now tell them to fight back as Americans who have nothing to be ashamed of. But it will take time both for Jews to overcome their complexes of persecution and inferiority and for Gentiles to extirpate the last vestiges of prejudice from their attitudes. Even today, a hospital that invites a Jew to serve on

its board of directors is doing him a favor; but the Christian who agrees to serve on the board of a Jewish hospital is doing Jews a favor. And don't think everybody concerned isn't aware of the distinction.

"As Americans," I was told by a Jewish leader, "we won't get the respect we deserve until we show that we have self-respect." I heard this stated differently by a young Jew just out of the Army: "If a guy calls you a kike and you swing on him, everybody else is on your side. I've tried it."

Is there a Jewish religious revival in America?

The current religious boom affects all faiths; Judaism is no exception. Synagogue affiliations in all 3 branches of Judaism was up 10 percent last year, and more than half of the Nation's Jewish children are now getting formal religious training in synagogue schools—an increase of 20 percent in 2 years. Only 1 out of 7 Jews go to weekly services (60 percent attend on the high holy days), yet this represents far greater participation in religious life than you might have expected 15 years ago.

In small towns, the synagogue is the headquarters of Jewish community life, and as more Jewish families move out of the cities and into the suburbs, they tend to become affiliated with their new synagogues for both spiritual and social reasons. The classic function of synagogue was to serve as a place of worship, of study, and assembly. In America today, the old definition is valid again—and don't forget to add the basketball, the dances, the kindergartens and the swimming pools that are giving many temples the look of community centers.

You can see the same trend in Christian churches. They have taken a new lease on life because people are groping for spiritual values and religious identification in a complex, impersonal society. Among Jews, the process of reidentification is more significant: It is not only religious, but involves an acceptance of their Jewishness. Wherever I traveled in America, I found Jewish parents who knew little of their faith and their culture sending their children to synagogue schools to learn about Judaism and its history. I have a friend out West who went to a temple for the first time in 20 years. "I was amazed," he told me, "to see how many of my acquaintances were in the congregation."

After more than 100 generations, Judaism is still a vital faith whose precepts are well adapted to contemporary life. It is a common sense, ethical, worldly religion that stresses the good life as its own reward and does not speculate too much about the hereafter. In Judaism, any act of etihcal import is as valid as a ritual observance. Compassion for one's fellow men, personal devotion to one God and emphasis on the home as the center of religious life—these are basic to Judaism.

Some theologians feel that as Judaism adjust to America, it will tend to evolve into something like liberal Protestantism—minus Christ and with an admixture of Hebrew ritual. However it develops, many Christians who go to synagogues for the first time are surprised to see how closely related their own faith is to Judaism. Some may even feel like the friar in Lessing's play, Nathan the Wise, who never really knew a Jew until he met Nathan.

"Nathan, Nathan!" he cried. "You are a Christian! By God, you are a Christian! There never was a better Christian!" To which Nathan replied, "We are of one mind. For what makes me, in your eyes, a Christian makes you, in my eyes, a Jew."

Will Jews ever be completely integrated in America?

It depends on what you mean by integrated. If you mean, "Will they eventually have the same social and economic status as other Americans," the answer is "Yes." That part of the American dream which says that any boy can grow up to be President will apply to Jews too. I venture to say that in another generation, there will be no purpose in a report such as this one.

But if you mean, will Jews lose their identity as Jews?—the answer is "No." Why should they, after all these centuries? Many individual Jews who saw a conflict between their Jewishness and Americanism—and decided to be only Americans—have often found they were not being honest with themselves or society. That's why more and more are reembracing Judaism, reasserting their identity as Jews.

A generation or more ago the problem tormenting many immigrants was: As a Jew, how can I be a good American? Today the children and grandchildren of these immigrants, more secure in their Americanism, more confident of belonging, are likely to pose the problem in a different way: As an American, how can I be a better Jew?

A Jewish social philosopher, Will Herberg, recently wrote that religious distinctions are the only ones that survive in American society. The melting pot takes care of the other immigrant traits—language, dress, and so forth. And he sees America's diverse peoples coalescing into three great subcultures—Protestant, Catholic, and Jewish. Under these circumstances, to be identified as a member of the Jewish faith will be an assertion of a Jew's Americanism.

From what Jews around the country told me, I am inclined to agree that religion (plus the culture and sense of history it implies) is becoming the binding element that will keep the American Jewish community from disintegrating. In time, American Jews will no longer be regarded as different—any more than Quakers are today.

Already their integration in American life is more complete than in many countries with older Jewish communities. A French Jew may say, "I live in France." An Italian Jew may tell you, "Our family has been in Rome a long time."

But an American Jew will say "America is my home."

Bureaucrats in Business—Hoover Group Explores Government's Commercial Empire

---

EXTENSION OF REMARKS
OF
HON. J. ARTHUR YOUNGER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 19, 1956

Mr. YOUNGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial taken from a recent issue—January 11, 1956—of the Wall Street Journal:

BUREAUCRATS IN BUSINESS—HOOVER GROUP EXPLORES GOVERNMENT'S COMMERCIAL EMPIRE

(By John Chamberlain)

Government, as a keen economist once said, works by ratchet action; you crank it up a notch and seldom, if ever, can it be made to slip back. The Hoover Commission, in its wide-sweeping investigation of Government competition with private industry, uncovered some 3,000 examples—invested capital; $15 billion or more—of federally owned enterprise, ratchet action on a huge scale.

The classic example of ratchet action, used by Herbert Hoover whenever he wishes to drive home his point, is the case of the Government-owned Inland Waterways Corporation, formed during a World War I emergency. Mr. Hoover tried to liquidate this corporation twice—once when he was Secretary of Commerce, and again when he was President. But whenever he threatened to lay a hand on it, civic organizations from Baton Rouge, La., to Keokuk, Iowa, sprang to its defense.

True, it lost money practically every year; true, it was competitive with private transportation. But it had a subsidy value to all sorts of people in the river towns, and the pressure on Congress kept saving it until, after 30 years, the Eisenhower administration was finally able to get it off the taxpayer's neck.

Deploying widely through all the Government administrative agencies, the Hoover Commission investigators found activity after activity to parallel the history of the federally owned Mississippi barges.

Item: Mailbag and lock manufacturing shops run by the Post Office Department. Item: Tourist facilities and services operated by the National Park Service which might be farmed out more cheaply to private concessionaires. Item: The fertilizer business run by the TVA. Item: The postal-savings banks which offer nothing that the private banking system is not prepared to offer under a Federal deposit insurance guaranty.

HELIUM AND HEMP

Item: The helium producing facilities under the Department of the Interior. Item: Various operations conducted by the Bureau of Mines, including the extraction of oil from shale. Items: Federal production of hemp in Central America and nickel in Cuba. Item: Various executive department printing plants. Item upon item: All the power installations and distribution systems run in connection with federally owned big dams, and all the Federal lending agencies from housing to those dealing in credit for farm cooperatives.

Since the biggest part of the tax dollar is spent by the Department of Defense, the Commission naturally found the Pentagon to be the source and sponsor of the biggest mare's nest of Government commercial and industrial-type facilities. The Pentagon runs cobbler shops, ice plants, sawmills, bakeries, aluminum sweating plants, motion-picture studios, dental manufacturing establishments, meatcutting plants, a ropewalk, ice cream plants, tire retreading facilities, tree and garden nurseries, plastic laminating operations, airlines, commissary stores, sea transport lines, a railroad in Panama and at least 30 other types of enterprise.

The sum total of individual commercial and manufacturing establishments run by the Defense Department is 2,500, a thousand of which, according to Herbert Hoover, could be curtailed or eliminated. The Commission argues from its own research that it makes little sense for the Department of Defense to run launderies in communities where there are plenty of launderers, or coffee roasting plants in big ports like New York City or Oakland, Calif., where coffee is roasted commercially every day.

Nor does the Commission think it makes sense for the Army to maintain commissary stores and post exchanges in metropolitan areas of the United States where there are plenty of privately owned stores where it is possible to buy practically anything. The comimssaries and post exchanges are abused everywhere, for military personnel seemingly have little compunction about buying food, cameras, and whatnot for civilian friends at Government-subsidized prices. Moreover, the commissaries and post exchanges are frequently used as a source for black-market operations at cut prices.

In certain areas the Department of Defense even competes with the Government facilities operated by other Federal agencies. The Government-owned Panama Canal Company, for example, runs the Panama Steamship Line, which maintains weekly service between New York and the Canal Zone by way of Port-au-Prince, Haiti.

The three Government-owned ships which ply back and forth between New York and the Caribbean lost about $350,000 over a 5-year period. The number of passengers carried at Government rates declined from 6,248 in 1950 to 4,746 in 1954; freight also dropped seriously from 1951 to 1954. Yet during this period the Department of Defense was busy carrying freight and passengers from east-coast ports of the United States to Panama.

NECESSARY TRIPS?

In 1954 alone the Army's Military Sea Transport Service made 28 passenger-ship voyages and 8 freighter voyages to the Canal Zone, carrying 6,781 passengers, 9,311 troops, and 79,515 tons of cargo. This was at a time when the Panama Steamship Line was making weekly sailings with partly empty staterooms and holds.

More than a hundred Government agencies are engaged in lending, and nearly all of the lending contains concealed subsidies. The Hoover Commission notes that, as of 1954, agencies engaged in home and housing finance had received more than $4 billion from the Federal Government in capital stock and loans and had further authority to borrow over $3.5 billion from the Treasury.

As of 1954, credit agencies engaged in financing farmers had received some $6.8 billion of Federal funds in the form of capital stock and loans; they also had authorization to borrow some $3 billion more from the Government. And foreign governments and foreign business establishments owed the United States Treasury some $30 billion, a figure which did not include grants or gifts. Many of the lending operations which compete with private finance companies could be eliminated; others could be "mutualized" and blended into the private-enterprise system.

The Hoover Commission limited its allegations of duplication and unnecessary competition with private industry to little more than a third of the 3,000 Government-owned business activities. In other words, it moved tentatively and gingerly into an extremely controversial field.

THE CIRCUMSPECT APPROACH

In making its report on water resources and power the Commission was especially circumspect; rejecting its own task force's recommendation that Federal powerplants be sold outright to private utilities, it limited its remarks to saying: "The problems involved cannot be solved by simple recommendations that such activities should cease and these projects be sold."

But if the Commission used no broad ax in its reports that touched on Government competition with business enterprise, it firmly called attention to its congressional mandate, which was to make recommendations bearing on policy as well as on matters of mere technical performance. "The genius of the private enterprise system," the Commission said, "is that it generates initiative * * * and unparalleled productivity."

The Commission might have added that initiative and productivity depend on a flexability which the ratchet action of Government inevitably precludes.

Pretty But Unreliable

EXTENSION OF REMARKS
OF
HON. JOHN J. FLYNT, JR.
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 19, 1956

Mr. FLYNT. Mr. Speaker, under leave to extend my remarks in the Appendix of the CONGRESSIONAL RECORD for today, it is my pleasure to include an editorial which appeared in the Griffin (Ga.) Daily News on Saturday, January 14, 1956. This is a signed editorial written by the editor of the Griffin Daily News, Hon. Quimby Melton, Jr., a distinguished citizen of Griffin and of the State of Georgia. Mr. Melton is a member of the board of regents of the University System of Georgia, is president of the Georgia Press Association—a statewide association of newspaper editors—and this year was voted Georgia's outstanding citizen by the County Commissioners Association of Georgia. His editorial in opposition to the proposed bill to provide Federal aid for school construction follows:

PRETTY BUT UNRELIABLE

In calling for $1,250,000,000 in Federal funds with which to help build badly needed schoolrooms, President Eisenhower had this to say:

"I am confident the Federal Government with this program can help construct schools without in any way weakening the American tradition that control of education must be kept close to the local communities." He added that "any legislation enacted should embody this principle."

That sounds real pretty.

But is Mr. Eisenhower not the same man who only a few days prior to that statement called for a commission to investigate alleged violations of civil rights? And was such a request not a demand of the infamous National Association for the Advancement of Colored People? Is he not the same President who wants the schools in the Nation to be integrated, the same man who held up the schools of the District of Columbia as an example of mixing the races in the classroom? (The population of the city of Washington, by the way, is now well more than half Negro. And white students, we are told, are dropping out of the integrated public schools there.)

Mr. Eisenhower's statement that schools wil continue to be controlled locally if his Federal aid program passes just does not jibe with his earlier statements. They are too far apart because on the one hand the Federal Government is seeking to force us to mix our schools while on the other the President says local folks will run local schools. The mixture is no better than oil and water.

In our anxiety to improve our schools which certainly need improving, we should not forget the fact that every time the Federal Government offers Federal funds, it also insists upon Federal control. This may not come immediately, but it is as certain to follow as night follows day.

Furthermore, let us not forget that Federal funds are not "something for nothing." They must be raised from the same source as State and local funds, the taxpayer. And as far as those of us who prefer local control are concerned, we'd rather pay local and State taxes to operate our schools than to pay Federal taxes for the same purpose. Then there would be no doubt about us retaining local control.

If Mr. Eisenhower really wants to help solve the serious school problem and at the same time leave our schools in our own hands where they belong, then we suggest that he balance the budget and start paying off some of our Nation's staggering load of debt. Thereupon the Federal Government could get out of fields of taxation which rightfully belong to the States. Then the States could finance the schools more adequately themselves. This would offer the further advantage of reducing the "drainage" of funds which inevitably occurs when a Federal agency handles them.

Yes, Mr. Eisenhower's lip service to local control of schools is real pretty. But we can place no reliance in it whatever because of his other statements and policies as regards forcing integration by Federal decree.

Not even Mr. Eisenhower can play ball on both sides of a pasture fence at the same time.

Secretary Dulles' "Brink of War" Policy

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 19, 1956

Mr. WILLIAMS of New Jersey. Mr. Speaker, the attempts by Republican spokesmen to persuade the Nation and the world that attacks on Secretary Dulles brink-of-war policy are just a political dust storm raise some very serious questions. If Democrats were alone in pointing out that Mr. Dulles has made a grievous blunder in agreeing to the portrayal of himself as a gambler who plays with atomic dice, there might be evidence to support Republican claims. But can the British press, the Indian press, even our own American press—which is hardly noted for its unswerving devotion to the Democratic Party—be accused of blowing up a political dust storm? Can the fact that Mr. Dulles has, as Walter Lippmann says, "provided the Soviet propaganda with a text which is sheer bonanza" be set down to campaign trickery? One might easily conclude that there is a concerted Republican effort to put the shoe on the wrong foot.

The Life magazine article has had two highly unfortunate effects. The first has been to revive our allies' fears about the responsibility and maturity with which we conduct our foreign policy. They know well that we are not playing with tin soldiers or pen knives and that braggadocio is hardly a suitable weapon in our arsenal. Secondly, the bipartisan support which has been the foundation stone of our foreign policy has been dealt a smashing blow. Mr. NIXON has commented:

> The Eisenhower-Dulles record, which has brought peace, standing against the Truman-Acheson policy which brought us war, will settle that issue and I think the rest of us will take care of the campaigning. All this "yackety-yak" about what Dulles said and how the foreign policy was developed will have little effect. The people are only interested in results. The Eisenhower-Dulles policy has brought peace without concessions.

This is a perfect illustration of the attempted misuse of foreign policy for what the Republicans hope will be partisan advantage.

If Democrats express their amazement at reading about developments which Mr. Dulles calls history but of which they were never informed, despite their role in conduct of the bipartisan foreign policy; if a storm of adverse opinon arises in the free world; if the Soviets fall upon Mr. Dulles' quotes with cries of pure glee—are not these matters which the Republicans must reckon with

and face honorably and conscientiously? I recommend to them an earnest study of the newspaper articles which I call to the attention of the Congress herewith:

[From the Christian Science Monitor of January 13, 1956]

DULLES POLICIES IN HOT WATER

(By Neal Stanford)

WASHINGTON.—Secretary of State John Foster Dulles is currently in some of the hottest political and diplomatic water of his career.

How he happened to get there, whether he waded in deliberately or was shoved in by an overzealous journalist or a careless State Department aid, currently overshadows all other topics along Embassy Row or on Capitol Hill.

It has brought forth a demand from Democratic leaders that the State Secretary repudiate the statements attributed to him on administration action in recent crises or they will release secret testimony by the Secretary said to be in direct contradiction of "his historical distortions."

It has brought forth a denial from the British Foreign Office that Britain never agreed to intervene in the Indochinese war and then reneged—as the article asserts.

MAGAZINE ARTICLE

It has brought forth criticisms from Britian's leading newspapers—the Times, of London, and the Manchester Guardian—that flatly contradict the version of affairs attributed to Mr. Dulles. And it has provided the Soviet news agency Tass the opportunity to assert gleefully that the American Secretary of State has now openly raised the "constant preservation of international tension" to the status of official American policy.

The tempest, considerably larger than most teapots, in which the Secretary finds himself, was brewed in this week's Life magazine article on "How Dulles Averted War"—not once, but 3 times in the past 3 years.

In this article, Mr. Dulles is represented as asserting that Communist aggressions in Korea, Indochina, and the Formosa Strait had been halted or forestalled by a deterrent policy of the administration based on, among other things, atomic weapons.

The most provocative quote—in a long list—is the following:

"You have to take chances for peace just as you must take chances in war. Some say we were brought to the verge of war. Of course, we were brought to the verge of war. The ability to get to the verge without getting into the war is the necessary art. If you cannot master it, you inevitably get into war.

"If you try to run away from it, if you are scared to go to the brink, you are lost. We've had to look it square in the face—on the question of enlarging the Korean war, on the question of getting into the Indochina war, on the question of Formosa. We walked to the brink and we looked it in the face. We took strong action."

PREVENTIVE ACTION

In two of these cases, as the article asserts, the administration made clear its intentions to use nuclear weapons if necessary. In the third, use of such weapons was not excluded.

Then there is a parenthetical insertion in the piece that states, with every evidence as being authoritative, that "Dulles has never doubted, incidentally, that Eisenhower would have regarded an attack on Quemoy and the Matsus as an attack on Formosa."

Stripped of its verbiage, what the piece appears to its critics to say, and claims as the facts straight from Mr. Dulles, is this:

In Korea the United States was ready to expand the war and use atomic weapons if the truce talks broke down.

In Indochina, the United States and its allies (London dissents strongly) were ready to enter the war and use atomic weapons if truce talks had failed.

In the Formosa Strait, the United States' promise to defend Formosa and the Pescadores (and Quemoy and Matsu, too, according to Mr. Dulles) has kept the Communist Chinese from unleashing war.

The Dulles thesis is that only by letting the enemy know what the United States could do, by deliberately "going to the brink of war," was war actually averted in these three instances.

MATTER OF JUDGMENT

Perhaps the most charitable comment on the article by a Democratic Senator, WALTER F. GEORGE, Democrat, of Georgia, was that whether the administration's actions had prevented actual conflict was "a matter of judgment as to how things happened." "It is particularly difficult," he said, in a mild rebuke to the Secretary, "to say why certain events didn't happen."

The most scathing comment was from Senator HUBERT H. HUMPHREY, Democrat, of Minnesota, also a member of the Senate Foreigns Relations Committee, who charged Mr. Dulles with "rewriting history" for political purposes, with making statements in direct conflict with his Senate testimony, and with endangering bipartisan support of foreign policy.

There is considerable uncertainty as to just how aware Mr. Dulles was of the events leading up to the publication of this provocative article. Life magazine itself, according to reports, may have been first preparing to put it out as an exclusive interview with the Secretary, but later, so the stories go, watered down its claims and changed some of the language as it appeared in the first mimeographed copies circulating in Washington.

Meanwhile, Secretary Dulles, on January 13, seemed to back up the claims attributed to him in the article. A press officer said: "The Secretary has now read the Life article. He feels that the statements specifically attributed to him do not require correction from the standpoint of their substance."

At his weekly press conference, January 12, Mr. Dulles (who was queried about the article that had not yet appeared) showed such apparent ignorance of both its claims and content as to lead most listeners to the conclusion that there might be much less "original Dulles" in it than seemed indicated.

DULLES STATEMENTS DISPLEASE BRITISH

(By Henry S. Hayward)

LONDON.—Britons, it is only fair to report, are particularly displeased about recent comments by American Secretary of State John Foster Dulles.

They have taken keen interest in his statement that on three occasions in 1953 and 1954, all-out war almost broke out in the Far East.

But they take special umbrage at these words attributed to Mr. Dulles:

"We were brought to the verge of war. The ability to get to the verge of war without getting into war is the necessary art. If you cannot master it, you inevitably get into war * * *. If you are scared to go to the brink, you are lost."

It is safe to say that the overwhelming majority of the British people today disagree with the implications of that statement.

Getting to the verge without precipitating a holocaust may be an art, they agree. But they are emphatic that it is an art that should not be indulged in by Americans—or anyone else.

FLUTTER OF APPREHENSION

Thus the burden of the Dulles remarks, as they reach this country, is that American policymakers flirted with the verge of war—not once, not twice, but thrice—and thought it a creditable action.

Each times it caused a flutter of apprehension in Britain. The fear frankly was that in a cliffside struggle, somebody would go over—and that war, as Mr. Dulles himself admitted, inevitably would result.

Britons think back to the Korean armistice crisis, the Dien Bien Phu crisis, and the Formosa crisis, not as triumphs for iron-nerved western diplomats, using threats of atomic warfare, but as nerve-wracking intervals when world peace may have hung by a thread.

Rightly or wrongly, many thinking Britons Their impulse, then and now, is not to edge up to the brink of vast hostilities, but to make all honorable speed in the other direction.

FUNDAMENTAL DIFFERENCE

Rightly or wrongly, many thinking Britons regard this as a fundamental difference between their world viewpoint and the American outlook.

There is little genuine anti-American sentiment visible in this country. But, as any visitor here can soon determine, there is a genuine portion of apprehension about what the United States does and fails to do.

And when the real or fancied omissions and commissions of Americans affect such vital issues as war and peace, the distinction between apprehension and out-and-out opposition (or anti-American) soon vanishes.

In British opinion, the differences between British and American positions during the Indochina crisis, which were exposed by Mr. Dulles' remarks, are much more an indictment of Dulles' diplomacy than of their own.

DIPLOMACY QUESTIONED

The apparently inadvertent reopening of such issues at this time also is cited as an act of dubious diplomacy.

If the Dulles move is for internal political purposes, as has been suggested, it still is not understood or sanctioned here.

As an illustration of how strongly Britons feel about the "verge of war" comment, some of those who recently have been busy belaboring Sir Anthony Eden for alleged shortcomings as Prime Minister took time out long enough to heave a sigh of relief that their man does not harbor what they regard as such dangerous sentiments.

"Sir Anthony Eden, to his eternal credit, would have none of this deadly game," wrote Columnist Cassandra in the mass-circulation London Daily Mirror, a newspaper that has been in the forefront of Eden critics.

STRONG-MAN POLICY

While turning their fire on the American Secretary of State, some British mouthpieces appear to have been led into questionable assumptions, however. One newspaper speculates that Mr. Dulles is hopeful of becoming a presidential candidate and is setting himself up as a strong man on Far East policy.

Another press speculation aired here is that the American Secretary of State, for some unexplained reason, is trying to increase Anglo-American tension at a time when Sir Anthony is under criticism at home and on the eve of his departure for important talks in Washington.

Like Senator HUBERT H. HUMPHREY (D), of Minneosta, it is apparent that the British also would like to hear Mr. Dulles repudiate his "verge" statement.

DULLES STARTLES WEST EUROPE

(By Volney D. Hurd)

PARIS.—Nothing could better illustrate the great gulf separating Britain and France from the United States on the question of big-power diplomacy than the reaction of the Dulles claim that the threat of atomic retaliation had saved the world from war 3 times in the past 18 months.

When Britain and France were dominating world affairs, before World War I, they did not hesitate to use a strong show of force

as a diplomatic instrument for keeping world order and peace. Yet, today, they are startled and shocked to see the United States doing the same thing in the atomic-age version of such a show.

Britain's famous "send a gunboat" or "send a cruiser" to the scene—depending upon the size of the threat required—has been replaced by America's sending an aircraft carrier, whose ammunition includes tactical bombs.

TODAY'S ATTITUDE

But since in today's interdependent world a military action anywhere could lead to a worldwide conflict, a weary Western Europe, whose days of playing this game apparently are past, sees such a show of force as a dreadful gamble.

Even with weapons limited to the 1914 version, the Europe of today would unquestionably hesitate to use shows of force as it used to do. Now must be added to this hesitation the vast destructive power of nuclear weapons.

Finally, to use such a threat in a world in which the other side is a tough communism, ruthlessly on the make toward world domination, causes Europe to believe that any needless show of force is something to be avoided at all costs.

SHOW OF FORCE DROPPED

The British and French school of diplomacy has always enjoyed and preferred the art of negotiation. But a show of force was always kept in the pocket of their chief negotiator, "just in case."

Today, negotiation appears to be the only term in which this diplomacy thinks. It is startling, in talking with Foreign Office men and politicians, to see how the show of force has been completely dropped from their diplomatic vocabulary. Constitutionally unsuited to their 20th century mood, it simply doesn't exist.

By disclosing this fundamental diplomatic difference between Britain and France and the United States, the Dulles statements must be considered as providing a useful and essential spotlighting of the Western European diplomatic mind of today.

So long as military forces exist and war represents the extension of diplomacy by other means, diplomacy must be made up of a combination of negotiation and a potential force which can be shown at the right place and time.

History indicates that any large nation which fails to keep these two complimentary elements of diplomacy in equal balance is rapidly jeopardizing its place as a world power.

FUNDAMENTAL DIFFERENCE

The problem of a united-front diplomacy among the Western Big Three has long been marked by this problem of Britain and France holding back from American concepts of how to handle expanding world communism.

So far, such hesitations have been accepted as merely these European nations' individual attitudes on some given problem. But the Dulles disclosure, and European reactions to it, show the existence of a deep and fundamental difference which must be resolved in behalf of Western survival.

The European reaction is to pull back pale and shocked and wish it could avoid being tied to a great and powerful ally whose Secretary of State can frankly state with easy calm:

"Of course, we were brought to the verge of war. The ability to get to the verge without getting into the war is the necessary art. If you cannot master it, you inevitably get into war. If you try to run away from it, if you are scared to go to the brink, you are lost * * *. We walked to the brink and we looked it in the face.

MAJOR QUESTION POSED

To today's Europe, such a statement is as foreign-sounding and nightmarish as something a space cadet might bring back from Mars.

Sound and detached diplomats here say this disclosure poses one major question which must be resolved before all others. It is: "Britain and France can no longer remain just where they are vis-a-vis the United States. Either they must break away, which would be just what Moscow wants, or they must move even closer, which goes against all their present lack-of-power, let's-negotiate-at-all-costs feelings."

Such comments give special interest to the Eden visit to Washington at the end of this month.

The Reversal—The Precarious Balance—The Other Direction

EXTENSION OF REMARKS

OF

HON. CLARENCE CANNON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 19, 1956

Mr. CANNON. Mr. Speaker, the Wall Street Journal, in its issue of January 17, finds the President's budget so disappointing and so pointed in its failure to redeem pledges of reducing Government spending, that it devotes its entire editorial page to the subject.

Its three notable editorials corroborate my statement on the floor following the reading of the budget message that the margin of balance is so precarious as to justify doubt as to whether the surplus is merely a bookkeeping item or whether it is a dependable and permanent balance.

Even so friendly a commentator as the Wall Street Journal is unable to find sufficient comfort in the message as to warrant commending either it or the budget.

After referring to reductions in expenditures in fiscal years 1954 and 1955—much of which was the natural concomitant of cessation of war in Korea—the first editorial recites:

Then, last August, the progress faltered. Spending for the current, or 1956, fiscal year was increased slightly to $63.8 billion. And now, in the budget message submitted yesterday, the faltering has turned into a reversal.

The editorial concludes:

All this comes at a time when the country is at its most prosperous, when there are neither wars abroad nor great troubles at home to call for more billions of Government spending. There could hardly be a plainer notice that the administration has abandoned its earlier fiscal course and buried its promise of a $60 billion budget $6 billion deep.

The second editorial, "The Precarious Balance," is even more emphatic:

To see how precariously this 1957 balanced budget is really balanced it is only necessary to look at some of the assumptions upon which it rests.

It then cites a number of specific assumptions, among which is the assumed enactment by the Congress of the once-rejected $350 million postal rate increase—a second rejection of which would cause the projected 1957 surplus to vanish in thin air.

The third editorial, "The Other Direction," cites chapter and verse. It calls attention to the obvious fact that inclusion af almost every conceivable kind of spending program, many on a larger scale than ever before and many presented for the first time, signals not only a turn in the other direction in fiscal 1957 but for years beyond. Many of them are dubious ways of spending the people's taxes, says the writer. And he concludes his reference to new and expanded spending proposals gloomily:

It justifies more spending solely on the grounds that there are more billions on hand. And if that is the new direction of the administration's budget policy, then it has embarked on a road that has no journey's end.

Mr. Speaker, under leave of the House, I include the complete text of these editorials from the Wall Street Journal:

THE REVERSAL

In the 1952 campaign General Eisenhower set forth two fiscal and economic goals for his administration.

The first was to provide a sound dollar by eliminating the deficit from the Government's budget. The second was a corollary, to reduce Government spending and thereby permit lower taxation. He set his sights firmly on a $60 billion budget.

For almost 3 years these 2 things were more than vague goals; they were the twin principles on which the Eisenhower administration based its economic actions. Since it came to office the people have had a $7 billion tax cut, they have found their money achieving a dependable value and they have seen the cost of Government steadily decline.

In fiscal 1953 the Government spent $74.3 billion. In 1954 it was $67.8 billion. In 1955 it was $64.6 billion. The budget which President Eisenhower submitted just a year ago, for the fiscal year ending next June, forecast spending at $62.4 billion.

This was truly a phenomenal achievement. One reward was a prosperity such as this country has never known before. It brought the administration within reaching distance of its dedicated spending goal. It brought the people promise of a further lifting of their burden of taxes.

Then, last August, the progress faltered. Spending for the current, or 1956, fiscal year was increased slightly to $63.8 billion. And now, in the budget message submitted yesterday, the faltering has turned into a reversal.

President Eisenhower says that in the current fiscal year the Government will actually spend $64.3 billion, an increase of nearly $2 billion from his forecast last January. In the coming fiscal year, 1957, the budget expenditures add up up to $65.9 billion.

Now it is true enough that all this is proposed within the framework of a budget that is, on paper, balanced. But the $400 million margin by which receipts are expected to exceed expenditures in 1957 is, in the President's own words, a slim one. It offers no room for a tax cut and provides at most only a token reduction in the national debt.

Even this slender margin is really no budgetary achievement by the administration. It will be cahieved, if it is achieved, solely because the Government finds itself in unexpected good fortune. It now thinks it will be able to take more money from the people than previously anticipated. And it must take a great deal more. To put this budget in balance the total tax take must

rise from the $60.4 billion actually received in 1955 to an estimated $66.3 billion in 1957.

But there is one thing in this budget that is certain. In the space of a year the administration has enlarged by $3.5 billion its idea of what the Government's annual spending should be—it has raised its sights from the $62.4 billion it sought in the original 1956 budget to the $65.9 billion it now asks for 1957.

And all this comes at a time when the country is at its most prosperous, when there are neither wars abroad nor great troubles at home to call for more billions of Government spending. There could hardly be a plainer notice that the administration has abandoned its earlier fiscal course and buried its promise of a $60 billion budget 6 billion deep.

THE PRECARIOUS BALANCE

To see how precariously this 1957 balanced budget is really balanced it is only necessary to look at some of the assumptions upon which it rests.

There is, first of all, the fact that it depends on the state of the economy being not only as good in and beyond 1956 as it was in 1955, but even better. In short, it depends not only on continuing good times but on a bigger boom.

Corporation profits are counted on to remain at least at the $43 billion level throughout 1956 and into 1957. Personal income is expected to rise from the $302.5 billion at which it has been estimated for 1955 to more than $312 billion for the rest of this year. That way the Government hopes to pick up some $5.4 billion more revenue than in fiscal 1955 and $1.5 billion more than it expects to receive in the current, 1956, fiscal year. All this assumes no reduction in individual or corporate or excise taxes.

The administration is also keeping its books as though Congress would approve a $350 million postal rate increase at this session, although last year, when the budget was completely out of balance, Congress refused to do so.

Finally, this budget is kept in balance by providing no funds for the new Federal highway program which the President asked for in his state of the Union message and which he again endorsed in yesterday's budget message.

We are not trying to suggest that any particular one of these wishes may fail of fulfillment. It could just as well be, for example, that the Nation will prove to be even more prosperous in 1956 than the administration expects.

But after all the most optimistic allowances have been made, it is still true that this margin has been stretched to the breaking point by the increase in spending plans. For the surplus to be achieved not just one or two but all the gambles must turn out right. If any one of the variables varies the wrong way, this little surplus will vanish into thin air.

The administration is right to prize the balance in the budget, but it seems to be prizing prudence too little when it depends on a balance that can be toppled by the slightest ill wind.

THE OTHER DIRECTION

If the Eisenhower administration had drawn up its spending plans for the 1957 budget solely on the basis of existing legislation that authorizes Government spending—that is, had not asked for any new spending powers—its total expenditures for the new budget would have come to $63.9 billion.

This figure of $63.9 billion is itself $1.5 billion above the spending line which the administration set for itself last January in the original budget for 1956. Had it held to that line in every other category it could have added a billion to national defense and still had a 1957 budget totaling no more than $63.4 billion.

In either case the prospect in the next fiscal year would be a surplus in excess of $2 billion on the basis of current revenue estimates. At the best there would be room for a tax cut. At the worst there would be a cushion against untoward events.

These speculations are not as idle as they may seem. For they show that to have obtained a sizable surplus in the 1957 budget it would not have been necessary to find any more economies. It would only have been necessary not to succumb to new temptations to spend money.

In short, this budget increase—the actual total is $65.9 billion—cannot be blamed simply on the high cost of national defense or the ordinary functions of Government.

The new spending programs cover a wide range. Some of them, like the new soil bank ($400 million), involve rather large sums. Some of them, like the program for new veterans' hospitals ($50 milion), do not seem individually large in relation to the total budget.

But in the aggregate, as well as they can be dug out from a complex budget document, the plans for new spending total between $2 billion and $3 billion. Nearly a billion dollars is involved in brandnew projects for doing things. This category includes a hospital building program, new public health activities and a construction program for local public schools. Another $2 billion is involved in extending programs scheduled to lapse next June 30, such as the college housing program originally intended to take care of returning veterans from Korea and World War II.

And in addition some older programs have been broadened. Foreign-aid expenditures have been boosted another $100 million between 1956 and 1957. Expenditures under labor and welfare will go up $228 million—an increase of $442 million over the 1955 level. Much of this last item involves new legislation also; or, in the President's words, the increase "stems largely from my proposals to strengthen and expand education, health, and research services substantially."

Now the purpose of this recitation—and the list could be lengthened—is not to argue that all of these things are undesirable. Many of them are dubious ways of spending the people's taxes, but quite a few of them are items which, considered individually, are unobjectionable. Some might even be useful expenditures in a budget not already laden with burdens.

Nonetheless, it would be hard to make a persuasive argument that in the past several years this country has suffered any economic or social hardship for the absence of this additional spending.

Nor does the administration try to pretend this is so. The President's budget message explains the new spending simply on the grounds that "budget revenues now permit us to undertake some new and expanded programs for enhancing opportunities for human well-being and economic growth."

However you phrase that sentence, it justifies more spending solely on the grounds that there are more billions on hand. And if that is the new direction of the administration's budget policy, then it has embarked on a road that has no journey's end.

Tax on Gasoline Used by Farmers

EXTENSION OF REMARKS
OF
HON. WILLIAM G. BRAY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 19, 1956

Mr. BRAY. Mr. Speaker, I have introduced a bill to refund the 2-cents-a-gallon tax on gasoline used by farmers for nonhighway use. This tax is an unnecessary and unwarranted burden on the farmers of this Nation.

Farmers should be expected to pay the same taxes as others on the gasoline and lubricating oil they use to travel public roads and streets. There is little justification, however, for extracting this tax from them for gasoline and oil used to power the vehicles and instruments of modern farm production. This tax is a significant item to many farmers, and should have been set aside long ago. It is all the more worthy at this time when so many farmers are caught in the squeeze between higher costs of production and lower prices for their products.

Other Congressmen have introduced legislation for this purpose, and the Ways and Means Committee is presently considering the subject. I trust a bill to exempt farmers from payment of this tax on gasoline purchased for nonhighway use will be approved by the committee in the very near future, and will be passed by a resounding majority.

A Soldier Goes Astray

EXTENSION OF REMARKS
OF
HON. J. ARTHUR YOUNGER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 19, 1956

Mr. YOUNGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Evening Star of Washington, Wednesday, January 18, 1956 which emphasizes the responsibility of the President relative to recommendations of the Chief of Staff of the Army.

A SOLDIER GOES ASTRAY

No one who has even a casual acquaintance with General Ridgway would think of questioning his sincerity of purpose. Moreover, he is a fine soldier—a dedicated officer to whom the security of his country comes first, last, and always. It is too bad that he did not stick to his field in the first of a series of articles he has written for the Saturday Evening Post.

General Ridgway is competent to speak on the subject of national security. His opinions in this area are not necessarily conclusive, but they are entitled to great respect. We had better listen when, speaking as a professional military man, he says that our current defense policies are endangering the safety of our country. It is also necessary, however, to keep in mind the limitations under which General Ridgway testifies. He concedes this himself in these words:

"As Chief of Staff of the Army and as a member of the Joint Chiefs of Staff, it was my duty and obligation to advise the Department of Defense, the National Security Council and the President on military matters. This advice should be based on my honest, fearless, objective estimate of what the Army needed to serve the national interest, and it should have no reference to the impact my recommendations might have on the national economy, on domestic politics, nor on administration policy at any particular time."

This is a correct statement, and it would have been better if General Ridgway, in his magazine piece, had confined himself to military advice. For that is the field in which he is competent and in which his

responsibility lies. But a President cannot ignore, as General Ridgway could, the impact of military recommendations on the national economy, politics, and policy. A President has to look at the whole picture and form his judgments accordingly.

In writing for the Saturday Evening Post, General Ridgway has not stuck to the single-minded duty which he laid upon himself as Army Chief of Staff. Unfortunately, he has strayed into the realm of politics. And the effect is to impugn, by implication, the good faith and the integrity of the President.

The release of advance copies of the article led to a Senate debate. Democratic Senator SYMINGTON said that the Ridgway article in effect "says that the security of the Nation is being thrown into the market place, to be traded for political advantage." Other Democrats, without mentioning that General Ridgway had also been severely critical of the Truman administration, chimed in. In all fairness, however, it must be said that the inferences drawn by the Democratic Senators were justified by the things General Ridgway wrote.

Thus, a statement by a distinguished soldier, which might have contributed to intelligent debate of a vitally important question, feeds the fires of political controversy at a very low level. And it will be a self-defeating thing. For the effect of all this is to accuse President Eisenhower and Defense Secretary Wilson, not of being mistaken in their judgment, but of selling the country short for the sake of votes. We do not believe this, and the people will not believe it.

Home Again: An Inspiring Story of Democracy

EXTENSION OF REMARKS
OF
HON. WILLIAM A. DAWSON
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 19, 1956

Mr. DAWSON of Utah. Mr. Speaker, under leave to extend my remarks, I wish to call the attention of my colleagues in the Congress of the United States to Home Again, a first novel by James Edmiston, which I believe is one of the clearest testimonials to democracy and our way of life that I have ever read.

It was presented to me recently by Mike M. Masaoka, the Washington representative of the Japanese American Citizens League, for Home Again is, in a real sense, a documentary of the Japanese in our country.

It tells in capsule form the history of the Japanese people in our Nation through the medium of the life story of a single Japanese-American family. It suggests the many and great contributions which our Japanese immigrants have made to this land of their adoption in spite of the discrimination and prejudice which challenged them on the west coast. It describes the heartaches of World War II, and documents the unprecedented sacrifices which this group of Americans and their alien parents had to undergo to demonstrate their loyalty. But, most important, it reports the triumph of our American way over wartime hysteria and bigotry.

I am proud to number among my constituents in Utah many Japanese-Americans. I know them, and their story, so I can vouch for the truth of Home Again.

Some extracts from reviews by representative newspapers throughout the Nation describe better than I can this story of democracy in action:

Boston Globe: "This is a story to make us think and to renew our confidence in our Government."

Cincinnati Enquirer: "The stirring account of how democracy conquered prejudice."

Norfolk (Va.) Pilot: "Dollars four, and worth every cent * * * this is not only a dramatic story, lively, educational, exciting and authentic but a healthy experience in self-examination."

Christian Advocate: "The reader will lift his head high as he marvels at the power of democracy to rectify its failures."

Abiline (Tex.) Reporter-News: "The story of how faith in democracy turned the tide of bigotry and hate."

San Francisco Examiner: "Home Again certainly deserves a place among the documentary literature of this generation."

Daily Sentinel, Grand Junction, Colo.: "A vivid book by a man with sentiment and a belief in democracy * * * a sharp picture taken from the facts."

Salt Lake City Tribune: "Home Again combines the stark documentary facts with the emotional impact one finds in the best novels. It does it extremely well * * * a fine testimonial for the democratic way of life as well as the remarkable perseverance of the Japanese-Americans."

Omaha World Telegram: "If you have forgotten, or never did know, how we treated our Japanese-Americans, this book is required reading. Humility becomes so proud a Nation as ours."

Catholic Book Week Supplement: "The loyalty of our Japanese-Americans never falters * * * Home Again closes on a note of courage and hope."

Columbus (Ohio) Dispatch: "This is the story that needs telling * * * those who fought the good fight for decency and a genuine working of democracy."

Patriot-Ledger, Quincy, Mass.: "Told with the emotional impact of a novel and the force of truth * * * in brief, this is the record of how a dynamic democracy can triumph over the sickness of intolerance."

Los Angeles Times: "Home Again proves that in a democracy, even when a sad mistake is made, it is possible to repair it; and second, that the overwhelming majority of our Japanese-Americans proved to the hilt, and with justifiable pride, that they were first-class citizens."

Chicago Tribune: "Home again is an angry, proud, confident book, a blazing and unforgettable lesson in civics worth the time and attention of every American."

Seattle Post-Intelligencer: "The moving story of a whole segment of our population into a novel * * * his story gives a good insight into the lives of Japanese-Americans."

Hollywood Citizens News: "A stirring book * * * to help dispel race prejudice."

Lubbock (Tex.) Journal: "It would have been easy for the author to have let his interest in Japanese Americans stir him to write a book of propaganda for them, but instead he has restrained himself to produce an excellent fictionalized bigoraphy of grays, not blacks and white."

Denver Post: "Your first impulse on reading this factual novel will be to say, 'Fantastic: It couldn't possibly be true. This could not have possibly happened here.' But it did happen * * * it is a dramatic story of tremendous impact."

Baltimore Sun: "We congratulate Mr. Edmiston on his zeal and compassion * * * in the same capacity as such pioneering novelists as John Steinbeck and Harriet Beecher Stowe, he has produced an effective propaganda piece."

Sacramento Bee: "This story is a good one and a dramatic one about an important chapter in California history."

New York Times: "Mr. Edmiston has undertaken to record, in semidocumentary form, one of the most dramatic segments of this Nation's history."

Almost without exception, I have been told, the newspaper and magazine reviews have been uniformly specific in pointing out the historic lesson this powerful book preaches—that democracy can and has corrected its mistakes.

I commend Home Again to the Members of both the House and the Senate and to all Americans as one worthy of reading.

I think some Hollywood studio should consider making a motion picture out of Home Again for its theme is the epic of America repeated again in the story of the Japanese Americans. It would make a motion picture that will make all Americans proud, and show all the rest of the world the workings of democracy in a troubled time.

The Downward Trend of Farm Prices

EXTENSION OF REMARKS
OF
HON. KARL M. LeCOMPTE
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 19, 1956

Mr. LECOMPTE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a resolution adopted by the Chamber of Commerce of Centerville, Iowa, expressing great concern over the continued downward trend of prices of farm products at the very time the prices of everything the farmer needs to buy is increasing. The resolution urges the Congress to take prompt action to adopt legislation to take care of the present emergency as well as a long-range program that will be equitable.

The resolution follows:

Whereas the board of directors of the Centerville Chamber of Commerce fully realizes the great importance of the farmers in the Centerville trade area to Centerville merchants; and

Whereas the directors note with concern the continued downward trend of farm prices which is taking place while the prices of the articles the farmer has to purchase is rising; and

Whereas recent predictions by some leading economists indicate a further drop in farm income in 1956, but a continuing increase in other business; and

Whereas no evidence is noted that anything concrete has been done in Washington to alleviate and correct the above discrepancies: Be it therefore

Resolved, That we, the said board of directors of the Centerville Chamber of Commerce, in meeting assembled in Centerville this 9th day of January 1956, do hereby urge the administration and Congress to immediately put into effect such temporary measures as may be necessary to assure

farmers of fair hog and cattle prices during the present emergency; and be it further

Resolved, That we urge the administration and Congress to prepare, pass, and put into effect with as much celerity as circumstances will permit, legislation that will assure farmers of equitable prices for their products in times of maladjustment without instituting any permanent controls that would limit their freedom of operations and opportunity; and be it further

Resolved, That copies of this resolution be forwarded to President Eisenhower, Secretary of Agriculture Benson, Senators Hickenlooper and Martin, to Congressman LeCompte, to Gov. Leo Hoegh, to Appanoose County Farm Bureau officials, and to Appanoose County press and radio.

In witness whereof the following officers of the said organization hereto attach their signatures.

H. H. HINES,
President.
WAGA B. HALDEN,
Vice President.
HARRY L. DUKES,
Managing Secretary.

Medical Progress and the American Hospital

EXTENSION OF REMARKS
OF
HON. IRWIN D. DAVIDSON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 19, 1956

Mr. DAVIDSON. Mr. Speaker, on Sunday night, January 15, there was held in the city of Washington, D. C., the first anniversary dinner given by the advisory board of the Jewish Consumptive Relief Society for the support of the American Medical Center at Denver, Colo. It was attended by a number of the Nation's most distinguished citizens in the fields of clergy, the military, and public officialdom.

It was at this dinner that the Surgeon General of the United States, the Honorable Leonard A. Scheele, delivered the principal address. His speech was one of great significance, recording the accomplishments of the medical profession in its battle against disease. His talk records in great detail the story of medical research and portends great progress which may be anticipated in the not too distant future.

I am sure that his remarks are of national interest, and, therefore, under unanimous consent, I include it in the Appendix of the CONGRESSIONAL RECORD.

The address follows:

MEDICAL PROGRESS AND THE AMERICAN HOSPITAL

(By Leonard A. Scheele, M. D., Surgeon General, U. S. Public Health Service, Department of Health, Education, and Welfare)

Congressman DAVIDSON, Mr. Nellis, distinguished guests and friends of the American Medical Center at Denver, I consider it a great honor to be with you this evening and to take a small part in your efforts in behalf of the American Medical Center at Denver. The history of that institution is closely linked with the history of our country's long battle against tuberculosis, a battle which voluntary and official health agencies, the professions, and the public have fought together for nearly 75 years.

When the Denver Hospital and Sanitarium, forerunner of the present medical center, was established, tuberculosis was the leading cause of death and long-term illness in the United States. The death rate from tuberculosis was nearly 200 per 100,000 at that time and was exceeded only by those arch-allies of the disease, influenza and pneumonia. The long-term suffering of tuberculous patients, combined with the hopeless outlook for recovery, the disastrous effects upon family life and economic status, justified Americans of the 1900's in calling tuberculosis "Captain of the men of death."

Since that time, medical science and public health methods have made enormous advances, parallel with continuing progress in all departments of life in the United States. The picture today is quite different. In 1954, the estimated tuberculosis death rate was about 10 per 100,000, a reduction of 95 percent since 1900. Much of this progress against the "Captain of the men of death" is due to very recent medical progress.

In fact, some of the most exciting and important advances in medicine have been made within the past 10 years. It is difficult for most of us to realize, for example, that in January 1946 we had no streptomycin, no para-aminosalicylic acid, no isoniazid for the treatment of tuberculosis. Yet all three of these drugs have been developed, tested, and put to effective use since that date.

In 1955, research workers in the Public Health Service discovered that isonaizid is remarkably effective in preventing tuberculosis in laboratory animals. This encouraging discovery is now being tested in several hospitals as a means of preventing serious complications of tuberculosis among children who have already acquired infection. Further trials in larger groups may give medicine and public health the first effective synthetic drug for large-scale preventive programs against tuberculosis.

One can report comparable advances in many other important medical fields. Radioactive cobalt and iodine have been added to the physician's armament for the diagnosis and treatment of some forms of cancer. Drug treatment of leukemia, a malignant disease affecting the blood, is now prolonging hundreds of lives. Surgical treatment of various heart diseases and diseases of the blood vessels, impossible 10 years ago, is applied successfully in most major medical centers in the country.

Cortisone and other steroids, reserpine, chlorpromazine, diantin, mestion, asparagine, and scores of other new hormonal and synthetic drugs are providing better treatment for arthritis, mental illness, epilepsy, and numerous diseases which hitherto had defied the practicing physician. The widespread use of sulfa drugs and antibiotics have literally revolutionized the care of patients with many infectious diseases.

In terms of prevention, we now have an effective poliomyelitis vaccine capable of reducing the annual toll of paralytic cases by 75 percent or more. Retrolental fibroplasia, a leading cause of blindness in infants, can be prevented by the controlled use of oxygen in the care of premature babies. Prevention of rheumatic fever is possible through the use of antibiotics, with a consequent reduction in the cases of rheumatic heart disease. Fluoridation of public water supplies, such as is practiced in the District of Columbia, makes possible the prevention of at least 60 percent of tooth decay in our children.

I have mentioned only a few of the striking advances that have marked medical progress in the past decade. What does this progress mean to the American people and how does it affect the American hospital?

In terms of national health statistics, it means an increasing life expectancy and a declining general death rate. In 53 years, 1900 to 1953, the average life expectancy at birth in the United States increased from 47.3 to 68.8 years—a gain of 21½ years. Five of those years were added since 1943.

The general death rate has declined 12 percent in the past 10 years. The drop in death rates from certain specific causes has been much more spectacular. For example, the tuberculosis death rate has declined by 24 percent in the 3 years just past—1953–55. In the past 10 years, the mortality rate from influenza and pneumonia has declined by 77 percent; from syphilis, 56 percent; from nephritis and other kidney diseases, 40 percent. Unfortunately, not all this life-saving is clear gain. As we conquer many diseases of early life, more people are living longer to those ages when they are most likely to have cancer, heart disease, and other chronic illnesses.

To the individual patient and his family, however, these figures have little meaning. People measure medical progress by the speed and effectiveness with which their physicians can relieve suffering and restore patients to health and social efficiency.

There is no doubt that the availability of the ever-increasing battery of wonder drugs has reduced the fear and dread with which people regard the onset of many acute illnesses, especially the acute bacterial infections. The occurrence of many chronic diseases, too, can be met with more fortitude, since improvements in diagnosis and therapy make possible earlier discovery and better control of long-term illnesses in the individual patient. Much of this change in attitude has occurred parallel with medical progress in the past 10 years. I will say more about the chronic illnesses later.

Hospital care also has changed radically in the same period. In the institution you are supporting at Denver, the shift in emphasis from exclusive care of tuberculosis patients to a broader program including the care of cancer patients, illustrates some of the changes that have been going on in hospitals across the country.

Early ambulation, home-care programs, expansion of outpatient services, blood banks, psychiatric services, and rehabilitation programs are among the many new concepts and programs now accepted by general and special hospitals.

Advances in medicine have not only changed the nature of hospital services in many instances, but have also greatly increased their costs. Modern radiation equipment alone for the diagnosis and treatment of cancer, for example, may cost as much as $1 million.

Bone banks, eye banks, and artery banks are becoming commonplace adjuncts in large hospitals. New types of anesthesia also call for new equipment. It is impossible to put a firm pricemark on any one of the modern technical services of a hospital, since their operation requires not only costly equipment, but also the full-time attention of highly trained professional and technical personnel.

On the other hand, many advances make possible more economical operation of some hospital services. It has been estimated, for example, that effective home care of long-term patients can be provided by a hospital at about one-third the per diem cost of in-patient care.

Let us look at the other side of the coin for a moment. Despite the advances I have mentioned and many others, the annual bill which could be prevented and which disease and accidents presents to our country is still far too high. It is excessive in terms of human suffering, needless deaths, and loss of productivity.

We cannot measure the suffering, nor can we accurately measure the loss of productivity. But we can get some idea of these imponderables in the knowledge that nearly 800,000 Americans, representing all age

groups, died of heart diseases alone in 1954. Another 237,000 died of cancer.

More than half a million new cancer cases are reported annually. One in every 10 children born in the United States today will be confined to a mental institution at some time of his life. It is estimated that about 10 million persons suffer arthritis or other rheumatic diseases; 9 million from neurological diseases, blindness, and other sensory disorders.

For the most part, the splendid medical progress of the past 10 years has touched only what we might call the outward and visible signs of these catastrophic causes of death and disability. In so far as scientific understanding is concerned, we may liken the major chronic diseases, mental illnesses, and many viral diseases to icebergs. One-tenth of the volume of the iceberg is above water—and can be seen and dealt with. The remaining 90 percent of the bulk is hidden.

The Nation's current medical research program is responsible for our ability to see and deal with the smaller fraction of our major health problems. It is for this reason that President Eisenhower has recommended to Congress a greatly expanded medical-research program, for the year beginning next July 1, including aid for the construction of research and teaching facilities in our non-Federal institutions.

In his state of the Union message of January 5, the President gave this reason for his proposal: "The Nation has made dramatic progress in conquering disease—progress of profound human significance which can be greatly accelerated by an intensified effort in medical research. A well-supported, well-balanced program of research, including basic research, can open new frontiers of knowledge, prevent and relieve suffering, and prolong life." Coupled with the recommendation for expanded Federal assistance in medical research and training is the President's conviction that "we must aid in cushioning the heavy and rising costs of illness and haspitalization to individuals and families."

We in the Department of Health, Education, and Welfare—and particularly in the Public Health Service—are greatly heartened by these proposals of the President. Our Secretary, the Honorable Marion B. Folsom, has presented the Nation's needs for medical research and other health services at the highest levels of public policy and has discussed these needs with non-Federal scientists, professional people, and citizen groups. He has indicated that our research budget request for next year will be increased by 25 to 30 percent.

Should the expanded medical research program be adopted by Congress, the Public Health Service would be able again to increase substantially its research grants to private and nonprofit public institutions in the fields of mental health, cancer, heart disease, arthritis and metabolic diseases, dental research, and allergy and infectious diseases, including tuberculosis. Scientists participating in these expanded programs could place more emphasis on basic research. Our research programs at the National Institutes of Health in Bethesda, Md., would be moderately expanded, although most of the additional funds would go to medical schools, hospitals, health agencies, private laboratories, and individual scientists throughout the Nation. For almost 2 decades the Congress has recognized the value of medical research and has acted with nonpartisan unanimity in providing funds for an expansion of the attack on the major cripplers and killers.

So that increased funds for medical research can achieve the maximum benefits, it is proposed also to increase Federal assistance for the training of research scientists. In many medical fields, there are major shortages of scientists. The development of a highly-trained scientist is a long-term process. Upon graduation from college, young men and women who are considering medical research as a career require from 8 to 10 years more training before they can undertake independent research. Often the only way they can support themselves while obtaining advanced training is by qualifying for a fellowship. Although the Nation's private and public institutions have made tremendous strides in increasing the support of research training since World War II, we have not even reduced the scientific personnel shortages existing at that time, much less met the needs of our ever-expanding scientific effort.

The President also proposes to recommend a new program of Federal assistance to medical and dental schools and nonprofit research institutions for the construction of research and teaching facilities. This is a logical supplement to the proposed expansion of research and training. For if it is true that increased funds for the conduct of medical research should be accompanied by the production of additional scientists, it is also true that there must be addtional facilities in which to do the research and train the research workers.

In 1955 an important new research program was implemented by a special congressional appropriation to the Public Health Service. The hospital and medical facilities research program is of more than usual interest to all institutions caring for patients, and especially to those caring for long-term patients.

Medical research illuminates understanding of the human organism and the diseases which afflict mankind. In order to apply the findings of medical research most effectively we need another type of research—that is, study of the ways in which hospital and medical services of all types may be organized and operated to the best advantage of the patients, the professions, and the community.

Research in this area—which for convenience many people call hospital research—has lagged behind the rapidly expanding medical research effort in this country. There has been a great need for studies and demonstrations that will serve as guides to individual institutions and groups of institutions in the development and operation of their services.

In connection with the hospital and medical facilities survey and construction program of the Public Health Service, the Congress authorized the expenditure of $1,200,000 this year for grants to communities, hospitals, universities, and other institutions, which would help in the conduct of studies, experiments, and demonstrations related to improved hospital and medical-care programs.

There is a great deal of interest in this type of research throughout the country. The best proof, I believe, is that the Public Health Service received 54 applications for grants totaling nearly twice the amount of money available. So far the Federal Hospital Advisory Council, composed of experts outside the Government, has recommended the award of 16 of the requested grants totaling more than $600,000. Other applications are still under consideration by the council.

Since this is a relatively new field for categorical research grants, let me tell you about a few of the projects approved by our council last December.

At the University of Arkansas, the department of sociology will conduct a study of recordkeeping by general duty nurses in 3 small hospitals and 2 larger hospitals. The aim is to find ways to simplify records, and thus to save the valuable time of nurses.

I am sure that the administrators of your hospital at Denver will agree that the results of this study would be of value to them. The shortage of professional nurses is nationwide and serious. It plagues hospital administrators, physicians, and patients. Earlier studies have shown that an inordinate amount of the professional nurses' time in hospitals is absorbed in keeping records. If we are going to use expert nursing skills most effectively for the care of patients, it is obvious that ways must be found to relieve nurses from their clerical duties, at the same time maintaining the necessary medical records.

Another grant has been made to a team of scientists at the Massachusetts Institute of Technology for a study of ways to apply managerial techniques, now commonly employed in industrial and business establishments, to hospital administration. The American Hospital Association also received a grant to study the operation of hospital planning and license laws. Both these studies will produce new information essential to the planning and operation of our American hospitals of today and tomorrow.

Progress in medical research and in the study of hospital and medical care programs represents only a small fraction of our total national effort for better health. The Federal Government has played an increasingly important role in these fields without domination or control, while at the same time our State and local governments, our private organizations and institutions, our voluntary health agencies have increased their efforts in all areas—research, training, and provision of services.

The truth is that our medical research and health problems are too large to be solved by any one segment of our Nation, or any one organization. These problems must be solved by the combined efforts of Government, voluntary agencies, industry, and private institutions. We cannot do without a single organization that is conducting a valuable program, whether in research, training, service—or in combinations of these activities.

Voluntary hospitals have always been in the forefront of the Nation's health services. They always will be. One reason for this is that in most instances, the voluntary hospital has been able to break ground as has the American Medical Center at Denver—in new fields and lead the way in providing special services.

At the present time, the United States has about 1 million acceptable hospital beds of all types. According to figures submitted by each of the States and Territories, we are still short well over 800,000 beds. We need every acceptable bed in hospitals of all types, plus thousands more.

The situation with respect to special hospitals, however, is a little different than that presented by this overall picture. It is a striking fact that in many parts of the country, fewer tuberculosis beds are needed than were available 10 years ago. In contrast, in some areas, there are still not sufficient beds for tuberculosis patients. In the well-supplied areas, State and local governments are reducing the number of operating tuberculosis beds, while expanding their home-care and follow-up programs. Waiting lists of many sanatoriums are rapidly shrinking. This means that patients urgently requiring sanatorium care can receive it sooner.

Nevertheless, about 100,000 new cases of tuberculosis continue to be reported annually throughout the country, a considerable percentage of which occurs in areas where the bed supply remains inadequate. Thus, voluntary services such as are provided for tuberculosis patients by the American Medical Center at Denver will be needed for some years to come.

In contrast with the tuberculosis picture, we have only a few tens of thousands of beds in chronic disease hospitals. The need for chronic disease beds, as well as for well-managed, medically supervised nursing

homes and homes for the aged has grown progressively with the rising toll of chronic diseases and the increasing number of old people. The need will continue to grow. So long as we are unable to attack the problem of chronic disease at the roots, as we have been able to attack tuberculosis, the need for voluntary services to chronic disease patients and the aged will continue to grow.

The recent expansion of your program at Denver to include care of cancer patients demonstrates the willingness of your organization to remain a pioneer in the provision of hospital services to the sick.

This is the wonderful objective of America's voluntary hospitals throughout the country. They cannot continue to carry out their mission unless they have the support of local groups such as the Washington members of the Jewish Consumptive Relief Society have brought together here tonight.

With your support, and the support of hundreds of other community groups, our American hospitals will continue to fulfill their glorious mission of relieving pain and restoring the sick to health.

General Ridgway's Battle

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 19, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the Washington Post and Times Herald, Thursday, January 19, 1956, in which the paper discusses and comments on the recent article written for the Saturday Evening Post by Gen. Matthew Ridgway, former Army Chief of Staff:

Gen. Matthew B. Ridgway has raised two sobering issues of national policy in his pointed article in the Saturday Evening Post. The first concerns procedures for handling military recommendations to the administration. Is it proper that an Army Chief of Staff be muzzled and his views misrepresented in an effort to give the appearance of unanimity? The second concerns the reductions in Army manpower in relation to a balanced defense. Are we relying so heavily on nuclear weapons that we would be forced to drop the first bomb for want of other means to fight a limited war?

It is no secret that General Ridgway was in disfavor with some administration officials before his retirement last summer. The general was outspoken and blunt in his opposition to cuts which he thought impaired the Army's capability to fulfill American commitments. President Eisenhower once termed his views "parochial"; and there may have been good reason for others to disagree with him. Nevertheless, it is a shock to read General Ridgway's emphatic contradiction of the statement in Mr. Eisenhower's 1954 state of the Union message that the new military program had been unanimously recommended by the Joint Chiefs of Staff. General Ridgway makes it clear that he did not agree. He regarded his function as that of giving military advice uninfluenced by budgetary considerations or the advantage to be gained in the field of domestic politics by a drastic reduction in military expenditures; and he regarded the 1955 budget as a directed verdict. Evidently the President was misinformed about General Ridgway's views, and the finger points to Defense Secretary Wilson.

There is an equally strong indictment of Mr. Wilson in the use of the "confidental" label to bottle up Gen. Ridgway's final report. This report, which was critical of the inadequate military capacity to cope with limited wars, went to Secretary Wilson as an unclassified document. Yet it was returned with the request that it be classified confidential, and it was pigeonholed until someone leaked the contents. This amounted to a prime abuse of the military classification system to suppress information that was merely embarrassing and had no direct relation to security. It is precisely this sort of thing that justifies the continuing protests against the Pentagon stranglehold on information.

On the substantive issue of whether budgetary cuts have injured the defense posture, it is difficult to have an objective judgment. Although an Army commander's devotion to the national interest may be unquestioned, he still may think in one-service terms and not have a sound overall appraisal. Because there is not enough money to satisfy all services, compromises must be made. This newspaper, nevertheless, is inclined to agree with General Ridgway that the emphasis on saving money through an all-atomic strategy could lead to a situation in which the country would be able to deter so-called brush fires only at the risk of general war. It is significant that General Ridgway is the man who bucked the other members of the Joint Chiefs of Staff, and who ultimately was upheld by the President, in opposing the kind of atomic countermeasure on Quemoy and Matsu that Secretary Dulles has skipped over so blithely.

The question of disagreements among members of the Joint Chiefs of Staff, and of economic considerations in the military budget, is one the Nation has faced many times before. Ultimately the decision has to be made by civilians on the most balanced advice. Once the decision is made, it is the job of military officials to go along loyally or request reassignment; the country cannot tolerate the kind of end runs of the sort conducted in the past in efforts to change policy. But none of these considerations is warrant for misrepresentation of views. Surely Congress is entitled to know, on demand, the honest feelings of a military chief who disagrees. Perhaps the major fault lies in the insistence on buttressing decisions with "unanimity" whether or not it actually exists.

The Upper Colorado Storage Project

EXTENSION OF REMARKS
OF
HON. WALLACE F. BENNETT
OF UTAH
IN THE SENATE OF THE UNITED STATES
Thursday, January 19, 1956

Mr. BENNETT. Mr. President, over the past 10 days I have submitted for the RECORD a series of editorials published in the Deseret News, of Salt Lake City, covering the entire scope of the upper Colorado storage project. Today I ask unanimous consent to have printed in the Appendix of the RECORD the last three editorials in the series.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Salt Lake City Deseret News of December 14, 1955]

THE WORK HORSE UNIT: GLEN CANYON WOULD BE TOPPED IN UNITED STATES ONLY BY HOOVER DAM AND WOULD CREATE GIANT RESERVOIR

1. One of the world's major dams, 700 feet high and 1,400 feet long, topped in the United States only by Hoover Dam.

2. A reservoir 186 miles long—equal to the distance between Pocatello, Idaho, and Murray, Utah.

3. A power capacity of 800,000 kilowatts—enough to supply electrical power needs of 1,500,000 persons.

These impressive statistics refer to Glen Canyon Dam—the proposed $379,143,000 work horse unit of the Colorado River storage project.

It is one of four major dams provided by the House bill now awaiting final vote of Congress.

The three other major dams are the $74,648,000 Flaming Gorge Dam on the Green River near the Utah-Wyoming border, the $32,933,000 Navajo Dam on the San Juan River in New Mexico, and the $80 million Curecanti unit on the Gunnison River in Colorado.

Time and space do not permit a detailed examination of each of these three major dams included in the House bill. However, a close-up look at Glen Canyon Dam will illustrate how each dam contributes to the over-all master plan for the development of the long-neglected upper basin of the Colorado River.

Glen Canyon Dam would be the only dam scheduled in the project which would actually be built on the Colorado River proper. Most other units would be built on its major tributaries.

Site of the dam is in northern Arizona, only 13 miles downstream from the Utah-Arizona line. Thus, the bulk of its tremendous reservoir would back up across southeastern Utah.

When filled, Glen Canyon Reservoir would extend 186 miles up the Colorado nearly to the mouth of the Green River, and also 71 miles up the San Juan River.

HUGE STORAGE CAPACITY

Its normal water surface area would be 153,000 acres. And it would store a whopping 26 million acre-feet of water.

(An acre-foot of water is the amount it takes to cover 1 acre of ground 1 foot deep. A football playing field covers approximately 1 acre. Thus, Glen Canyon Reservoir when filled, could flood 26 million football playing fields to a depth of 1 foot.)

The dam itself would be a concrete arch structure, rising 700 feet from bedrock and 580 feet above the river. It would be topped in the United States only by Hoover Dam, which is 726 feet high. It would be 150 feet higher than Grand Coulee Dam. Glen Canyon Dam's crest length would be 1,400 feet, and thickness at the base 425 feet.

It would be located only 16 miles upstream from Lees Ferry which is the division point between the upper and lower basins of the Colorado.

Glen Canyon Dam thus would be the final regulatory structure delivering water to the lower basin as guaranteed by the Colorado River compact.

Its major function would be stream control and storage of upper-basin water, most of which now pours unused into the ocean. Its vast reservoir could catch water from the flood season for use in the dry season and hold over water during wet years for use during dry years.

UPSTREAM USE

When filled, while providing water for lower-basin areas as guaranteed by river compact, it would make it possible for upstream areas to take water out of the river

and its tributaries for municipal, culinary, industrial, and farm use.

Besides ending flood dangers and putting this uncontrolled water to work, Glen Canyon Dam also would fill another vitally needed function, that of silt control.

As it is now, the lower Colorado, heavy with mud, is rapidly filling up Lake Mead and threatening the useful life of Hoover Dam. Construction of Glen Canyon, it is estimated, would extend the useful life of Hoover Dam 200 years.

Even after 200 years of silt deposits at the current rate, Glen Canyon would still boast a storage capacity of 10,455,000 acre-feet. And, of course, construction of the Colorado River storage project and conservation of upstream soil and water, is the best hope of cutting down this colossal soil loss.

Glen Canyon is a multipurpose dam, which means that in addition to storing water and regulating the stream, it also will generate power.

TREMENDOUS POWER

Its hydroelectric generators will turn out a tremendous 800,000 kilowatts—half of the total capacity of the entire originally planned Colorado River storage project of seven major dams.

The powerplant, located at the toe of the dam, would consist of 7 generating units. The power would be sold to REA cooperatives, public organizations and to private utility companies which have applied for purchase of the power to meet expanding power needs.

There is no public versus private power controversy here as in the case of Hells Canyon in Idaho.

Sale of the power produced could be applied toward repaying the cost of the power facilities, and when they are paid for, toward repaying the cost of building the dam itself.

While repaying the Government for the cost of building the power facilities, the project also would pay the Government standard 2½ percent interest on all monies advanced for power construction costs. Thus Uncle Sam would net a neat profit on the transaction.

Three other factors make Glen Canyon a feasible project: one the site is geographically favorable; two, no relocation of existing facilities is necessary; three, abundant construction materials are located nearby.

At the site, the sides of the canyon rise abruptly from the river bed in nearly vertical walls 650 feet high. The rock forming the abutments and the foundation is fine-grained sandstone, buff to red in color, remarkably free of structural defects.

No man-made improvements, roads, farms, towns, or improved lands of any consequence lie in the reservoir area which would require condemnation or relocation. Thus, the cost of the dam would be kept to a minimum.

And as for construction materials, supplies of satisfactory quality and adequate quantity can be obtained from deposits in Wasweap Creek about 7 miles northwest of the dam site, according to engineers' reports.

[From the Salt Lake City Deseret News of December 14, 1955]

WATER'S RICHER THAN GOLD—IT'S THE WEST'S LIFEBLOOD—THE COLORADO PROJECT WOULD HALT SHAMEFUL WASTE OF RIVER'S WATER

"In this country, water is more precious than gold."

One of Brigham Young's scouts first said it. And it has been echoed by nearly every mountain-west resident who has endeavored to scratch his livelihood out of the fertile but arid valleys of the high Rockies.

"Far more westerners have died fighting over water than over gold," Utah's Senator ARTHUR V. WATKINS notes.

It is because of this situation that planning on the Colorado River storage project has moved slowly. The Colorado is the last untapped water source of the area—the "last great water hole" of the West.

Whatever plan is finally adopted for its development must first of all assure the most economical use of the available water.

The Colorado River storage does just that. It has won the enthusiastic endorsement of the cities and States which it will serve, of the Eisenhower administration, and of both political parties.

It has been debated by two Congresses. At present, it lies within one rollcall of passage. The project has passed the Senate and the necessary House committees. It awaits only the final stamp of approval of the House membership. And the House is scheduled to take up the project when it convenes for the 2d session of the 84th Congress in January.

Briefly, this is what the project consists of:

To be authorized first by Congress would be four major dams. These would store water for consumptive use. Supplementing these large dams would be 11 smaller participating projects. These would actually take the water out of the river and channel it to municipal, industrial and farm use.

The controversial Echo Park Dam is not included.

The major dams are project keystones. They must be built first. They would be true multipurpose units.

First and foremost, they will control the river and end floods. The Colorado is one of the wildest streams ever to be challenged by man, coursing through the most rugged and spectacular of our last frontiers.

SIXTY PERCENT WASTED

Because there are no storage facilities in the upper basin, 60 percent of the river's waters presently is flowing unused into the Gulf of California, a shameful waste of the area's most precious resource.

Secondly, the dams will provide the storage facilities needed to fulfill terms of the Colorado River Compact. This compact assigns each of the seven river States its just share of water. These dams will carry over surplus water from the wet years to the dry years so that no State will suffer a shortage. They also will act as water banks upon which the entire river system can draw.

Thirdly, these dams will provide the means of paying most of the project's cost. True multipurpose dams, they will generate needed electrical power, using the same energy source, falling water, over and over again.

UTILITIES BACK PROJECT

This power will be sold at the source to the area's private power companies, REA cooperatives, and public agencies, who will distribute and sell it to waiting markets.

All of the Mountain West's power utilities unitedly back the project. They have agreed to purchase all available power to satisfy their power-hungry customers. There is no public power vs. private enterprise controversy here.

Fourthly, these major dams will help put an end to the second great current waste—that of the Mountain West's topsoil. The present muddy Colorado each year carries downstream, in its uncontrolled runoff, thousands of tons of rich topsoil, in a continuation of the erosion that produced the spectacular Grand Canyon.

This erosion, besides being a shameful waster of the Nation's most valuable resource, also imperils existing structures of the lower basin.

Fifth and lastly, these dams of the project would provide tremendous recreational and wildlife benefits in an area where few lakes presently exist. All America could share in these playgrounds, enjoying boating, fishing, swimming, and camping.

These dams are engineered to do all these things. But the thing the typical westerner likes best about them is the fact that they stand on their own feet. They will pay for themselves.

"We're not asking for handouts," veteran rancher, Briant S. Stringham, of Vernal, explains.

"We're just asking that Congress invest the money in a sure thing. Revenues from water and power users will pay back the loan according to contract, same as in other reclamation projects—and for the most part with interest, too."

[From the Salt Lake City Deseret News of December 14, 1955]

THE COLORFUL COLORADO RIVER—THIS MUDDY STREAM DRAINS ONE-THIRTEENTH OF THE NATION—THE VAST BASIN IT TRAVERSES IS RICH IN HISTORY, SCENERY, MINERALS

To millions of Americans, the Colorado River is just a muddy, sluggish river, winding its way through spectacular vistas.

Tourists remember it as a yellowish-gray ribbon cut in the depths of Grand Canyon, or as a wide, sluggish stream of silt oozing its way through to the Gulf of California.

They do not know that it is one of America's largest rivers, draining 244,000 square miles—one-thirteenth of the area of this Nation—along its 1,700-mile length.

Or that it is one of the most remarkable rivers in the world, because of its capriciousness and erratic flow, because of its colorful history, its power potential, and because of its undeveloped, fantastically rich "last frontier"—the upper basin.

The Colorado is remarkable because of its origin and the spectacular country through which it flows.

It is entirely a snow-fed stream, with 90 percent of its waters originating in the high mountains of the upper basin: Wyoming, Colorado, Utah, and New Mexico. And because it is a snow-fed stream, its flow varies unbelievably, both from season to season and from wet year to dry year.

During the spring runoff, the Colorado floods destructively, with a flow as high as 100 times as great as the low-water flow in the fall. And because the snowfall on its watersheds vary with the weather, the runoff during a wet year may be six times as great as during a dry year.

The very extremes of the flow are prime reasons why storage dams of the type called for in the Colorado River project are urgently needed to prevent flooding and to carry over surplus water until needed.

DESTRUCTIVE RIVER

This flooding, of course, makes the Colorado the most destructive erosively of all major rivers—witness the Grand Canyon. The silt measured at Yuma averages 0.62 percent by volume. The annual load of silt brought to the delta region by the Colorado averages 105,000 acre feet, or 170 million cubic yards annually.

This terrific silting waste also is imperiling existing Lower Basin structures. Lake Mead behind Hoover Dam is slowly filling up with silt. The construction of one dam alone in the upper basin area could extend the life of Hoover Dam by 200 years.

But the Colorado is more than a muddy, soil-moving river. Historically, it figures in the earliest and in the most colorful episodes of western history.

FORGOTTEN PEOPLES

Along its reaches in earlier years lived forgotten peoples of which there are now no trace except for hieroglyphics on the rocks and the ruins of their cliff dwellings by which they are most widely known.

The area's modern history begins in the earliest days of American history. The region boasted Spanish missions as far back as the days of Balboa and Cortez. Then came the mountain men and fur trappers and behind them the pioneers along the

Santa Fe and Oregon Trails, both of which traversed the Colorado River system.

The basin has witnessed the full scenario of Western development: the Indian warfare of Navaho, Ute, Shoshone, and Apache; the struggle of the rancher and farmer for survival, the range wars, the gold and silver rushes and the mining booms, the bandit wars from Rustler's Roost to Hole-in-the-Rock in the remote fastnesses of the isolated Southwest, the Pony Express and the coming of the railroad. All have echoed along the Colorado and its tributaries, in a remarkable historical kaleidoscope.

The Colorado also is unusual for its high rate of fall on its way to the sea. This carries great significance to engineers—it means an unsurpassed power potential.

REMARKABLE RIVER

"The Colorado River is one of the remarkable rivers of the world in its value for irrigation and water power," the Encyclopedia Britannica notes.

"It combines, in proper sequence for complete use, a large quantity of water, great concentrations of fall, reservoir sites for the control of flow, sites for powerplants and several million acres of irrigable land below the stretch where power may be developed. Over 5 million prime horsepower can be developed."

Prime producer of power along the river's lower reaches at the present time is, of course, Hoover Dam. This world-famous structure generates 1,835,000 horsepower and irrigates 2,100,000 acres. More power is produced at dams still farther downstream.

But the prime power sites are located on the upper half of the river, the upper basin—and on all these hundreds of miles of river there now exists not one dam.

This circumstance arises from geographical reasons. Despite all the activity which has swirled across the West, one large section has remained relatively isolated. That is the upper basin of the Colorado River. Some areas here are so isolated they still remain unmapped and unexplored, virgin territory to the white man.

It is a forbidding—but spectacular—country, characterized by high plateaus, crevassed by jagged and deep canyons wherever streams carve their way through. But breaking up the Colorado Plateau are spiny ranges of the Rockies, and lying between the mountains are fertile valleys, some green from irrigation, some completely undeveloped.

They are not developed despite their fertility and mineral riches because of the mountains and the river. Much of the upper basin is isolated by high mountains. Usually when this happens in other sections of the country, the rivers can serve as highways.

But not in this case. Many stretches of the Colorado and its tributaries are impassable, foaming with white water rapids. Also, for the most part of the year, at low water the river is not navigable. Travel thus is limited to one way only, over rapids, during a short time between the flood season and the low-water period.

Then, too, the rivers have carved such deep canyons that access to the plateaus and valley areas is impossible. This feature also causes the anachronism of fertile valleys going unirrigated within a stone's throw of the river. There is no way to get the water up the canyon wall and onto the land—or to transport the produce out.

For these reasons, this area has remained largely primitive and isolated while western civilization has built up all around it. Development of the area requires engineering assistance, beyond the ability of the few residents of the area. Otherwise, the residents would not be asking the Federal Government to take over the master planning of their future development.

Something To Bank On

EXTENSION OF REMARKS
OF
HON. JOHN E. HENDERSON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 19, 1956

Mr. HENDERSON. Mr. Speaker, there has been a lot of hysteria and name calling generated by the supposed political implications of the present agricultural economy. Seldom have we heard the situation discussed in the light of cool reason since somehow, reason departs, and party propaganda takes its place when the farm question is raised.

It comes as a rare surprise to read a commentary, grounded on reality and based upon an understanding of the part agriculture has played in our Nation's history. Such an article is the following editorial of the Zanesville Signal for January 16, 1956:

SOMETHING TO BANK ON

During war and its aftermath, the Government gave American farmers incentive to expand their output to meet the extraordinary needs of this country and its allies. Now it must supply fresh incentives to get them to reduce production in the face of monumental surpluses.

For too long the high, rigid price-support law encouraged farmers to produce too much. Foreign markets fell off but the crops kept piling up—in Government warehouses.

At length, under President Eisenhower, a shift was made toward more flexible supports designed to minimize the lure and put prices more in line with true market conditions. But the switch was so long in coming that by then the Nation's surpluses had become well nigh unmanageable.

Meantime the farm price decline that set in even before the Eisenhower regime has continued apace. Total net income from farm products has slipped substantially. This has hurt family-sized farms more than large commercial establishments. It has left many ordinary farmers outside the sweep of America's newest wave of prosperity.

The President's new farm proposals represent a broader and more drastic attack upon the farmers' dilemma. They seem to emphasize not so much immediate relief as a long-range approach which might conceivably get farmers out of their predicament for an indefinite time. In this respect they show political nerve in an election year, when the clamor is for quick solutions.

In addition to offering a multitude of devices for directly reducing present surpluses—research into new market uses, removal of barriers to sales abroad, etc.—the President asks Congress to enact what is being called the soil bank program.

Under this plan farmers would be compensated for taking out of production either fertile lands or marginal soil or both. Payment could be taken in cash or feed stocks now in Government hands.

In the case of productive soils, farmers would be asked to cut their crop acreage voluntarily below existing allotments, in return for payment.

They would also be urged, with the same incentives, to put their marginal lands back into forest or grassland. This soil presumably would be removed indefinitely from the crop-producing category.

These soil-bank measures, together with the frontal assault on current surpluses, would be expected within fair time to make deep inroads into our mountainous reserves.

No one can properly say how effective this approach would be. But at least it is an approach that goes beyond the sterile thinking which says that high, rigid price supports and only they can get American farmers out of their low spot.

At the minimum the soil-bank plan constitutes a start down newly inventive lines. At best it may contain the core of a real solution.

Address by Philip M. Klutznick, President of B'nai B'rith, at Dinner Session of Conference of Major Jewish Organizations, Shoreham Hotel, Washington, D. C., January 18, 1956

EXTENSION OF REMARKS
OF
HON. HUGH SCOTT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 19, 1956

Mr. SCOTT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address:

My dear friends, in anticipation of the convening of this meeting, on January 5, I dictated a memorandum of statements that I would make on this occasion. Events have moved with such a degree of rapidity that what I would have said then has been outmoded today. Perhaps, in the same framework, what we say tonight will become ancient history within hours or days. The Middle East has taken the center of the stage. Only a few months ago it was still a far-off place to many Americans. Suddenly, Russia, Czechoslovakia, and Egypt brought the Middle East into the very home of every American, whether he things about it or not. The potent light of a blinding type of urgency has settled over an area which for so long was far down on the agenda of pressing international problems.

There are those who question the timing of this conference. I say to them and to others when potential tragedy and catastrophe are riding herd over a vital area of the world, any time is both a good and a bad time to convene Americans to deliberate together.

I therefore welcomed not only the delegates to this conference and the friends who are present tonight, but especially I extend our greetings to those distinguished members of our Government who have seen fit to grace this occasion.

Seventeen important national Jewish organizations have convened this meeting. By agreement, we limited our representation to 20 representatives of each organization plus others who, in a sense, represent the communities at large. We are not here to pack a meeting with the countless hundreds who would have come; we are here to think aloud and to deliberate. These people come from all parts of the United States and who they represent and what they represent is a matter of record.

No one is selected or annointed to represent all of Jewish life in America, not even a small group which in its own troublesome fashion persists in trying to run everybody's business instead of its own. On January 16, in the New York Times it is reported that the American Council for Judaism challenged the right of the B'nai B'rith, which I have the honor to represent as its president, as well as certain other organizations, to represent American Jews on issues concerning United States policy in the Middle East. In a distasteful and dishonorable incursion into

the freedom of conscience this infinitesimal percentage of American Jews arrogantly and without knowledge of action taken by our organizations conveyed to the Secretary of State and to each Member of the Senate and House of Representatives the strange concept of a new limitation on the right of American citizens because they are Jews.

Curiously, similar attacks were addressed to individual members of our organization, the B'nai B'rith. In these attacks they urgently petitioned this membership to convey to me their belief that I had no right to be here or to involve the B'nai B'rith in these discussions. Let it be said to the everlasting credit of nearly 400,000 members of the B'nai B'rith resident on this continent that despite this harassment only 2 saw fit to address a communication to me, 1 directly and the other through a subordinate officer. In both instances, while they questioned the position, they did not question the basis of our participation.

Please permit me the luxury of a personal comment. For years I have been importuned to attack publicly the right to exist of the American Council for Judaism. Firm in my belief in the freedom of speech, no matter how diametrically opposed to my own views, as in this case, I have refrained. Even to the contrary, I have insisted on the right of this small group as any other to express its views—even though they are fallacious in my own reckoning.

Now that its president on its official stationery has sought by innuendo, direct attack and malicious misrepresentation to silence organizations of long standing, respectability and status, I can only say for myself personally that he has subverted the word "American" and dishonored the word "Judaism." It is impossible for me to believe that this action represents the belief of any substantial portion of even the members of that organization.

As far back as the birth of B'nai B'rith in 1843, it adopted a policy of expressing itself publicly on matters of concern to our great land and to our people. Since 1886 our organization has through acts and deeds expressed a sympathetic understanding of the problems in Palestine, now Israel. We have never and will never tell a foreign country, whether it be Israel or anyone else, how to run its public affairs. We will, however, continue to persist in the expression of our views on matters of vital concern to America as well as to the people from whom we stem. At the last triennial meeting of all of B'nai B'rith in May of 1953, by unanimous resolution this attitude was conveyed to the public and to our Government with respect to problems affecting Israel. As recently as November 8, 1955, we expressed our vital concern to our Government by unanimous resolution of our representative policy assembly, the board of governors, about the recent events that have raised havoc in American thinking and in middle-eastern affairs.

Another source has indirectly attacked the right of American Jews to express themselves on this subject domestically. While for some time we have known the extent of the hate campaign launched against not only Israel but American Jews by official representatives of certain Arab nations, it is significant that on January 16, in a documented article by Guy Richards and Jeffrey Roche in the New York Journal-American, the full extent of this unholy pressure is described. We shall never be guilty of telling Americans, be they Jews or of any other religious persuasion, that they must agree with us. We shall, however, persist in our own right to express our views to the greatest degree of our intelligence in matters that affect our beloved country and that concern us most intimately.

On the eve of this conference I had occasion to read a monograph on the life of one of the early presidents of B'nai B'rith, Simon Wolf, as prepared by Esther and David Panitz. It reminded me of similar incursions into the rights of man when Wolf, in his extraordinarily capable fashion, made certain representations to the White House in what has historically become known as the "ill-conceived order No. 11," on the very eve of the presidential campaign of 1864. He was attacked for having had the gall to intervene in a matter of great concern in the midst of the War Between the States. His statement, made at a time when we had not yet advanced in the preservation of human dignity and human and civil rights to the point we now have reached, I repeat to the American Council for Judaism, to our Arab detractors, and to anyone else who may question this or any similar conference: "We are not Jews except to God; we are to the country what Mrs. Smith, Jones, and Brown are—citizens. We seek no tolerance from anyone in this age of progress and ennobling humanity. Tolerance is for slaves, not for humanity."

I would add one more thing to the representatives of the Arab nations who have entered into this fray on our domestic front. An effort seems to be in the making to suggest that American Jewry is against the Arab nations. This insinuation would imply that Egypt and others are not only at war with Israel, but with those Americans who are Jews, save the few to whom I have referred who are openly anti-Israel. This is utter nonsense. When the United States of America influenced Great Britain to evacuate the Suez, what substantial segment of American Jewry opposed Egypt's return to dignity? When have we in any official or individual sense opposed our country's economic aid to this and other lands? One would have to be a fool of the first order not to favor a friendly relationship between our great country and the Arab nations. All that we have ever urged is that such friendship should not be bought in the open market at the expense of a friend, Israel. Even Israel and all nations believing in democracy and freedom profit from a relationship of an Arab world oriented to the West and not to the East.

Pro-Arab or any other propaganda which suggests that American Jewry is against the Arab world does untold damage to its own cause and shocks the intelligence of thinking people. This is not the issue in the Middle East.

The transformation, wrought practically in a moment by the Russo-Czech-Egyptian arms transaction, has naturally created a substantial measure of chaos and confusion. In the midst of such uncertainty some very dangerous ideas gain currency. What I have said to you now is one of them. Perhaps left alone they would tend to dissipate themselves. But left alone they might also serve to substitute unreal issues for those that are truly at stake in the problem of the Middle East. Time is of the essence. This being true, the real issue should be faced.

The real issue is in a measure presented in the reported statement of Premier Gamal Abdel Nasser, as contained in the New York Times of January 17, on the occasion of the presentation of a new constitution to the people of Egypt. I quote first from Premier Nasser's own speech: "From the Atlantic to the Persian Gulf there is but one Arab nation, which no one will succeed in dividing again. After World War II part of the Arab heart was snatched from the Arab body. Today Arabs from the Atlantic to the Persian Gulf will cooperate in restoring that part. Today's constitution is the beginning of a structure toward this end." I now quote from the observation by the author of the article, Osgood Caruthers:

"The latter was a reference to Egypt's contention that the Israeli created their state out of land they seized from the rightful Arab owners and the avowed intention of Egypt and other Arab States to regain that land."

This is a polite way of identifying the basic issue in the Middle East which is war or peace. Does America and the other Western Powers have a stake in this? Do we, as Americans, face this prospect without concern? Let me quote once again from a January 16 London dispatch of the conservative Daily Telegraph which seems quite well to understand the truth of the predicament.

"It is of vital importance for the United States, Britain, and France to make a firm pronouncement they will intervene against either an Arab or Israeli aggressor in the event of war.

"It is clear that the main question before the forthcoming Anglo-American conference in Washington will be how to maintain peace and stability in the Middle East. * * *

"The main preoccupation of all Israel's neighbors is her extermination, and the prospects of any sort of compromise are remote. If the West cannot now make a real peace, it can still prevent war.

"A firm pronouncement by the three signatories of the 1950 declaration that they will intervene against either an Arab or an Israeli aggressor would not be a bluff. Nothing else can hold the ring until fears lessen and tempers cool."

One other reference in this statesmanlike pronouncement is of major significance. The Telegraph noted that there have been suggestions that all would be well if only Egypt's Premier Gamal Abdel Nasser's "friendship can be secured," and commented, "certainly much has been done to secure it, but without avail."

The concluding observation to which I make reference is vital in our thinking. It follows:

"Our view of priorities is to guard first against the Communist menace—his (Nasser's) is to liquidate first what he would call the Israeli menace."

I do not pose as an expert on the technicalities of international commitments and pacts. I know only that whether it is done by unilateral security treaties or pacts, in which the United States and Israel and Arab nations that wish it are secured against aggression, or whether it is done, as suggested, in tripartite fashion, it must be done and with teeth. Treaties and balances in military strength may not be the heroic achievement of immediate peace, but they are the only combination that has been devised thus far to prevent war in this current chaotic struggle between East and West. This policy, so successful elsewhere, should not be withheld from the Middle East just because Israel is one of the exposed parties. To my mind in foreign affairs this is the issue.

The United States and the Western Powers have an indescribably vital stake in the peace and economic growth of the Middle East. We cannot and must not in our own interest permit Egypt or the Arab nations to become so strong in military strength as to be tempted to wipe out what they call "their menace, Israel." Until this balance is reestablished by appropriate defensive military provision and operative agreements, the hope for the ultimate aim—peace—becomes vain and elusive.

In this framework it is that we gather to help in the thinking of our great country in the best tradition of American citizenship to establish a forthright and effective policy that will prevent war. In this first step all right-thinking Americans should find the essence of a measure of hope that good sense may be restored to the Middle East and that Arab nations and Israel alike in such an atmosphere will one with the other, through negotiation and discussion, find a formula for the greatest of gifts that an Almighty can convey on His suffering humanity—a just peace.

The Brilliant Record of the Kansas City, Mo., Police Department

EXTENSION OF REMARKS
OF

HON. RICHARD BOLLING
OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, January 9, 1956

Mr. BOLLING. Mr. Speaker, the citizens of Kansas City, Mo., take great pride in the brilliant record achieved in recent years by their police department. During the adjournment of Congress, I observed at firsthand the operations of this dedicated and able law-enforcement organization. I was enormously impressed by the energy, enthusiasm, and effectiveness of every person concerned, from the president of the board of police commissioners to the newest member of the force.

What has been accomplished in Kansas City is best revealed by the following facts: From 1952 to 1954 the national crime rate rose 22.6 percent. In Kansas City the 2 years revealed a 20.5-percent decrease. I understand that the latter trend continued during 1955.

There follows an address entitled "One-Man Car Patrol," by the outstandingly able chief of police of Kansas City, Bernard C. Brannon. The address was made before the 62d annual conference of the International Association of Chiefs of Police on October 3, 1955, in Philadelphia, Pa.:

In the broad sweep of time, it has been but yesterday that the prevailing opinion held the world to be flat, with the horizon's end promising a sudden drop into bottomless chaos of old cosmogonies. Those who held to other theories were scoffed at and challenged for proof.

The proof was forthcoming when the bolder explorers of the seas did not drop off the table edge of the world. Old convictions died and new beliefs were substituted. Another shackle of progress was cut away. But even if it had developed that the world was not a sphere, those who sailed over the edge into the void of nothingness would still have resolved the issue through experimentation.

Thus it has always been that man has hunted for truth, for facts that prove or disprove a given proposition. From the massive controversies of the universe to the simple, detailed issues of daily life, the process of solution and progress has been theory supported by experimentation. We seldom fail to derive ultimate benefit from efforts aimed at discovery of truth.

It has been so in our police world. Our progress has been predicated on the formula of discovering needs, formulating theories of solution, and testing them out. As each of us gather facts that may be helpful to the other, it is incumbent on us to pass our findings along. One of the best ways to determine what is going on around us in the law enforcement profession is to encourage our fellow worker to stand up and tell his story.

I need that encouragement today, for I am about to report on and briefly discuss the controversial issue of one-man patrol cars. As I do so I recall the admonition, "It is better to be silent and thought a fool than to open your big mouth and remove all doubt." Yet I will assume the risk with the hope that I might receive your valuable advice while offering some enlightenment on the issue.

In June, 1953, Kansas City, Mo's., police department first tested the one-man patrol car. We had always operated with two-man crews. It was the beginning of a plan that would eventually see a complete change-over from 2- to 1-man patrol. Some 6 months later, after prolonged study and consideration, the transition on a citywide, 24-hour basis, was effected. This was December 1, 1953.

I well realize the one-man patrol car idea is not new. It has been used in smaller cities and towns for many years, sometimes by choice but often through necessity. Modified forms of one-man patrol cars have been and are being used in some of our larger law enforcement agencies. But to my knowledge, Kansas City, Mo., was the largest municipality ever to inaugurate a 100-percent change to the one-man patrol car system. This should prove of interest, for we were surprised to find that there was little or no factual information, accurately compiled statistics, from large cities that proved or disproved the issue of 1- and 2-man cars.

To be sure, there was an abundance of personal opinions pro and con, but with few exceptions those opinions were not based upon comparative data gathered over a reasonable length of time. The safety factor of the individual officer was often the foundation of adamant opinion, with certain incidents of tragedy affecting the police executive's overall views. Also, the tendency to support one's administrative decision as to the use of 1- or 2-man patrol cars seemed to background some opinions.

Modern surveys reveal that the proponents of one-man patrol cars are in the minority. Some daytime use, especially in residential areas where the workload is light, is about the extent to which most larger cities have gone into the use of one-man patrol cars.

Here are some of the objections to one-man patrol cars voiced by police administrators: The safety of the officer is definitely impaired; it is impossible to drive and adequately observe at the same time; it is impossible to drive at high speeds and use the radio or firearms effectively; the lone patrolman is inclined to overlook suspicious persons and conditions simply because he is alone; it is difficult and hazardous to effect an arrest with only one officer; it is dangerous to bring in a prisoner alone; with one-man cars all calls have to be screened to determine the risk involved, and more than one car sent to the scene, leaving other areas unpoliced; there is too much time off the air because of personal needs of the officer; and the average officer simply does not like to ride alone.

Proponents of one-man cars have said: One-man cars provide equal or better police service for less money; more officers are available to operate more cars or perform other needed police duties; police surveillance is increased; more cars add to a feeling of public security; there is no distracting conversation or personality clashes with fellow officers; the lone patrolman does not take unnecessary chances, is more alert, and hence safer; the officer knows he will get credit where credit is due and works harder; self-reliance develops and argues for a stronger and finer police officer; the officer is more courteous and builds better public relations.

Because of the variables involved, such as the location, size, population, and other particular law-enforcement problems of a city or area, it is impossible and inadvisable to confidently take sides. However, since there is a dirth of substantial supporting facts, the mere reporting of our experience in Kansas City may be a contribution more solid than opinion alone.

Why we made our decision to use one-man cars, how it was made, and the operating results, are questions that have been asked by many police departments here in the United States and in other countries. Because fact finding on an acceptable basis requires the passage of time, we were forced to delay answering many of the inquiries. But perhaps it is now the time to do so.

For a moment I would like to go back to the days not so long ago when police patrolling was accomplished on foot. Even then decisions had to be made as to whether a certain beat should be covered alone or by officers in pairs. In the tougher, more dangerous parts of town, where, as we would say today, the workload or number of police incidents were high, patrolmen often worked in teams. But the vast majority of beats saw the officer patrolling alone.

With the advent of the automobile and its application to police patrol, it developed that at least two men to a car were thought necessary to get the job done. There were good reasons for this thinking. Patrol areas were increased in size as the cities spread out, separating the officer from his fellow patrolman by miles instead of blocks. Where he could formerly call for assistance by voice, whistle, or nightstick pounding on the pavement, now, riding alone some distance away, he would be cut off from his fellow patrolman in neighboring patrol area.

So the motorized patrolman had to have his help with him. If only there were some way the officer could summon immediate assistance. A way came. A great boon to law enforcement—the radio. As it developed from 1-way communication to 2-way, and then to 3-way, or car-to-car, many police administrators came to the thinking that it was time to reappraise patrolling tactics.

Somewhat like the advent of the telephone in the home, a means of contact with the outside world, the radio gave the motorized patrolman a new link with his fellow officer and a new sense of confidence. The distance barrier had been cracked. The patrol cars were brought closer together in point of effective coassistance than had been the foot patrolman of yesterday. Those who earlier advocated the one-man patrol car now spoke in louder voice. If the patrol areas could be reduced in size, bringing the cars physically closer together, and with newly developed car-to-car radio communications, why couldn't the patrolman ride alone with safety and effectiveness?

It was only after exhaustive study and consultation among veteran police officers that Kansas City made its decision to move to one-man patrol cars. The sole objective was to obtain greater police service without (1) increasing the hazards of police employment by adversely affecting the personal safety of the officer, without (2) increasing the individual workload of the officer beyond fair and reasonable standards, and without (3) increasing operating costs beyond normal budgetary limitations.

I was deeply concerned for the safety of the individual officer, and this was our gravest problem. After much study and consideration it was concluded that if the patrolman was physically and mentally prepared, adequately trained and thoroughly schooled in strict compliance with our selected one-man car procedure, and assigned to a smaller patrol area with a workload determined by new calculations, the question of personal safety would be favorably resolved.

We considered such factors as the average age of our patrolmen, whether they were young enough to grasp the new idea and support it. A reexamination of their intellectual level as indicative of ability to assume added responsibilities and to comprehend fully the detailed procedures to be followed was made. Supervisory officers were consulted and closely checked to determine whether they would be able to support the system without openly or latently offering opposition due to preformed personal prejudice.

Need for the establishment of special training programs was early recognized. Both

the patrolman and supervisor would have to receive extensive instructions in one-man car procedure and technique. The radio dispatchers became keymen in the success of the operation. Their appraisal of police calls was vital, and they, too, needed special training and complete understanding of their added duties.

While it was contemplated that the trial and error method would have to be the great teacher, we were determined to do all within our power to foresee and anticipate the mistakes that could be made, and to correct them before they had a chance to happen. Several years ago under our two-man car operations a police officer was shot and killed while seated in the police car beside his partner, and while in the process of stopping a car for a routine traffic violation. Other than the sorrow of the department arising from the tragedy, and the criticism of the technique of the officers in stopping the car, there was an acceptance of the incident as one of risks of the police service. The two-man car patrol system was not blamed, yet it could well have been, for the single officer might have been more alert. I have no doubt, however, that if the tragedy occurred during one-man car operations, the patrol system would have been blamed. Police and public reaction to scrap the system would swell up to the bursting point. This risk was recognized in our decision. We knew that regardless of our preparation an unforeseen happening could wreck our plans.

Kansas City is divided into three large police districts broken up into patrol areas or beats. Under the 2-man patrol car system we had 24 such patrol areas, each with 1 car and 2 patrolmen. It was never contemplated that these old patrol areas would be left as they were and that a 1-man car would be substituted for the 2-man car.

At no time have I felt, nor do I now feel, that the one-man car system of patrol can offer any improvement over the two-man system unless the patrol area is reduced in size and the patrolmen moved closer together. Neither should it be attempted without the finest of radio facilities and especially car-to-car communications.

Therefore, the most important aspect of Kansas City's change to one-man cars was a redistricting of the 24 patrol areas into 42 areas. The new areas followed the census tract lines as nearly as possible so as to provide material from government sources of value to the patrolman in orientation for his area.

The average size of the patrol areas was reduced from 3.4 square miles to 1.9 square miles. In effect, this was a reduction of patrol areas by about half. It might roughly be said that the workload of each patrol area was also cut in half, and that one patrolman was assigned to each of the halves. Observe that the patrolman was not riding his old patrol area alone—his fellow officer was still there, but in an additional car.

To me, this is the secret of success in Kansas City's application of the one-man patrol system. You will see, then, that it is not an economy measure. Actually, it costs more money to operate. The police administrator should obviously be prepared for increased costs, for more automobiles are needed, more gas and oil, more car repair and maintenance will be needed, and more equipment must be provided. The economy effected is the purchase of more police service, without the employment of more patrolmen.

To assign two-man crews to the current patrol areas in Kansas City would require an additional salary expenditure of $592,800 per year, and $45,600 in uniforms and equipment.

We needed 20 additional cars for the one-man patrol. By setting up a motor pool we acquired some automobiles from other units of the department, but 16 additional cars were purchased new. Together with equipment, this cost was $50,018.78. Automobile maintenance costs, excluding depreciation, were $222,291.79 in 1954, as compared with $163,461.25 during two-man car operations in 1952. Our comparison years are 1952, which was the last full year of operation under the two-man patrol, and 1954, the first full year under the one-man system. 1953 was the transition year, as I have said, the first six months of which were still total two-man car operations.

So the cost for additional cars and equipment together with maintenance increased 27 percent. The total number of motor cars subject to maintenance increased in number from 128 to 148, or 14 percent. As a natural corollary to the acquisition of more vehicles, the item of depreciation increased from $46,947.53 to $72,514.87. Added to the maintenance costs, the total increase in 1954 over 1952 was $87,939.76.

In explanation of the increased maintenance costs, other than the normal expectancy arising from 20 more vehicles being placed in patrol work and the rise in prices occurring during the 2-year period, was the increase in the number of miles traveled. In 1952, the two-man patrol covered 1,277,762 miles; in 1954, the one-man patrol car traveled 2,777,460 miles, a numerical increase of 1,499,698 miles, or 117.4 percent. This amazing increase in activity was viewed favorably by the department in light of results.

You are certainly entitled to ask the $87,000 question: What were the results? To me they are little short of amazing.

Referring to the annual bulletins of the Federal Bureau of Investigation, I find that the national crime rate rose 22.6 percent from 1952 to 1954. In Kansas City, Mo., the 2 years revealed a 20.5 decrease. All of our statistics are carefully kept in accordance with the requirements of the Uniform Crime Reports as requested by the Federal Bureau of Investigation.

Thus far this year our crime rate continues to decrease. For the first 6 months of 1955, as compared with the first 6 months of 1953 (under two-man car patrol), there has been a 36.6 percent decrease in part I classification offenses.

All along the line patrol activity has increased. There are more arrests, more checks of buildings, and stricter traffic enforcement. Our patrol cars were painted solid white with large black letters to identify them as police vehicles. More conspicuous and in greater numbers, the patrol cars are noticed with greater frequency by the public. The public reaction has been good. Time in answering calls for police service has been cut by one-third.

We have had no officer fatalities attributed to one-man car operations. Personal injuries to officers present no problem. Incidents of resisting arrest have not increased in proportion to the step-up activity, and for the first 6 months of this year such incidents have decreased 13.7 percent over the corresponding period in 1953.

We will continue to compile statistics to prove or disprove the value of one-man patrol cars. Such data will be made public.

Kansas City, Mo., is a growing, expanding municipality with a diversified population approaching 500,000. It is the hub of a metropolitan area of a million persons. Presently 81.72 square miles in area, it will reach 129.83 square miles within the next 3 years through annexations that have already been voted. It is geographically the largest city in Missouri, and is second in population to St. Louis. Surrounded by penal institutions, possessing a great railroad center, and being the headquarters for one of the countries largest airlines, it is a city of increasing congestion and activity. There is every potential for crime that normally exists in every city of the United States. Our past history reveals heavily publicized blots of police failure and criminal activity. I say this to you so that you will understand that we are not a city where criminal activity would tend to decline without good reason. I believe that one of the most important reasons for the declining crime rate is the institution of the one-man car patrol, operated as I have described.

We will be happy and proud to supply any further information you may desire. We consider it your right to inquire and our duty to answer.

Remarks of Senator James H. Duff, Republican, of Pennsylvania, at Conference of Jewish Organizations, January 18, 1956, Shoreham Hotel, Washington D. C.

EXTENSION OF REMARKS

OF

HON. HUGH SCOTT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 19, 1956

Mr. SCOTT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address:

It can no longer be gainsaid that the darkening clouds in the Near East are the early portents of a storm that could burst in that area with completely devastating violence.

There is every evidence that the Communists have concluded that the Near East is the soft spot that now presents the most promising opportunities for exploitation in the characteristic Communist way.

In determining how to deal with this critical situation, it is important to bear in mind that in the years intervening since the end of World War II the Communists, by methods similar to those now being employed in the Near East, have brought under their domination seven hundred million peoples and one-quarter of the whole surface of the earth, and with this, enormous material resources, including those vital to supplement the particular deficiencies which the Communist world has so far suffered from the lack of. The implication of the successful continuation of such methods is too clear to require elaboration.

It is of no avail at this late hour to cry over past spilt milk. But possibly a realization of how that milk was spilt may be instructive in dealing with the present constantly mounting crisis. Failure to act in 1949, when Israel had won a decisive victory against the Arab States, has resulted, as such delay always does, in making infinitely more difficult the resolution of the problem.

At that time, had treaties been definitized and a modus operandi established, there would have been no crisis today.

As might reasonably have been expected, the Communists have shifted from one tack to another in dealing with this situation, studied to create confusion, and done everything in their power to prevent a peaceful and fair solution of the difficulties in that area.

Hardly a day passes without some new move by the Communists to keep the whole situation upset and to make it increasingly difficult to deal with. Only today a dispatch out of London indicates that Czechoslovakia has offered cheap Communist arms to Afghanistan, an immensely important spot on the flank of the Baghdad Pact Defense Alliance. Other moves of the same character can with assurance be expected. All of which indicates that this vitally critical area

to the free world has been selected by the Communists for the embarrassment of the West and the continuous further march of the communistic infiltration and expansion.

This complicated and aggravated situation in the Near East, especially between Israel and Egypt, poses the greatest possible threat to world peace. Too little and too late is a sure invitation to Communist aggression as was proven both in Korea and in Indo-China.

Formosa is not the only place where it was necessary for the free world to draw a line and say: "No further."

It was always the dream of Imperialist Russia under the czars to extend the domain of Russia eastward to the Pacific—a dream realized under the Communists. It was as well the dream of Imperialist Russia to extend their domain from the Mediterranean and the Dardanelles eastward to the Persian Gulf. There is every reason to believe that the intention of the Communists to realize this second ambition is as definite as was the first. There can be no doubt that the free world cannot possibly permit this expansion to be realized. And yet the Israel-Arab dispute is on the very doorstep of that expansion.

Consequently it would seem that it was in the enlightened self-interest of the free world to put a period to this expansion now before it expands beyond control so as to threaten the peace of the world.

The policy of the United States is to wage peace, not war. The policy of the Communists is to wage war, and not peace. The sure way to play into their hands, to make it easier for them to gain their ends, is to vacillate at a time when decisive action is necessary and it seems to me that this is the time for decisive action in the Near East. Certainly that problem will not be settled in the United Nations. It will not be settled at all except by the definite and united action of the United States, Britain, and France. That was true in 1949. It is true today. It will continue to be true until the situation develops into a crisis that may be unresolvable except by conflict. That conflict must be prevented.

Speaking as an individual, the only practical solution for this problem is for the free world to guarantee the existing borders between the disputants, to offset arms to Egypt by arms to Israel—not to encourage an arms race but to maintain a proper balance between them.

Vacillation can only result in ultimate disaster. Decisive action now is the answer.

To the answer that this is dangerous procedure, the reply is: Of course, it is dangerous. Everything is dangerous unless the Communists are permitted to have their own free way. To guarantee these boundaries at this time instead of allowing the Communist infiltration and expansion might very well be the means of preventing another local war of enormous strategic importance where ultimately we would be compelled to interfere. Therefore, the risk would be no greater now than later and it very reasonably might be expected to stabilize a situation that would otherwise be completely out of hand.

By the very nature of current events, it must be clear that we are living in a tremendously dangerous and explosive world. And it will continue to be dangerous and explosive until the Communists are made to understand unmistakably that the time has come when we will act and not talk when they continue in a course that unimpeded can lead to disaster both to us and free people everywhere.

In conclusion, the time has come when we've got to say to the Communists: "You've got to stop this and you've got to stop it now."

Art for Whose Sake?

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 19, 1956

Mr. DORN of South Carolina. Mr. Speaker, I am happy that many patriotic people and organizations are exposing the hoax of modern art. I wish it were possible for every student in America to read the following article. I commend it to the attention of every Member of Congress:

ART FOR WHOSE SAKE?
(By Esther Julia Pels)

In the story "The Emperor's Clothes," by Hans Christian Anderson, the Emperor, stark naked, marches proudly down the street between rows of his people. The admiring crowds murmur their appreciation of his beautiful new robes, their soft coloring, and their magnificent texture. Two thieves pretending to be tailors had convinced the Emperor that they could weave for him the most beautiful rope in the whole world, but that the cloth could only be seen by wise and intelligent people.

With huge sums of money obtained from the gullible and vain Emperor, they pretended to weave these beautiful new textures. So skillful had they been in convincthe palace retainers that failure to appreciate their handiwork would brand one as having no taste, that not a single courtier had dared to raise his voice to protest against what was obviously a swindle. So, while the gullible Emperor marched down the street naked, the perpetrators of the hoax rolled on the palace floor in helpless laughter at the success of their scheme.

If the beloved Danish weaver of children's fairy tales were alive today, he would be astonished to see that his delightful fable has been taken over literally by swindlers in the field of so-called modern art. Here we find an identical parallel—the perpetrators of the hoax of modern art have generally convinced the gullible that failure to appreciate their new forms of art expression brands one as hopelessly unintelligent and behind the times. In fact, the situation is almost identical in that blank canvas is actually exhibited as art.

This may sound very funny, but the sickening story of decadence, perversion, and revolutionary purpose behind the introduction of modern art to America is far from humorous. So-called modern art had its origin in socially sick and decadent European art circles before the First World War. From them sprung Cubism, Dadaism, Futurism, Symbolism, Expressionism, etc. In the social ferment that was to produce communism, fascism, and nazism, there arose artists who plotted to use art as a means of power over the masses. Since its inception, modern art has been revolutionary, not in the sense of bringing new beauty and craftsmanship to the world, but in the deliberate turning of the human mind from what is true, good, and beautiful to the contemplation and worship of ugliness, disordered visions of madness, social protest, and the use of esoteric and occult symbols for reality.

All over Europe the revolutionaries, the dabblers in the occult, and the demented overturned the traditional forms of beauty and art. They boldly proclaimed themselves the new elite of the world of art. They formed into tight little groups, issued manifestoes, and tirelessly promoted their new art forms.

In 1920 the Dadaists held their most spectacular exhibition under the direction of Max Ernst, the artist. The entrance to the exhibition, which was held in Munich, was through a public urinal. A young girl dressed in white, as if for her first Communion, recited obscene poems in a loud voice. A feature of this early Dada exhibition was an aquarium full of blood-red fluid in which were an alarm clock, a lock of hair, and an arm carved in wood. Visitors also were invited to take an axe and chop at a large block of wood.

The general impression created by this insane exhibit was to convince the ordinary visitor that he too had gone mad. Indeed, some of the visitors did go mad in the sense of outraged anger. They seized the axe and proceeded to chop down the whole Dada exhibition before the police arrived. The Dadaists were elated—they had proved their point that the whole world was in a state of complete madness.

The Dadaists were not alone in unleasing perversion and madness on the world. In June of 1936 the Surrealists held an exhibition in London. The noted British novelist, J. B. Priestley reviewed it for a London paper. He said in part:

"The Surrealists stand for violence and neurotic unreason. They are truly decadent. You catch a glimpse behind them of the deepening twilight of the barbarism that may soon blot out the sky until at last humanity finds itself in another long night."

Prophetic words written almost 20 years ago. Part and parcel of those helping to bring on the long night were the following artists:

J. T. Baargeld, founder of the Dadaists who helped establish the Communist Party in the Rhineland.

Filippo T. Marinetti, founder of the Futurists. He was a friend of Mussolini, and was proclaimed the cultural leader of the Italian Fascists after their seizure of power. Marinetti proclaimed: "Man has no more significance than a stone."

Vassily Kandinsky, leader of the Expressionists. Kandinsky, who was born in Russia, studied painting in Germany. He was a mediocre painter until he discovered Expressionism. This theory of painting was that painting in a trance would produce visions of the unconscious on the canvas. This was supposed to produce a like state of trance on the part of the spectator. The followers of Kandinsky in Germany were known as the Blue Knights. In 1914 he returned to Russia. He was a friend of Trotsky, and after the revolution he and his pals sought to dominate the Russian art world. For a while they succeeded. They created their own workshops and art organizations. Kandinsky became the director of the Museum of Pictorial Culture in Moscow. He helped establish museums throughout Russia. But his triumph was shortlived.

A smarter and far greater Communist, V. I. Lenin, was watching the newly developing Bolshevik art movement. Master of revolutionary techniques himself, Lenin saw in the art of Kandinsky and his associates just another way of subverting the masses through distortion and neuroticism. The Russian masses which Lenin had chosen to conquer for socialism, had to face cold, hard, reality—neuroticism and decadent distortions were for people outside of Russia whom Lenin hoped to soften up and demoralize for later conquest. Kandinsky was kicked out of Russia by Lenin in 1921, and the Expressionist leader returned to Germany. A few years later he was brought to the United States by Katherine Dreier, an aging but active leftwinger from Brooklyn.

Kandinsky, former cultural commissar in Bolshevik Russia, believe it or not, became vice president of the Société Anonyme in New York 2 years later. This was an international association set up in 1920 by the same Katherine Dreier for the promotion of the study of progressive art in America. There is no reason to believe that Kandinsky, who had failed to establish his revolutionary art form in Russia, had abandoned his ideas or plans when he got to this country.

In a speech entitled "Modern Art Shackled to Communism" Congressman DONDERO of Michigan said:

"The Société Anonyme according to the American Art Annual was first organized as the Museum of Modern Act. The Museum of Modern Art founded in 1920, officered in 1923 and for years thereafter by Kandinsky, Russian commissar of the isms becomes crystallized in 1929 as the present Museum of Modern Art. As an enduring link between the two, Alfred H. Barr, Jr., member of the board of directors of Société Anonyme, is the director of the present Museum of Modern Art."

The way was open for the virus of the foreign-spawned isms to be injected into the bloodstream of American culture, and it was. Books written by or about the leaders of social protest in the art world were published or sold by the Museum of Modern Art. The art critics of liberal and radical magazines praised to the skies the daubs and monstrosities of the new school artists. They employed a gibberish even more incomprehensible than the alleged paintings they so lavishly praised. Even more fantastic were the prices asked for some of this abstract junk.

Abstract art offered the Communists a quick route to fame and fortune. It dispensed with the long training and talent demanded by traditional painting. A few daubs of paint on a canvas called abstract art could be boosted and pushed as great art. Many of the newly rich were eager to emulate an older generation of millionnaire art patrons. Most of the great works of art of past centuries have been acquired by museums or families of great wealth. Therefore, it became tremendously chic to purchase works of unknown artists and to become a patron and defender of the new culture.

On the other hand, the average American under no such delusions derived no pleasure or inspiration from the new art forms. The spectator felt uneasy and bewildered looking at paintings that conveyed neither beauty nor sense. Nevertheless, like the emperor's courtiers they were easily cowed into silence because they feared the ridicule which the so-called critics and defenders of the new isms would heap upon them.

This was not an American art movement. At practically all of these American exhibitions, even today, the names of the same leaders of European modern art appear over and over again—Salvador Dali, Max Ernst, Pablo Picasso, Miro, Paul Klee, Tanguy, Chagall, De Chirico, et cetra.

The wedge of confusion having been driven home, a new phase was started. William Z. Foster, veteran Communist leader, made this significant admission in the New Masses in 1946:

"There must be a clear understanding that art is a weapon in the class struggle. Not only is art a weapon, but a very potent one as well. Moreover, rising revolutionary social classes instinctively realize the importance of art as a social weapon and have always forged their own art and used it to challenge that of the existing ruling class."

The Communists had started to organize and exploit artists in the early 1930's by setting up fronts along cultural lines. One of the most notorious was the John Reed Club, named in honor of an early American Communist, John Reed, who had died in Russia shortly after the Bolshevik seizure of power and had been buried with full red honors in the Kremlin wall. Also active in New York was the artists union. Organized in 1933 by unemployed artists working on Federal arts projects, a part of the Federal relief program, it was supermilitant. On May 1, the Communist holiday, it called upon all artists to come out into the streets, to don chisel and brush, and march shoulder to shoulder with his fellow workers toward the future.

These artists were primarily interested in art as Communist and revolutionary propaganda. Federal and State art projects set up to alleviate unemployment and distress offered wonderful opportunities to get paid, with taxpayers' money, for daubing revolutionary propaganda on public property walls. They violently resisted all controls, which they called censorship.

These founders and early members of the John Reed Clubs and artists union can be found today as favored and prominently displayed artists in many museums throughout the United States. The names of these same artists appear over and over again as sponsors or supporters of literally dozens of Communist fronts during the past 20 years.

William Gropper was one of the founders of the John Reed Club as well as a founder of Artists Equity in 1947. According to Congressman DONDERO, "Artists Equity Association lists practically all the notorious red artists in the country." Gropper was present in 1930 at an international Communist conference on art in Kharkov, Russia, set up to bring American artists under Comintern control. The sabotaging of American art was the direct outcome of this conference. In a cable to Moscow in 1932 Gropper reported to his Soviet masters the accomplishments of American Communists in the struggle for world socialism:

"I have held exhibitions of cartoons, drawings, and paintings on the imperialist war and the defense of the Soviet Union throughout the west coast of the United States like Berkeley, San Francisco, and Los Angeles in California, and in galleries in New York City. At present I am at work on a mural painting to be exhibited in the Museum of Modern Art, which thousands of people visit weekly and I shall register my protest by exposing the war plot against the Soviet Union in this painting.

"With revolutionary greetings,

"WILLIAM GROPPER."

Gropper's Communist-front record with some 60 or more affiliations is second only to that of Rockwell Kent with well over a hundred. Yet he had the gall to tell the Senate Permanent Subcommittee on Investigations in 1953:

"You see I am an artist. I am primarily an artist. I am not in with this political business that you people are all involved in."

Despite this long Communist-front record and his protests of complete lack of political knowledge, Mr. Gropper nevertheless conveniently took the fifth amendment when asked if he was a Communist. He admitted he had received between $4,000 and $5,000 for a mural he did for the new Interior Building in Washington. When asked whether he had contributed any of this money to the Communist Party, Gropper again took the fifth amendment.

In 1947 the State Department paid $55,000 of your tax money for a collection of 79 works of art to be shown abroad as examples of American culture. At least nine of the contributing artists had front records. The project was quickly dropped when the then Secretary of State, George Marshall, received a flood of protests from Congressmen and indignant citizens. The War Assets Administration later disposed of the whole collection for $5,544.45, or about 10 cents on the dollar.

A year later an "art gallery on wheels" was set up to tour Veterans' Administration hospitals. Congressman DONDERO exposed the front records of 17 artists whose works were included in the project. The sinister purpose behind such an otherwise harmless idea was to give these Communist-front artists a sort of patriotism by association halo in that their modernistic daubs had presumably benefited recuperating veterans. They could also later claim that they had at least been inferentially cleared of any taint of subversion by virtue of the fact that the United States Government had displayed their works in veterans hospitals. You have to get up awfully early to outsmart Communists.

The Communists are tireless in boosting each others' products. They are also highly adept at infiltrating art juries. Recently the National Council for United States Art announced the first competition for art work to decorate the U. N. Building in New York. The 10 jurors include at least 3 with Communist-front records, Leon Kroll, Paul Manship, and William Zorach. Six of the 18 members of the Visual Arts Panel of the United States National Committee of UNESCO are connected with Artist Equity. This is a cozy "you scratch my back and I'll scratch yours" arrangement.

Small wonder that so many young and struggling artists go left. They are smart enough to realize that with such obvious infiltration, and in some cases, control of art juries and panels by notorious leftwingers, anti-Communist painters do not stand much of a chance. For example, Anton Refregier was selected from 86 other contestants to paint the Rincon Post Office murals in San Francisco. There were 3 artists on the jury; 2 who voted for Refregier had long front records. Outraged protests from patriotic groups finally forced a congressional hearing on these slanted murals. Refregier himself was not even called to testify as to what part of the $26,000 of taxpayers' money which he received was diverted to any of the Communist fronts with which he was connected. Despite the protests of large groups of patriotic citizens, the objectionable murals painted by a Communist sympathizer are still on the walls of a United States Government building. Who benefited by the selection of Anton Refregier as the artist?

In the story of the emperor's clothes, it was the voice of one small child which exposed the whole carefully built-up hoax. "But he has nothing on," exclaimed the child. The emperor, realizing that the child spoke the truth, rushed back to his palace to turn out the rascals who had made such a fool of him. The clear-sighted vision of small children is apparently not given to the blind worshipers of modern art. Consider the reply of Sidney Marcus, chairman of the Dallas Museum board, to a resolution of the Dallas public affairs luncheon club. The resolution protested the exhibition of works by Communist and pro-Communist artists at the local museum. "Tommyrot," sneered Mr. Marcus.

Christianity is today the main target of world communism. What more subtle way could be devised to destroy children's faith in religion than to show Christ on the cross as a gigantic insect? Nothing is more despicable in modern art than the vulgarity and ugly distortion in religious themes.

The real thinking behind these sacrilegious paintings is given away by a critical review in the Communist Daily Peoples World of April 6, 1955. Criticizing Rico Lebrun's Crucifixion series, the review says:

"In attempting to depict man's inhumanity to man there was a deep and important fallacy. The carpenter who erected the cross, the soldiers who rent the garments, and the crowds who jeered and mocked were all portrayed in unsparing horror. But the forces which put these executioners into movement, the instigators of mankind's most notorious execution of a radical thinker, nowhere were these forces shown."

Can you believe it? Jesus Christ, not the hope and Savior of all mankind, but merely a radical thinker.

This is hate art. The purveyors of it have their vile works exhibited in museums and private galleries throughout the country. They are praised, financially supported, and defended by the very class that they plot to destroy. The Daily Worker of April 10, 1955, carried an article on the Jack Levine show exhibited in the Whitney Museum of Art in New York. The following excerpts are significant:

"He paints dead souls in living bodies with devastating power and insight. He paints men and women who would stifle humanity, starve mankind, brutalize the world for their own parasitic, selfish, greedy ends. He divests these people of their outer garments of wealth, position, and respectability and exposes the sham that covers the leering evil, the greed, the corrosion of upper-class immorality and self-indulgence.

"His technique in depicting death in life, evil inhuman form is close to perfection. The painting, The Trial, has deep political significance today as witchhunts and hysteria have made a mockery of courtroom justice.

"Throughout the exhibition it is more clear what Jack Levine hates. He says himself, 'Those I love I simply leave out. A painter should do what he does best.'

"He has created unforgettable faces expressive of corruption that grows and decays, of hypocritical souls wielding power today."

Pope Pius XII summed up the whole situation recently when he spoke at an exhibition of the works of Fra Angelico, famed 15th century Florentine painter of saints and angels. His Holiness extolled the work of Fra Angelico, who had painted an ideal world of angellike men, and then said:

"If the artistic expression turns instead to a false, empty, and unclean spirit, which deforms the designs of the Creator, if instead of elevating the mind and heart to noble sentiments it should incite the more vulgar passions, it might find acclaim or acceptance by some, even if only because of novelty, which is not always of merit.

But such art would degrade itself, denying its own principal and essential aspect and would be neither universal nor perpetual as is the spirit of man to which it is addressed."

A few years ago, Col. William R. Kintner wrote a book entitled "The Front Is Everywhere." He demonstrated beyond cavil that secret Communists and their sympathizers in our midst are waging total war against us every hour of the day and night, on every level and stratum of our society—religious, cultural, political, economic, social, moral, and intellectual. This constant corrosive attack seeks to destroy our religion, our home life, our national unity, our history and traditions, our very will to resist and live. In this titanic struggle for the world, no sector of human thought or activity is overlooked by the minions of Moscow. So, remember that even in the museums, "Art is a weapon in the class struggle."

Our Foreign Policy

EXTENSION OF REMARKS
OF
HON. E. ROSS ADAIR
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 19, 1956

Mr. ADAIR. Mr. Speaker, there follows the Good Evening column by Clifford B. Ward which appeared recently in the Fort Wayne, Ind., News-Sentinel. It contains some very sound views, in my opinion, with respect to our foreign policy:

A few of us, sitting around the other day in the self-constituted roles of saviors of the world were discussing the increasingly important subject of a satisfactory foreign policy for the United States.

That's so big a subject that almost anyone can be an expert in it. As in all such discussions, there are many points of view. One man stated that it has been suggested that an academy, similar to West Point or Annapolis, be established for State Department career men. Another said that such an academy would have little value unless the academy itself knew the fundamental philosophy on which this country would try to operate in the field of foreign relations.

With this latter view I agreed, on the theory that a policy is only an extension of a philosophy, but went on to express my view that we have no such philosophy and need to develop one. There was a point in the history of civilization when it became necessary for Christians to formulate a list of things in which they believed and the result was "the Apostles' Creed." We need now something like the formation of an Apostles' Creed with reference to the attitude that this country should take first to itself and then to the rest of the world. We had such a policy for decades prior to the coming of Franklin Roosevelt. We have not had any since. Our present policy is to extemporize from day to day on the basis of expendiency, not for ourselves, but for the world generally.

IS NATIONALISM OBSCENE?

First of all, we should determine in our own minds, whether we owe any apology to ourselves for being ourselves. Is it wrong to be an American in preference to being a citizen of the world? Is it wrong to take an ordered pride in our views of human freedom and the manner in which we have succeeded in applying them? Is an ordered nationalism, not an excessive nationalism, an obscene thing? Is it wrong for an American to feel a thrill running up and down his spine when he views the American flag fluttering in the wind and is it wrong if he doesn't feel a similar thrill watching a UN flag fluttering in the breeze? To be sure we are all members of the human race, all sons of the same father, but the general welfare can never exclude the welfare which an individual must worry about for himself. All human society begins with the individual. It is no better than the sum total of all the virtues of the individuals who go to make it up and a man must be true to himself before he can be true to his own family; and true to his own family before he can be true to his state; and true to his own state before he can be true to the world at large.

A PROPER SELFISHNESS

There is a proper selfishness in the affairs of all men and that proper selfishness is extended to a nation. No man ever has a right to surrender his own conscience completely to someone else and neither has any nation the right to forget its own proper interests for the interests of all the nations of the world.

The bases of any philosophy of foreign affairs for this country have to be some very old things such as truth and honesty. We have an idea in this country that any problem can be solved if sufficient money is appropriated to correct it. Is religion failing? Give the churches more money. Is the school system failing to educate? Give it more money. Is our reservoir of good will over the world running low? Give it more money. This sort of thing is wholly fallacious. A man doesn't establish a reputation for truth and honesty by buying it. He earns it over the years by being truthful and honest. Affection he may not get, but respect he should. Today in most countries, we are not liked as Americans. That is not nearly as alarming as the fact that in most countries we are not respected. To earn again the respect which we once had, we will have to forget the idea that what we want we can buy. It isn't that easy.

Is Wolters Abandonment Justified?

EXTENSION OF REMARKS
OF
HON. JIM WRIGHT
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1956

Mr. WRIGHT. Mr. Speaker, under leave to extend my remarks in the RECORD, I should like to include the following editorial which appeared in the Fort Worth Star Telegram on Sunday, January 15. The editorial very succinctly presents a situation involving both ethics and economics:

IS WOLTERS ABANDONMENT JUSTIFIED?

Mineral Wells seems about to suffer a cruel economic blow for the second time in 10 years. This time the blow threatens to be far more damaging than when Camp Wolters was shut down as the country's foremost infantry replacement center at the end of World War II, for the reason that the city and its residents have more invested and have assumed greater financial obligations than before.

The impending blow comes from a decision of the Defense Department to deactivate Wolters Air Force Base, which succeeded the infantry replacement center as a place for the training of aviation engineers. With considerable justification, Mineral Wells feels that it is the victim of bad faith, for its cooperation in the opening of Wolters Air Force Base in 1951 and its more-than-substantial expenditures to accommodate it were based on what it thought was assurance that the installation would be a permanent one.

On the basis of what they viewed as a binding promise, the city government and private firms and individuals have spent heavily to provide such things as housing, recreation facilities, water, schools, utilities and transportation, and streets and churches. As reckoned by a Mineral Wells committee which is trying to prevent abandonment of the base, the total of these expenditures comes to nearly $11 million—no small sum for a city of less than 8,000 population. To add to the city's plight, it gave up a promising industrial development on some of the land of old Camp Wolters in order to make way for the new base.

The taxpayers at large also have a substantial investment in the facilities which now seem about to be abandoned. The investment is in land, in buildings and equipment, in aircraft runways, and in publicly built housing for personnel of the base. In fact, a hospital on the base is now at 70 percent of completion, and runway building is still in progress.

Efforts abetted by the Fort Worth Chamber of Commerce and by Texas representatives in Washington have won no promises so far that this damaging blow to Mineral Wells' economy will be averted. Admittedly, the Defense Department cannot always reconcile its needs with the economic needs of the area in which its installations are situated. But appropriate committees in Congress would be justified in looking into the question of why a $20 million base is

slated for the discard while it is still abuilding, and both the poor planning and the disregard for the taxpayers' money that such an action betokens.

Fuel for Republicans Seen in Truman Memoir Chapter

EXTENSION OF REMARKS
OF
HON. GEORGE A. DONDERO
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 19, 1956

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York Herald Tribune of January 17, 1956

TODAY IN NATIONAL AFFAIRS—FUEL FOR REPUBLICANS SEEN IN TRUMAN MEMOIR CHAPTER

(By David Lawrence)

WASHINGTON, January 18.—"O that mine enemy might write a book"—it's an old slogan and has its application to the 1956 Presidential campaign. For the latest installment of the memoirs of former President Truman seeking to defend the loss of China to the free world is about as useful a piece of political ammunition as the Republicans could acquire this year.

When, as Mr. Truman declares in the current installment published in Life magazine, the loss of China is due to the fact that Chiang Kai-shek wasn't conciliatory enough toward the Chinese Communists, the whole issue surrounding the Democratic administration's tragic policies in the Far East is revived.

The American people have not only been brought to the brink of war in Formosa but they lost 140,000 casualties in Korea in an actual war because the policies of the Truman administration turned out to be to the advantage of the Communist government in China.

Mr. Truman says that General Marshall tried to get Chiang Kai-shek to agree to a coalition government. The general, to be sure, was acting on the basis of detailed instructions prepared for him by experts in the Department of State whose fidelity to the best interests of the United States versus Soviet Russia came into question later in hearings before congressional committees. Nobody with a sense of fairness has ever suggested that General Marshall knew the sinister influences at work in the Department of State. For, as a good soldier, he followed orders. But the fact is that the idea of a coalition government in which the Communists and the Nationalists would participate was a hoax from beginning to end.

COALITION TRICK

The coalition idea had already resulted in the sellout of the people of Poland through the Yalta agreements, and it isn't hindsight as Mr. Truman argues now, to recall that point. For the whole world knew the Communists were using the coalition trick to gain military supremacy. Indeed, they notified the American negotiators in China that they wouldn't integrate their armies under any circumstances. How could Chiang Kai-shek agree to a coalition government while his enemies were maintaining an armed force to continue their military pressures?

Mr. Truman says, in effect, that the Nationalists should have surrendered because they didn't have a chance militarily to win, and General Marshall thought so, too, but the opinion of other observers, including the American Ambassador, Leighton Stuart, an educator of wide experience in China, was that the failure of American aid to come at the opportune moment was the real cause of the weakness of the Nationalists and the disintegration of their armies. Many Nationalist military commanders went over to the enemy because they saw the United States withdrawing moral support from Chiang Kai-shek.

Mr. Truman boldly defends what the Treasury did. He doesn't mention the late Harry Dexter White, named in congressional hearings as a Communist spy, who sat in the Treasury Department with full power to say when the money promised Chiang Kai-shek would be forwarded or held back. The former President commended Harry Dexter White in writing on April 30, 1946, even after J. Edgar Hoover, Director of the FBI, had in November 1945, and February 1946, called the President's attention to the questionable record of White's relations to the Communists.

TRUMAN ON THE LOAN

On the subject of the loan, Mr. Truman doesn't identify the Treasury experts who held it up but he writes:

"General Marshall devoted his brief stay in Washington (March–April 1946) to talk with Government officials regarding loans for China and aid in the form of shipping and surplus property. I instructed the Treasury Department to cooperate with him in every way, and an agreement was reached for an immediate loan to China of $500 million. Unfortunately, when nothing but the Chinese signature was lacking on this document, Chiang Kai-shek's representative, the Chinese Ambassador in Washington, insisted on changes before he would sign. And to complicate the matter further, the Generalissimo on the same day made a speech in China that was in effect a call to arms. It is no wonder that the Treasury experts felt that it would not be in line with our policy to make a loan if political settlement was not forthcoming in China. They were correct."

This is by no means all of the story, but it is a sensational paragraph nonetheless. It shows that Mr. Truman either didn't know how the loan was being squelched by some persons in the United States Treasury Department friendly to the Communists, or else that he naively accepted the superficial explanation which he now repeats.

For certainly Chiang Kai-shek had to keep on fighting. The Communists were refusing to dissolve or disarm their forces. Already betrayed by the Yalta agreement which secretly gave Soviet Russia advantages in Manchuria that paved the way for the conquest of all China by the Communist Chinese, the Nationalist Government of China was deserted at a critical time by the United States Government, which welched on its promises and involuntarily built up a Communist regime in the Far East that any day may bring the world to the brink of war.

Tribute to the Young

EXTENSION OF REMARKS
OF
HON. HAROLD C. OSTERTAG
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 19, 1956

Mr. OSTERTAG. Mr. Speaker, so much is said and written these days about the destructive, antisocial habits of the younger generation, that our thinking about them is in danger of getting out of focus. It has been my observation that the young people of today are smarter, better informed, more ambitious, and more conscious of their obligations to each other and to society than those of other generations. Juvenile delinquency is a fringe problem. The great mass of young people are pulling their weight and acquitting themselves with credit.

In order to call attention to, and underscore this fact, Mr. Speaker, I intend, during the present session, to insert in the RECORD, illustrative accounts of young people in the 39th Congressional District of New York who are winning distinction in many fields. Under leave to extend my remarks, I include today accounts of three young women of western New York who, on the basis of outstanding qualities of leadership and character, have been selected to participate in the good citizenship contest of the Daughters of the American Revolution. The accounts are all from the Batavia Daily News of Tuesday, January 17, 1956:

ELBAN IS SELECTED FOR DAR'S CONTEST—MISS SALLY WARBOYS OF DRAKE STREET ROAD, WILL REPRESENT BATAVIA GROUP

Miss Sally Warboys, daughter of Mr. and Mrs. Irving Warboys of Drake Street Road, has been selected by faculty members and fellow classmen to represent Elba Central School in the DAR Good Citizenship contest, sponsored by the Batavia chapter.

Miss Warboys has been an outstanding leader throughout high school. She has served as student council representative and secretary as well as corresponding secretary of the county organization.

Interested in sports, she has been a cheerleader for 4 years, a member of the Girls' Athletic Association and Leaders' Club.

In the school band for 6 years, she played in the county band 3 years and has won 3 awards for solos in State competition. She has participated in chorus, dramatics, and public speaking. This year she is editor of the school yearbook.

Miss Warboys was elected to the National Honor Society when a sophomore. She plans to attend Buffalo State Teachers College, specializing in the education of handicapped children.

A member of the First Presbyterian Church of Elba, she has been active in Westminster fellowship, serving as treasurer of the local group and vice moderator of the County Young People's Council.

SENIOR AT PAVILION NAMED GOOD CITIZEN; RECEIVING DAR AWARD

Barbara Griffith, daughter of Mr. and Mrs. W. W. Griffith, of Wyoming, was chosen by the senior class as Pavilion Central School's "good citizen" to represent the DAR. The qualifications were based on dependability, service, leadership, and patriotism.

Upon submitting her essay "The Spirit of '76 in 1956," Barbara became entitled to receive a certicate of award from the National Society and to wear the DAR Good Citizenship pin. Barbara is a member of the National Honor Society, the yearbook staff, is active in the Girls Athletic Association, and has been a member of the cheerleading squad for the past 4 years. She participated in the junior and senior plays, has been a member of the student council for 3 years, was editor of the school paper during her sophomore and junior years, and was president of her class in the sophomore year.

Barbara plans to enter Nazareth College in Rochester in the fall.

LYNDONVILLE STUDENT NAMED FOR DAR AWARD

LYNDONVILLE.—Judith Ann McCargar, 15, a senior at Lyndonville Central School, has been picked as the school's representative for the annual Daughters of the American Revolution Good Citizenship award, according to Principal Robert Starr.

She is the daughter of Mr. and Mrs. Harold McCarger of Marshall Road.

The Merchant Marine

EXTENSION OF REMARKS
OF
HON. FRANCIS E. DORN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 19, 1956

Mr. DORN of New York. Recently all New York City newspapers gave prominence to a roundup story showing that a total of 132 big ships had made their maiden visit to the world's largest port during 1955.

New York is my home port, and port officials there were greatly gratified to learn that such a great flotilla of fine vessels had passed the Statute of Liberty for the first time and docked at the city's piers carrying passengers and cargo from all over the world. It was good news, indeed, for everyone except those of us in Congress who hold the interests of the American merchant marine to be one of our paramount considerations

As a member of the House Merchant Marine and Fisheries Committee I read these stories with keen disappointment. For, out of the grand total of 132 ships making their initial visit to New York, only 6 flew the American flag. Twenty-two times that number carried foreign flags. This is distressing news, indeed, for anyone holding the firm conviction that the American merchant marine is not only vital to our whole economy, but to our very security as a Nation.

The American Legion and Veterans of Foreign Wars at their last annual conventions again emphatically stressed the necessity of a strong American merchant marine as a vital defense factor. These veterans' organizations realize, probably more deeply than anyone else, the hard fact that it was the American merchant marine that made it possible to fight and win two great World Wars on the enemy's territory instead of fighting it out here on our own. It was this offensive defensive which paid off so brilliantly, and it was our own merchant marine which made it possible.

But the figures I have cited on new-vessel arrivals in my own home port are a dramatic warning. We are letting our merchant marine, the most powerful defense corollary of our Armed Forces, decline. It will decline even more rapidly unless Congress meets head-on a new threat whose ominous proportions at last are made clear. I speak of the oncoming attempt by foreign-flag steamship lines, with the direct assistance of their governments, to break down the historic 50–50 law whereby American ships are carrying half of the relief cargoes we are sending to those very countries. These cargoes are financed by the American taxpayer. Because of this, you would naturally think that our foreign marine competitors would accept the fair and just principle that Americans just be given an even break with their own. But no. Apparently they want to transport it all. If this strikes a paralyzing blow at our merchant marine, well, so what?

The exposure of this calculated plot was fully revealed just the other day by Francis T. Greene, president of the American Merchant Marine Institute. Appearing before the National Security Commission of the American Legion here in Washington on January 18, Mr. Green charged that there is a collective conspiracy by powerful foreign steamship groups to pressure Congress into emasculating one of its laws, "to the detriment of our national security and the security of the free world."

President Greene told the Legion Security Commission that the law the foreign shipping interests sought to break down is the statute which the Legion has strongly supported for years, guaranteeing that 50 percent of the cargoes for foreign relief and paid for by American taxpayers, must be carried in American ships.

It is due largely to the vision and support of the Legion that Congress each year has assured the American people that their own merchant marine shall be used to transport a fair half of these cargoes—

Mr. Greene said.

The hope of this conspiracy by foreign steamship lines is to mislead the American farmer and the American people into the belief that the fair and equitable 50–50 law is blocking surplus agricultural disposal—

The shipping official told the Legion. He continued:

Thus, the foreign shipping associates, by arousing the fears of American agriculture, hope to ride on the back of the American farmer and tear down the 50–50 law. These foreign shipping lobbies could never do this by themselves.

Mr. Greene charged that as early as September 1954, the principal European maritime nations represented by the Organization for European Economic Cooperation, made the pointed suggestion that their member countries, rather than abide by the 50–50 provision in American law, might prefer to take care of their agricultural requirements elsewhere.

The American shipping official cited an impressive list of collusive incidents by Scandinavian shipowners' associations in refusing to buy American agricultural products where the 50–50 law applies.

This documented record proves that the Western European shipping associations have induced their governments to raise the 50–50 issue in their own self-interest in order to put pressure on the American farmer to put pressure on our Congress to remove this essential safeguard for our own merchant marine—

Mr. Greene added.

All these attacks by foreign shipping interests on American laws violate a basic tenet of American Legion policy, which supports a strong American merchant marine as being vital to our security as a nation—

Mr. Greene testified.

The authoritative Defense Department estimate is that this country should have not fewer than 1,085 ships in the dry-cargo category alone—

Mr. Greene said.

This is greater than our entire private merchant marine today, tankers included.

Another factor impairing the efficiency of the American merchant marine as a defense auxiliary is the direct competition of the Military Sea Transportation Service with our commercial passenger fleet, Mr. Green said.

Currently, MSTS is operating 47 Government-owned passenger ships, as against 39 privately-operated liners. While this direct competition is destructive, the paramount issue is the retention of the 50–50 principle. Its emasculation or abandonment would put American exporters in general, and American farmers in particular, at the mercy of discriminatory foreign-flag rates. All Americans who produce any commodity for export need the assurance of reliable ocean transport. This can be given only by a merchant marine under American control. It is my sincere conviction that elimination of 50–50 from Government-financed sales of Government surpluses, or from any other category of public cargo to which it now applies, would, in the long run, be no less a disaster for American agriculture and industry than for American shipping, which it would severely cripple, or for our national security, which it would dangerously jeopardize.

House Joint Resolution 433: To Expand and Improve Our International Information Programs

EXTENSION OF REMARKS
OF
HON. EDMUND P. RADWAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 19, 1956

Mr. RADWAN. Mr. Speaker, under leave to extend my remarks, I want to submit the proposals made by Mr. Walter V. Chopyk before the World Fellowship at the University of Buffalo, Buffalo, N. Y., on December 9, 1955. Mr. Chopyk is a leading citizen and civic worker in the city of Buffalo, and holds the position of secretary to the Department of Public Works, city of Buffalo.

The proposals submitted follow:

1. Formation in next Congress of a joint congressional committee on United States International Information Programs. In other words, passage of House Joint Resolution 433 which calls for this. Purpose: To finance, expand, and improve our information program to compare with Moscow's.

2. With this expanded program, concentrate especially on the non-Russian nations in U. S. S. R., with Russian colonialism and imperialism as the prime targets. We should hammer away on the basis of a resolution adopted by the House of Representatives in 1955 against Russian colonialism.

(a) Russian propaganda in southeast Asia portrays Ukraine, etc., land of great prosperity, etc. Why? To mislead the Asiatics that there is any Russian colonialism in U. S. S. R. and to, therefore, associate more closely with

Moscow against the West and its colonial powers, such as England and France, our close allies.

We must counteract this in Asia and give the truth, centering attention on Russian colonialism.

3. Press still for United States Ambassador to Ukraine and Byelorussia, to force this concentration in America on the non-Russian nations and play up to them in order to split the basic Russian empire in the form of the U. S. S. R.

4. The Government follow the once proclaimed policy of liberation by supporting undergrounds in Europe and Asia. This can be done without precipitating any war. Time is with Moscow, not us.

Of the People, by the People

EXTENSION OF REMARKS
OF
HON. FRANCIS E. DORN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 19, 1956

Mr. DORN of New York. Mr. Speaker, 71 years ago a group of German-American immigrants founded the Workmen's Benefit Fund of the United States of America, to provide mutual help in times of economic crises. This year its publication Solidarity celebrates its 50th anniversary. I ask unanimous consent to have printed in the Appendix of the RECORD an address by Mr. Morton B. Lawrence before the national executive board of the Workmen's Benefit Fund of the United States of America, on January 12, 1956:

OF THE PEOPLE, BY THE PEOPLE

The history of the Workmen's Benefit Fund is the story of individuals joining together to work for the common good. It is a familiar story for Americans, but it can never be told too often. For it repeats in its own special way the pattern of America and its growth.

The story begins—like the American story—with a group of men who sought political asylum. With their families they fled the oppressive laws of Germany under Bismarck, the Iron Chancellor, in the 1880's. They came to the United States. They came as free men—machinists, cigarmakers, and other skilled craftsmen, to work and to raise their families in freedom. A major part of that freedom is the right of men to organize to protect themselves—from political tyranny, from economic exploitation, from the poverty which follows upon the sickness or death of the family's provider.

Wage earners in the 1880's could not fall back upon savings, as their paychecks were small. Neither was there any aid from the Government, or organized charity, to which they might turn. On September 24, 1884, a group of those exiled German workers met for the purpose of forming an association which would protect its members in times of sickness or death. Scandals had brought the established profitmaking insurance companies into disrepute. "Order of the day," the minutes of that meeting read, "Self-help." Less than a month later, on October 19, 1884, that association was founded—the General Workmen's Sick and Death Benefit Fund of New York and Vicinity.

The beginnings were modest enough: payments to begin when the organization had 75 members; weekly sick benefits of from $6–$9; a death benefit of $75. These payments seem insignificant in the light of today's wages and the cost of living, but it should be remembered that 70 years ago $7 a week was the salary of a skilled working man. Only a few months after the establishment of the society, it was faced with a dramatic challenge. Two members died. The $150 needed in death benefits had not yet been collected in the treasury. Had the society failed its members in that crisis, it could not have survived. But the enterprising treasurer raised the money by borrowing from friends. The death benefits were paid, and the society's reputation for honesty and reliability was thereby established.

The membership rolls expanded. By 1887 there were 4 branches with 527 members. By the end of 1888 there were 733 members and 15 branches in 3 States: New York, New Jersey, and Massachusetts. Growth was so rapid and so extensive that the society's name had to be changed to include the wider territory; it was now called Workmen's Sick and Death Benefit Fund of the United States of North America. (The designation North was later dropped.) After 1888, sick benefits were extended to 26 weeks, with another 25 weeks at half benefit, and death benefits were raised from the original $75 to $150 in 1888 and $250 in 1891.

With such rapid growth, there was a sharp need for new administrative machinery. The small group of German workmen who founded the society had provided a completely democratic organization, and the organization proved flexible enough to meet the needs of expansion. Headquarters were expanded too—from a small office on East 4th Street at $6 a month to a store at $12, and by 1889 the society leased larger quarters in the Metropolitan Savings Bank Building on Third Avenue, which remained its home until 1930 when it moved into its own building at 714 Seneca Avenue in Brooklyn.

The problem of coordinating the activities of the member branches with the main administration was met and solved by holding a convention. The first was held in November 1892 and there all branches were represented. A second convention met in 1895 and a third in 1898. In 1898 the National Executive Board applied for incorporation of the society. There were now 161 branches in 21 States and over 20,000 members. Eminent personalities began to join the organization, among them the genius in the field of electricity, Charles Steinmetz, who for a time was the financial secretary of one of its branches, Daniel Hoan and Jasper McLevy, many-term mayors of Milwaukee and Bridgeport respectively.

By 1905, the society had grown so large that it needed its own publication to spread news of its activities to its membership. At the convention of that year, a motion was passed authorizing the publication of a paper, Solidarity. Its first issue appeared in April 1906 and it has since been published regularly for half a century as the official organ of the society. Its policy was stated clearly in that first issue: "Our paper shall be a means of enlightenment and conciliation. Its best efforts will be given to that great work of culture: The winning of the workers to the goal which we must set for ourselves * * * enlightenment, teaching, education are the prerequisites."

The Workmen's Sick and Death Benefit Fund had been founded by German immigrants, and in its early years it remained essentially German in composition. The convention of 1910 proposed, among other things, the organization of English-speaking branches. During World War I the society, like all German-American groups of the times, was subjected to a certain amount of harassment by self-styled superpatriots. Its loyalty to America, however, was never questioned, and the society grew in strength during the war. Soon after World War I, the United States Department of Labor asked the society for permission to scan its records for statistical purposes, because the organization's sick benefit figures were at that time practically the only source of health insurance statistics. The society gladly cooperated with various Government agencies, for it had been an early advocate of a system of Government-run social security. Even today, the society is urging broader coverage and higher benefits under the social-security laws.

The postwar period was one of expansion and consolidation for the society. In 1928 the organization adopted new additions to its benefit structure: women could now join the sick benefit group, and children were also admitted to the society. Membership rose to a new peak in 1929. In 1934, when it celebrated its 50th anniversary, it could look back with satisfaction over its half-century with the knowledge that it had survived war, labor unrest, and the great depression. During the period of great unemployment, its relief fund had helped thousands of members to survive. No person was dropped from membership for nonpayment of dues, so that regardless of the members' economic condition, they were eligible for benefits in times of sickness and distress.

In a new era, which recognized the rights and duties of men to organize in their own interests for their security and protection, the society moved ahead steadily. In 1939 at the 18th convention, its name was officially changed from Workmen's Sick and Death Benefit Fund to Workmen's Benefit Fund. Once again, as it had done many times before, the Workmen's Benefit Fund asserted its firm opposition to fascism, nazism, and communism, "with their intolerance, hatred, persecution, and destruction of culture, freedom, and peace." At this convention, too, the medical care and hospital plan was adopted on a national basis, following the institution of similar services by local branches a few years earlier.

The Workmen's Benefit Fund continued to expand its activities and its services to members. The 20th national convention of 1943 set up a life-insurance program of regular and endowment policies. The emergency relief fund had been greatly strengthened and is constantly being used to help member families that suffer from unemployment or other financial distress, such as that caused by floods or other disasters. District committees were set up to coordinate the activities of the many branches. These include not only the insurance and health benefits, but such varied services as camps for children in various part of the country, homes for the aged and convalescent. Local branches are, of course, also engaged in social and educational activities and support national and community drives for charitable and health purposes. Many branches provide general practitioner care and, in metropolitan areas, an excellent medical specialist service. By 1955 the membership was 58,000 in 26 States.

Over the years of growth there have been many changes, but the fundamental structure of the workmen's benefit fund has remained unchanged. At the 70th anniversary celebration in 1954, guest speakers Mayor Robert F. Wagner, of New York, and United States Senator HERBERT H. LEHMAN, praised the society in glowing terms for its years of dedicated service to democratic ideals and to the enactment of forward looking social reforms and legislation. The editor of its magazine Solidarity reiterated briefly just what their organization means to its members: "In itself, the society is a very sober-minded affair, a purely protective institution, organized for self-help on a nonprofit basis. The very purpose gives the organization its idealistic aims. For this reason, progressive thinking men and women of all national origins, and of all occupations, can be active in the workmen's benefit fund as they are active in political, educational, and economic organizations."

Thirteen-Cent Hogs to Seventy-Nine-Cent Chops

EXTENSION OF REMARKS
OF
HON. WALTER NORBLAD
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1956

Mr. NORBLAD. Mr. Speaker, under leave to extend my remarks, I include herewith an editorial written by Mr. Robert Ingalls in the Corvallis (Oreg.) Gazette-Times:

THIRTEEN-CENT HOGS TO SEVENTY-NINE-CENT CHOPS

Ever wonder how come the farmer is getting less for his produce and you are still paying the same high price in the market? We have. There is an article in the December issue of the Farm Journal by Dean Wolf which explains this unhappy situation pretty well.

Mr. Wolf decided to go to a farm and witness the selling of some hogs and travel with them until they appeared on someone's dinner table. He kept cost records along the way of each item which went into the processing and the selling. His experience is an interesting one and helps to show why a 13-cent a pound hog gives us pork chops which cost as much as they did when the farmer got a much larger bite. We'll try to summarize the article for you.

Wolf went out to a farm in Iowa where he found people in that area were raising 5 percent more pigs than last year (the national total is 9 percent more) and in the week he began his experiment the slaughter was 24 percent higher than the previous year. Here, of course, is one of the big troubles.

The first cost on the hogs started when a small truck picked them up at the farm and transported them to a nearby community where they were reloaded for the 200-mile haul into Chicago. The expense here (on 32 hogs) was 63½ cents per hundredweight; 50 cents for the truck; 3 percent Federal tax on the trucking charge and 12 cents for in-transit insurance.

At Chicago the pigs were sold. The stockyard bite was $11.16 for yardage and $4.20 for 2 bushels of corn. Fire insurance took 7 cents and the National Livestock and Meat Board got 21 cents to use for promoting pork. The stockyard cost is the same as last year even though the CIO stockyard employees got a 5-cent an hour boost last December and a 13-cent increase this August.

Commission firms are still charging the same selling prices as back in 1951 atlhough their wages have gone up 5 percent to 10 percent just in the past year. The 31 hogs—1 died—were sold by the commission firm for $11.77 or 38 cents a hog.

All these charges have been against the original farmer. The hogs which sold for $14 a 100 pounds in Chicago returned him $12.88 a hundred back in Iowa.

Armour & Co. who bought the hogs, shipped them to their plant in New Jersey. Freight charges are 15 percent higher than last year and now total $1.05 a 100 pounds. Railroad costs have been upped on this line in the past year. Yardmasters' pay checks are $21 a month fatter and base pay for trainmen is up 10½ an hour. The conductor in the caboose where Mr. Wolf rode told him his annual wage was $7,300 a year.

With the increase in railroad costs Armour & Co. now had $16.48 in their $14 hogs.

The packers handling margin on the fresh pork from a 192-pound hog averaged $3.98 the week these hogs were sold compared to a $3.17 margin a year ago. That's an 18½-percent boost compared to the farmer's 28-percent cut.

This isn't all profit though. Costs are averaging 12 percent higher than last year. (Labor in this packing plant is up 19.3 percent, the average wage rate is $1.97 per hour plus fringe benefits.)

Up to this point with the hog killed, cut up, and in the plant's cooler, the costs for each 192-pound hog amounted to $32.49.

With the hog cut into pieces, each different cut was valued at a different amount. Up to this point it was easy to tell who had been paid and how much for handling these hogs, but from here on out the author found it impossible. The pieces went in all directions.

He decided to follow a pork loin. It went to a supermarket in New York. The market paid Armour a wholesale price of 40 cents a pound, only 3 cents less than on the same day a year ago. Center-cut pork chops from that 40-cent loin sold that day for 79 cents a pound yet the meat department manager said he was having a hard time making last year's figures. Like everyone else, he complained about rising costs.

Supermarket costs on a pork loin are for slicing, wrapping two chops in a cellophane package, and various overhead charges. Labor, a big item, has gone up 30 percent at this one market in the past year. It costs 12 cents just to put an empty package on the meat counter when all the overhead is figured.

Mr. Wolfe stood in the meat market until a Mrs. S. J. Ciaccio came along and bought the chops and he was invited to eat them with the family at Sunday dinner.

What were Mr. Wolfe's conclusions from this trip? He says, "Well, one thing was that the further you go back toward the farmer in the lineup of middlemen, the less anybody was making. And the farmer is by far the worst off of all.

"It was hard to tell what the retailer and the packer was making compared with a year ago, but it is generally believed that they are doing better. The railroads are showing increased earnings too.

"But the one group that is doing better for sure is organized labor, wherever you find it. And the one group that is doing a lot worse is the hog raiser."

The Late Dr. Will W. Alexander

EXTENSION OF REMARKS
OF
HON. CARL T. DURHAM
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 19, 1956

Mr. DURHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I should like to express my regret in the passing of Dr. Will W. Alexander, who died from a heart ailment in my home town of Chapel Hill last Friday.

Dr. Alexander had been in failing health for the past 4 months but until recently he carried on his duties with the Rosenwald Foundation.

Will Alexander lived a full and rewarding life and served in many posts of distinction in his long public career. Ordained as a minister, he served churches in Tennessee before leaving the ministry to become executive director of the Commission on Inter-racial Cooperation in Atlanta. He was president of 1 college and trustee of 5 colleges. An assistant director of the United States Resettlement Administration and vice president of the Rosenwald Foundation, he labored faithfully to improve living conditions for many groups, particularly in the South. Under the late President Franklin D. Roosevelt, Dr. Alexander served as Director of the Farm Security Administration.

Known nationally as a race relations authority, Dr. Alexander was awarded in 1928 the Harmon award for service in American race relations.

On retirement, Dr. Alexander moved to Durham County in my district, and bought a farm. He had many friends and admirers in the university community of Chapel Hill, and his counsel and advice were often sought. He will be greatly missed throughout the South and the Nation, and I am sure many Members of the House who knew him and know of his work and influence will regret the ending of a useful life devoted to the public good.

Honor for Us

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1956

Mr. MULTER. Mr. Speaker, I direct the attention of our colleagues to the following editorial which appeared in the January 13, 1956, issue of the New York Journal-American:

HONOR FOR US

William Randolph Hearst, Jr., editor in chief of the Hearst newspapers, started a campaign for better roads for this country more than 3 years ago.

At that time he had never heard of the George S. Bartlett Award, presented annually to the individual who contributed outstanding service to highway progress.

His orders to the Hearst newspapers were to battle continuously in the cause of better roads until that cause was victorious.

The chips and the awards could fall where they may.

However, since Mr. Hearst has now been awarded the Bartlett plaque, the Hearst newspapers are enjoying that comfortable sense of well-being that comes when you know that your efforts are recognized and appreciated.

Presentation of the award means that Mr. Hearst has been selected as the one man who did more for the better-roads movement during 1955 than any other person in America.

Who says so? Three authoritative organizations: The American Road Builders Association, the American Association of State Highway Officials (of all 48 States), and the Highway Research Board of the National Academy of Sciences.

The award was presented to Mr. Hearst at Miami Beach yesterday by L. L. Colbert, president of the Chrysler Corp., representing the three organizations. Mr. Colbert said many nice things about the Hearst newspapers and the effectiveness of our 3½-year-old better-roads campaign, for which this is formal thanks.

We know that Mr. Hearst will not mind our sharing this award with him because, by

his own direction, this has been a Hearst organization fight. All of the facilities and skills available have been used for the single purpose of securing adequate highways.

Thus all of us in the Hearst organization rejoice at the honor received by the man who started it all and, once started, has seen that it did not falter.

We have never heard of the Bartlett award either, but just between you and us, we're tickled pink that there is one and that Mr. Hearst has it.

And now back to the roads battle, and won't you pitch in and help us?

The Sordid Picture of Integration in the Nation's Capital—Part I

EXTENSION OF REMARKS
OF
HON. JOHN BELL WILLIAMS
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 18, 1956

Mr. WILLIAMS of Mississippi. Mr. Speaker, a long-time Washington newspaperman, Mr. Howard Suttle, has recently written a series of articles on the subject of racial integration in the Nation's Capital. Mr. Suttle wrote these articles only after long and exhausting study into the operation of integrated public schools and other public institutions in the District of Columbia.

Because the whole story of integration in the Nation's Capital will not be found in the local newspapers or in the left-wing-controlled periodicals of the country, I am placing these articles in the CONGRESSIONAL RECORD.

Mr. Suttle's candid exposure of hypocrisy among our top-level Government officials, his frank but sordid picture of racially amalgamated public schools in operation and the other startling information in these articles deserve the attention of our people.

Under leave to extend my remarks in the Appendix of the RECORD, I am including herewith Mr. Suttle's first article, which appeared recently in the Jackson (Miss.) Daily News and other papers throughout the Southern States:

[From the Jackson (Miss.) Daily News of January 9, 1956]

INTEGRATION PICTURE IN WASHINGTON IS SORDID

(By Howard Suttle)

(EDITOR'S NOTE.—Veteran Washington newsman Howard "Slim" Suttle his spent the past few weeks digging into the facts beneath the surface of the District of Columbia's newly integrated public schools. In a series of articles beginning today in the Jackson Daily News he gives the true picture of the failure of integration in the Nation's Capital.)

WASHINGTON.—When Mississippi's Senator JAMES O. EASTLAND in an address in early December held up to ridicule Washington's system of integrated public schools he was immediately denounced as a "bigot" by minority pressure groups.

The truth about the sordid facts connected with integration in Washington was the one thing the "Mix-ie-crats" didn't want aired.

They immediately intensified their left-wing propaganda in frantic efforts to "wash over" the ugly picture that has developed in the Communist-inspired campaign to promote racial discord in the United States.

That they wield considerable influence through political intimidation of Members of Congress, the United States Supreme Court and other public officials became quite obvious when President Eisenhower recommended a few days ago that Congress set up a bipartisan commission to investigate alleged violations of the so-called civil rights of Negroes "in certain sections of the Nation"—meaning Mississippi and other Southern States.

It also is quite obvious that the President, himself, has been misled concerning the true facts about racial "mixology" in the United States.

EASTLAND, in his address, recalled that minority pressure groups such as the NAACP had boasted that integrated schools in the Nation's Capital, now in their second year of "mixology," would be an "example of how good racial integration would be."

"Now they do everything possible to hide the example," EASTLAND said, "but the facts are leaking out."

The alarming and distasteful facts sustain EASTLAND'S contention that mixed public schools in Washington are not by any means attaining the success claimed for them by the "Mix-ie-crats."

But in Washington, as in many large northern cities, newspapers in the city and area have shied from printing the true facts concerning the failure of integration.

HOME RULE FAILED

Negroes have been coming to Washington to live in increasing numbers since the end of the War Between the States. It was, in fact, the influx of former slaves into the Capital that caused Congress to end the system of "home rule," under which District of Columbia citizens once elected their officials under the so-called territorial system.

Years before the big-city bosses of today, such as New York's Carmen De Sapio, Chicago's Jack Arvey, and Pittsburgh's Dave Lawrence, adopted the Negro vote-bait formula, a character known as Boss Shepherd had built a corrupt Washington political machine by organizing and bloc voting the ex-slaves.

The political odor of Washington became so offensive to Senators and Congressmen—even to those generally accustomed to offensive political odors—that a policy was laid down under which Congress would in the future "exclusively govern the District of Columbia." Thus ended Washington's system of home rule, return of which leftwing and minority pressure-group bosses clamor so loudly for today.

Fifteen years ago Washington was virtually a "southern city."

Separate schools were operated for white and Negro children. These included not only the primary, elementary and high schools, but also Wilson Teachers College for whites and Howard University, affording both undergraduate and postgraduate courses for Negroes.

The District of Columbia government maintained separate public parks, play grounds, golf courses and swimming pools. About the only difference in the segregation picture between Washington and southern cities was that separation of the races was not practiced in street cars and buses.

At that time, however, the influence of the minority pressure groups and their intimidation of the politicians who desired their balance-of-power votes in elections had already begun to transform the United States capital from the cultural center it had been into the "crime capital of the world."

NAACP OFFICES IN SLUMS

It's rather ironical to drive through the New Jersey Avenue slums and note that headquarters for the National Association for Advancement of the Colored People, with its perpetual multi-million-dollar slush fund, is in a ramshackle building in the midst of these slums.

NAACP could very well maintain clean, luxurious offices in clean surroundings. However, visitors to NAACP headquarters would then be denied the opportunity to see the squalid conditions upon which the politically potent organization, infiltrated with notorious Communist-fronters, relies for grist for its propaganda mill.

The story of the transformation of Washington into a Negro-coddling city, where the Police Department handles with kid gloves blacks charged with crime, is a sordid one.

It's also a story of political intimidation of public officials, many of whom, believing they needed minority group votes to stay in office, joined in the well-organized move to break down separation of the races, reduce economic and social standards achieved by white leadership and retard the education training of students—an obvious intellectual "slowdown," patterned after the industrial "slowdown" dictated by union brass hats.

These minority groups, aided and abetted by their political stooges, set out to achieve their integration objectives, even if, in the achievement, it mean abrogation of the Federal Constitution and destruction of the principles upon which the United States has reached world leadership.

RAPE CASES RAMPANT

That the soft attitude toward crime among Negroes in Washington had an encouraging effect upon those with criminal inclinations is most obvious.

The records show that around 75 percent of Washington crime is committed by Negroes. Negroes commit about 5 murders to every 1 for the whites. Rape cases of record show Negroes leading at the rate of about 7 to 1. This does not include the unreported rape cases, in which white victims—mostly school students—decide to remain quiet rather than subject themselves to the public disgrace they would have to bear through no fault of their own.

About 15 years ago, police found the body of a white Government girl, raped and mutilated, in an alley. She was the first of a number of women who were apparent victims of the same person.

The criminal, a Negro named Theodore Roosevelt Cato, was finally caught—but not by Washington police. Cato decided to transfer his activity to New York, where he raped and murdered a white woman, was caught and returned to Washington, tried, convicted, and electrocuted. He confessed to several of the crimes before his execution.

The Cato case was the first of several hundred that followed. Whether the soft attitude toward minority groups of law-enforcement authorities and politicians in these parts encourage such crime is, of course, a matter for argument.

It seems quite obvious, however, that the activity of NAACP leaders, drawing five-figure salaries and liberal expense allowances, and politicians, supporting integration objectives chiefly because of the vote bait involved, provide encouragement for this type of crime.

The Sordid Picture of Integration in the Nation's Capital—Part II

EXTENSION OF REMARKS
OF
HON. JOHN BELL WILLIAMS
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 18, 1956

Mr. WILLIAMS of Mississippi. Mr. Speaker, herewith the second portion of the articles of Mr. Howard Suttle, which appeared in the Jackson (Miss.) Daily

News and other papers throughout the Southern States follows:

[From the Jackson (Miss.) Daily News of January 10, 1956]

WASHINGTON IS FAST BECOMING AN ALL-NEGRO CITY

(By Howard Suttle)

WASHINGTON.—Early last spring, Mississippi's Senator JOHN C. STENNIS received a telephone call from District of Columbia Commission Chairman Samuel Spencer.

The District of Columbia official asked the junior Mississippi Senator for a conference. The subject involved the question of revenue needs of the District of Columbia government to offset dwindling tax collections.

STENNIS is chairman of the District of Columbia Appropriations Subcommittee, which handles legislation to set aside money for financing the District of Columbia government. Each year Congress is called upon to supplement revenues collected in District taxes from Washington citizens.

Such an annual appropriation is accepted as justified—up to a point. Many thousands of District of Columbia residents, working for the Federal Government, maintain legal residences in their respective home States, where they pay State and local taxes. Congress concedes that with such persons legally exempt from levies in the District, other than sales taxes and taxes upon property they may own, it's fair for the Federal Government to make a lump sum gift appropriation to augment District of Columbia revenues.

REQUESTS BOOSTS EACH YEAR

During the past several years, however, the District of Columbia government has found it necessary to request annual increases of the Federal gift appropriation.

The reason for this situation may be summed up briefly.

Negroes are moving into Washington in increasing numbers. As they move into the District, substantial, tax-paying white citizens are moving into suburban Virginia and Maryland. As the Capital City's black population is swelled, the relief rolls become longer for many of the Negroes go on "de welfare" as soon as they can establish a local address.

The problem of making up the revenues formerly paid by white citizens, who now pay their state and local taxes in Virginia and Maryland, is admittedly serious—a major headache to Senators STENNIS, ALLEN J. ELLENDER, Louisiana; RICHARD B. RUSSELL, Georgia, and other Members of the Senate Appropriations Committee, as well as Members of the corresponding House committee.

NEGRO CENSUS NOT ACCURATE

"I can't give you much sympathy," Representative JAMES C. DAVIS, Georgia, chairman of the House District of Columbia Crime Subcommittee, told a group of D. C. officials a short while ago. "You brought it upon yourselves."

DAVIS was thinking, when he made the statement, of the manner in which facts were suppressed concerning the influx of Negroes into Washington. He remembers well how the Census Bureau took violent issue with those who questioned the bureau's figures concerning Washington's Negro population.

Shortly after announcement of the preliminary 1950 census count, showing the Negro population of D. C. to be slightly more than 25 percent of the total of 802,178, several newspapermen were so bold as to challenge the figures, insisting that Washington's Negro population was at least one-half the total.

NEGROES SLEEP IN SHIFTS

The late Jack Lait and Lee Mortimer, New York newspapermen, are credited with having been the first to apply the word, "ridiculous," to the Census Bureau's 1950 count of Negroes in the District of Columbia. These figures showed a black population in Washington of 280,524. Lait and Mortimer kicked off the controversy in their "Washington Confidential," a sensational-type book purporting to give the "lowdown on the big town."

Census Bureau officials prefer to say as little as possible concerning charges that census-takers, covering Negro slum areas, failed to take into consideration the fact that many black workers sleep in shifts.

It's a fact that in Washington, beds in legitimate use in some of the shacks occupied by Negroes are vacant, in a 24-hour period, only during the few minutes for arising of occupants after their sleep and retirement for the next sleeping shift of those who take their places. In many of these cases, the census-takers thus overlooked 2 Negroes for each 1 counted.

Irrefutable figures showed that Negro students in Washington schools outnumbered the Whites during the 1950–51 session. At that time, there were 47,807 Negro public school students, compared with 46,080 Whites.

That was before the Mixiecrats took over. School integration started in the 1954–55 session.

SIXTY-FOUR PERCENT NEGROES NOW

The manner in which Negroes have poured into Washington the past few years is clearly shown by the increase of Negro students in District of Columbia public schools. Most recent figures on the 1955–56 enrollment show a total of 68,877 Negoes, compared with 38,768 Whites. This means 64 percent of Washington's public school population are Negroes—that Negro students outnumber Whites by 2 to 1.

Twenty years ago, the situation was reversed. At that time, District of Columbia schools had 59,582 White students, 38,768 Negro students.

Today, no other large American city has as great a proportion of Negro students in public schools as has Washington.

An idea of the rapid increase in Negro enrollment is shown by the boost during the present session over the 1954–55 session. Last session, there were a total of 64,501 Negro students, 41,358 Whites. This means that while the Negro student population, in 1 year, went up by 4,826, the total White students dropped 2,590.

This represented a 7.5 percent increase in Negro enrollment, against a 6 percent decrease in whites. In the 1954–55 session, the Negro enrollment increased 8.6 percent, while the white student total dropped 7.7 compared with the 1953–54 session.

DISCRIMINATION IN ASSIGNMENTS

It's interesting to note that minority group leaders, who decry so loudly asserted discrimination against Negroes, seem satisfied with the obvious discrimination—against both white and Negro students—in assignments to District of Columbia public schools.

Washington has 11 high schools, plus 1 for shut-ins; 22 junior high schools, plus 1 for shut-ins; 5 vocational high schools, and 129 elementary schools, plus 1 for shut-ins.

Spingarn High School has a student body of 519, with only 1 Negro. Woodrow Wilson High has 1,207 students, with 2 Negroes. Six white students are enrolled, along with 757 Negroes, at Cardozo High. Eastern High, scene of a large amount of the trouble among students since integration, was once an all-white school. Today, Negroes at Eastern outnumber the whites.

A check of elementary schools will show the discrimination more extended. A. Bowen with a total of 519; Carver, with 712; J. F. Cook, with 801; Langston, with 327; Grimke, with 816, and Barrville, with 713 each has a lone white child among all the blacks.

Van Ness School has 4 whites, 207 Negroes; Van Ness Annex, 5 whites, 207 Negroes; Taylor, 3 whites, 293 Negroes; Perry, 4 whites, 355 Negroes; Morgan, 2 whites, 691 Negroes, and Monroe, 3 whites, 503 Negroes.

Ann Beers School has 1 Negro, 632 whites; Key, 3 Negroes, 208 whites; Takoma, 3 Negroes, 358 whites; Stoddert, 3 Negroes, 275 whites; Randle Highlands, 5 Negroes, 311 whites; Murch, 4 Negroes, 665 whites; Maury, 1 Negro, 340 whites, and Simon, 5 Negroes; 1,104 whites.

This type of discrimination in assignment of students is one of several reasons why white parents in Washington are trying frantically to get their children into private schools of the area. It's also one of the reasons why the segregated private schools are operating at capacity—sometimes higher—and have waiting lists.

The Sordid Picture of Integration in the Nation's Capital—Part III

EXTENSION OF REMARKS

OF

HON. JOHN BELL WILLIAMS

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 18, 1956

Mr. WILLIAMS of Mississippi. Mr. Speaker, following is the third portion of Mr. Suttle's article:

[From the Jackson (Miss.) Daily News of January 11, 1956]

LAWMAKERS' CHILDREN ATTEND SEGREGATED SCHOOLS

(By Howard Suttle)

WASHINGTON.—White House Press Secretary James C. Hagerty was fast on his feet when asked by reporters about attendance by President Eisenhower's grandchildren at a private, segregated school, in Alexandria, Va.

The President's grandchildren, whose father is Maj. John Eisenhower, are attending Episcopal School, an all-white denominational institution for children, across the Potomac from Washington.

When asked at a White House press conference about this, Hagerty replied that Major Eisenhower and his family live in Alexandria—not in the District of Columbia. The inference, of course, was that even if the Eisenhower children attended a public school in Virginia, as of now, it would also be a segregated school.

The inquiry to Hagerty was inspired by an address by Mississippi's Senator JAMES O. EASTLAND, who called attention to the fact that the President's grandchildren were attending a private, segregated school.

"President Eisenhower's own children have been removed from a system that permits integrated schools, and placed in a private Episcopal school in Alexandria, Va.," EASTLAND declared in the speech, delivered, December 1, in Jackson before the Mississippi Association of Citizens Councils.

But whether Hagerty had told the complete story when he sought to kiss off the EASTLAND statement with an explanation that Major Eisenhower and his family live in Alexandria, not in the District of Columbia, appeared worth looking into. Major Eisenhower and his family occupy a home at Fort Belvoir, located in a group of houses set aside for officers on the post.

Fort Belvoir schools are integrated, in conformance with military policies dictated during the Truman Administration, after General Eisenhower had left the office of Chief of Staff, but continued under the administration of President Eisenhower.

IKE REJECTED INTEGRATION

When General Eisenhower was Chief of Staff, he refused to order mixing the races in the Armed Forces, obviously feeling at the time that efficiency would best be served by keeping segregated white and Negro soldiers, sailors, marines, and airmen.

The President apparently reversed himself later, after entering politics as a result of the timeworn argument of integrationists that the world is severely critical of segregation practices in the United States.

Although Hagerty's attempt to kiss off the EASTLAND disclosure was apparently accepted by most of the reporters who attended the conference when the inquiry was submitted, it would be a hard matter for the President's press secretary, or anyone else, to give any major reason for attendance by the Eisenhower children at a segregated private school except that their parents desire that they attend school where their progress will not be impaired by Negro children, less capable of advancement.

And the Eisenhowers are not, by any means, in an exclusive category among white parents in the District of Columbia, who are able to send their children to private schools and who have been so fortunate as to find places for such children.

Private all-white schools in and around Washington are operating at capacity, or above, according to officials of such schools with whom this reporter has talked during recent weeks.

SOLONS' CHILDREN ON LIST

Among the largest of the all-white private schools in the Washington area are the Congressional Schools of Alexandria and Arlington, operated by Prof. and Mrs. Melvin Devers.

The operators of the congressional schools, which send their own buses through Washington, twice daily on school days, to pick up and return home around 1,000 students declined to reveal the names of the children of Senators and Congressmen whose children attend the schools.

Devers said, however, that "more than 50" children of Members of Congress are enjoying the advantages of attending the Congressional Schools.

Senator EASTLAND is sending his son, Woods, to Friends School, which was also attended by children of Attorney General Herbert Brownell. Incidentally, the Attorney General's office intervened before the Supreme Court in the school-segregation cases, asking the high tribunal to order mixing of the races in the public schools.

Friends School, operated under direction of Robert Lyle, was founded by the Quakers. It's now a private school, however, with a self-perpetuating board of trustees. The Quaker influence recently brought a proposal that the school permit entry of Negroes. tI was decided, however, that if the institution integrated, it would lose more students than it gained.

Mississippi's Representative JAMIE L. WHITTEN, Charleston, also sends his son, Jimmy, to Friends School. Recently, when one of his colleagues, in critical manner, remarked to him, "I hear you're sending your son to a private school," WHITTEN replied:

"I'm sending my son to a segregated school."

PARENTS MAKING SACRIFICES

Officials of the private institutions are obviously fearful that publication of the names of such children might, in a number of instances, cause their withdrawal.

These officials, most of whom said they would close up before accepting Negro students, are also preparing for the possibility of lawsuits from minority groups that might demand entry of Negroes into their white institutions.

Children of Senators, Congressmen and other Government officials are scattered through the many private schools, such as Holton Arms and Mount Vernon Seminary. A few of the private institutions—for instance, Cathedral School and some parochial schools—are now accepting Negro students.

Parents in Washington are making great sacrifices in order to send their children to all-white private schools.

SCHOOLS LOSE TALENTED STUDENTS

The family of Mr. and Mrs. Clarence Blake presents a case in point.

Blake, manager of Fairfax Village, an all-white apartment development in southeast Washington, has two beautiful, charming and talented daughters.

Barbara, 17, went to Charlotte, N. C., to live with her grandparents and attend high school. Now in her second year at Charlotte, she is drum majorette of her high school band, and recently was the subject of a feature story in Newsweek magazine as the result of her ingenuity in obtaining an interview by long distance telephone with Ernest Hemingway in Habana.

Linda, 11, lives at home here and attends Arlington Congressional School. She arises at 6 a. m. each school day—one hour earlier than when she attended a District of Columbia school before integration. When the Congressional School bus stops at her house, at 7:45, she's ready. She gets home in the afternoon more than an hour later than when she attended school in the District.

Linda Blake is also talented and popular. She was elected queen of the Homecoming and presided over the annual "grudge" football game between the two Congressional schools.

These are examples of the manner in which District of Columbia school integration is taking talented students away from Washington public schools.

The Blake parents report the cost of sending their two daughters to private schools is around $225 per month.

There are many parents in the District of Columbia who would be willing to make this sacrifice, but can't get their children any closer to private schools than the waiting lists. Some Senators and Congressmen, because of their influence, are fortunate enough to get their children into integrated schools where there now are only a few Negro children. But if Negroes keep coming to Washington at the same rate they have entered the past few years, there won't be any such schools in a few years.

The Sordid Picture of Integration in the Nation's Capital—Part IV

EXTENSION OF REMARKS

OF

HON. JOHN BELL WILLIAMS

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 18, 1956

Mr. WILLIAMS of Mississippi. Mr. Speaker, herewith follows the fourth portion of the articles of Mr. Howard Suttle:

[From the Jackson (Miss.) Daily News of January 12, 1956]

CLAIMED CIVIL RIGHTS VIOLATED—WASHINGTON PAPERS SET UP A HOWL WHEN STUDENTS SEARCHED FOR KNIVES FOLLOWING STABBING INCIDENT

WASHINGTON.—The excursion boat, *Mount Vernon*, steamed into Washington's Potomac docks about midnight during the school holidays last spring carrying about 1,000 white schoolchildren.

The steamer had just completed a round trip to Mount Vernon, home of George Washington. Members of senior classes—boys and girls from some 20 high schools across the Nation—paraded down the pier, en route to hotels to which they were assigned.

The young students were enjoying themselves thoroughly, as do the hundreds of thousands of schoolchildren who are fortunate enough to visit their Nation's Capital during the most beautiful time of the year here.

The boys and girls who returned from the *Mount Vernon* cruise on this occasion had toured the historic estate of President Washington, picnicked under the trees in the shadow of his tomb and danced together, to the tunes of a good swing band, on the excursion boat.

LULA-RICH STUDENTS IN PARTY

In the group were some 30 members of the senior class from Lula-Rich Consolidated School, in the Mississippi Delta. They had come to Washington in a bus, under supervision of Prof. Thomas J. Bogue, superintendent of Lula-Rich School.

When the *Mount Vernon* docked, several of the Lula-Rich girls obtained permission from the superintendent to walk to their hotels with their dates—boys from other schools they had met during their sightseeing tour of the Nation's Capital.

Professor Bogue and five Lula-Rich boys returned to their hotel—the Lee House—together. When they arrived at the hotel the supervisor told the boys he would have to remain in the lobby until all the students had checked in with him. Frank Hudson, Jonestown; Morris Anderson, Tunica; Howard Foster, Coahoma; and Frank Lee, Jr., Lula, obtained permission to "take a stroll" while the supervisor awaited arrival of students who walked from the docks, about 20 blocks away.

STABBED BY NEGROES

The 5 youths were about 6 or 7 blocks from their hotel, enjoying the bright lights of the Capital and kidding each other as they walked toward Pennsylvania Avenue, Washington's "Main Street."

Two Negro boys, each appearing to be about 18 or 19, approached them. According to their own story, the white boys stepped into single file to permit the Negroes to pass.

One of the Negroes bumped shoulders with Ashby, then belligerently exclaimed:

"Why don't you look where you're going?"

Ashby replied with the same question, "Why don't you look where you're going?"

Later, in a talk with Senator JAMES O. EASTLAND, Ashby said he and his associates tried to "avoid" trouble—that they told the Negro they did "not want any trouble." Ashby was the only member of the group who was not attending Lula-Rich School. He had not had the opportunity during his senior year—the previous session—to come to Washington, and had joined the group last year.

But trouble they had—lots of it.

The Negroes pulled knives and started slashing.

LEE CALLS POLICE

Frank Lee, Jr., a Chinese boy whose father operates a Lula laundry, shouted he was going to "call the police." He ran to a restaurant, open across the street, to do so. The Negroes ran toward a dark alley.

The encounter resulted in injuries to Ashby, Hudson, and Anderson.

Young Foster flagged a cruising taxicab. He and Lee loaded the injured boys, told the driver to take them "to the nearest hospital."

At Sibley Hospital, where the wounded Mississippi youths were treated, it was found that Ashby was cut seriously across the

stomach. Eight stitches were taken in the wound. Hudson and Anderson were stabbed in the back, less seriously injured. Ashby told Senator EASTLAND he "did not know I had been cut until I looked down and saw the blood pouring out."

Hudson and Anderson, after treatment, were released to return to Mississippi on the bus with their class. But Ashby had to remain in Sibley Hospital for several days.

CRIMINALS STILL AT LARGE

When Washington police learned of the encounter, they immediately threw up a human cordon for several blocks around the scene of the scrap. Several score suspects were jailed. Foster and Lee, the uninjured Mississippi youths, were brought to the lineup in efforts to identify the culprits. Negroes were paraded before the boys for some time, but they were unable to make identification.

Washington police report they are still working on the case. They made an arrest in November.

Ashby, Hudson, and Anderson, now in the armed services, were brought to Washington to look at the suspect. They said he was not 1 of the 2 who attacked them.

As this is written, the Negroes who attacked the Lula-Rich boys were still at large.

SEARCH STUDENTS FOR KNIVES

Apropos of the incident in which the Mississippi youths were slashed, students—both boys and girls—at several Washington junior high schools were recently searched for knives.

These searches led horrified Washington newspapers to protest that the rights of the students were being violated. The attitude was that a knife is traditionally part of the pocket equipment of American boys.

There seemed to be little or no argument with the position of the newspapers concerning the right of youths to own pocketknives.

The awful thing about the case is that the Mixiecrats had brought about a situation, through school integration, where authorities felt they should make such searches.

The searches were said by police to have been part of a "survey" to ascertain what the "knife situation" was at District of Columbia junior and senior high schools.

"If we can prevent just one case of the students at the school," said Chief Robert V. Murray, "the survey will have been justified."

But the editorial howl of the newspapers—most prominently the Washington Post and Times Herald—caused District of Columbia Schools Superintendent Hobart M. Corning to order the searches halted after they had been conducted at only two schools. Most of the students at the schools where the searches were made are Negroes.

POLICE PATROL EASTERN GROUNDS

When word got around among segregation advocates in Washington that a check was being made on the effect of public school mixology, persons desirous of making available information on the subject began to be heard from.

A white mother said her daughter, a student at Eastern High School, had been receiving telephone calls from Negro boys, asking for dates.

Another mother advised that lunches taken to school by her children were periodically stolen. She said the lunch stealing had occurred only since Washington schools had been integrated.

The situation became so serious at one time at Eastern High School that police officers were assigned to duty on the school grounds, in the morning before school opened, during morning and afternoon recess periods, at noon and other classes were dismissed in the afternoon.

The Sordid Picture of Integration in the Nation's Capital—Part V

EXTENSION OF REMARKS

OF

HON. JOHN BELL WILLIAMS

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 18, 1956

Mr. WILLIAMS of Mississippi. Mr. Speaker, herewith follows the concluding portion of Mr. Suttle's articles:

[From the Jackson (Miss.) Daily News of January 13, 1956]

WHEN INTEGRATION CAME WASHINGTON PUBLIC SCHOOLS WERE FORCED TO LOWER STANDARDS OF PROMOTION TO LET NEGROES KEEP PACE

(By Howard Suttle)

WASHINGTON.—Officials of Washington's mixed public schools, now in their second year of integration, are obviously most concerned and greatly embarrassed with the necessity for lowering standards of promotion, so that Negro pupils may keep pace in advancement with their more intelligent white fellow students.

The fact that promotion standards in District of Columbia public schools have been lowered since the Mix-ie-crats took over was aired by Mississippi's Senator JAMES O. EASTLAND in a recent address before the Mississippi Association of Citizens Councils, at Jackson.

But the educational slow-down in Washington was brought to light earlier, in a sensational manner, during a November meeting of the District of Columbia Board of Education.

Dr. Rowland F. Kirks, member of the Board, aired his dissatisfaction in no uncertain terms.

It was Dr. Kirks who directed a most embarrassing question to Dr. Hobart M. Corning, superintendent of District of Columbia schools.

"Is it valid," Kirks asked Corning, "that the essence of education is deteriorating in the District because we're not maintaining academic standards, and that you can advance practically on the basis of poundage and height?"

Corning denied that promotions are now based upon poundage and height. However, he did concede in effect, that standards of promotion had to be set to accommodate the average.

CORNING TALKS TO PRINCIPLALS

Dissatisfaction expressed by the District of Columbia School Board no doubt influenced statements by Corning when he addressed principals of Washington schools a day following the board parley.

Corning told his principals "our emphasis needs to be changed somewhat." He urged that teachers put more stress on bringing children up to standard on each grade level and not pass on the responsibility for making up deficiencies to the next grade.

Corning admitted at the school board meeting, on questioning by Kirks, that there are students in both junior and senior high schools of Washington who cannot read. He added there always will be. When Kirks said the system of promotions should embrace some irreducible standard, he was told by Corning, that your basic concept is wrong if you think we dilute things.

A colleague in the Washington correspondents corps said he had reports that failures in Washington schools had increased 75 percent since the practice of racial mixology was started in schools of the Nation's Capital.

DISCUSS SUPREME COURT EDICT

Washington newspapers are loath to publish facts in the school segregation picture that are unfavorable to integration objectives. The Washington Post goes all-out to break down segregation completely. The Post, headed by Eugene Meyer, former Federal Reserve Board member, a short while ago acquired the Times-Herald. The two publications have been consolidated, leaving Washington with only this morning paper and two afternoon papers—the Evening Star and Washington Daily News. The latter is a Scripps-Howard tabloid.

Top men on the Post recently opposed the election of Luther Huston, New York Times correspondent, to the National Press Club Board of Governors, giving as the reason for their opposition the fact that Huston had actively opposed admission of a Negro reporter to club membership.

It's not often that owners of a big newspaper are so bold as to try to impose upon their reporters their ideological and political policies.

Reporters in the capital press corps are, of course, divided, in their personal views, on the segregation issue. It's discussed daily around the press club council table.

KISS OFF COURT VIOLATIONS

And it's most amazing how prointegrationist white newspapermen try to kiss off the charge that members of the Supreme Court violated their oaths in the school-segregation decision, when they assumed prerogatives to legislate that are not given them by the Constitution.

"The Supreme Court has encroached upon the authority of Congress before," one colleague insisted. "That's (the school-mixing decree) not the first time."

His argument, of course, was the same as saying that two wrongs make a right.

The complacency with which such correspondents meet the charges of corruption in the Supreme Court is also most startling.

It seems to be of little or no significance to those who favor racial mixology that Justice Hugo Black accepted a plaque from the Southern Conference for Human Welfare, a Communist front, in recognition of his contributions to integration, at the same time that organization was helping to finance cases pending before the Court.

Persons of the same thinking also seem unimpressed with the fact that Justice William O. Douglas accepted two $1,000 cash contributions from the CIO at the same time that group was contributing also to help the NAACP prosecute the school cases before the Supreme Court.

And it seems to be of little moment to these that 16 of the so-called sociological and psychological experts quoted by the Supreme Court in the Black Monday decision have Communist-front records.

In conclusion of this series regardless of the claims of Mixiecrats that racial mixology is working successfully in Washington schools, the facts are that the present school system in the District of Columbia has retarded the advance of both white and Negro children, increased confusion and tension in the Nation's Capital, and contributed to wholesale discriminations against both white and Negroes that did not exist under the segregated school system.

That the Mixiecrats are surprised, even astounded, at the national extent of the opposition to integration is interesting to advocates of racial separation, who are convinced the Supreme Court's school integration order was issued in violation of the Constitution and in complete disregard of precedent.

Young Citizen of 23d Congressional District of California Wins National Essay Contest by National Association of Real Estate Boards on Subject What the Bill of Rights Means to Me

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 5, 1956

Mr. DOYLE. Mr. Speaker, I am naturally very happy and very proud to present to you and all the Members of this great legislative body the winning essay in the nationwide competition sponsored by the National Association of Real Estate Boards on the subject of What the Bill of Rights Means To Me.

This national essay contest, I am very proud to say, was won by Miss Carol Barrett, attractive 17-year-old senior at Pius X High School, Hollydale, Calif.

Hollydale is one of the thriving, happy communities in the great 23d District which I have the honor to represent this my fifth term in Congress. It is immediately adjacent to the important community of Downey, which is also in the great 23d Congressional District. And, in Downey is one of the active, successful realty boards in my native State of California.

Miss Barrett, the national winner, is sponsored by the Downey Board of Realtors, Inc., of which Earle M. Sweet is President, Giles D. Hollis, vice president, and Dorothy Chamberlain, executive secretary. The directors are Henrietta Durston, Gayle Fredrickson, James F. Hall, C. Larry Hoag, E. E. McCallum, Chris Parr, and Elmer Wilkerson.

Naturally, Mr. Speaker, the whole 23d District is very proud of the worthy and distinguished achievement of Miss Carol Barrett. Her own high school and her own community of Maywood are also justly and especially proud of having her in their midst.

I was pleased to be able to meet her and her mother, who were accompanied by Mrs. Bernice Mason, an able and much appreciated member of the Downey Realty Board, at the plane arriving from California Tuesday evening, with the representatives of National Association of Real Estate Board Convention Committee, which is now in session at their Annual Convention at the Mayflower Hotel. I was also accompanied by Mr. Orvan Leavell, a member of the Lynwood, Compton and Southeast Realty Boards in the 23d Congressional District of California. Of course, the NAREB had planned extensive entertainment for Miss Barrett, her mother and Mrs. Mason. It will be the pleasure of Mrs. Doyle and myself to have these friends from the great 23d District of California as guests here at the Capitol today, at which time I will have the honor of having them as my House Gallery guests and also Senate Gallery guests and luncheon guests.

Final judges in the contest were Senator John W. Bricker, Ohio; Representative Bruce Alger, Texas; and United States District Judge Edward M. Curran, Washington, D. C. Preliminary judges of the 57 national entries were the following teachers from the Washington area: Fred H. Hilton, Jr., Capitol Pages' School; Joseph Mabbett, the Bullis School, Silver Spring, Md.; and the Reverend Stephen M. Connelly, DeMatha Catholic High School, Hyattsville, Md.

Carol Barrett, who lives with her mother, Mrs. Geraldine Barrett, at 4863 East 60th Street, Maywood, Calif., put her journalistic experience to good use in writing her essay on "What the Bill of Rights Means to Me" for her history and civics classes at Pius X High School. She was a writer for the paper at St. Agnes High School, Los Angeles, where she was enrolled her first three years of high school.

An honor student at St. Agnes, she was treasurer of her freshman classes and vice president of her sophomore and junior classes. She has maintained a "B" average throughout high school.

Her interest in journalism is reflected in a feature article which she wrote for the Community Chest Times of Los Angeles in November, 1954, and in her plans to enroll next September at UCLA, with the intention of majoring in journalism.

Carol has been a student of music and dancing and collects records as a hobby.

This distinguished young lady was honored last evening at the national banquet of the National Association of Real Estate Boards by being called upon to read her winning essay to the many hundreds of people there present.

I herewith set forth the text of the letter dated January 12, 1956, from the Downey Board of Realtors, Inc., together with the consent dated January 8, 1956, addressed to said Downey Board of Realtors, Inc., signed by Carol Barrett, the national winner, and approved by her mother, Mrs. Geraldine Barrett:

DOWNEY BOARD OF REALTORS, INC.,
Downey, Calif., January 12, 1956.

The Honorable CLYDE DOYLE,
Representative in Congress,
New House Office Building,
Washington, D. C.

MY DEAR CONGRESSMAN: At the suggestion of Leon Emerson, our board attorney, the matter of forwarding the winning essay of the Downey Board of Realtors to you on the subject of What the Bill of Rights Means To Me was placed on the agenda for the board of directors meeting held January 3, 1956, with the following action recorded in the minutes:

"It was moved by Elmer Wilkerson, seconded by Gayle Fredrickson, and carried, that the directors approve the publication of the board's participation in the What the Bills of Rights Means To Me essay contest in the CONGRESSIONAL RECORD.

Action of the directors at this meeting was approved by the general membership of the Downey Board of Realtors at the regular business meeting held on January 4, 1956.

We are attaching a copy of the original essay written by Carol Barrett whom we know you will be proud to have in your district when you learn that she was also the national winner of the contest and will read her essay at the inaugural dinner to be held in Washington, D. C., at the Mayflower Hotel the evening of January 18.

I was in hopes that I would be able to attend the inaugural meetings myself in Washington this year; however, the workload in the office at this particular time prevents my taking advantage of the opportunity to be on hand to welcome you and Mrs. Doyle myself to the congressional dinner which will be held by the California delegation on Monday evening. My thoughts and good wishes for you both will be there in my stead.

We are also attaching a signed authorization from the author and her mother (father is deceased) for publication in the CONGRESSIONAL RECORD and want to express to you our sincere appreciation for your interest and cooperation.

With kindest personal regards.

Yours very truly,
DOROTHY R. CHAMBERLAIN,
Executive Secretary.

MAYWOOD, CALIF., *January 8, 1956.*
DOWNEY BOARD OF REALTORS,
Downey, Calif.

GENTLEMEN: Permission is hereby granted to the Downey Board of Realtors to authorize the publication of my original essay on the subject of What the Bill of Rights Means to Me as submitted to the Downey Board of Realtors for entry in the annual essay contest conducted by the National Association of Real Estate Boards or any portion of the essay or mention of the essay for the CONGRESSIONAL RECORD.

Yours very truly,
CAROL BARRETT.

Approved:
Mrs. GERALDINE BARRETT (mother).

Following is the text of Carol's essay, which was judged the national winner:

WHAT THE BILL OF RIGHTS MEANS TO ME

(By Miss Carol Barrett, Maywood, Calif.)

Musing one night by the campfire as the crackling flames leaped high, I watched the curling plumes of smoke go up, and as they spiraled I seemed to see the faces of men who once at another time—long, long ago—possessed the courage, spirit, and foresight that made America for me. 'Twas here that I first reflected seriously upon the priceless heritage that is mine. Not satisfied with the constitutional guarantees they demanded with clear vision a 'Bill of Rights.' This was the beginning of the birth of democracy as we know it today.

God-fearing men, they realized the moral code, and that code they translated into 10 amendments known as the Bill of Rights. Each is a key, as it were, which will open for all time the door to the solution of each problem as it affects my personal life or the life of the Nation. The key to the four fundamental freedoms of every person opens the door of my church, unlocks the silence of my lips, and permits to enter into my life the news of the world about me. The key to my home seals it to unreasonable search and protects my person and those things I would hold private. The key to justice shuts out any possibility of arrest without trial by jury, confinement without the right to be bailed out, and of self-incrimination. The key to eminent domain guarantees me the security that my property will not be taken for the common good without compensation. The key to unlisted rights gives me the assurance that I can appeal until I have reached the citadel of justice. And finally the key to delegated powers makes me a citizen not only protected by my national Government but also by my State government. The Bill of Rights has been the citadel of the oppressed, the beacon of light of those seeking refuge from tyranny, and the security of all free men. It means America to me. Therefore, we, the youth of America, must guard our land from all danger, from those who would steal our birthright. And keep democracy's campfire, with freedom and liberty bright.

Psychiatric and Narcotic Hospitals a Federal-State Partnership

EXTENSION OF REMARKS
OF
HON. IRWIN D. DAVIDSON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 19, 1956

Mr. DAVIDSON. Mr. Speaker, I should like to speak today in support of my bill H. R. 7838, which I introduced in the first session of this Congress. This bill would amend the Hospital Survey and Construction Act to provide grants of Federal aid to States for surveying and meeting the needs for psychiatric hospitals and auxiliary facilities and for narcotics hospitals and auxiliary facilities. There can be little doubt as to the crying need for action in these areas of concern for public health.

Nor can there be any doubt that under the provisions of the so-called Hill-Burton Act great strides forward have been made to alleviate the painful shortage of general hospital facilities. From January 1948 through September 1955, 126,740 general hospital beds have been provided or are in process under the provisions of the 1946 act. The emphasis in the past has been, however, on general hospital facilities, and the time has now come for specific attention to be given to two of our Nation's major health problems: mental illness and narcotic addiction. Both of these phases of our Nation's health have been all but neglected in the administration of the Hill-Burton Act, and it is only through a specific allocation of funds for these purposes that significant steps can and will be taken to improve the present situation.

In the field of mental illness, it has been estimated recently that 9 to 10 million Americans, 1 of every 16, are suffering from some mental or emotional disorder. On any given day, 750,000 are mentally ill in a hospital bed. In addition, some 400,000 persons suffering from mental illness should be in mental hospitals. The remaining millions, though not requiring hospitalization, are seriously handicapped in their ability to work and lead normal family and civic lives.

The fact remains clear that existing facilities are nowhere near adequate to handle the present burden. In some States, persons legally committed to mental hospitals have to wait months, sometimes years, before they can be placed. In some cases, these mentally ill persons spend this waiting period in jails, often ruining any chance they might have had for recovery.

The hospitals are extremely overcrowded. Two out of every four State mental hospitals are handling a patient load greater than their intended capacity. The need for additional hospital beds has been estimated at between 330,000 and 500,000, but even the lowest figure is a huge one. Congress, having recognized its function in the construction of general hospitals, should now provide specific aid to the States to ease the critical shortage which now exists in the field of mental care. We must recognize the need to aid States which cannot provide or have not provided adequate facilities to care for their mentally ill.

In addition, my bill provides for surveying the needs and constructing badly needed psychiatric rehabilitation facilities. More than 200,000 persons a year are being treated at these clinics and they too are greatly overcrowded. It has been estimated that to fulfill the requirements for outpatient psychiatric services, an additional 800 centers are needed.

The effectiveness of psychiatric clinics and rehabilitation centers has already been well established. Psychiatric techniques have so advanced in recent years, that authorities in the field have estimated that as many as one-third of the patients being treated successfully in clinics would, several years ago, have been regarded as suitable only for more costly hospital treatment.

These facilities are used not only for cases which are of a less serious nature, but also function as diagnostic centers, spotting incipient mental disease and recommending treatment before it becomes drastically disabling. Furthermore, clinics provide follow-up aid for patients who have been released from mental hospitals.

We know that readmission rates to mental hospitals are very high. Although there are no adequate statistics for the total picture, studies have indicated that in my own State of New York, for example, one-third of all mental hospital entrants have been in these hospitals at least once previously. The follow-up treatment given at psychiatric clinics may well cut into this readmission rate substantially. Thus, establishment of such clinics would represent a saving in money and in human resources.

In the area of treatment and rehabilitation of narcotic addicts virtually nothing has been done under the Hill-Burton Act, and every day the scourge of narcotic addiction increases. My bill is designed to allocate funds for the specific purposes of surveying the need for narcotic hospitals and narcotic rehabilitation facilities, as well as for their construction. The narcotic problem merits the considered attention of the Congress.

At the present time, the Narcotics Bureau estimates that there are 60,000 addicts in our population; that is, 1 of every 3,000 persons. This represents an increase of 10,000 to 15,000 addicts since 1948, an increase which is frightening since the trend indicates that since the end of the war there has been an increase of narcotic use among our juveniles. In 1948, for example, approximately 3 percent of all addicts admitted to the Lexington Narcotics Hospital were under the age of 21 years and, in 1955, the figure rose to approximately 7 percent. Some form of aid must be given to help these young persons.

In addition to the problems caused by the use of narcotics by these minors, there is the testimony of many authorities that addicts, to support their habit, must resort to crime. It has been previously estimated that as much as 50 percent of the crime in our major cities today is perpetrated by drug addicts.

Commissioner Anslinger has stated that 11.8 percent of the total Federal prison population in this Nation are persons convicted of violations of the Federal narcotics and marihuana laws. He further cited a city in this Nation where there was heavy traffic in narcotics and a 600 percent increase in the number of housebreakings, armed robberies, and larceny. The Commissioner reported that when narcotics agents cracked down on the drug traffic, the crime rate dropped to its normal level.

The tragedy of the situation is simple: All efforts have been and are being directed at the flow of narcotics to the user, and few forward strides have been made in the cure of the addict who is captured or voluntarily comes forward for cure.

It is generally recognized that it is impossible to defeat addiction outside of institutions specifically and specially staffed and equipped to effect a proper cure. At the present time, there are only two hospitals in the United States specifically equipped to supply a comprehensive treatment to addicts. They are the Federal institutions at Lexington and Fort Worth. The combined facilities of these 2 hospitals is a mere 2,340 beds, a pitifully inadequate figure. There is a waiting list at present of over 500 applicants.

The shortage of facilities must be overcome. To do the job intelligently, however, it is necessary first to determine the specific needs of specific localities. For this purpose, my bill authorizes that funds be appropriated for a survey to inventory existing facilities for the diagnosis, treatment, and care of addicts, to determine the need for construction of facilities for such diagnosis, treatment, and care, and to develop programs for the construction of such facilities.

Perhaps the most important feature of my bill is its concern with the construction of rehabilitation facilities to aid users of narcotics who are not as yet addicted, to counsel addicts to prepare them to accept the benefits to be derived from hospitalization, and, finally, to provide aftercare to addicts who have been released from narcotics hospitals so that they may once again take their place in society.

This latter phase is one which is receiving growing recognition. Commissioner Anslinger recently testified before the subcommittee investigating this problem that "aftercare is probably one of the most promising phases of rehabilitation." Aftercare in clinics would help the addict adjust psychologically to withdrawal of drugs after he had been relieved of physiological dependence on them.

Too many addicts, who have been treated at the hospitals, return to the same environment from which they came and, unable to find work, or acceptance by a new social group, they return to their addiction. This is considered a strong factor in the large proportion of addicts, estimated at 85 percent, who return to their addiction after

release from the Federal narcotics hospitals.

With clinics and rehabilitation centers which could provide psychological counseling, and which could mobilize community employment and recreation resources, we might be able not only to cure the addict, but to keep him cured. Only a small number of such rehabilitation centers exist. They are of recent origin and are located in New York, Chicago, and Los Angeles. Although they are able to handle only a small number of cases, their indicated progress is heartening. I feel that Congress should provide aid to the States in establishing more of such facilities.

I wish also to report, Mr. Speaker, that I have requested the opinions of State public-health officials, and of public-health groups throughout the nation on the bill I have introduced. The response has been exceptionally gratifying, not only in terms of the number of replies, but much more important, in terms of the enthusiasm displayed for the legislation. I shall present all of these communications to the Committee on Interstate and Foreign Commerce when hearings are held on the bill.

In closing, Mr. Speaker, may I say that this bill, H. R. 7838, represents an application of a well-established principle, Federal aid to State health activities, in two crucial areas of national concern. I hope that consideration of the magnitude of the mental health and narcotic addiction problems will cause the legislature to pass this bill.

Markings on Social Security Checks Sent Through the Mails

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 19, 1956

Mr. FLOOD. Mr. Speaker, today I introduced a bill in the House of Representatives that would amend title II of the Social Security Act to provide that benefit checks and certain related materials sent through the mails shall not bear any markings which would reveal the nature of the recipient's entitlement or disentitlement to benefits under the act, such as, for example, unremarried widow.

My bill would provide that no check drawn in payment of any benefit under title II of the SSA, and no envelope or other outer covering for any such check, or for any other statement or document relating to an individual's eligibility for any such benefit, which is sent through the mails, shall bear any markings or devices which might disclose any information with respect to such individual's status under title II, or to the nature of his or her entitlement or disentitlement to benefits under title II.

Mr. Speaker, I have received numerous complaints from constituents on this problem.

After all, communications between the department of social security and an individual should not be for the information of outsiders; it sometimes causes needless personal embarrassment.

Our Tribute to Douglas McKay

EXTENSION OF REMARKS
OF
HON. WALTER NORBLAD
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1956

Mr. NORBLAD. Mr. Speaker, under leave to extend my remarks, I include herewith an article regarding Secretary of Interior Douglas McKay which appears in the first annual yearbook of the Republican Party of Oregon which was published this month:

OUR TRIBUTE TO DOUGLAS MCKAY

Secretary of Interior Douglas McKay is the second Oregonian ever to serve in the Cabinet of a President of the United States in the nearly 100 years that Oregon has been a State.

This signal honor by President Eisenhower is a tribute both to Oregon and to a native Oregonian who has compiled a distinguished lifelong record of civilian and military service to his community, his State, and his Nation.

In the 3 years that Douglas McKay has held one of the highest offices in the land, he has conducted the affairs of the Department of the Interior with ability and integrity, conserving and developing the natural resources in his care.

Secretary McKay's present national position has tended to obscure what he stood for and what he accomplished here in Oregon as a private citizen, as a legislator, and as Governor of Oregon.

With this thought in mind, we review his record to remind Oregonians why they have given this distinguished American their votes of confidence in the years before his elevation to the Cabinet.

Before becoming Secretary of what he has described as "the United States Department of Natural Resources," Mr. McKay compiled an outstanding conservation and resources development record.

He established the governor's committee on natural resources, the first of its kind in the United States. This committee provided an effective method for coordination of State agencies dealing with resource conservation and development and was later formalized by law.

At the Governor's direction, a special subcommittee spent a year studying means of controlling and abating air pollution. Governor McKay endorsed the findings of the subcommittee and the 1951 legislature enacted an air-pollution control and abatement law.

He worked vigorously for the fastest possible development of hydropower, irrigation, and flood control in the Pacific Northwest, appearing before congressional committees in support of adequate appropriations for Federal multipurpose projects.

In addition, he regularly attended and took a leading part in the activities of the Columbia Basin Interagency Committee, the Federal-State coordinating body for regional resource development.

Governor Martin in 1935 named State Senator McKay to the newly organized Willamette Valley Basin Commission. The 50-man group named Mr. McKay the chairman, a post he held for 14 years. Under his long-time leadership, funds were obtained to complete a substantial portion of the multipurpose dams in the Willamette Valley.

Efforts to save the scenic beauty of the Columbia Gorge were supported by Governor McKay, who appointed the Columbia Gorge Committee. Activities of this committee have been a major factor in maintaining the natural-forested beauty of the world-famed water-grade route through the Cascades.

A believer in soil conservation, he lent the support of the Governor's office in actively furthering a vigorous soil-conservation program.

During his term as mayor of Salem, from 1932 to 1934, the capital city of Oregon laid the foundation for its present water system. He carried out the mandate of the people to purchase the then privately owned water system serving the city.

In 1933 Mayor McKay obtained voter approval of a bond issue to finance construction of a sewage disposal plant for Salem, thereby ending a major source of Willamette River pollution.

CIVIL RIGHTS ADVANCED

Governor McKay received national recognition when he banned racial discrimination in the Oregon National Guard.

He appointed an advisory board to counsel with the State Labor Commissioner in administering the Fair Employment Practices Act adopted by the 1949 legislature.

The Governor's Council on Indian Affairs was established during his administration to aid the Indians of Oregon to discuss and solve their problems.

A leading Negro newspaper praised the Civil Rights record of Governor McKay at the time of his appointment to the cabinet.

A GOOD ADMINISTRATION

Governor McKay's administration was noted for the economies and strict budgeting which reduced the expenditures of the State government while maintaining State services. He supported the "Little Hoover Commission" proposal for a State Department of Finance and Administration adopted by the Legislature.

Observers generally agreed that no administration in a comparable period accomplished so much in improving State institutions and expanding their physical facilities. There was agreement, too, on his excellent appointments to judicial and other positions and his ability to bring people together to work for common goals.

Through his efforts, labor and management in Oregon joined in the first cooperative legislative program. As a result, mutual understanding between labor and management was encouraged. An industrial safety program that earned the active participation of management and labor made possible a record increase in accident benefits paid injured workmen and at the same time a $1 million cut in contributions to the State fund required from employers.

HIGHWAYS AIDED

Both as a State senator heading the senate roads and highways committee and as governor, Mr. McKay worked for better roads and highways. In recognition of his efforts, he was called upon for the principal address at the ceremonies marking the opening of the Sunset Highway linking Portland and the seaside area of the Oregon coast.

Governor McKay called upon the legislature for a road-building program sufficiently large to keep pace with the growth of the State and make up for the construction delayed and lost because of World War II.

In response, the legislature authorized a $72 million highway bond program that has restored Oregon to its former rank as having one of the best toll-free market road and superhighway systems in the United States.

Mr. McKay began his political career in 1932 when he was elected mayor of Salem only 5 years after moving to Oregon's second largest city. He was so successful as mayor that in 1934 he was elected State senator from Marion County for the first of four terms. Each time he led the Marion County ticket.

SERVICE IN THREE WARS

His military service began with the outbreak of World War I when he volunteered for duty following graduation from Oregon State College. He served as a combat second lieutenant with the 91st Infantry Division through much of the bitterest fighting in France.

In 1918, while serving as a battalion scout in the last great offensive of the war, he was critically wounded in the Meuse Argonne. He was retired from the Army as a first lieutenant after a year in a hospital, then was intermittently hospitalized for approximately 12 years before making a full recovery.

The start of World War II found State senator McKay in Honolulu where he witnessed the attack on Pearl Harbor. In the confused hours that followed the attack, he joined the visiting Willamette University football team in guard duty on the beaches.

Back in Oregon, he was accepted by the Army for a second tour of wartime duty. He waived 66 percent physical disability, received military leave from the Oregon senate and starting in August of 1942, served 3½ years of Stateside duty.

On December 20, 1945, he was retired from active duty with the rank of captain. Five years later, as Governor of Oregon, he instituted a program for civilian war preparation during the Korean emergency.

Mr. McKay's chosen profession was farming and his degree from Oregon State College is in agriculture. But his war wounds required an occupation less physically demanding than farming. After starting in Portland as a salesman, he acquired a then small automobile agency in Salem, building it into one of the largest in Oregon.

RECOGNITION AS A CIVIC LEADER

Through the years fellow students, colleagues, his college and the public have honored Mr. McKay with their confidence. Besides serving as mayor of Salem, president of its chamber of commerce and commander of the Salem American Legion Post, he was president of his State trade association and helped organize the Oregon chapter of the National Society for Crippled Children and Adults.

Oregon State College honored him in 1955 with an honorary Doctor of Laws degree in recognition of one of the school's most distinguished graduates. While working his way through college in three years, he was elected president of the freshman class, helped organize the student cooperative and was elected president of the student body.

His grandfather, Malcolm McKay, arrived at Fort Vancouver in 1841, and was a storekeeper for the Hudson's Bay Co. under Dr. John McLaughlin. All of his grandparents were in Oregon by 1852.

The future Secretary of the Interior was born June 24, 1893, in Portland at 347 Taylor Street, at that time on the outskirts of the city and now near the heart of the Oregon metropolis. As a boy he played baseball on Broadway, which was then little more than a residential street.

When he was 13 years old he began working to provide the chief support for his mother and sister. Summers were spent working on farms. After leaving school to work full time, he prepared for college by attending night school.

Perhaps it was from these experiences that he first acquired the stamina and philosophy which has guided him in public life. Shortly after becoming governor of Oregon, which at that time had a population of one and a half million persons, he observed:

"No kind of job can be too demanding or too annoying if you have the kind of bosses I have."

The Wounded Shall Never Be Forgotten

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1956

Mr. MULTER. Mr. Speaker, I direct the attention of our colleagues to the following article which appeared in the New York Journal-American on Saturday, January 14, 1956.

It is my hope that they will take the time to urge each of their home communities, that have not yet done so, to organize a similar organization to remember our disabled 52 weeks a year.

FIFTY-TWO ASSOCIATION DOESN'T FORGET

(By Phyllis Battelle)

It's a happy quirk of nature and the mentality of mankind that we are able so often to forget the bad things and cling sweetly to the memory of the good.

Like the times we played hookey—we remember the circus we saw, but forget the castor oil we got after. Or the men we've known—we remember the roses they brought Saturday nights, but forget how they were taken tardy from drinking with the boys. And parents, of course, we remember them observing our birthday, not our report card.

But sometimes, in very specialized cases, this pleasant-recollection stuff is not right. As a man named Mortimer Karrp says, "There are some uncomfortable realities that a man is a heel to forget."

What Mr. Karrp is referring to, in a pleasant and businesslike tone of voice, are the realities of war. What he represents is an organization called the 52 Association. It is dedicated to the proposition that the wounded shall never be forgotten—and it is called 52 because that proposition applies 52 weeks a year.

CLUB'S BASIC RULE

A big man with a friendly face, the executive director of the New York branch of this outfit, went on to say that a basic rule of his club—founded 10 years ago next month—is complete anonymity for its members.

"The only reason I'm telling you about it," he said, "is that membership has fallen off gradually since the Korean war. We don't feel so bad about that—the flag-wavers have lost interest, and it's better to have people working with you who feel they have a serious obligation to the men who have been injured in wars."

But the point is, he says, other people should form organizations similar to the "52s" because the more secure the outside world becomes, the more heartbreaking is the plight inside service and veterans' hospitals.

"Our club now has 13,650 members and has chapters in New York, Miami Beach, Buffalo, Chicago, and Los Angeles—but there are vast areas of the country that are untouched.

HOW GROUP OPERATES

What "52" (and groups which might follow its technique) does for the boys is this. Every week, every few days, in fact, the members put on suppers for hospitals they select—bringing food and entertainment to the wards, for the boys who cannot leave, bringing the wounded boys who are capable of it into town for dinners, dances, parties.

It costs each member $52 a year, 1 leisure night a week, to belong.

The "52 Association" is formed of business and professional men who like parties, love people, and are stuck with a few sad memories along with the happy ones.

Resistance of the Non-Russian Peoples—The Weak Point of the U. S. S. R.

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 19, 1956

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks, I wish to include an article entitled "Resistance of the Non-Russian Peoples—the Weak Point of the U. S. S. R." I have been asked also to call attention to the 38th anniversary of the Ukraine which is being celebrated here in Washington on Saturday next, January 21.

With reference to the 38th anniversary of the proclamation of the Ukrainian National Republic and the long liberation struggle of the Ukrainian people, we must recognize that throughout the existence of the U. S. S. R. it was never confronted with a more dangerous and explosive problem than the organized and spontaneous resistance of nations enslaved by it. Therefore there is nothing that the rulers of the Kremlin fear more than the danger of the free world speaking openly of the great centrifugal liberation forces of the non-Russian peoples inside the U. S. S. R., and lest the free world support these forces.

What is the essence of this weakness of the U. S. S. R.? The point is that contrary to widespread opinion in the West, the Soviet Union is not a monolithic nation, united by a single idea, but a horrible prison of many nations which aim at severance from Moscow and desire independence. This condition prevailed even in the tzarist empire, and only thanks to demagogic agility were the Bolshviks able to turn back the process of complete internal disintegration. Aware of the power of the liberation movements of the Ukrainians, Georgians, Armenians, Turkestanians, and other non-Russians, Lenin wrote as early as 1913, addressing himself to Russian Chauvinist circles who did not understand it, the following: "The gentlemen nationalists forget that there are no more than 43 percent of Great Russians of the population of Russia . This means that aliens are a majority. How can a minority hold a majority without promising the majority the comforts of political freedom and national equality." (V. I. Lenin, Staty I Rechi ob Ukrainye (Articles and Speeches on Ukraine), 1936, p. 248.)

Notwithstanding these promises of the Bolsheviks, the non-Russian nations established their independent republics and declared their severance from Russia right at the start of the revolution in 1917. Sensing this threat of disintegration of the Russian empire, the Bolshevik government of Moscow dispatched its armies to Ukraine, Byelorussia, Georgia, etc., and after several years of war conquered their territories and subjected them again to Moscow. But even then Bolshevik Moscow conducted its conquests under the alleged motto of "liberation" of non-Russian nations. The Bolshe-

viks were also able to utilize to their advantage the fact that Kerensky's government was unwilling to recognize the right of non-Russians to their separate states. This matter was subsequently commented upon by Stalin as follows: "Do not forget, comrades, that we advanced against Kerensky with flying colors and overthrew the provisional government partly because we were backed by the confidence of those oppressed peoples which were expecting liberation at the hands of the Russian proletarians." (Joseph Stalin, Marxism and the National and Colonial Question, London, 1942, p. 154.)

The Bolsheviks obviously never meant to keep their promises made to non-Russian peoples. After overthrowing their national states, Moscow introduced ruthless terror and russification, branding all opposition as so-called bourgeois nationalism of non-Russians.

For resisting collectivization alone and for continued desire of independence, Moscow starved to death 7 million Ukrainian peasants and liquidated thousands of political and cultural leaders. A well-known student of Soviet matters comments on this genocidal policy of Moscow in the 1920's and 1930's as follows: "Thus the non-Russian peoples lost two sets of their national elite during the period stretching from the October revolution until roughly the outbreak of the Second World War." (Walter Kolarz, Russia and Her Colonies, London, 1952, p. 11.)

Is it surprising, that under these circumstances the non-Russian nations aim at the quickest possible severance from Moscow and establishment of their true independence? This became quite apparent during World War II when millions of Red army soldiers, primarily non-Russians, surrendered and declared their readiness to fight Moscow. Hitler rejected their offer being unwilling to permit the nations of the U. S. S. R. to become independent and this caused his defeat in the East. This is not denied even by those scholars in the West who cannot under any circumstances be called friends of the non-Russian peoples. Thus, Eugene Lyons in his book Our Secret Allies (New York, 1954, p. 232) states: "An American journalist was talking to a prominent member of the former German general staff after the war. 'Do you know where we lost the war in Russia?' the German asked. 'In Stalingrad,' the journalist answered promptly. 'No, we lost it long before that; in Kiev, when we hoisted the swastika instead of the Ukrainian flag.' "

The Ukrainians and other peoples of the U. S. S. R. organized an underground against the Germans and they are continuing it against Moscow. Recently returning German prisoners of war speak of organized and spontaneous resistance of the peoples of the U. S. S. R. and confirm that this is the greatest threat to the present imperialism and colonialism of Moscow.

These conditions inside the U. S. S. R. give us a unique opportunity to raise the flag of liberty of enslaved nations of the U. S. S. R. and to give them full moral and political support. At the 19th Communist Party Congress in October 1952 Stalin called upon the Communist parties of the whole world to become spokesmen of the idea of national liberation and this part is being played with signal mendacity by Khrushchev and Bulganin who are mobilizing the nations of Asia against us. To forestall this march of falsehood and provocation led by Moscow, we must turn their own weapons against them. We must show the world that nations and peoples are being enslaved by Moscow and not by us, and that it is Moscow that is guilty of genocide committed upon dozens of nations.

Why have we failed to bring to the forum of the United Nations the problems of aggression of Moscow against Ukraine, Georgia, Poland, Turkestan, Kazakhstan, and the Baltic lands? Why have we thus far not raised in the United Nations Committee on Human Rights the question of Soviet concentration camps, that greatest shame of the 20th century? Khrushchev and Bulganin should be made to answer before world public opinion for their criminal practices of Moscow's Communist colonialism upon the Moslem nations of Asia, as well as upon the Ukrainians, Poles, Lithuanians, and others. They should also answer why they are depriving the Russian people of liberty and why they are proclaiming the superiority of the Russians over others and thus incurring the wrath of non-Russians against them.

The public opinion of the world must be informed of all that goes on inside the U. S. S. R., and a courageous declaration must be made that in the gigantic struggle of enslaved peoples against Moscow, we are on the side of those peoples and not on the side of the Communist oligarchy in Moscow. The great ideals of freedom which brought glory upon our Republic have to be again the beacon of our external policy. They will help us oppose effectively Moscow's Communist aggression. They will hit Moscow where it hurts the most: in its very innards. They will also give the enslaved nations of the U. S. S. R. a chance to develop the decisive fight for liberation from the yoke of Moscow's colonialism and imperialism.

Pan American Airways

EXTENSION OF REMARKS
OF
HON. JOHN V. BEAMER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 5, 1956

Mr. BEAMER. Mr. Speaker, today's Washington Daily News carried the information that President Eisenhower has instructed the Civil Aeronautics Board to reconsider, in the light of new developments, its decision to keep Pan American Airways off the great circle route to the Orient in competition with Northwest Airlines.

Inasmuch as the Committee on Interstate and Foreign Commerce is concerned with the stability and progress of our civil air transport system, this is a most gratifying development.

We all know of the pioneering work Pan American did in spanning the Pacific 20 years ago and it seemed inconceivable to us that one carrier should enjoy exclusive privileges in flying the shortest route to the Orient. Ironically, until the President's action, Pan American, which first surveyed the great circle route, was forced to use the old island-hopping route to Tokyo and beyond, a distance some 1,200 miles longer than the route now flown by Northwest.

Certainly a restudy by the CAB of this situation is necessary. A prompt decision, in line with the President's recommendations, should make for keener United States flag line competition in an area which has opened up an entirely new trade route for our large and growing cities in California, Portland, and Washington.

President Eisenhower is to be congratulated for his understanding action.

The International Labor Organization

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 19, 1956

Mr. WILLIAMS of New Jersey. Mr. Speaker, a few days ago the gentleman from the First District of Wisconsin inserted in the RECORD a news item published in Human Events for July 1, 1955. This item played up the views of Mr. William L. McGrath, who has been, for several years, the employer delegate from the United States to the International Labor Organization.

Since his association with the ILO, Mr. McGrath has continuously been critical of the ILO and has recently recommended that the United States Government withdraw its participation.

In the article published in Human Events, it is alleged that the ILO has underway a move to raise the United States contribution to the ILO from $1,750,000 to $3 million a year. This statement is contrary to the facts. There is no contemplated change in the present budget of the ILO commensurate with the $3 million figure alleged by Mr. McGrath.

Budget proposals for the year 1956 will be presented to the governing body for its consideration at the February-March meeting. The charge that the ILO budget will be enlarged to the extent that the United States contribution would be increased from $1,750,000 to $3 million is ridiculous and absurd. It would necessitate an ILO budget of approximately $12 million from its present $6 million level. The American Federation of Labor and Congress of Industrial Organizations, which has been the organization responsible for the nomination of the worker delegate to the ILO, in contrast to the views expressed by Mr. McGrath is in complete support of the ILO and its work. The AFL–CIO believes that the United States Government should strengthen its influence in the ILO and help this organization continue its efforts to improve the economic and social status of people throughout the world.

I would like to insert in the RECORD at this time the following speech made last year at a regional academic meeting at the University of Notre Dame by the worker delegate, Mr. George P. Delaney, international representative of the AFL-CIO, which clarifies some of the allegations contained in the remarks inserted in the RECORD by the gentleman from the First District of Wisconsin:

The American Federation of Labor has been long and intimately concerned with the work of the International Labor Organization since its inception. Samuel Gompers played an instrumental role in the creation of that body, and left a definite imprint upon its very nature and structure. He regarded it as one of those great and infrequent opportunities afforded men to make something decent and humane out of their world and and of their relationships with one another. He saw it as an opportunity to bring out of the bloodshed and chaos into which the world had plunged itself, an instrument of

lasting practical value to the millions of working people everywhere who had been exhorted, bullied, and dragooned into hating, starving, and actually killing one another. The fact that this dream has been but partially realized is not a valid argument against the dream, or the organization itself, but rather a demonstration of the countervailing power of cynicism, avarice, and ignorance which still stand in the way and which must yet be overcome.

The ILO is the only international body in which both workers and employers share immediate responsibility with government representatives in the direction of its decisions and actions. Formal position is taken by the conferences of the organization only after full and complete study and discussion, in which tripartite delegations from all of the member nations are entitled to take part.

The basic purpose of the organization is to secure and to protect the human and civil rights of all working men and women. In so doing it seeks to contribute to the establishment of universal and lasting peace by furthering social justice. It seeks by international action to improve labor conditions, so doing it seeks to contribute to the estab- and social stability.

The ILO pursues these aims through the formulation of minimum labor standards, in the form of conventions having the status of draft treaties—which may, of course, be adopted or rejected by member nations as they see fit. In most instances these minimum standards are well below those prevailing in this country, so that the benefit to American workers is mostly indirect. Of one thing, however, we can be sure—the establishment and continuing improvement of the standards enjoyed by workers in other lands will enhance our ability to protect and maintain our own. Furthermore, as the incessant use of the "cheap foreign labor" argument in the current debates on the tariff question indicates, the elevation of foreign standards would greatly facilitate the reduction of trade barriers, expand our own foreign markets, and greatly increase the job and profit opportunities open to every American.

The broader application of decent minimum labor standards is indeed a vital objective. But in our approach to the world at large, as well as on the domestic scene, labor can never rest content with bare minima. Workers must be encouraged to continually move ahead, through their own free collective efforts, to establishment of higher levels above and beyond any basic minima. This can be accomplished only through the development of strong, free and independent trade union movements, operating in every country.

An equally essential phase of the ILO's program, therefore, is the promotion and the protection of the right of workers to organize freely into trade unions of their own choosing, without interference, domination, or control by governments or employers. While the ILO does not sponsor or directly promote any trade union organizations, it does endeavor to promote the principle of freedom of association among the nations of the world, and thereby to help create conditions and attitudes favorable to the independent development of legitimate organizations of workingmen.

In recent years, the ILO has devoted much of its time and energy to the discovery and exposure of facts concerning the systems of slave labor that exist behind the Iron Curtain. These efforts have culminated in the recent report of the U. N.–ILO Ad Hoc Committee on Forced Labor, disclosing and documenting in detail the extent to which slave labor is employed, both for economic purposes and for political coercion, within the Soviet Union and its satellite nations.

This report has done much to arouse the indignation of the free world, and perhaps more importantly, to awaken the peoples of the uncommitted nations to the grim truth behind the fraudulent claims of the Kremlin. It has placed new moral resources within the grasp of the forces of democracy which, if intelligently and actively exploited, could help to weld the non-Communist world together in stronger opposition to the Communist bloc. Certainly, in the light of the facts uncovered by the ILO, only the wilfully blind can any longer fail to see that the only alternative to resistance is abject slavery.

These facts serve to underscore the crucial role which free labor must play in the struggle against Communist tyranny. In this contest, a labor force composed of freemen—motivated not by fear of the alternatives, but by a deep and positive devotion to the affirmative ideals of a free society—is the greatest single advantage on our side of the issue, and the one element of strength which the Soviet world does not share. We must not fail to extend that advantage and build upon it.

In today's world, an active and influential International Labor Organization, supported by all segments of the American public and inspired by the enlightened and energetic leadership of the United States, would be a powerful—and perhaps a decisive—asset to the cause of freedom. Regretfully, such a description cannot be accurately applied to the ILO today, nor to the role of the United States in relation to that Organization.

As a consequence, the ILO is threatened with a sort of creeping paralysis and stands in danger of being crushed between the millstones of reactionary extremism, on the one hand, and Soviet opportunism, on the other.

Let me set forth a few reasons why this is so. Mr. McGrath, the previous speaker and employer delegate to the ILO, has on many instances in the past 3 years, bitterly attacked and discredited the ILO in articles in trade association magazines and in public speeches. Mr. McGrath stated that the ILO today presents, quote "a growing threat of the use of treaties as a means of transferring legislative authority over our domestic affairs from our own lawmaking bodies to an international agency." This statement is a direct quote from his testimony before a subcommittee of the Senate Committee on the Judiciary, when it was considering Senate Joint Resolution 1, commonly known as the Bricker amendment.

This statement has no foundation in fact, for the ILO exercises no "legislative authority" whatsoever. It has no power over the domestic or internal affairs of any nation, and there is no threat that this or any other nation's sovereignty will be transferred to the ILO. Mr. McGrath, in addition has alleged that the ILO is a hotbed of socialism, and that it is dominated and controlled by a Socialist government-labor coalition, bent upon forcing Socialist programs upon the United States. Certainly any blanket assertion that any of the member governments are socialistic in character should be called to account before any serious credence is given to any arguments which proceed from such a premise. The large majority of the nations participating in the ILO are, allowing for variations in economic conditions and stages of industrial and political development, predominantly free enterprise in character.

Until comparatively recent years, delegations representing American employers played a positive, constructive role in the work of the ILO, often supporting and voting in favor of conventions and other conference actions which the current employer delegate loudly condemns as examples of rampant "Socialism."

Thus it can be seen that through the influence of the National Association of Manufacturers and the Chamber of Commerce, the American employers are today represented in the conference of the ILO by an antagonist of the ILO itself and all its works.

It has become quite apparent to most of those who have observed their pattern of conduct at firsthand that the primary aim of the employer delegate and his principles is not to promote or to improve but to defeat the work of the ILO. This is an objective which they share, whether they recognize it or not, with the Kremlin. The Soviet Union withdrew from the ILO in 1937, and from that time until this past year has kept up a running campaign of propaganda against the Organization, attacking it as a "tool of capitalist imperialism." Suddenly last year, however, the Kremlin made another of its well-known reversals of field, declared its willingness to meet the obligations of membership, and submitted a formal request for readmission to this "tool of capitalist imperialism."

The motives behind this maneuver are quite transparent. The object is to create confusion and discord within the ranks of the non-Communist nations, to neutralize the effectiveness of the ILO as a force for freedom, and to place the Soviet Union in a more strategic position to direct its appeal to the working peoples of the uncommitted and underdeveloped nations.

The various issues posed by the reentry of the Soviet bloc marked the battleground upon which a major struggle in the conflict between East and West took place during the last ILO conference. This struggle revealed the nature of current Communist strategy.

Under the urging of the International Confederation of Free Trade Unions, a move was made at the Conference to unseat the worker delegates of the U. S. S. R. and Czechoslovakia. This move was defeated. The real stumbling block to success for the ICFTU on this issue was a defect in the constitution of the ILO which does not explicitly exclude so-called worker delegates of the Soviet type who are, in fact, the creatures of their Government. The real action needed is an amendment to the constitution, so that workers and employer delegates may not be handpicked by totalitarian governments.

Aside from this regrettable action, the Western democracies did win all of the other important political decisions at last year's conference. They defeated Soviet attempts to substitute the government of Red China for Nationalist China. They likewise showed a united front against the application for membership of Red Rumania. The conference also turned down an attempt to seat the Hungarian delegation at a time when Hungary was more than 2 years in arrears in its contribution to the ILO.

Similarly, the Soviet satelites failed to win a single elective seat either as titular members or as deputy members of the ILO's governing body, and the worker and employer groups of the new governing body elected no Communist members or substitutes. The sole Communist-held seat on this 40-member body is that of the Soviet Union which acquires nonelective status as one of the 10 states of chief industrial importance.

As a one-vote minority, the Soviet Union is not likely to be very influential in the ILO executive machinery unless isolationist political pressures here at home serve to weaken further the influence of the United States within the organization. I can conceive of many reasons why the men in the Kremlin would like nothing better than to see the United States out of the International Labor Organization. It would enable them to plant their agents in technical administrative jobs in southeast Asia, Africa, the Middle East, and Latin America. It would abet their efforts to turn the delegates from other non-Communist nations against us. It would give their spokesmen

greater access to the ILO rostrum without timely response by American worker, employer, and Government delegates. And, in the last analysis, it would utterly destroy the positive effectiveness of an organization which has been and is today a veritable thorn in the side of Communist slave-labor dictatorship.

But whatever the motive, the designs of the Soviet Union are definitely advanced by division in the western ranks, and by the anti-ILO and anti-U. N. outcries of our domestic isolationists. Now, more than ever before, while the Communist bloc in the ILO remains small and relatively ineffectual, it is up to the free governments and to organizations of free employers and free workers to do all that they can to strengthen the hand of the ILO, to move in an orderly way toward a tightening of the ILO constitution and rules of procedure, and to take the lead in helping to make the organization an effective instrument of practical progress in pursuit of our democratic ideals.

The blame for American failure to make the most of the opportunities offered by the International Labor Organization cannot be laid at the door of any one element or group—it must be shared by all. Likewise, every element concerned—labor, management, Government, and the public at large—must share responsibility and cooperate in the steps that must be taken to rehabilitate the American position in the world and to make effective use of the International Labor Organization as a means to that end.

Let us for a moment examine the role now played by the American Government, its deficiencies and some of the things that need to be done to revitalize this Nation's leadership in the world. It is my firm conviction that the times demand that the United States assert a bold, forthright, and affirmative policy, based upon concrete and practical—rather than merely rhetorical—objectives. Talk is very cheap and we have had a great deal of fine talk about a dynamic policy, but in action it has boiled down into retreat, retrenchment, withdrawal, and failure, and a complete collapse of our appeal to the ordinary people of the world. We should endeavor to associate ourselves with the legitimate aspirations of peoples, rather than the ambitions of premiers, generals, and petty potentates.

There could be no more effective way to bring this about than to make strong, active, and positive support of the ILO a fundamental attribute of American foreign policy, by placing our full influence, both political and economic, behind the standards and the objectives of that body. A good beginning in this direction would be to increase our contribution to the U. N.-ILO technical assistance program so as, at the very least, to meet our full quota, and to give that program the stability and assurance that it has lacked because of the failure of the United States to live up to its obligations and to deliver on its commitments.

We have often heard it stated by our public officials that the ultimate aim of our foreign aid program is the improvement of the conditions, the opportunities, and the level of living enjoyed, or rather endured, by the rank and file citizens of the nations involved in those programs. Yet, in all too many cases, the deed has not lived up to the word. Billions have been distributed abroad that have lined the pockets of the wealthy, with little or none filtering down in the form of concrete improvements in the status of laboring people. The result has been a widespread and growing cynicism and disillusionment among the workingmen and women of the world, who should rightly be our strongest allies in the fight for democracy, freedom, and progress.

There could be no better way to correct this situation—though it may be already too late—than by using the principles and standards of the ILO as a practical test of merit in the allocation of aid and expenditures overseas. Certainly no project or nation where those standards are grossly violated or disregarded is a proper channel for the distribution of funds raised in large part by taxes upon the paychecks of American workingmen. By making it clear that we regard the work of the ILO as something more than empty talk, the United States could give the prestige and influence of the Organization a powerful lift in those nations that look to America for aid or trade.

Yet, before we can adopt such a stance in our dealings with other nations, our own moral position in relation to the ILO must be greatly improved. We can scarcely question the sincerity or the performance of any other country when we ourselves have ratified no more than a handful of the less important of the ILO's conventions. A more serious attitude toward our responsibilities as a member of the ILO needs to be taken, both by the Congress and the administration. It must be realized that, while the ratification of most of the ILO's conventions would do little or nothing to alter the standards and practices already observed in this country, such action is very important as evidence of our sincerity of purpose in supporting the Organization.

With that kind of backing at home, it would then be possible for the American delegation to the ILO to assume the role of vigorous, constructive leadership befitting it as the representatives of the greatest and most advanced industrial democracy in the world. Perhaps then our Government delegates would shed some of that timidity that has assailed them in the past and take the initiative in advocating new and positive steps to secure and advance the rights and standards of the laboring poor. This would indeed be a welcome improvement over the present situation where, before voting on someone else's proposal for some such meager proposition as the principle of vacations with pay, spokesmen for our Government wrestle long and fearfully with their consciences. And, all too frequently, the conscience loses the wrestling match.

It is not, of course, my part to advise the employers of America as to the direction in which their best interests lie. Yet I cannot accept, without comment, the argument advanced by their representatives to the ILO—that their interests are best served by the obstruction of, or withdrawal from, the work of that body. Such an argument makes no more economic sense than would the argument that the economic interests of New England employers who pay decent wages are advanced by the continued absence of effective standards to effectively restrain the exploitation of labor by their southern competitors.

I sincerely believe that American employers can—if they will and as they have at times in the past—put their best foot forward and make a great contribution to the objectives of the ILO and to the cause of social justice without sacrificing any real principles of their own. American employers have an opportunity to make a strong case for the benefits of free enterprise, where mass markets and top efficiency are promoted through the incentive and reward of high wages. But they should deliver that message where it can do the most good—among employers abroad who today accept oppressive, subhuman conditions with utter complacency.

In the meanwhile, they should not obstruct the work of the ILO, but support it—for, under a different kind of private enterprise abroad, the persistence of the conditions which the ILO seeks to correct is of no benefit, and much injury, to that great majority of American employers who have no large foreign plantation or petroleum holdings and who employ only American workers, under American conditions.

I believe also that American employers have the same interest that we all do in the establishment of a secure and lasting peace throughout the world. Such a peace however can be built only upon a foundation of social justice.

I do not mean to exonerate American labor or its representatives of any blame for the lack of understanding and bedrock support for the ILO within this country. Labor, perhaps, has a greater and more direct responsibility toward the ILO than does any other group, for the main function of the organization is, after all, the improvement of the conditions of labor. I have no doubt but that, had the trade unions of America been more consistent and active in cultivating an understanding and appreciation of the importance of the ILO among their members and in communicating their interest to the Congress and to the administration, America's role in the organization would have been far more fruitful than has actually been the case.

As in the case of the public at large, the effectiveness of labor's support for the ILO has been handicapped by the lack of interest at the local level, by the inability—common to most human beings—to see beyond the range of one's immediate bread-and-butter interests and to appreciate the stake of American labor in the welfare and progress of its brothers overseas.

We can none of us—whether we come from labor, management, government, the academic world, or the public at large—afford to neglect the responsibility and the opportunity presented by the International Labor Organization. The world does not offer very many such opportunities to correct old mistakes and to avoid future catastrophes, and the time is short.

None of us has anything to lose in the effort to make the International Labor Organization a more effective instrument for the attainment of a better world society.

We all have much to gain.

Julian H. Krolik

EXTENSION OF REMARKS
OF
HON. JOHN M. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 19, 1956

Mr. DINGELL. Mr. Speaker, I rise today to pay tribute to a great man, Julian H. Krolik, a humanitarian and a philanthropist. He was loved and respected by all his fellowmen. He was active in Jewish charities and philanthropies; among them, the Jewish Welfare Federation, the United Jewish Welfare Federation, and the Sinai Hospital. He was also active in many non-Jewish charities and is perhaps best known for his activities on behalf of the Community Chest, in which organization he was a tower of strength giving unselfishly both of his time, energy, and money.

He was a strong man, but time finally took its toll of his strength, and although his body failed, his mind remained that for which his friends had long admired and respected him, clear and powerful. Although I only knew him by the universal respect in which he was held, I join his many friends throughout the

community, his family, and the people of Detroit in the knowledge that we have lost a great man for whose presence all of us are richer in things spiritual and physical.

At this time I introduce into the RECORD an editorial by my good friend, Mr. Philip Slomovitz, the editor of the Detroit Jewish News:

JULIAN H. KROLIK—TRULY, A GREAT MAN

About Julian H. Krolik it may truly be said that "sar v'gadol nofal b'Israel," that a prince and a great man has fallen in Israel.

He was a genuinely cultured man, an able leader, an inspirer of his fellow men.

And his chief distinction was that he was a man with a deep and abiding sense of justice. He had few prejudices. He was always on the side of the underdog. He fought for unpopular causes, and although his family background was non-Zionist, he alined himself with the Zionist cause when it was still unpopular.

He was more than a leader in the Jewish Welfare Federation. With the late Fred M. Butzel, he shared for many years the distinction of having inspired Michigan Jewry to action whenever there was need to help distressed Jews, when there were calls to action for causes in behalf of oppressed people, when our country called its citizens to respond to liberty loans or war-bond drives.

Our Community Chest counted him among its most devoted leaders.

His fellow Detroiters often marveled at his vitality, at his having shunned hat or overcoat, at his love of nature and all natural phenomena. In recent years he was not well, and it grieved all of us to see him losing his health. But although his body weakened, his mind retained the great strength of a great man. We mourn his passing. We shall miss his absence from our midst.

The Cost of World Wars I and II
A Staggering Sum

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 17, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am inserting valuable information compiled for me by the Economics Division of the Library of Congress. Mr. Hermann Ficker, analyst in international trade and finance, has prepared the material which I am inserting.

Mr. Speaker, this information covers the cost of World Wars I and II. It is obvious at a glance that war is costly and destructive and it seems that we should be on the road to finding a solution to this problem other than by an armaments race with Russia, which appears in the making at this time.

The above-mentioned follows:

THE COST AND ESTIMATED PROPERTY DAMAGE OF WORLD WAR I

Twice in one generation the shadow of mass warfare has fallen athwart the world. These great wars have caused incalculable human misery due to the loss of millions of men in the prime of life and the death and displacement of civilians in even greater numbers.

While immense sums are consumed in the prosecution of wars, as well as in recovery and rehabilitation of war-ravaged areas, we know that great problems remain and that wars add greatly to the tax burdens of succeeding generations.

METHODS OF COMPUTING THE COST

Estimating the cost of war in olden times must of necessity prove futile since records were not kept as to the cost of armies in the field, tribute, slaves, destruction of property, and other items included today in a general war assessment. Conclusive compilations of the exact cost of World War I have never been made due to the difficulty of separating war-related items from the current budgets of all the governments concerned. Similarly there has been found no conformity in the definitions as to what programs are allocable to war and what other programs during a war period were merely to carry on the ordinary administration of a nation's general economic life.

Statements as to the exact cost of World War I are therefore to be taken merely as approximations based on insufficient statistical evidence. In fact, most countries have not issued detailed official figures on World War I expenditures. Published computations have mostly been made by students far removed from the actual operational procedures incidental to the expenditures of money from the national exchequers.

The waste of treasure that wars have brought to humanity should also include the loss of national wealth comprised in the drain of raw materials and natural resources. When converted into the implements of war they are not replaceable and future generations are forever deprived of them.

Another evaluation of the cost of war should include losses in national income due to the prolonged absence from productive work of millions of men and women engaged in unproductive and destructive war work. The billions of hours devoted to preparedness and to actual fighting if turned into the building of homes, schools, hospitals, bridges, roads, and factories would assuredly have advanced humanity toward greater achievements in all cultural and humanitarian fields.

DIRECT MONEY COST

Many estimates of the cost of World War I are available, all divergent in totals, but basically the differences in cost are due to the period of time over which the cost is spread.

E. L. Bogart, on behalf of the Carnegie Endowment for Peace computed in 1920, that the direct money cost of the war to all countries was as follows:

A. Allies:	
United States	$32,080,266,968
Great Britain	44,029,011,868
Australia	1,437,418,680
Canada	1,665,576,032
India	601,279,000
New Zealand	378,750,000
Union of South Africa	300,000,000
Belgium	1,154,467,000
France	25,812,782,800
Greece	270,000,000
Italy	12,313,998,000
Rumania	1,600,000,000
Russia	22,593,950,000
Serbia	399,400,000
Other allies	500,000,000
B. Central Powers:	
Germany	40,150,000,000
Austria-Hungary	20,622,960,000
Turkey	1,430,000,000
Bulgaria and Rumania	815,000,000
Total	207,850,860,348

These costs included not only the maintenance of the armies, transportation and the production of war materiel but also the aid etxended to other countries by both sides. The total of this aid is tabulated separately merely to show the amounts that individual countries expended. It amounted to approximately 10 percent of the total direct costs of World War I.

ASSISTANCE TO ALLIES

Included in the overall estimate of the cost of World War I are the advances made to their allies by the belligerents. These were:

United States	$9,455,014,125
Great Britain	8,695,000,000
France	1,547,200,000
Germany	2,375,000,000
Total	22,072,214,125

INDIRECT COSTS OF WAR

Among the indirect costs of World War I should be included an estimate of the value of property destroyed during the period of belligerency. This is physical damage to homes, schools, churches, factories, power installations, transportation facilities and equipment and other property. Again Bogart has made an estimate in rounded figures without trying to give a breakdown by type of property destroyed. The only differentiation made is in property on land and shipping.

Property damage:	
Belgium	$7,000,000,000
France	10,000,000,000
Russia	1,250,000,000
Poland	1,500,000,000
Serbia, Albania, Montenegro	2,000,000,000
East Prussia, Austria, Ukraine	1,000,000,000
Italy	2,710,000,000
Rumania	1,000,000,000
Germany	1,750,000,000
British Empire	1,750,000,000
Total	29,960,000,000

SHIPPING AND CARGO LOSSES

The total losses in shipping to the allies and neutrals from the beginning of hostilities to August 1, 1918, are estimated at 15,000,000 tons. This is approximately one-third of the world's prewar shipping tonnage of 48,500,000. Production cost of that tonnage was $1,050,000,000. Germany and Italy lost almost all of their merchant shipping. In addition to the deadweight tonnage there is also the question of cargo. Altogether, the estimate for shipping and cargo amounts to $6,800,000,000.

COST OF WORLD WAR II AND PROPERTY LOSSES

Statisticians have not yet attempted to assess the total expenditures of participating nations in the prosecution of World War II. Military expenditures as part of national budgets do not portray the full extent to which the energies of any nation were directed toward warmaking purposes in the war emergency.

Guess-estimates have varied from $1 trillion to $4 trillion, depending on the type of direct and indirect cost included in the overall totals. If the figure of $4 trillion is used, the cost of World War II amounts to $1,708 for every man, woman, and child in the earth's estimated population of 2.3 billion people.

In the following tables an attempt has been made to state the direct cost of war insofar as figures are available from published sources with a total of $1,439,250,000,000. Indirect losses are summarized under two headings, namely property damages estimated at $259,557,000,000 and an itemized list of shipping losses for which dollar value figures are not available. Illustrative data for property destruction in various countries are added to show the extent of war damage.

Lastly, a total of aid rendered foreign countries by the various belligerents is given. This list is incomplete. The sums mentioned are included in the direct money cost of the war.

DIRECT MONEY COSTS

Insofar as published estimates are available, the various nations spent the following sums as direct costs in the prosecution of the war:

United States [1]	$317,600,000,000
United Kingdom	120,000,000,000
France [2]	192,000,000,000
Canada	14,000,000,000
Australia	8,000,000,000
South Africa	2,250,000,000
New Zealand	1,650,000,000
Germany	273,000,000,000
Italy	94,000,000,000
Japan [3]	56,000,000,000
Finland [4]	2,000,000,000
Rumania	1,750,000,000
Russia	357,000,000,000
Total	1,439,250,000,000

[1] Commercial and Financial Chronicle. Dec. 13, 1945. P. 2927.
[2] London Times. Aug. 17, 1945. P. 4.
[3] New York Times, Mar. 18, 1947, p. 4 and Aug. 12, 1945, p. E–2.
[4] U. S. News. Sept. 17, 1945.

To these totals should be added the expenditures of India, Egypt, Turkey, Greece, China, and many smaller entities.

PROPERTY DAMAGE

The best estimates of property damage has been compiled by the French National Institute of Statistics and Economic Studies.[1] According to an analysis published in 1947 fixed property destroyed during World War II was valued as follows:

Austria	$534,000,000
Belgium	2,274,000,000
Denmark	159,000,000
France	21,504,000,000
Greece	3,269,000,000
Holland	3,947,000,000
Italy	2,900,000,000
Luxembourg	179,000,000
Norway	1,275,000,000
United Kigdom	6,872,000,000
Germany	48,000,000,000
Albania	512,000,000
Bulgaria	420,000,000
Czechoslovakia	4,202,000,000
Hungary	4,330,000,000
Poland	20,000,000,000
Rumania	683,000,000
Yugoslavia	10,497,000,000
U. S. S. R.	128,000,000,000
Total	259,557,000,000

There is wide discrepancy in totals for individual countries. The authoritative London Times stated that France suffered $122 billion in property damage, whereas the French themselves put their losses at just over $20 billions. If mere replacement value were the criterion of worth then the overall totals will assuredly be very much smaller. On the other hand many of the later estimates are expressed in terms of currencies suffering in many instances from inflation.

SHIPPING LOSSES

The following French Institute estimate of merchant ship losses includes only vessels of 100 gross tons or more during the period September 1, 1939 through September 3, 1945.[2]

Merchant-ship losses, Sept. 1, 1939, to Sept. 3, 1945

	Vessels	Tons
United States	736	4,734,768
British Empire	1,910	11,193,964
United Kingdom	1,753	10,484,595
Belgium	57	341,190
Denmark	109	407,715
France	313	1,581,761
Greece	247	1,078,482
Holland	240	1,326,536
Norway	418	2,027,204
Poland	9	45,000
Sweden	120	450,645
Turkey	9	25,994
U. S. S. R.	51	207,450
Yugoslavia	46	189,161

WAR DAMAGE IN VARIOUS COUNTRIES

It has been found impossible to make detailed lists of property damages suffered in all countries. Illustrative of the type of damage suffered by individual countries a brief statement will be made concerning those areas for which data were found.

United Kingdom: "In England, by March 1944, 3 million war-damaged houses were 'first-aid' repaired, and 102,700 badly damaged houses were restored to use. The following year more than a million houses were damaged or destroyed by flying bombs." [3]

France: "The total number of buildings damaged and destroyed * * * in World War II was some 1,804,000. Nearly 25 percent of all buildings damaged in World War II were completely destroyed.[4]

"The French ports have been notable casualties in the war. Toulon is blocked by the scuttled French fleet much too effectively for German salvage or French reconstruction. The Atlantic ports are almost useless. * * * The Channel ports were bombed ruthlessly." [5]

Countries such as Finland, Norway, Denmark, the Netherlands, and Belgium, and Czechoslovakia suffered damages to physical installations that amounted to hundreds of thousands of homes destroyed, transportation paralyzed, ports demolished, and extensive dislocations of the national economies. Damage can be assessed in the trillions of dollars.

China: "Property losses have been astronomical. In Shanghai alone $2 billion worth of homes and factories were destroyed. In their campaign of terror the Japanese did not hesitate to level hundreds of towns and villages. Nor will it ever be possible to compute the dollar-and-cent loss suffered by China in the forced flight of 40 million people. Or of the damage done to the soil by the gerat floods which followed the breaching of the Yellow River dikes." [6]

Japan: Apart from all industrial destruction and dislocation of the economy, 2,252,000 buildings were destroyed.[7]

Germany: Few nations have suffered such utter destruction as was heaped upon Germany. Complete estimates have never been computed.

U. S. S. R.: The fantastic destruction in Russia is noted in the following statistics of war damage: [8]

Towns	1,710
Villages	70,000
Houses	6,000,000
Hospitals and medical centers	40,000
Schools and research institutes	84,000
Libraries	43,000
Industrial plants	31,850
Electric motors	239,000
Metal-cutting lathes	175,000
Railway track (missing pieces)	40,625
Railway stations	4,100
Railway bridges	13,000
Locomotive depots	317
Steam and motor locomotives	15,800
Passenger and freight cars	428,000
Passenger and freight vessels	4,280
Ports and docks	479
Post, telegraph, and telephone offices	36,000
Collective farm headquarters	98,000
State farm buildings	1,876
Tractor stations	2,890
Horses	7,000,000
Cattle	17,000,000
Hogs	20,000,000
Sheep and goats	27,000,000
Poultry	110,000,000

Italy: The most detailed list of war damage has been compiled for Italy.[9]

Military operations involved practically the entire peninsula and every aspect of life was in chaos because of material destruction and disorganization of the central network of economics, financial and administrative life. Among the various classes of property which had undergone most damage were:

(a) Housing: 1,900,000 habitable rooms destroyed; 1,100,000 seriously damaged; 3,800,000 to a lesser degree.

(b) Public works: State roads destroyed and damaged 60 percent; secondary roads 20 percent; important bridges destroyed 2,968; secondary bridges 5,269; post buildings 90 percent damaged; port machinery and docks 50 percent destroyed; schoolrooms 40 percent destroyed; hospitals and equipment 20 percent destroyed; churches destroyed and damaged 11,000.

(c) Mercantile marine: Itay's merchant navy consisted of 1,109 units over 100 tons gross. Total of 3,400,00 gross tons was reduced to 429,000 representing a 90 percent loss.

(d) Railways: 40 percent of all railway equipment and facilities was destroyed.

(e) Agriculture: Direct damage was estimated at 550 billion lire. Indirect damage would take years to eradicate due to the lack of fertilizers, damage to water supplies, deteriorating of river defense-works, uncontroled depreciation and the abandoning of sound methods of cultivation.

(f) Industry: Plant and property destroyed amounted to 450 billion lire. Worst hit were the steel works, electrical works, shipbuilding, chemical works and metal works.

In addition to these serious overt aspects of war damage there are the aftermaths of a continuing deterioration in the entire governmental system, the reduction in agricultural and industrial production, the reduction in the standard of living, the inflationary movement, unemployment and the price spiral which will take years to be overcome.

Classics of American Democracy—VI

EXTENSION OF REMARKS
OF

HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 18, 1956

Mr. O'HARA of Illinois. Mr. Speaker, I am extending my remarks to include replies from a representative group of religious leaders to the proposal to translate the Classics of American Democracy into many languages and to make them easily accessible and at reasonable prices to people everywhere. The letters follow:

DEAR SIR: I have read with interest and appreciation your plan and the suggestions made for books. In my opinion this is one of the most effective attacks that I can imagine on the inroads of communism in foreign countries. I am particularly impressed by the creative diversity in your list ranging all the way from the authorities being cited by "our new conservatives" to the classical liberals.

I am most delighted with this undertaking in the defense of democracy.

Very truly yours,

NELS F. S. FERRÉ,
School of Religion, Vanderbilt University.

DEAR CONGRESSMAN O'HARA: This is in answer to your letter of December 12 concerning the matter of enabling legislation directing the United States Information Agency to publish for nominal prices, in the principal languages of the world, a small library of basic statements of democratic political philosophy.

I am thoroughly in accord with the feeling that such a step should be taken, and believe that every reasonable means of distribution should be used.

As to the books and papers listed, I am altogether unfamiliar with some of them. However, I would select these five without question: The American Commonwealth, Bryce; The Spirit of Liberty, Hand; Representative Government, Mill; Democracy in America, De Tocqueville; The New Freedom, Wilson.

I think that, in general, books written since around 1900 should be given highest ranking.

Sincerely,

GEO. H. SMITH,
Pastor, Church Street Methodist Church, Knoxville, Tenn.

DEAR MR. O'HARA: I was very much interested in the plan for publication of Democratic Classics, which you sent. I feel very strongly that the United States has not done sufficient to popularize the meaning of democracy to the nations of the world. The Communists have been much more aggressive.

In my travels through Europe and Israel, I was able to note the prevalence of subsidized literature which the masses could afford to buy. This literature presented the Communists' point of view. We of the democracies ought to be as aggressive in communicating our ideas.

I therefore endorse this proposal, and urge its acceptance. The books that you list constitute a representative sampling. Since I am not expert in these matters, I hesitate to express an opinion. I am sure that a satisfactory list will be prepared. What is important is that we make our point of view known to the world.

Sincerely yours,

RALPH SIMON,
Rabbi, Congregation Rodfel Zedek, Chicago.

DEAR CONGRESSMAN: Your letter of December 12 concerning library of basic statements of democratic political philosophy is at hand. I am warmly in favor of establishing such a library. Furthermore, I have carefully studied the list of proposed works and find it an excellent one. I would suggest that you might well add on works containing essays or addresses or excerpts from such by various writers. Here I would think of some of the speeches or writings by men like President Eisenhower, President Herbert Hoover, Mr. Adlai Stevenson, Dr. Elton Trueblood, Dr. Reinhold Niebuhr, and others. In other words, I would like to have a little more by contemporary and living writers than your list contains.

Sincerely yours,

HERBERT GEZORK,
President, Andover Newton Theological School, Newton Centre, Mass.

MY DEAR CONGRESSMAN O'HARA: I give my enthusiastic support to the proposal described in your letter and enclosure of December 12.

Nothing, in my judgment, would serve to help combat the insidious intellectual appeal of communism, as much as widespread distribution of the basic and classic formulations of the reasonings of Democracy.

I think that the numbers and names of the books ought to be the subject of a meeting of a number of authorities in the field. You would probably find disagreement with some titles and the recommendation of the addition of other titles, but these details are not nearly so important as the proposal itself.

I do hope that you will push this proposal hard when it comes before Congress in the form of a resolution and I should be happy if you were to see fit to use all, or part of this letter in any way that you might deem best.

With very good wish, I am,

Sincerely,

DR. BERTRAM W. KORN,
Rabbi, Reform Congregation, Keneseth Israel, Philadelphia.

MY DEAR CONGRESSMAN O'HARA: In response to your letter of December 12, may I give my whole-hearted approval of the list you have sent to me. It would be an excellent beginning.

With good wishes to you in the sacred cause of the rights of man, I am,

Sincerely,

NORMAN GERSTENFELD,
Rabbi, Washington Hebrew Congregation.

DEAR CONGRESSMAN O'HARA: I have your letter of December 12, and I think this is a most excellent plan.

One of the problems is, going to be to get the kind of things into the hands of simple people which they can understand.

A lot of the things that you have written down here will be way over the heads of ordinary people. There is a little book by Dr. Daniel Marsh, former president of Boston University, called The American Canon, that can be understood by an intelligent schoolboy. It deals with the creation of the seven fundamental documents, as he believes, of American history. I believe this could be republished to great advantage and spread abroad, and would take on with simple folk better than some of the learned volumes that you have written down, although these are important, of course, also. I did a little book myself called, Freedom and Faith, and am sending you a copy of it under separate cover. This, too, is of a very much simpler order. It contains some addresses I gave over WJZ years ago. Clarence Manion's book, The Key to Peace, is also extremely valuable. I believe this all needs to be hit from many different angles.

Warm good wishes to you in this fine enterprise.

Sincerely yours,

S. M. SHOEMAKER,
Rector, Calvary Episcopal Church, Pittsburgh.

MY DEAR CONGRESSMAN O'HARA: Thank you for your letter of December 12. I think your proposal an excellent one. I have believed for a long time that we have been remiss in not making available at a reasonable price the basic statements of democratic philosophy. I am happy that you contemplate this.

I should like to write you later concerning the list of books. There is always the danger that in meeting the Communist challenge we speak in terms of political democracy and fail to present works that deal sufficiently with the issue of economic democracy. The Communist tries to point out that political democracy, while stressing

freedom, avoids the issue of justice. This is not true. However, most of the books you recommend approach the problem solely from the political point of view. It seems to me that we have got to show that the democratic concept can bring justice in the economic sphere and maintain freedom. The Communist sacrifices his freedom to get what he calls justice. Actually, he gets neither. But this is a matter I think you may wish to consider.

With every good wish, believe me,

Ever sincerely yours,

G. BROMLEY OXNAM,
Bishop of the Methodist Church.

MY DEAR SIR: I am in receipt of your letter of December 12 asking for my comment on your plan for publication of democratic classics.

May I say that I'm completely in accord with part 1 of the plan. However, I feel that part 2 could be expanded and to this I would like to give more time and attention. If there is opportunity to do so, I would be very happy to discuss such a listing with the newspaper editors and educators of our own community.

Sincerely yours,

SELWYN D. RUSLANDER,
Rabbi, Temple Israel, Dayton, Ohio.

DEAR MR. O'HARA: Thank you so much for sending me the material concerning the publication of a small library of basic statements of our philosophy. I like the idea tremendously and have no suggestions to give you. I think the books you have named are the ones that ought to be included. The whole idea has my enthusiastic support.

Thank you again for writing to me.

Sincerely,

GERALD KENNEDY,
Bishop, The Methodist Church, Los Angeles Area.

DEAR MR. O'HARA: I think the plan as outlined is excellent and I will be happy to do anything I can to aid in the program.

Sincerely yours,

JOSEPH R. ROSENBLOOM,
Rabbi, Congregation Share Emeth, St. Louis, Mo.

MY DEAR SIR: Mr. Samuel Gale asked me to make some comments on your letter concerning the publication of books on our democratic philosophy. He suggested that I might communicate directly with you. Needless to say, I am honored by his confidence in my judgment. However, I am deeply aware that on a matter such as this there cannot be an unanimity of opinion.

I am tremendously interested in your proposed legislation. I have for a long time held the conviction, and have so expressed it many times, that we have failed to spread the gospel of democracy in such a manner that it becomes available and intelligible to the average man throughout the world.

Will you permit me to make one suggestion concerning the list of authors? It strikes me as being somewhat topheavy with "classical" works. There are only three names which belong to our modern era: Dewey, Hand, and Wilson. It would be difficult for me to say what to select from Jefferson and Lincoln. So much of the former's writings and the latter's speeches breathe the very spirit of democracy. Emerson's Essays on Politics, Compassion, Self-Reliance, and Character probably express more what we have in mind than anything else he ever wrote and said.

It appears to me that in this selection of books considerable thought should be given to the emphasis of responsibility which falls upon the individual in a democracy. There is constant danger that the element of privilege can be stressed to a degree which brings about an unbalance. This is particularly true in such a case as Dewey. I would have no hesitancy in adding modern names which put democracy and its basic tenets into the framework of contemporary circumstances. Writings similar to those of Learned Hand would make a great contribution. The names of such men as Lippman and Commager are good examples.

I am grateful to Mr. Gale for the privilege which he has accorded me in writing to you.

Very respectfully yours,

ARNOLD H. LOWE,
Minister, Westminster Presbyterian Church, Minneapolis.

DEAR CONGRESSMAN O'HARA: In response to your request for suggestions on the list of democratic classics, let me say just this: Some of those proposed appear to me to be rather heavy reading. I think especially of Burke, Kant, and von Humboldt. These would be more fitting for a University of Chicago great-books course. I would, however, certainly like to see included Milton's Aereopagitica.

I think a volume of exerpts of some of the great opinions of Holmes, Brandeis, and Cardozo would be effective as an indication of how the democratic principle has come into the actual legal structure of the land. I think also another volume devoted to excerpts from Benjamin Franklin, Hawthorne, Melville, Twain, Whitman, Henry George, Carl Sandburg, and Clarence Darrow would not only be readable but would give a better opinion of America's commitment to the democratic ideal. You might even add another volume on American folk lore and humor, reflecting the folk commitment to democracy.

At any rate, I think we have to guard against the rather heavy, academic tone which the present list reveals.

Most sincerely,

JACOB WEINSTEIN,
Rabbi, K. A. M. Temple, Chicago.

DEAR CONGRESSMAN: I heartily endorse the plan which you outline, even though there may be a good deal of dispute as to the type of work included in such a library. I would not wish to quarrel with the gentlemen who have drawn up this original list, but I would strongly suggest that those who can and will read Kant will find him easily enough available and do not need this special series.

I would make two suggestions:

1. To include the text of the basic constitutional government of some of the world's leading democracies such as our own, France, Switzerland, etc.

2. I would suggest the inclusion of Great Statements on Democracy by Americans as well as others. I have in mind Washington's inaugural, Lincoln's inaugural, and Gettysburg Address, and other similar documents, many of which have been collected in anthologies as those by Henry Steele Commager.

Wishing you the very best in this undertaking, I am,

Sincerely,

W. GUNTHER PLAUT,
Rabbi, Mount Zion Temple, St. Paul, Minn.

DEAR SIR: I have your letter of December 12 and the enclosure relative to a desirable list of books, etc. In reply thereto, let me say that I am in favor of the project, but I find the list unsuitable for the following reasons:

You are evidently after the intellectuals. In that case, at least half the titles are without a doubt familiar to them. To think oherwise, is to underestimate the European intellectual. What they need is being brought up to date.

In the second place, why not aim at a middle group? Why not make up a list of books popularly written which present the subject of "Democracy and Freedom" in a manner understandable to the more-or-less average?

The above are general statements. I am not in a position to give alternate titles. But I know they are available, and that your staff can easily compile many titles.

I hope that you will take my criticism in good spirits. Had you not asked me, I would not have given it.

With kind greetings,

Sincerely yours,

Rabbi JOSEPH UTSCHEN,
Temple Emeth, Ardmore, Okla.

DEAR MR. O'HARA: In response to your letter of December 12 concerning your plan for the publication of a small library of basic classics of American democracy, let me say that I think it is a splendid idea. I have traveled abroad often enough to know that such a thing as this is terribly important and valuable. In looking over the list which was suggested, I should simply like to make the general observation that classics need not necessarily derive only from 18th and 19th century writings.

I have the feeling that many intellectuals around the world would like to know what some of our 20th century political philosophers are writing. Thought should be given, therefore, to including such volumes by contemporary authors as would be in harmony with the basic concepts of the list, which in the main is excellent.

As you may note, I am no longer with the congregation in Milwaukee but have assumed this new position in New York.

Very truly yours,

Rabbi HERBERT A. FRIEDMAN,
Executive Vice Chairman, United Jewish Appeal.

Classics of American Democracy—VII

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 18, 1956

Mr. O'HARA of Illinois. Mr. Speaker, I am extending my remarks to include among other communications from industrialists and leaders in business and finance a letter from H. W. Prentis, Jr., past president of the National Association of Manufacturers, past director of the United States Chamber of Commerce and recipient of honorary degrees from 14 American colleges and universities, as follows:

DEAR MR. O'HARA: I have been out of town almost continuously for the past 2 weeks, which accounts for my delay in replying to your letter of December 12. I think that the idea of authorizing the United States Information Agency to publish for nominal prices, in the principal languages of the world, a small library of basic statements of the political philosophy on which the American Republic is based, is excellent. I have looked over the list of publications that you enclosed and of all the works mentioned, I think The Federalist Papers are of the most importance. Next I would rank de Tocqueville's Democracy in America, and Bryce's The American Commonwealth. One other book which I think very highly of is The Power in the People, by Felix Morley. In my opinion, this work, which came out a year or two ago, is the best analysis of the American system that has appeared since The Federalist Papers. One book on your list that I have some question about is Rousseau's The Social Contract, because in my opinion The Social Contract provides a good deal of philosophical justification for socialism.

I am very glad that you have undertaken this project and I sincerely hope that you will be successful in getting the enabling legislation through Congress.

Yours sincerely,

H. W. PRENTIS, Jr.,
Chairman of the Board, Armstrong Cork Co., Lancaster, Pa.; Past President, National Association of Manufacturers.

DEAR CONGRESSMAN O'HARA: This is in reply to your letter of December 12.

I have asked one of my associates who is a prominent editor to give me the benefit of his judgment in connection with your suggestion and I am quoting from his letter to me:

"I think this list proposed by Congressman O'HARA is all right, if we assume that the readers to be reached are reasonably sophisticated and acquainted with political history. Personally, I wouldn't include Rousseau as in the liberal tradition, but who am I among so many?

"To reach a wider audience, I would suggest including a few more personalized approaches to the problem, such books as the autobiography of Jacob Riis or maybe a digested edition of parts of Sandberg's Lincoln. There are, of course, hundreds of other books which tell stories of how individuals, many of them immigrants from other countries, have flourished under our free system.

"Although I should like to see people everywhere able to obtain the great classics of democratic political theory at reasonable price, I would certainly think a few books of the type I've suggested might well be included."

I would agree entirely with this gentleman's letter, although I think I might add one other title, that is, "The Americanization of Edward Bok, which also tells the story of an immigrant boy's success in this country.

I hope this answers your question.

Sincerely,

W. D. FULLER,
Chairman of the Board, the Curtis Publishing Co.; Past President NAM.

DEAR CONGRESSMAN O'HARA: The proposal expressed to me in your letter of December 12 is one of the best undertakings I have heard of in a long time.

This, however, is my personal opinion. But within our organization we have a very active committee on economic education. It meets shortly. I will put the proposition to the group, which is made up of executives in industrial firms, and give you their reaction.

Please call on me for any assistance I can afford you on any matter.

Thanks.

Very truly yours,

JOHN E. GREGG,
Executive Vice President, Mississippi Manufacturers Association.

DEAR MR. O'HARA: I am honored to have your letter of December 12 asking that I check the list of books which will be proposed for printing in foreign languages.

I am so interested in this undertaking that I have engaged a competent person, Shirley Ann Sackman, to assemble copies of these books and review them for me. As soon as this has been done I will give you a report as to my thinking about them.

Cordially,

ROY A. GOULD,
President, Diamond Lumber Co., Portland, Oreg; Director, National Association of Manufacturers.

DEAR CONGRESSMAN O'HARA: I appreciate receiving your letter of December 12 outlining the proposal for distribution of basic statements of democratic political philosophy through the United States Information Agency. I think the plan of distributing inexpensive copies of such books is an excellent one and I heartily approve of your plan for obtaining the necessary enabling legislation.

I think the list of books which you enclosed represents a fine selection. I would like to suggest that you also consider the possibility of using the following:

1. The United States Declaration of Independence.
2. The Constitution of the United States.
3. The Secret of American Prosperity (publisher: Greenberg—A Corwin Book).
4. The Epic of America, by James Truslow Adams.
5. America Comes of Age, by Andre Siegfried.

Also, although it might not be in exactly the same category as the others, I would suggest that you consider How We Live, published by the American Economic Foundation, as being one of the best short statements of basic American economic principles.

Sincerely yours,

HOWARD I. YOUNG,
President American Zinc, Lead and Smelting Co., St. Paul, Director, National Association of Manufacturers.

DEAR CONGRESSMAN O'HARA: As you requested, I have reviewed the list of books which you are seeking to have the United States Information Agency publish in the principal languages of the world.

The list as submitted seems to be a good one.

I do not feel, however, that I am in a position to comment on the value of such an activity as you propose. I am not very familiar with the work of the United States Information Agency or with the present availability of such books, already printed in foreign languages.

Sincerely yours,

FRED C. FOY,
President, Koppers Co., Inc., Pittsburgh. Regional Vice President National Association of Manufacturers.

DEAR MR. O'HARA: I think the idea of book distribution in foreign countries is an excellent one.

I am not familiar enough with the books mentioned to know whether they are or are not the right choices. But it seems to me that the principle is sound.

Cordially yours,

GEO. OLMSTEAD, Jr.,
S. D. Warren Co., Boston, Director NAM.

DEAR MR. O'HARA: After reading your letter of December 12, with the enclosed plan, I would like to say that I stand behind your views on this matter.

I believe that this plan can do a lot to better world relations.

At the present time, I have no additions, omissions, or substitutions of the books recommended in the plan.

I would appreciate you advising me if and how I can be of further help to you.

Wishing you success in the coming new year, I remain,

Yours very truly,

J. CLIFTON YAUN,
Baton Rouge, La., Director, NAM.

DEAR MR. O'HARA: In reply to your letter of December 12, it seems to me that your program has very good objectives, provided the subject matter can be brought to the proper people at a nominal cost.

It seems to us that the Constitution and Bill of Rights should head the list of publications. We would like also to call your attention to a book, Essays on Liberty, as published by the Foundation for Economic Education, Irvington-on-Hudson, New York. In this very excellent book there are a number of essays which are particularly pertinent, including the Bill of Rights, That Something, For the Better Economic Life, The Most-Dreaded Enemy of Liberty, The Guaranteed Life.

There is also another book, Understanding Our Free Economy, published by D. Van Nostrand Co., New York, which we think would be very good for your purposes.

Wishing you all success in this enterprise,

Very truly yours,

ALLEN ABRAMS,
Vice President, Marathon Corp., Rothschild, Wis., Director, NAM.

DEAR MR. O'HARA: I have your letter of the 12th outlining a plan for making available abroad at nominal cost a selected group of books describing the Democratic political philosophy.

I am in accord with the thought that we should wage war with all appropriate tools in the battle of ideologies. It would seem to me that this move provides an added tool.

I have no suggestions with regard to authors and works. The list you mention would, I think, be very difficult to improve upon.

Have you thought of making "The American Heritage" available? It presents the best historically in current fashion.

Very truly yours,

FRANK E. MASLAND, Jr.,
C. H. Masland & Sons, Carlisle, Pa., Director, NAM.

DEAR MR. O'HARA: I have received your letter which you have sent to all the directors of the National Association of Manufacturers regarding the plan for passing legislation directing the United States Information Agency to distribute a small library of basic statements in the principal languages of the world.

I am not familiar enough with the material that you list to make a constructive comment, but I do think the idea is a good one and I also think some publication that stresses our Bill of Rights and the outstanding features of our Constitution should certainly be distributed worldwide.

Yours truly,

B. C. ESSIG,
Gardner-Denver Co., Denver, Director, NAM.

DEAR CONGRESSMAN O'HARA: It is a pleasure to comment about the proposed publication of basic classical works on democratic philosophy, through the United States Information Agency, as requested in your letter of December 12, 1955.

I find no criticism of the idea that we should be more active in selling the democratic point of view, nor with the proposal that it be done by wider dissemination of the basic works from which the American Republic drew its founding philosophy and proceeded to develop it in later years.

No list of 15 or 20 books can do the complete job, but it can be comprehensive. In developing such a list, there are bound to be omissions and differences of opinion about those included. Frankly, I would not relish the job of making the selections.

The list of suggested authors and works accompanying your letter is a good one. As to specific recommendations, I would not include the writings of Dewey as representative of the best democratic thinking, because of my familiarity with his works generally rather than the specific work, the Public and Its Problems.

To generalize a comment is dangerous from a scholarly standpoint * * * yet to be specific runs headlong into accusations that one is quoting out of context.

Although all of the works listed are controversial to the extent that they offer much for pro-and-con discussion, it is my opinion that including Dewey would be like waving a red flag in front of a large segment of the

American public which would class his philosophy far to the left of the others * * * certainly not worthy of listing alongside Emerson, Hamilton, Jefferson, Kant, Locke, et al.

Sincerely yours,

RAYBURN WATKINS,
Managing Director, Associated Industries of Kentucky.

DEAR MR. O'HARA: Mr. Daggett, director, NAM, has asked me to reply to your letter to him dated December 12 in connection with a plan for legislation directing the United States Information Agency to publish certain books.

The idea that publications should be available in foreign languages to explain the American system of government and economy is obviously sound. It is a project which our Government should be prepared to underwrite. Furthermore, it is to be presumed that the United States Information Agency might very well be the agency through which this might logically be done. The question about which there is room for divergent views is as to what sort of publications should be sponsored.

It would seem that the list of suggested authors and works would be entirely appropriate for certain potential readers, particularly scholars in foreign countries. However, they do not appear to be particularly well chosen for the information and education of many other classes of persons. For example, Thoreau's Walden, a literary masterpiece, a very interesting book and one with expressions of opinion which are part of the concept of democracy, is nevertheless somewhat removed from contemporary time and conditions of living. It was written before the Civil War and under conditions of population and economic life much different from our own. It is to be feared that a reader who is something less than a philosopher or serious student of history might not learn much from Walden which would help him understand the American concept and practice of government.

In view of the well printed and well bound books which the Soviet Government makes available to citizens of other countries at nominal cost, it is possible that our Government should make available books which will have an offsetting influence, if it has not already done so. However, it is possible that one or more books should be used which are more comprehensive as to our background and present situation than are any one or few of the works listed. I am sorry that I cannot suggest such a book. If there is none, an especially prepared publication might be advisable, particularly if such a book included appropriate excerpts from many of the works suggested in your letter.

Very truly yours,

E. I. WHYATT,
Assistant to the President, Gould-National Batteries, Inc., St. Paul, Minn.

Classics of American Democracy—VIII

EXTENSION OF REMARKS
OF

HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 18, 1956

Mr. O'HARA of Illinois. Mr. Speaker, letters from leaders in the labor movement in response to my letters of December 12, 1955, follow:

DEAR SIR: In response to your communique concerning enabling legislation directing the United States Information Agency to publish a small library of basic writings concerning the democratic political philosophy, let me say in my opinion this is a very worthwhile and urgently needed addition to our foreign-policy program.

My only suggestion, for whatever it is worth, would be that you might add to part 2, since I am in full agreement with part 1, the following authors or works:

Beard, Rise of American Civilization.

Commons, American Labor Movement.

Parrington, Main Currents in American Thought.

Paine, Commonsense.

If I can be of any further service in helping promote this legislation, please feel free to call upon me.

Sincerely,

JULES PAGANO,
Director of Education, Communications, Workers of America.

DEAR CONGRESSMAN O'HARA: I am much in favor of your proposal to have Congress direct the United States Information Agency to publish a small library of basic statements of democratic political philosophy in the principal languages of the world.

There can be no doubt in my opinion that such a project would not only meet a great need, but could also go far to promote democratic thought particularly in the uncommitted countries of Asia and Africa. Needless to say, however, Congress should also provide sufficient funds so that USIA can make effective distribution of the series down into small-town libraries, local trade-union centers, editorial offices, etc.

I also generally agree with the titles suggested so far. It would seem to me, however, that the series could be brought a little more up to date without impairing the noncontroversial nature of the selection. In other words, the thought that democracy and our American democracy in particular, is ever-growing and basically able to cope with the problems posed by the industrial and atomic age should, in my opinion, be considered in the selection of the works.

One book which demonstrates this thought in thoroughly objective fashion and also includes some of the vital documents and thinking behind the New Deal and other more recent applications of democratic thought to new problems, is Henry Steel Commanger's Documents of American History (Appleton-Century, Crofts). This or some similar work may well be worthy of inclusion in the proposed series.

Sincerely yours,

F. K. DASHIELL,
Labor's League for Political Education.

DEAR MR. O'HARA: I think that your suggested plan for the publication of Democratic classics is an excellent one.

There is nothing that I could add to the proposal other than to say it should provide for expansion, provided the initial start receives a good response.

Within the last 5 years I have spent nearly 18 months in the various countries of free Europe. In many countries people do considerable reading and the response to books on political science is always in evidence.

It would seem especially appropriate during these times that we should make available books depicting our way of life.

Sincerely,

E. E. PHELPS,
Director, Research and Education Department, Oil, Chemical, and Atomic Workers International Union, C. I. O.

DEAR REPRESENTATIVE O'HARA: Arnold S. Zander, president of the American Federation of State, County, and Municipal Employees, and his associates in our national headquarters in Madison have studied with favor your proposed bill authorizing translation of basic literature of American democratic thought.

At your suggestion we are submitting herein a list of writings that we feel strongly should be included in such a list. We are not critical of your suggested authors and works and do not suggest deletion except for some of the early documents written by the English, French, and German authors. Our preference would be to substitute some from the following list:

The Crisis, by Thomas Paine.

The Declaration of Independence.

The Supreme Court Decision on Desegregation of the American Public Schools.

President Eisenhower's Proclamation for Desegregation in the Armed Forces.

The Constitution of the United States.

President Lincoln's Proclamation of 1863 on Slavery.

The political platforms of the Republican and Democratic Parties in the 1952 election.

The Constitution of the American Federation of Labor and the Congress of Industrial Organizations adopted in New York in December 1955.

The thought behind our selections is that the industrial worker and farm laborer of Europe and Asia would find the living documents above more meaningful in terms of his struggle for freedom than the basic, but difficult texts you have suggested.

If we may be of further service in your cause, please call upon us.

Most sincerely,

JOHN P. CALDWELL,
Director, Education and Publications, American Federation of State, County, and Municipal Employees, Madison, Wis.

DEAR CONGRESSMAN O'HARA: I think the plan for publication of Democratic Ideas is a splendid one.

I do wish that a somewhat less forbidding list of titles could be drawn up and agreed upon. I think the life of this Nation, for example, is often better reflected in its fiction and its poetry than in the kind of literature that is included in the list you sent me; however, I do see that you are, and must be, interested in the democratic abstractions and that getting agreement on a list of different kinds of books would be all but impossible and also even if preliminary agreement could be reached, it would not be feasible to get the list finally approved in Congress, so I settle for the list you sent me.

All good luck with what seems to be a really quite wonderful project.

Yours truly,

BRENDAN SEXTON,
Director of Education, UAW-CIO.

DEAR SIR: This will acknowledge your letter of December 12, 1955.

I believe the plan to enact legislation directing the United States Information Agency to publish for nominal prices, in the principal languages of the world, a small library of basic statements of democratic political philosophy will definitely make a contribution to winning the minds of men to democracy over totalitarianism.

I would recommend a book named "Thomas Jefferson on Democracy" selected and arranged with an introduction by Saul K. Padover; Lincoln's Emancipation Proclamation, January 1, 1863; Lincoln's Gettysburg Address on November 19, 1863, and Emerson's oration on the American Scholar delivered at Harvard College in 1837, to be included in the suggested authors and works made in your enclosure, part 2.

Very truly yours,

JOHN J. MCCOY,
Editor, the Hosiery Worker, American Federation of Hosiery Workers.

JANUARY 3, 1956.

DEAR CONGRESSMAN O'HARA: I wish to acknowledge reciept of your letter of December 12, 1955, relative to establishing a small library of basic statements of democratic political philosophy, in the principal languages of the world.

Regarding enclosure, part I, I must admit that the program is not quite clear to me. If it is directed toward students and intellectuals, I believe the vast majority of these people are polylingual and fluent in English. The books listed in part II are famous books, and I am confident they are available to students throughout the world.

If the program is not primarily directed toward students and other intellectuals, but for literate populations throughout the world who may be curious about the principles of democracy, I believe the books listed in part II are too advanced. I believe this segment of the world's population would be more interested in the evolution of democracy.

While I understand it is not part of the proposed program, I cannot help but suggest that there is a great need for a small book written in simple, native language, with many pictures and drawn illustrations of democratic principles functioning. If communism breeds on unrest and unrest first manifests itself among working people, it is the workers who need most a knowledge of democratic theory and principle. A simple, well written book, distributed without cost to workers throughout the world, would be a real contribution to any program dedicated to the enlightenment of those unacquainted with democracy in action.

Regarding part II of the enclosure, with the exception of Thoreau's Walden, I believe the list of books represents an excellent choice. I would like to suggest two others for your consideration: American Democracy in Theory and Practice by Robert K. Carr, Donald H. Morrison, Marver H. Bernstein and Richard C. Snyder, published by Rhinehart & Company, Inc.: The Big Change by Frederick Lewis Allen, published by Harper Brothers.

I think your objective is laudable and one that our country sorely needs. The National Postal Transport Association will be happy to cooperate with you in advancing the necessary legislation.

With best wishes for success.

Sincerely,

WALLACE J. LEGGE, Jr.,
Chairman of Labor Education, National Postal Transport Association.

DEAR MR. O'HARA: We are in receipt of yours of December 12 and the attached enclosures regarding the publication of Democratic Classics.

I am strongly in favor of the idea. My only suggestion with regard to the list of authors is that perhaps Tom Paine should have been included. I realize that he has some followers among the Communists but that does not seem to be an adequate reason for excluding him from the list.

Very truly yours,

ANTHONY G. WEINLEIN,
Director, Building Service Employees' International Union.

DEAR SIR: This refers to your letter of December 12, in connection with the translation into various foreign languages several books which you list.

I am not familiar with many of these books, but it seems to me that if they cover the principles of our democratic form of government, the Bill of Rights, etc., then the purpose will be served and a great deal of good should come from this project.

Sincerely yours,

J. E. LOVING,
Director, Educational Bureau, the Order of Railroad Telegraphers.

DEAR CONGRESSMAN O'HARA: This will acknowledge receipt of your letter of December 12 relative to legislation directing the United States Information Agency to publish a small library of basic statements of democratic political philosophy.

I have carefully studied the suggested words and authors, and am heartily in approval of same.

I trust this will aid you in your decision.

Very sincerely yours,

EDWARD J. COUGHLIN,
Assistant to the President, American Federation of Technical Engineers.

DEAR CONGRESSMAN O'HARA: Thanks for your note of December 12. I am sure that most of our thoughtful fellow American citizens will endorse your plan.

Over the weekend, I am going to try to examine the list carefully and possibly suggest some additions. In the battle for public opinion throughout the world, the circulation of such books as you mention will be of untold value. You probably know that the National Committee for an Adequate Overseas United States Information Program is circulating the list and is calling attention to your admirable proposal.

The season's greetings, and with hope that this good idea can reach fruition in 1956.

Yours sincerely,

MARK STARR,
Educational Director, International Ladies' Garment Workers Union.

DEAR CONGRESSMAN O'HARA: As promised, I gave further thought to the list of books which were circulated by you with a view for translation and publication by the United States Information Agency. One general comment is that these books are certainly classics, but the people who will be likely to read such books are college professors and specialists who will have a reading knowledge of English.

Would it not be advisable to think of American books with a more general and popular appeal? In my travels abroad, I find that such books as Upton Sinclair's "The Jungle" and Jack London's "Iron Heel," as well as John Steinbeck's "Grapes of Wrath" are still quoted and referred to by liberal and radicial groups. Would it not then be wise to issue something by Sinclair some 30–40 years later to show what he now thinks about democratic procedures in the United States?

Why should we claim Burke and Kant for the United States, and if Burke is published, we might consider publishing Tom Paine's reply to the particular book cited. May I suggest that some biographies, such as Van Doren's "Story of Benjamin Franklin", along with Franklin's own autobiography, and of Lincoln would be more readable? What about the stories of some of our outstanding immigrants, as described in their own writings, or by Louis Adamic? Mary Anton's "The Promised Land" is an example of the book I have in mind. "American Memoir" by Henry Seidel Canby, Houghton Miffling, 1934, gives an interesting picture of the growth of the United States. Then, what about a short and popular history of the United States, such as those written by Nevins-Commager or Richard Heffner? A good short and popular history of the labor movement in the Untied States should also be considered.

I would suggest that, in dealing with Emerson, you use the selections made by Dr. Edward Lindemann, and Saul Padover, has made a good selection of Jefferson's "Opinions on Democratic Principles and Practices."

It seems to me that Tom Paine's "Common Sense" is more closely connected with the United States than, say, Mill, Mazzine and Locke.

I hope these suggestions will be helpful to you. The fundamental decision, I think, rests with whether you are going to publish classics which have been written elsewhere and which can be listed as the source of American democracy, or whether you want to give a picture of the growth and development of the United States itself.

Yours sincerely,

MARK STARR,
Educational Director, International Ladies' Garment Workers' Union.

DEAR MR. O'HARA: In reply to your request of December 12 for our opinion concerning the plan of a group of Members in the next session of Congress pushing for legislation that would direct the United States Information Agency to publish for nominal prices, in the principal languages of the world, a small library of basic statements of democratic political philosophy we have the following comments:

1. We believe that the proposal and the idea is an excellent one. It has our wholehearted cooperation and support.

2. We wish to register our opposition to the works of the following authors appearing on your suggested list: Burke, Emerson, Madison, Mill, Rosseau, and Thoreau.

3. I believe that every effort should be made to include a book of the present day which could be representative of our democratic political philosophy at this time. We do not feel qualified to make the selection of such a book at this time although we are studying the matter, but we believe that your committee could give consideration to this idea and come up with some good suggestions. I realize that it is difficult to do this in an era when the author may be still alive, but I think that our present day democratic philosophy is probably going to be of more interest to the foreign countries than our history of the past.

We wish to express our appreciation for having an opportunity to pass judgment on your suggested material and, if after further thought, we have any suggestions to make which we think might be of some interest we will write you again concerning them.

Very truly yours,

E. W. KENNEY,
Director, Research and Education, International Woodworkers of America.

Classics of American Democracy—IX

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 18, 1956

Mr. O'HARA of Illinois. Mr. Speaker, following are letters from librarians concerning the proposal to translate into many languages and to make easily accessible at reasonable prices throughout the world the classics of American democracy:

DEAR MR. O'HARA: I acknowledge with much interest your letter of December 12, 1955, with enclosures describing a plan for publications of democratic classics and providing a list of suggested authors and works.

I concur heartily in the suggestion contained in the plan. There appear to be reasons for supposing that in the present competition for the interest and adherence of foreign audiences, the classics of Marxism-Leninism have a certain advantage over those of Western democracy. It is highly desirable, in consequence, that publications be made more easily available to these audiences which explain the American system of

government, and the philosophy and ideals on which it is based.

However, I am not quite prepared at the present moment either to adopt the list of suggested authors and works or to suggest substitutes. The problem appears to me to be one of sufficient difficulty as to justify a kind of consideration that I am very doubtful of my preparedness to give.

On the one hand, the classics of Marxism-Leninism, which are being distributed by the Soviets in the countries to which we would appeal, represent writings of an industrialized society, and speak in modern terms. Meanwhile, many of the classics of Western democracy represent writings of a preindustrial society and a considerable number of those in the list actually derive from the 18th century. While, of course, it is desirable to call the great writings of liberty, of whatever period, to the attention of the audience whose loyalty for those ideals we wish to win, the equality of the competition into which we would advance these classics may nevertheless be questioned before venturing upon a wide campaign of distribution.

To put the problem succinctly, we wish to capture the interest and loyalty that is attracted by Stalin's Problems of Leninism; is Locke, On Civil Government, adequate for this purpose?

It appears to me, accordingly, that the selection of a list of works for the purpose of the "plan" should result from a very considered study by persons well acquainted not only with the literature which it is desirable to present, but also with the conditions of reader-interest and acceptability which the literature will encounter in the countries in which distribution is intended.

Sincerely yours,

L. QUINCY MUMFORD,
Librarian of Congress.

DEAR MR. O'HARA: This is to acknowledge receipt of your letter of December 12 describing your proposal under which the United States Information Agency will be directed to publish for nominal prices and in the principal languages of the world, a small library of basic statements of democratic political philosophy. This is an area of much interest to the association and one which falls within the field of its International Relations Board. Consequently, I am asking Mr. William S. Dix, librarian of Princeton University, and chairman of the board, if he will write you.

Sincerely yours,

DAVID H. CLIFT,
Executive Secretary, American Library Association.

DEAR MR. O'HARA: Mr. David H. Clift, executive secretary of the American Library Association, has forwarded to me from Chicago your letter of December 12 with its request for comments and suggestions on the proposal to have the USIA publish a small library of basic statements of democratic political philosophy. When I have had an opportunity to study your list of suggested authors and works and to confer with some of my colleagues, I shall write to you in more detail. I can say now that the basic idea seems to me an admirable one.

Cordially yours,

WILLIAM S. DIX,
Chairman, International Relations Board.

DEAR MR. O'HARA: Thank you very much for giving me the opportunity to comment on your letter of December 12. I think that the idea of providing translations of from 15 to 20 books that are basic examples of the American philosophy of life is exceedingly important. There is little question that these would be well received if subsidized to sell at a competitive price in the local bookstores in foreign lands. Everyone I know who has looked at bookstands in the troubled areas of the Middle East and Far East in particular, report finding beautifully produced and inexpensive editions of Russian materials in the local languages in all the bookstores, but substantially none of the classics of our way of life.

While it is probable that no two people would agree on all the titles to be included, I think there could be no quarrel about the titles listed in your letter as being among those that might well be reproduced. The only suggestion that I can make is that I hope this program can be broadened, after the initial experiment, to become a fundamental part of our information work abroad.

If there is any way that I or the American Library Association can be of assitance to you in this project please do not hesitate to call on us.

Sincerely,

RALPH R. SHAW,
President-Elect, American Library Association.

DEAR CONGRESSMAN O'HARA: Thank you for your letter dated December 12 and recently received.

As one who has had the good fortune to travel abroad, I am particularly struck by the excellence of your program. In foreign bookstores, American books are represented mainly by the expensive, hardbound, new titles, that only the wealthy can afford to buy.

Your proposal would make fine and inspiring books available in a format that would be familiar and within reach of the people generally.

Some titles have already been translated, although the translations may not be adequate.

Your list is good and I am particularly pleased to see such foreign visitors as Bryce and de Tocqueville represented. No such list would be complete, however, without Tom Paine's Commonsense and Rights of Man. And I would put in a word for that old classic, much admired abroad, Main Currents in American Thought, by Parrington.

Several collections which deserve consideration are:

Commager, Henry S., editor, Documents of American History. Fifth edition, Appleton.

Edman, Irwin, Foundations of Freedom; the Growth of the Democratic Idea. Harcourt. "Part I is an essay on the origins and implications of the democratic idea. Part II is an anthology of illustrative material * * * from philosophers and statesmen of all time." The Bookmark, May 1951.

Ketchum, Richard M., editor, What Is Democracy? Duton, 1955. Attractively printed quarto telling through text, maps and captioned photographs "the truth about the nature, the principles and the achievements of our society." The Bookmark, October 1955.

As to additions or selections, I would suggest:

For Jefferson: Saul K. Padover's Thomas Jefferson on Democracy, New American Library of World Literature.

For Lincoln: Paul M. Angle, editor, The Lincoln Reader, Rutgers University Press (also in pocket books); and T. Harry Williams, editor, Selected Writings and Speeches of Abraham Lincoln, Farar, Straus.

For Emerson: Essays, Everyman's Library, Dutton, or Bliss Perry, editor, Heart of Emerson's Essays, Houghton.

If we may be of any further help to you, please do not hesitate to let us know.

Sincerely yours,

C. F. GOSNELL,
State Librarian, New York.

DEAR MR. O'HARA: The list of suggested authors and works is one which I consider quite satisfactory to meet the purpose of the plan to publish a small library of basic statements of democratic political philosophy. The list certainly includes time-tested classical statements of democratic theory and I think it is desirable to have on the list authors other than Americans. Certainly the classics of American democracy included in the list owe a great deal to the works of such authors as Burke, Kant, Locke, Mazzini, Mill, and Rousseau. The only title which I would suggest for consideration is Milton's Aeropagitica. I recognize the difficulty of keeping a list such as this to reasonable proportions but I feel that the idea of freedom of the press as exemplified in Milton's work certainly should not be omitted from any discussion and theory of democratic society and constitutional government.

Sincerely yours,

EUGENE H. WILSON,
Director of Libraries, University of Colorado.

Classics of American Democracy—X

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 18, 1956

Mr. O'HARA of Illinois. Mr. Speaker, as indicative of the interest among the women of the United States, and the study and thought they are according to the proposal, are the following letters from representative leaders in woman activities:

DEAR MR. O'HARA: I think it is a wonderful idea for us if we are going to add to the Information Agency to ask them to translate and publish in the principal languages of the world classical statements on democratic theory in their original forms. To make it valuable, however, in competing with the Soviets we will have to give them some modern statements that apply to contemporary situations.

A list of books is a good idea but I would ask experts who know various parts of the world as to the choice in different cases, because democracies are going to be different in different areas of the world. They will not be exactly as in the United States, though based on the same principles. Any appeal would have to be geared to the needs of the people into whose language it is translated. For instance, to talk about freedom of thought, speech, and religion is almost foolish unless it is tied up with the first freedom you can think of, namely the right to eat and the right to learn to read.

This can be one of the most effective programs in counteracting the Soviet subsidizing and selling for a few pence many of their classics as well as pamphlets on their political concepts. But I think it requires expert advice to have it really well done and I would ask the Library of Congress to get a group together and the State Department to get someone with background on the nations and their conditions so that the consultation can be on both these levels.

Very cordially yours,

ELEANOR ROOSEVELT.

DEAR MR. O'HARA: Your letter of December 12th has been given my attention. The plan for the translation and inexpensive distribution of basic and classical statements on democratic theory in their original forms as outlined in that letter, seems to me to have much to be said for it. I have not made an exhaustive study of all these materials, but I am acquainted with many of them and the list seems to me to have been carefully

chosen. It is always hard to limit one's choice.

I believe if the United States Information Agency accepts the plan that emphasis should be made that whatever is produced must be simply done in format—easy to read, and very cheap in price so that those who need to read them and would, can purchase them easily.

Truly yours,

DORIS STEPHENS,
Director, League of Women Voters.
OKLAHOMA CITY, OKLA.

DEAR MR. O'HARA: I am writing in reply to your letter of December 12, 1955, regarding the plan for publication of democratic classics.

The plan seems to me to be a sound and constructive one and to provide an affirmative answer to the wide dissemination of the Communist classics. This opinion is based on the premise that these or similar books are not now readily and inexpensively available abroad. I assume also, that the plan does not overlap or duplicate any current program or plan of the United States Information Agency.

The choice of books seems to me good. In addition to or in substitution for some of those now on the list, you might wish to consider A Documentary History of the United States by R. D. Heffner, Thomas Jefferson on Democracy edited by Saul K. Padover, both published by the New American Library, and Primer of Intellectual Freedom edited by Howard Mumford Jones and published by the Harvard University Press.

Sincerely yours,

RUTH M. LURIE,
Mrs. Moses H. Lourie,
Director, League of Women's Voters.
BELMONT, MASS.

DEAR SIR: I was much interested in your "Plan for Publication of Democratic Classics" but, not being familiar with many of the books nor several of the individuals mentioned in your letter, I consulted one of the history professors at the University of Maine. He believed it to be a step in the right direction, thought the backers were capable and interested citizens, and considered the list of books excellent. His only comment not entirely favorable was that some of the books were rather out of date, but admittedly classics. He thought that the books written by men of other nations would have considerable influence.

With this corroboration of my own opinion I am very glad to give my approval for this project.

Sincerely yours,

SARA T. WENTWORTH,
Mrs. Chauncey D. Wentworth,
President, Maine Council of Church Women.

DEAR MR. O'HARA: If I could take an opinion poll of the church women of Nebraska, I believe they would heartily endorse the proposal as outlined in your letter of December 12.

America needs friends and more friends. Please note that the United Church Women have sent an "Ambassador of Good-Will" around the world and in 1955 we sent a "Fellowship Team" of four, for one specific purpose—to understand each other.

With the encouragement of two minister friends and the high school history teacher, I have checked the books. As I told them the purpose of my inquiry, they said, "Wonderful."

Blessings on you.

Sincerely,

MRS. HARRY COGGINS,
President, Nebraska Council of United Church Women.

DEAR MR. O'HARA: In my humble opinion, I think it would be a fine thing for the United States Information Agency to translate and publish in the principal languages of the world a select list of classical statements of democratic theory. I approve of the list of books given in part 2 and have no other suggestions to offer. I trust that the next session of Congress will see fit to pass the plan suggested in part 1 and 2. They certainly have my approval.

Respectfully yours,

MARY S. ETTER
Mrs. E. O. Etter, Sr.,
State President, Virginia Federation BPW Clubs, Inc.

DEAR MR. O'HARA: I was very much interested in your letter of December 12 and the proposal that the United States Information Agency publish for nominal prices in the principal languages of the world a small library of basic statements of democratic political philosophy.

I am sure from my contact with foreign students in the United States that there is a great interest in the subject and that even if these books were available at a low price in English, they would get wide circulation abroad. I have little idea of the cost involved in translating and printing them in a variety of languages. I am constantly amazed at the degree at which foreign students are able to read the English language. While the ordinary man in the street may not be able to read English easily, the documents on your list are more likely to appeal to college students or other well educated men and women when the present generation, at least, have English as a second language.

As I look over your list, I have no suggestion for deletion, but 2 suggestions for inclusion: Thomas Paine's, Rights of Man, and Walt Whitman's, Leaves of Grass. My only reservation is whether some of these books will be understandable without considerable editorial comment or interpretation in a classroom. It is a good many years since I have read most of them, but I recall I found them rather heavy going and I was raised in the Pennsylvania school system and have graduated from college.

Sincerely yours,

MARGARET BARNARD,
President, Business and Professional Women's Clubs of New York State.

MR. O'HARA: I would like to suggest two more books for the list you are asking about especially for Americans to read in inexpensive publications, "The American Past" by Roger Butterfield and "The Great Rehearsal" Carl Van Doren.

I think it is a wonderful idea to make these books available to foreign peoples but the common citizens of our own country need them also.

Respectfully,

Mrs. SEYMOUR Y. MCALLISTER,
Ogden, Utah.

DEAR MR. O'HARA: I was much interested in your idea of asking the USIA to publish a library of statements of democratic political philosophy.

Although the League of Women Voters cannot give your idea official support because the subject is not on our program, I would like to say that as a private citizen I applaud the idea, as outlined in your letter of December 12.

Sincerely,

ZELIA P. RUEPHAUSEN,
450 East 52d Street, New York City,
Director LWV.

DEAR MR. O'HARA: It is gratifying to know that a group of Congressmen are thinking in such constructive terms about publicizing democracy as you suggest in your letter of December 12. I think the plan for publication of Democratic classics in volumes which can be obtained at nominal cost is excellent. It would be desirable not only to make such volumes available to citizens outside the United States but also to citizens in the United States, especially young citizens.

While I am not a political scientist and, therefore, feel unable to render expert judgment on the list of books and authors you suggest in your enclosures, the list does seem to me to include the leading authorities on democratic government and philosophy.

I think it might be well to secure the judgment of Dr. Boyd and his associates of Princeton University on the writings and speeches of Jefferson, as well as Dr. Dumas Malone of Columbia University who is the author of the life of Jefferson. You might also wish to examine W. W. Willoughby's Congressional Government.

I shall certainly follow with the most sympathetic interest the progress of your proposal in the next Congress.

Sincerely yours,

NELLE S. REESE,
Mrs. Albert M. Reese,
President, League of Women Voters of West Virginia.

MY DEAR CONGRESSMAN O'HARA: Your letter of December 12 concerning the publication of a small library of basic democratic philosophy, in the principal languages of the world, has aroused my interest. This is most certainly a constructive suggestion and one which may offer great rewards in international understanding.

I do not speak for the federation in commenting upon your plan, for I do not know whether our members would approve the expenditure of Government funds for this purpose; but if Government subsidy were not necessary, I am sure many of our members would heartily endorse your proposal.

The list of books seems to me to be excellent, for while I have not read some of the volumes you list, I recognize them as being foundation works in their fields. No doubt you have had the advice of teachers of political theory in making this selection.

Thank you for keeping me informed of your project.

Sincerely yours,

MARGARET N. MATHENY,
National Chairman, Program Coordination Committee, National Federation of Business and Professional Women's Clubs.

DEAR MR. O'HARA: I received your letter of December 12, 1955, in regard to the proposed enabling legislation directing the United States Information Agency to publish for nominal prices, a small library of basic statements of democratic political philosophy.

I approve of the principle of this plan but I do not feel that I could express myself properly in regard to the list of books in enclosure, part 2, because I am not personally familiar with all of these books.

I would like to express myself in regard to the inclusion of some books that would represent the spiritual growth and strength of our Nation, which to me is one of the chief ramparts of our security and freedom.

Sincerely,

MARGARET WILKINSON,
Memphis, Tenn., National Federation of Business and Professional Women.

DEAR MR. O'HARA: I am sorry to have been so slow in answering your letter of December 12 asking for suggestings of books on American democracy which might be printed in the principal languages of the world and sold for nominal prices so that peoples of other countries might be able to learn about our American democracy. I felt that this is such an important venture that I wished to consult with some of our well-informed league members.

We believe your plan to have the USIA publish in many languages an inexpensive and compact library of classics on democracy

is an excellent one and long overdue. We will ask our members to urge their Congressmen to support it.

The proposed selections in your enclosure, part 2, are good but we feel they are too heavy and too exclusively academic for wide general reading. Granted that many of them are basic and should have priority, we feel that more modern selections, simply and clearly written should be included. Eighteenth century writings that show the origin of our democracy should be balanced by more modern writings that show it as a living, growing, working concept.

Of the earlier writers we would definitely include the selections listed from Locke, Rousseau, Kant, Mill, the Federalist Papers, deTocqueville, Selections from Jefferson (Saul K. Padoveis mentor book—Jefferson on Democracy) Thoreau, Emerson, and Abraham Lincoln.

We feel inadequate to recommend specific modern writings, in addition to Hand and Wilson, both excellent, but we urge you to consider:

1. Where Constitutional Liberty Came From, by Alfred H. Kelly, of Wayne University, Detroit, Freedom Agenda Pamphlet No. 10, Carrie Chapman Catt Memorial Fund, 164 Lexington Avenue, New York.

2. The Democratic Way of Life, by T. V. Smith and Edward Lindeman.

3. Some selections from the writings of our eminent Chief Justices, such as Oliver Wendell Holmes and Charles Evans Hughes who have written brilliantly on democracy from the judicial viewpoint.

4. Also to consult some of our great historians such as Henry Steele Commager for selections or suggestions of writings on democracy today.

5. Also if eminent world figures like Einstein or Albert Schweitzer have written on democracy their work would add to any collection.

Such a balanced, well-rounded set of books we feel would help fill the need. Some Europeans have criticized us for relying on 18th century writers to explain democracy. We can't explain without them but a balance of present-day writings show proof of its adaptability and workability.

This suggestion may not comply with your desire to include only time-tested classics, and we certainly do not wish to precipitate a congressional argument over modern authors, but for wider reader interest and consumption it is essential to balance the collection.

We trust that these suggestions may be of help to you, and thank you for asking the League of Women Voters of Nebraska to participate in this project.

Most sincerely,

EDNA J. MARSHALL,
Mrs. Roy Marshall,
State President, League of Women Voters of Nebraska, Omaha, Nebr.

DEAR MR. O'HARA: Thank you for your letter of December 12, in which you describe the proposed plan for enabling legislation to direct the United States Information Agency to publish a small library of democratic political works in the principal languages of the world.

It seems to me to be an excellent plan and one in which the American people would be much interested. The list of suggested authors seems to me a fine one but I am unable to comment specifically on the choices you suggest.

The best of luck to you in this project.

Sincerely yours,

HELEN B. LATIMER
Mrs. John G. Latimer,
Director, League of Women Voters.

DEAR MR. O'HARA: Thank you for your letter of December 12, 1955, outlining plans for the cheap publication of statements of democratic theory. This seems to me a most interesting and worthwhile project.

Before making suggestions for your book list as you requested, I should like to get the opinions of some of my associates. I should have a chance to do this in the next week or so. Then I will be better able to give you a more thoughtful reply, which would reflect more than my own.

We appreciate your consideration in writing our organization.

Yours very sincerely,

SUSAN H. BAKER,
President, League of Women Voters of Pennsylvania.

DEAR MR. O'HARA: I have read with interest your letter outlining the plan for having the United States Information Agency undertake the publishing of a library of books on democratic political philosophy in the principal languages of the world.

At the moment, I feel I have no very useful ideas on the subject, although I do have a number of questions. First, I wonder what you would consider to be "the principal languages." My impression is that most if not all of the books on your suggested list have been translated into French, German, and Spanish, and are available in many countries in inexpensive paper-backed editions. This, it seems to me, raises a couple of problems, one being the matter of distribution of large quantities of books published at "nominal, subsidized cost" which should be widely available "not alone from United States agencies." Is there not a danger that the United States would be accused of unfairly competing with local publishers in some—particularly European countries? The other problem is in the field of public relations. Would it not appear somewhat presumptuous for the United States to publish books by, say, the English and French authors for widespread distribution in the countries of their own origin?

There is no question in my mind but that the works you have chosen are all excellent. I would suggest only that more American and fewer foreign authors be included and that some be contemporaries even though the subject matter itself remains historical. I would also like to see the list broadened to include more interpretation of our form of constitutional government by such men as Charles Beard or Justice Holmes, for instance.

The idea of promoting widespread circulation of the concepts of democratic government is undeniably a good one provided it can be carried out in the right places and without infringing on local interests. (It would even be helpful, I think, to have such subject matter more widely circulated in the United States.)

I will be interested in learning what action is taken on your plan in the coming session of Congress.

Sincerely,

MARGARET E. BRUCE,
Mrs. Rudolph Bruce,
President, League of Women Voters of Massachusetts.

Get Trained Man for the Job

EXTENSION OF REMARKS
OF
HON. JIM WRIGHT
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 9, 1956

Mr. WRIGHT. Mr. Speaker, under previously granted leave to extend my remarks in the RECORD, I include the following excerpt from an editorial which appeared in the Fort Worth Press on February 3, 1955. This editorial, in my opinion, describes a fundamental situation which exists in many localities throughout the country and commends itself to the reading of all Members of the Congress:

GET TRAINED MAN FOR THE JOB

The Post Office Department is one of the biggest business enterprises in the world.

And, that being true, it naturally follows that the Nation's 40,000 post offices—particularly those as large as the one in Fort Worth—should be run with a maximum of efficiency and a minimum of politics.

Which brings us directly to the point—the regrettable tradition that has been followed for so long in selecting postmasters, a tradition bogged deep in the quagmire of political patronage.

More often than not the county political committee of the party which happens to be in power decides that good old Joe or faithful old Jake should have this patronage plum—regardless of the fact that Messrs. Joe or Jake probably know little more about postal affairs than how to lick a 3-cent stamp and stick it on an envelope.

God old Joe or jolly old Jake may be anything in the professional field—butcher, baker, or candlestick maker—but, as a usual rule, that deters a country committee not one whit.

The committeemen are prone to reason that since the selectee has chalked up a good mark as a party wheelhorse, he should be thrust into a key position in one of the world's greatest businesses * * * and without any apparent qualifications for the job.

On the other hand, there are men in the various postal services—both Democratc and Republicans—who have long and outstanding records as career men, people with the know-how that comes from years of experience in handling the affairs of the Post-Office Department.

The late Dudley C. Jernigan provides a case in point. Mr. Jernigan was a long-time career man in the Department and he went to the postmastership after distinguishing himself in the postal inspection service. He was a man who knew all the ins and outs of the mail business, and although his tenure was all too brief, he will be remembered as one of Fort Worth's most outstanding postmasters.

Ben Franklin's Prayer

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1956

Mr. MULTER. Mr. Speaker, on January 17, 1956, our country will observe the 250th anniversary of the birth of one of America's most revered and beloved statesmen, Benjamin Franklin. It would be most fitting if on that day we all joined in repeating the prayer he penned on December 4, 1789. It follows:

BEN FRANKLIN'S PRAYER

God grant that not only the love of liberty, but a thorough knowledge of the rights of man, may pervade all the nations of the earth, so that a philosopher may set his foot anywhere on its surface, and say, this is my country.

Appendix

The Importance of Transportation

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Friday, January 20, 1956

Mr. MARTIN of Pennsylvania. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "The Importance of Transportation," which I delivered on September 24, 1955, at Reading, Pa.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE IMPORTANCE OF TRANSPORTATION

(Address of Senator EDWARD MARTIN, of Pennsylvania, at the parade of progress, celebrating the 50th anniversary of the Parish Pressed Steel Co., at Reading, Pa., Saturday, September 24, 1955

I am highly honored by your invitation to come to the historic city of Reading, the county seat of the rich and charming county of Berks.

Courageous and God-fearing people have developed this area into an industrial and agricultural section unsurpassed by any similar area in the world.

In all the history of Berks County its many cultural institutions and its churches of every denomination have had the splendid support of the people.

We meet to celebrate the 50th anniversary of a great industry that has contributed so much to the welfare and prosperity of Berks County, the Commonwealth of Pennsylvania, and the Nation. The establishment of the Parish Pressed Steel Co. a half century ago was a notable event in our history. It was the first step in the parade of progress that has marched forward through the years.

This celebration demonstrates pride in the past and renews our faith in the future. It represents outstanding achievement under the system of free, competitive, private enterprise which is the foundation of American economic strength.

It is an example of success based on the superior skill and know-how of the American worker and American management, which have created the greatest industrial empire the world has ever known.

Today I want to direct your attention to the important place of transportation in the growth and expansion of the United States.

Transportation has always been and still is one of the big problems in America. It is a problem that we must face with the same courageous spirit that our ancestors met the difficulties of their day.

The history of transportation in America is a fascinating story. It is filled with the romance of an expanding empire of freedom and opportunity. It is the story of resolute, courageous men and women who pushed westward over the mountains and plains to open new lands, to clear the forests, and to create new communities that have become great centers of industry and enterprise. From the earliest settlements along the Atlantic seaboard, to the present time, the development of our systems of transportation has been one of the most important factors in our material, cultural, and spiritual progress. It is the foundation upon which were built the great foreign and domestic commerce carried on our rivers and harbors, our highways, railroads, airlanes, and pipelines. It made possible the development of agriculture, the opening of rich mines, oilfields, and forest resources.

In the early days the streams and Indian trails provided the only means of communication and travel. The first roads that connected scattered communities were built to accommodate horse-drawn vehicles in the unhurried pace of that day.

Military necessity was another strong influence in road development.

The westward migration brings to mind the great fleet of Conestoga wagons, which had their origin in Pennsylvania, and other covered wagons, ever moving toward the setting sun. This is an inspiring picture. It is typically American. It embodies the American spirit of self-reliance and individual responsibility. It meant hardship, privation, and often death, but it developed the greatest nation the world has ever known.

Today we have five major transportation systems in the United States: Waterways, roads, railways, airplanes, and pipelines.

There is much competition among these systems. It would be most helpful if our five methods of transportation could be coordinated so there would be less competition, but in our free-enterprise system this is almost impossible as it would involve too much governmental interference.

However, the people should demand that each type of transportation be required to bear its fair and equitable burden of taxation.

Each system of transportation has had some help from government.

Roads are entirely financed by the three levels of government.

Railroads in the early days received grants of land to aid them in their financing.

Airports are constructed from public funds.

Ports and waterways have been financed by the Federal Government.

Pipelines had some Federal help during World War II to aid in their construction. They are owned by private enterprises.

We now have invested in highways, 1931 through 1955, $75,230,000,000 distributed as follows: Federal $11½ billion; State: $43 billion; local: $21½ billion.

In waterways the Federal Government has invested, including harbors, channels, inland and intracoastal waterways, 1931 through 1955, $1,450,000,000.

In railroads we have a total of 401,539 miles, with a value of $33,581,000,000. They pay taxes of $1,261,000,000 a year. They are owned by the people.

In aircraft the total investment of public money is $2,200,000,000. The total value of scheduled and nonscheduled airlines is $1,175,000,000, and the total taxes paid by airlines is $450 million a year.

The Federal Government has not built any pipelines except during World War II—the Big and Little Inch—which were sold to private industry in 1947 for $143,127,000. Private enterprise in the last 10 years has invested almost $50 billion in pipelines for oil and gas.

The waterways of our country have always held a magnificent place in our material, cultural, and spiritual progress.

Transportation on the rivers may not be as romantic as it was at one time, yet it continues to increase in importance.

In the early days, transportation on the rivers centered around speed. Now the objective is tonnage. For example in 1953, from conservative estimates, there were 158 million tons carried on the Mississippi River system, which includes the Gulf Intercoastal Canal. This tonnage was principally bulk commodities, such as coal, steel, chemicals, and petroleum.

An ordinary towboat, pushing 9,000 tons of petroleum products form Houston, Tex., to Pittsburgh, Pa., is doing a job that would require 830 tank cars of 8,500-gallon capacity, or 1,300 tank trucks of 5,000-gallon capacity. By rail it would require 16 trains of 50 cars each. If transported by truck, it would cover 50 miles of road space.

This traffic is constantly increasing. The Army engineers' records show that in 1944 the waterways over which petroleum products and coal are transported carried about 20 billion ton-miles; in 1953, it had moved to over 33 billion ton-miles.

In 1953 the Chief of Engineers, United States Army, estimated the total cost to complete all authorized river and harbor projects presently deemed necessary in the interest of commerce and navigation at about $2½ billion.

The natural waterways in America have been a success, but there have been some notable examples of financial failure in State government construction and operation of canal systems.

The great example was the most dismal failure of the publicly owned canal system of Pennsylvania. That system started in operation about 1824. The Commonwealth of Pennsylvania offered its direct obligations in bonds to finance the construction of these canals. The total construction cost was about 33½ million; maintenance and repairs amounted to about 24½ million; interest on loans amounted to 43½ million, which made a total investment for the State of over 101 million. The State collected in tolls about 32½ million and sold the canals for $11,281,000, or a financial loss to the State of almost $60 million. That was an enormous amount of money at that time.

America has more men of know-how in the operation of business than any other country in the world, but somehow Government operation of business has been almost a complete failure. Considering living standards it has always failed any place in the world.

For a moment, let us consider our expansion in the United States, for this is the real reason for much of our transportation difficulties.

One of the most spectacular developments has been the surprising increase in our population. According to the latest Census Bureau estimates we are now a Nation of more than 165 million people. We never expected to reach that number.

The figure represents an increase of more than 13 million, or nearly 9 percent, above the total for the last general census of 1950 and 25 percent since 1940.

Translated into terms of human needs and the American way of life this population

increase has imposed upon us many great problems.

We need more schools to educate the growing army of young people. We need more hospitals. We must build more churches of every denomination. We must have more, better and safer roads to accommodate the vastly increased volume of motor traffic that crowds upon our inadequate and hazardous highway systems.

The highways are today, as always, the basic means of transportation. The other transportation systems—waterways, railroads and the air—aid and supplement the roads just as the auxiliary branches of the armed services help the doughboy gain and hold his objective.

Turning now to the present and the future, there is widespread agreement that bold, new steps must be taken to correct the deficiencies that have accumulated on our highway system during and since World War II.

President Eisenhower has proposed that bold plan.

The Nation has not kept pace with highway needs. The time has come when obsolete and dangerous roads must be replaced or rebuilt to modern standards of safety and efficiency. Larger, faster, and increased numbers of motor vehicles have added to our problem and will continue to do so. The American people now own more than 58 million motor vehicles and that figure is expected to rise beyond 81 million in the next 10 years. They now own 253,000 buses, about 10 million trucks, and 48 million passenger cars.

The trucking industry has grown to be one of the big industries of our country. Its annual gross expenditures for all purposes is about $29 billion.

The Federal Government has collected annually from taxes on gasoline, diesel fuel, lubricating oil, excise taxes on motor vehicles and tires and tubes more than $2½ billion. The Highway Act of 1954 allocated funds equivalent to all the Federal gasoline tax to the States for road construction.

For many years roads were built where there was the strongest political pressure. There was no comprerensive plan.

The plan proposed by President Eisenhower places emphasis on the national system of interstate highways. This is a specially designated network of 37,600 miles to connect 42 State capitals and 90 percent of all the cities over 50,000 population. It will have controlled access and will bypass large centers of population. It will cost about $25 billion.

The system has been carefully laid out to take care of the military, civilian defense and industrial needs of the country. When completed it will bring our people closer together and provide the means for a better understanding of our great country.

We need the roads. There is no disagreement on that score. We must have them if we are to have an expanding economy. We need them for our industrial, cultural, and spiritual advancement. We need them for national and civilian defense. We need them to reduce the frightful toll of lives taken each year by accidents on our highways. The big decision we must make is how they shall be financed. It's up to the American people to decide, for they must pay the bills.

Personally I feel the President's plan for a bond issue is sound. I do believe, however, that serious consideration should be given to the question of tolls. I believe that the collection of tolls, wherever feasible, on sections of roads, bridges and tunnels, would be advantageous to our country and fair to the traveling public. Or perhaps it might be wise to require the payment of a license fee for vehicles traveling on the interstate system. Some money should come directly from the general funds.

In the past the romance of traveling in covered wagons, stagecoaches and packet lines were adventures pictured in the famous prints of Currier and Ives and other artists. The tying together of the Atlantic and the Pacific by steel rails was acclaimed all over the world.

The first plane across the continent was hailed as an event unparalleled in transportation.

The completion of the interstate highway system will be another romantic story in American progress. I am hopeful that the next session of Congress will see the wisdom of an early start on this tremendously important project. Let me assure you that as a Member of the Senate and as the ranking Republican member of the Senate Public Works Committee, I shall do everything possible to expedite the enactment of the necessary legislation.

Again, I say, it is an honor to appear in this historic county.

Through the years you have contributed outstanding patriotic service to our Nation.

You have had a large part in building the economic strength of the United States. You have worked hard to make America.

What has made us such a great nation?

First and foremost in attributing the success of the American Republic I would place our system of government, based on God's greatest gift to mankind, freedom of the individual.

Second, I would place the sturdy courage and faith of our people—the American character based upon hard work, thrift, tolerance, love of liberty, and love of God.

These priceless endowments are the foundation stones upon which American initiative, energy, and know-how, combined with transportation, created the vast empire of industrial and agricultural production that twice in a third of a century saved the world from dictatorship.

Let us take inspiration from this parade of progress to rededicate ourselves to patriotic purpose, to face the future confident and unafraid, trusting in the mercy and goodness of God to direct the course of our Nation in the path of righteousness, justice, and peace.

Major Aspects of the Senate Highway Bill

EXTENSION OF REMARKS
OF
HON. DENNIS CHAVEZ
OF NEW MEXICO
IN THE SENATE OF THE UNITED STATES
Friday, January 20, 1956

Mr. CHAVEZ. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a speech on the major aspects of the Senate highway bill, which I delivered before the first general session of the American Roadbuilders' Association, 54th annual convention, at Miami Beach Municipal Auditorium, on Thursday, January 12, 1956.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

MAJOR ASPECTS OF THE SENATE HIGHWAY BILL

(By Hon. DENNIS CHAVEZ, United States Senator)

It is indeed a pleasure for me to be here again today to address the very fine organization which you gentlemen represent. I have known many of your members and Washington representatives for years during my service in the House of Representatives and in the Senate, where I have had the honor and privilege of serving since 1930. Your president, Jack Robertson, is a particularly good friend of mine, and the other officers of your fine association are always welcome, not only in my office but before the Senate Committee on Public Works of which I have the honor to be chairman.

I am happy to greet this exceptional group of Federal, State, and local highway officials and I know that the many heads of industry have taken time from their own pressing business to attend this important meeting.

I wish to pay my respects, too, to the distinguished guests of this convention who have come from the Republics of Central and South America. We have been working in the Senate and the same can be said for the House, I think with considerable success, to hasten the completion of the Pan-American Highway and also extend increasing technical and engineering assistance to our other friendly neighbors in the Pan American Republics. Surely it would be a wise course for our Government to expand the highway assistance program that is now under way. I feel confident that we shall take steps in this direction in the near future.

My experience in the field of highway legislation has been continuous since becoming a Member of the United States Senate in 1935, and during the more than 20 years which I have served on the committee concerned with roads many changes have taken place in the field of highway transportation, with the motor vehicle registration increasing from about 26 million in 1935 to more than 61 million in 1955, and it is estimated that the total will reach 81 million by 1965.

Until 1950 Federal assistance was provided mainly on about 234,000 miles of the primary Federal aid system which interconnected most of the principal cities which had been selected by State and Federal authorities. In 1940 $100 million was provided for the primary system and only $15 million provided for the secondary system, and $20 million for grade crossings.

World War II saw the end of the pioneering period of road building and many cities were interconnected by two-laned surface roads but they were entirely inadequate to care for the great volume of traffic which had developed.

We in Congress recognized the great importance of an accelerated road program and in the Highway Act of 1944, we authorized a greatly expanded postwar highway program of $500 million annually for 3 years and increased funds for the secondary system by tenfold, and included for the first time funds for routes within cities. There was a delay in the initiation of the program until October 1945, however, progress was slow because of shortages of manpower, materials and contractors.

The national system of interstate highways was designated in 1947. Authorization of funds specifically for this system was first made in legislation of 1952 for funds for fiscal years 1954 and 1955 and allowed $25 million for each year, which we realized was insufficient to make the needed progress. In the Federal Aid Highway Act of 1954, we authorized $875 million for apportionment to the States for each of the fiscal years 1956 and 1957, which was an increase of 52 percent over funds for the 2 preceding years. In the 1954 act we increased the funds for the interstate system from 25 million to 175 million dollars annually and authorized the use of these funds to pay for 60 percent of the construction costs.

I feel that the statistics which I have quoted is desirable to emphasize the fact that the Congress has recognized the extreme importance of an accelerated highway program and we have realized that even the 1954 authorization is not sufficient to care for the tremendous impact of automobiles, busses, and trucks on our highways which

amount to a total of more than 3,366,000 miles, of which about 235,000 miles are on the primary Federal aid system, which includes the interstate system, and about 483,000 miles on the secondary system. It is interesting to note that of the 3,366,000 miles there are more than 1,200,000 miles with no surfacing.

Although the 1954 authorization provided for matching funds up to the fiscal year ending June 30, 1957, steps were taken during the first session of the 84th Congress to authorize a greatly expanded program of road construction to enable our highly mobile economy to move about with greater ease and safety. Several highway bills were introduced and hearings were started on February 21, 1955, and extended through April 15, 1955, with about 100 persons and organizations interested in highway development being given an opportunity to be heard. Among this group many outstanding members of your own organization gave fine testimony on the problem of highway needs and the ability of our industries to carry out the program of construction.

After the many days of public hearings and numerous executive sessions by our Committee on Public Works the bill designated as Senate bill 1048 was reported and passed by the Senate with certain amendments being made on the floor of the Senate.

I want to say that in my many years of experience as a representative of my people in New Mexico and the country as a whole that the legislation which we passed in the Senate on the highway program is one of the most outstanding pieces of work that I have seen. The bill, as you know, would authorize $900 million annually for 5 years for the primary, secondary, and urban highways and $1 billion, $1.25 billion, $1.5 billion, $2 billion, and $2 billion for each of 5 years for the interstate system. We felt that the interstate system should be accelerated because of its value in serving interstate commerce and national defense but that we must not neglect the secondary system which not only means much to our national economy but also to the local economy of each State and community.

In our consideration of a program of such magnitude for the interstate system we believed that since the Federal Government would be matching on a 90–10 basis, on the interstate system, that protection should be provided for this investment, so we included a provision designed to limit weights and dimensions of vehicles. We also instructed the Bureau of Public Roads to conduct tests to determine the effect of overloading on highways. The Maryland road test and the recently completed road test in Idaho, have indicated that roads must be constructed much more substantially to withstand the impact of heavy vehicles. However, many of our existing roads are not now constructed to such standards, therefore we must not overload them. Other provisions included were designed to expedite the acquisition of rights-of-way and to take care of relocations.

One of the many items which have given me great concern over my many years of experience in highway legislation, is the effect of by-passing communities which depend on highway traffic for their livelihood. In many cases communities prefer to have main highways pass around them but they should be given consideration in the matter.

During consideration of the highway bill I pointed out that in any program of the magnitude proposed, we should insure that the workers on these projects would not be treated unfairly insofar as living wages and decent hours are concerned, however, there was considerable opposition to including compulsory labor pay standards as a part of the legislation but I was assured that such matters would be taken care of by the States and contractors and that in the construction program all workers would be treated fairly.

There are many more features of the bill which we passed in the Senate which are technical in nature and I need not dwell on them at this time, but I cannot leave you without commenting on the terrible toll of life which is taken daily on our highways and streets. In 1941 highway traffic deaths reached nearly 40,000. Then wartime gasoline rationing reduced the toll but they began to increase and in December 1951 we had our millionth traffic death. In 1954 there were more than 36,000 deaths as a result of traffic and in addition a million and a quarter people were injured, with over 100,000 suffering permanent disability. It is quite evident that our highways are not adequate to handle the terrific amount of vehicular traffic, nor to utilize the tremendous power to speed being built into our modern automobiles. The only answer is to drive carefully and work for better roads and continue to drive carefully.

Acknowledging the need for a great new system of modern roads—for the States and the cities and the counties and the hamlets—is one thing; defining the method by which we can bring this miracle to pass is something else again. It seems to me that we are possessed here with a problem that embraces our total economy and modern society—probably our defense and survival. Thus, when we speak about building roads for this country, whether it be in New Mexico or Maine, we are really touching one of the most delicate nerves of the Nation. There is absolutely no place for political bickering or a scramble for credit in the essential job to be done. The great burden will rest, as it always has, with the States and their political subdivisions. But the responsibility of the Federal Government cannot be lightly brushed aside. There is no sense in pretending that there will be any substantial difference in the saving of dollars because we shift responsibility from one government to another. There isn't anything easy or cheap in this whole road building plan. It's all going to have to be paid for and the only important question is how can it best be planned to serve the Nation as a whole? The Federal-aid program has become an old adventure, once termed radical during the administration of Woodrow Wilson. But after 40 years, the remarkable cooperative Federal-State arrangement which has been distinctive in the field of road building has proved itself beyond question. We have recently been expanding the Federal-aid program and I see no good reason for changing my view that the program should be expanded to a still greater degree.

The nub of these remarks is that, in my opinion, better highways are a desperate American need. Further, insofar as I am able to judge, our committee and the United States Senate will continue to warmly support a reasonable, workable national program to bring about a solution.

I would not want to close my speech without paying tribute to a dear friend of mine and your association who has passed away.

While Tom Keefe was well known from coast to coast among the ranks of men who serve the highway industry and the engineering profession, his friendship with key figures in the Federal Government in Washington was developed highly.

Tom built up a fabulous array of friendships, not only among the most powerful and highly placed Members of Congress but throughout the Federal executive branch. His formula for winning friends was disarmingly simple and in its philosophy mirrored the man himself. "Serve others," he would say, "without hope or desire of personal reward."

That was the credo by which this exceptional and, at times, explosive man lived and by which he was able to perform remarkable services for his country. Those who were privileged to know him well are aware of the nobility and true essence of his service and his unflagging work.

We shall look far to again find such a man. We are filled with gratitude for the unselfish help that he gave us. We miss him now most deeply. But we hope, since that is the way matters are arranged by the Highest Authority, that he is finding a richly deserved and everlasting peace.

Thomas J. Keefe, a native of West Philadelphia, lived at 4411 Bradley Lane, Chevy Chase, Md. He is survived by his wife, Elizabeth, three sons, and a daughter.

A Message in German

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES

Friday, January 20, 1956

Mr. MARTIN of Pennsylvania. Mr. President, recently the Governor of Pennsylvania sent a letter of congratulation to Chancellor Adenauer, and it was in German. I invite the attention of my colleagues to the fact that Pennsylvania has produced many outstanding men of Pennsylvania German descent. Among those were the ancesters of the President of the United States. They lived in Pennsylvania, and he has many of the characteristics of those great people. General Pershing's people lived in Pennsylvania.

I mention these facts because in this trying period, when we sometimes have doubts about the loyalty of those coming from other countries, it is a pleasure to point to these fine people who have been so loyal to our country and have been fully in accord with our ideals.

I ask unanimous consent to have an editorial referring to this matter printed in the Appendix fo the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A MESSAGE IN GERMAN

That Governor Leader's congratulatory message to Chancellor Adenauer on the latter's 80th birthday anniversary was in German has caused comment. Says the Associated Press:

"The telegram * * * is believed to be the first message written in a foreign language by a Pennsylvania Governor in recent years."

Well, there is no State whose governor would have a better right to write in German than Pennsylvania.

For, surprising as it may seem to those who never have inquired into the subject, an immense number of Pennsylvanians have German backgrounds.

We call them Pennsylvania Dutch, Dutch being a corruption of the German word "Deutsch," which means German.

The Pennsylvania Dutch were among the earliest settlers in Pennsylvania and were so numerous that after the Revolution there was a brief discussion over the question of whether English or German should be the official language of the legislature.

To this day there live in rural districts in eastern and central Pennsylvania thousands of persons whose ancestors have been Pennsylvanians for 4 or 5 generations but who

still speak the German dialect called Pennsylvania Dutch as their mother tongue.

Pittsburgh's oldest church, the Smithfield Street Congregational, still occupying land given it by William Penn's heirs, began as a German language church. And a 100 years ago Pittsburgh had German language daily newspapers with what for those times was a large circulation.

Governor Leader is of Pennsylvania Dutch extraction, as were also his Republican predecessor, Governor Fine, and many other Pennsylvania governors.

President Eisenhower is the descendant of Pennsylvania Dutch ancestors and so, too, was the American commander in the First World War, General Pershing, whose ancestors, some of whom lived in Westmoreland County, spelled the name Pfoerschinn.

As the Pennsylvania Dutch became Americans of unquestioned loyalty, so, too, will the more recent immigrants from eastern and southern Europe.

Some of the second and third generations already are prominent in politics and public affairs.

Address by Former President Truman at St. Paul, Minn.

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Friday, January 20, 1956

Mr. HUMPHREY. Mr. President, it is with particular pleasure and pride that I bring to the attention of the Members of the Senate an address by its most distinguished alumnus, the former President of the United States, the Honorable Harry S. Truman.

President Truman was the guest of honor and the principal speaker at a dinner honoring the Governor of the State of Minnesota, the Honorable Orville Freeman. This dinner was attended by over 2,200 persons. President Truman's address was carried over radio on a nationwide hookup through the CBS facilities. It was presented over television by 11 midwestern television stations. The former President distinguished himself not only by the excellence of his address, but by his gracious, pleasant, and engaging personality. We Minnesotans like Harry Truman—and he seems to like us.

The former President's visit also afforded us an opportunity to make a substantial contribution to the Truman Library. Some of the most distinguished citizens in our State were present at a luncheon in his honor. He was warmly welcomed and received, and honored our State by his visit.

I ask unanimous consent to have the address of the former President printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am very happy to come here today to pay tribute to this wonderful young governor of yours. He deserves all the good things you have been saying about him. He is a fighter for the people, and he is carrying on in the great, liberal tradition of the Democratic-Farmer-Labor Party of Minnesota.

Orville Freeman is worth talking about in his own right, but he is more than that. He is a sample of the vigorous young Democratic leadership that is rising to the top all over the country. I could name a number of young governors who are carrying the Democratic banner to victory in many States. They are doing that by dedicating their lives to the welfare of the people—and by giving the people good government. It is really wonderful to see this crop of new and brilliant leaders coming to the front to carry on the great tradition of the Democratic Party.

I always like to come to Minnesota. I have known your Senator HUMPHREY for a long time. He was a great help to me when I was in the White House. He is taking his place now as one of the most respected and trusted national leaders of the Democratic Party. He is a man who has given the cause of liberal, democratic government new life and greater vigor not only in Minnesota but throughout the country.

Being here in Minnesota reminds me of the visits I made in this area when I was President. I remember that I was up this way campaigning in 1948 and 1952. On both occasions, I warned the people not to vote for a Republican administration, particularly if they were farmers. I told you then that the Democratic Party had the interests of the farmer at heart and would work for farm prosperity. And I pointed out, and proved by chapter and verse, that a Republican administration would be bad for the farmer—and it has been.

Well, in 1948 a sufficient number of people believed what I said. We elected a Democratic administration and we had 4 years of good farm prices and good farm incomes. Then in 1952, a majority of the people refused to believe what I said and they put in a Republican President. And now I can say—and I will say—I told you so. I told you on both those visits that a farmer who would vote the Republican ticket ought to have his head examined. I am sure you believe that now.

I don't have to argue about it any more. You can just look around you and see for yourselves. The price of every single farm product has gone down—wheat is only 78 percent of parity, hogs have fallen to $11, and corn is at 63 percent of parity—and the costs of farm equipment are rising. Overall, farm prices were 101 percent of parity in 1952—now they are 80 percent of parity. There is real distress, real suffering and anxiety on American farms today, and that is a sad thing and bad for the whole country.

I notice that the administration is talking very sweetly to the farmer these days. President Eisenhower said in his state of the Union message last week that, and I quote: "The longstanding and deep-seated problems of agriculture have been forthrightly attacked."

Well, there has been an attack, all right. But it's not the farm problem that has been attacked—it's the farmers.

Secretary of Agriculture Benson began driving farm prices down as soon as he took office. In the nonbasic commodities, where price-support levels were discretionary with the Secretary, he began lowering support prices early in 1953. He reduced the price of milk in 1954. And the worst is yet to come. Because this year support prices are going to slide even further down Benson's sliding scale, and the farmers are going to slide right into the abyss of bankruptcy.

I don't know whether the middle western farmer will be able to make 50 cents an hour this year or not. I doubt it. I expect that a lot of farmers will have to sell out. But don't worry—that is all part of the plan of the Eisenhower administration.

Listen to what his Assistant Secretary of Agriculture had to say on this subject:

"Agriculture is now big business. Too many people are trying to stay in agriculture that would do better some place else. Farming takes capital and managerial capacity."

And his Under Secretary of Agriculture says the same kind of thing:

"Price-support programs tend to keep the inefficient farmer in business instead of allowing the normal healthy adjustment that should take place in agriculture," he says.

The Republican administration in Washington does not understand the traditional farm policy of the United States. They have the whole thing backwards and upside down. If you look at the history of this country, you will see that we have always been determined to make the independent, family farm the foundation of our system of agricultural production. For generations we have protected the family farm, and fostered it, through political battles, economic depressions, and civil war. We have done this because we believe the family farm is a way of life that preserves moral values and human values essential to the growth and vigor of this Republic.

Jefferson was the champion of the small farmer, and so was Jackson and so was Lincoln. The family-farm concept inspired the early pioneers to settle west of the Alleghenies. As population moved west, the free soil movement claimed the lands of the West for the family farmer—in opposition to the slavery movement, which wanted to impose the plantation system. When the men of this area marched off to the War Between the States, one of the things they were fighting for was the free and independent family farm. During the war the Homestead Act was passed, giving the national domain to small farmers who would settle on the land and farm it. And so it has gone, all through our history. The Reclamation Act incorporated the family-farm principle, and so did other progressive measures.

The great depression that began on the farms in the early 1920's—and came to its dreadful climax in 1932—presented a grave new threat to the family size farm. Many small farms were sold during that period, and fell into the hands of banks and mortgage companies. Some people thought that the future of agriculture lay with the corporate farm, and the big landholder, and that the day of the family farm was over.

But the New Deal stepped in and saved the family farm. And the measures of the New Deal worked, in spite of all the clamor by Republicans who said it was wrong to tamper with economic laws—that is, Republican economic laws, laws that make the rich richer and the poor economic slaves.

Agriculture was saved by the Democratic New Deal and Fair Deal, and the family farm remained the bedrock of our farm policy. And it is well that it did. For the family farmers of America proved their efficiency in World War II—and gave to the Allied cause the abundance of food and fiber that was necessary for victory and for the relief of a war-torn world.

Today, the prosperity of our agriculture is again in danger; and the welfare of our family farms is in danger, too. The danger comes from the very men who, under the laws and the Constitution, are entrusted with the responsibility for helping our agricultural system. These men are dominated by the big business point of view, and are out of sympathy with the needs of agriculture. They love International Harvester and General Motors, but they are rather cool to the old dirt farmer. Of course, this is the year 1956, and an important election is coming up. As a consequence, the Eisenhower administration is going to say a lot of things and make a lot of gestures in a desperate effort to hide the record of what they have done in the last 3 years. To my mind, this attitude smacks a little of death-

bed repentance. If the Eisenhower administration had been really concerned about the condition of the farmer, they would have done something about it long before this.

Let me give you an example: In March 1955, your own Senator HUBERT HUMPHREY introduced a conservation acreage reserve bill to set up a soil bank program. It was a constructive and forward-looking proposal. The Eisenhower administration took 7 months to consider it, and finally, on September 30, 1955, they turned it down. Now, 3 months later, all of a sudden, in his State of the Union message pointing toward a presidential campaign, General Eisenhower advances the very same proposal—although I suspect it will come out in a very watered-down version.

And on top of all this, the Republican administration has the nerve to say we must not let politics influence our agricultural policy.
